A SPECTATOR MODEL FOR DEEP INELASTIC ELECTRON SCATTERING Ph.D. Thesis
Herman Meyer 1992 100 p Sponsored by Stichting voor Fundamenteel Onderzoek der Materie, and Netherlands Organization for Scientifc Research
(ETN-92-92539) Avail: CASI HC A05/MF A02

The main aspects of Deep Inelastic Scattering (DIS) are discussed. DIS of leptons off hadrons has proved to be an excellent tool for probing the elementary structure of hadrons. It has shown the 'existence' of quarks on the nucleon. The role of the system that is not hit by the virtual photon, the spectator system, is considered. Scale dependence of the structure function, including renormalization and the Gribov Lipatov Altarelli Parisi (GLAP) equations, is described. The diquark spectator model and DIS from nuclear targets are addressed. In conclusion, the spectator model for DIS in its simplest form can be used to quantify many interesting phenomena that are related to nonperturbative aspects of quantum chromodynamics such as the shape of quark and gluon distributions. It could be the starting point for other more detailed applications including higher twist contributions and possible dynamical approaches to quark-gluon interactions. ESA

THE PION CONTRIBUTION TO SEMI-INCLUSIVE DEEP INELASTIC SCATTERING WITH SLOW BARYONS IN THE FINAL STATE
C. L. Korpa, A. E. L. Dieperink, and O. Scholten 1992 9 p Submitted for publication
(KVI-881; ETN-92-92542) Avail: CASI HC A02/MF A01

The pion exchange contribution to the semi-inclusive lepto-production on protons, with a slow nucleon or delta in the final state, is analyzed. The ratios of the production of nucleons and deltas of different isospin states are calculated. The results are compared with a recent experiment and with predictions of the string fragmentation model. Experiments to further test the relevance of the pion contribution to semi-inclusive deep inelastic scattering are discussed. ESA

ESCAPE- AND SPREADING WIDTH OF THE ISOBARIC ANALOG STATE
S. Y. vanderWerf 1991 8 p Presented at 6th International Conference on Nuclear Reactions and Mechanisms, Varenna, Italy, 10-15 Jun. 1991 Sponsored by Netherlands Organization for Scientific Research
(KVI-884; ETN-92-92543) Avail: CASI HC A02/MF A01

Data and systematics on the natural line width, the escape width, and the spreading width of ground state isobaric analog states are presented. The relation between isospin impurity and spreading width, and between escape width and neutron spectroscopic factors is discussed. The neutron decay, possible only through isospin breaking, was measured directly and is found to have a mostly statistical spectral shape. ESA

EQUILIBRIUM AND PRE-EQUILIBRIUM MODELS FOR CALCULATION OF PARTICLE EMISSION CROSS SECTIONS AND SPECTRA
C. Y. Fu 1992 10 p Presented at the Symposium on Nuclear Data Evaluation Methodology, Upton, NY, 12-16 Oct. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001635; CONF-921046-4) Avail: CASI HC A02/MF A01

Improvements of equilibrium and pre-equilibrium models that were applied to the evaluations of the recently released nuclear data libraries are reviewed. The improvements include energy-angle correlated neutron emission in the continuum, charged-particle and recoil spectra, widths-fluctuation correction for the continuum, pre-equilibrium capture, and gamma-ray strength functions. Their impacts on evaluated data are summarized. DOE

CHARGED-PARTICLE BEAM DIAGNOSTICS FOR THE ADVANCED PHOTON SOURCE (APS)
A. H. Lumpkin, G. Decker, E. Kahana, D. Patterson, W. Sellyey, X. Wang, and Y. Chung 1992 17 p Presented at the 14th International Free Electron Laser Conference, Kobe, Japan, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-001855; ANL/CP-76107; CONF-9208142-7) Avail: CASI HC A03/MF A01

Plans, prototypes, and initial test results for the charged-particle beam (e-), e(+) diagnostic systems on the injector rings, their transport lines, and the storage ring for the Advanced Photon Source (APS) are presented. The APS will be a synchrotron radiation user facility with one of the world's brightest x-ray sources in the 10-keV to 100-keV regime. Its 200-MeV electron linac, 450-MeV positron linac, positron accumulator ring, 7-GeV booster synchrotron, 7-GeV storage ring, and undulator test lines will also demand the development and demonstration of key particle-beam characterization techniques over a wide range of parameter space. Some of these parameter values overlap or approach those projected for fourth generation light sources (linac-driven FELs and high brightness storage rings) as described at a recent workshop. Initial results from the diagnostics prototypes on the linac test stand operating at 45-MeV include current monitor data, beam loss monitor data, and video digitization using VME architecture. DOE

FAST NEUTRON SCATTERING NEAR SHELL CLOSURES: SCANDIUM
A. B. Smith and P. T. Guenther Aug. 1992 38 p
(Contract W-31-109-eng-38)
(DE93-002090; ANL/NDM-125) Avail: CASI HC A03/MF A01

Neutron differential elastic- and inelastic-scattering cross sections are measured from approximately 1.5 to 10 MeV with sufficient detail to define the energy-averaged behavior of the scattering processes. Neutrons corresponding to excitations of 465 +/- 23, 737 +/- 20, 1017 +/- 34, 1251 +/- 20, 1432 +/- 23, and 1692 +/- 25 keV are observed. It is shown that the observables, including the absorption cross section, are reasonably described with a conventional optical-statistical model having energy-dependent geometric parameters. These energy dependencies are alleviated when the model is extended to include the contributions of the dispersion relationship. The model parameters are conventional, with no indication of anomalous behavior of the neutron interaction with Sc-45, five nucleons from the doubly closed shell at Ca-40. DOE

MONTE CARLO SIMULATION OF MINIMUM BIAS EVENTS AT THE LHC ENERGY
Guido Ciapetti (Istituto Nazionale di Fisica Nucleare, Rome, Italy) and Anna DiCiaccio 15 Jan. 1991 10 p Presented at Large Hadron Collider Workshop, Aachen, Germany, 4-9 Oct. 1990
(Nota-Interna-969; ETN-92-92598) Avail: CASI HC A02/MF A01

A good description of the soft hadronic interactions at the Large Hadronic Collider (LHC) energy is a necessary tool to do a realistic feasibility study of the experiments that must be able to disentangle possible rare physics processes from the bulk of proton-proton interactions. Two Monte Carlo generators, Isajet and Pythia, were tuned on the experimental data over the largest presently available range of energies. Their predictions were extrapolated at square root of s = 16 TeV. Assuming a linear increase with log s for relevant quantities of the mean charged multiplicity and of the average transverse momentum, both models give reasonable results. An average charged multiplicity, per unit of pseudorapidity, of 5 to 6 particles and an average transverse momentum around 0.510 and 0.540 GeV/c is expected. The effect of the pile-up of several minimum bias events in the same trigger gate was investigated. Limits on the minimum jet transverse energy and on the minimum value of the isolation cut that can be used in the analysis of rare events was derived. ESA

EXPERIMENTAL STUDIES OF ELEMENTARY PARTICLE INTERACTIONS AT HIGH ENERGIES
K. Goulianos 1 Oct. 1992 73 p
(Contracts DE-FG02-91ER-40651; DE-AC02-87ER-40325)
(DE93-003652; DOE/ER-40651/3; RU-92/E-36) Avail: CASI HC A04/MF A01

In the past year, our research program encompassed four major areas: the UA-6 experiment at CERN, the CDF (Collider Detector at Fermilab) experiment at Fermilab, the SDC (Solenoidal Detector Collaboration) experiment of the SSC (Superconducting Super Collider), and an R&D project for the development of High Pressure Gas Calorimetry for high luminosity colliders. The UA-6 experiment studies direct-gamma and J/psi production in pp and (bar p)p interactions at (radical)s = 22.5 GeV. In the CDF experiment we have concentrated in the plug calorimeter upgrade program, which involves replacing the plug and forward calorimetry with a more compact calorimeter based on scintillator tiles being readout with wave-length shifting (WLS) fibers. In the SDC experiment, we have taken primary responsibility for the Preshower/Shower-Maximum detectors. We wrote the original shower-maximum proposal for the SDC and have contributed to detector simulations, scintillator/WLS-fiber light yield measurements, building prototype preshower and shower-maximum detectors and measuring their performance in a test beam, and developing novel photosensitive devices to read out the fibers. The High Pressure Gas Calorimeter project has been very successful. A prototype parallel plate iron based electromagnetic calorimeter was designed, constructed and tested in an electron beam at Fermilab. The results were very encouraging. We are presently working on a new design, which would be more suitable for the construction of economical, large scale calorimeters, such as those needed for the forward region of SDC and FAD. DOE

POSITRON DYNAMICS IN SOLIDS Ph.D. Thesis
Jari Makinen Helsinki, Finland Finnish Academy of Technology 1991 55 p Sponsored by the Finnish Cultural Foundation and Geophysical Observatory
(Acta-Polytec-Scand-PH-176; ISBN-951-666-334-6; ETN-92-92611) Avail: CASI HC A04/MF A01

The low energy positron beam and positron lifetime spectroscopies were used to investigate positron solid interactions. The topics include positron diffusion in solids, interaction with solid surfaces, and positron annihilation in semiconductors. Coupling of positrons to acoustic phonons is recognized as the dominant scattering mechanism. This is verified experimentally in a wide temperature region from 20 K to the inset of positron trapping at thermal vacancies. Positron motion in electric field in Si was investigated in a surface barrier diode. Below 300 K, the lattice scattering mechanism limiting positron motion is due to acoustic phonons. Positron emission and positronium formation were studied at clean metal

surfaces. The discovery of a rapid decrease of both yields at low temperatures at negative work function surfaces is consistent with wave mechanical reflection of the positron from the surface barrier. Positron trapping at negatively charged centers in electron irradiated silicon was examined using the lifetime technique. A large trapping cross section and a strong temperature dependence of the trapping rate were discovered. This is ascribed to positron trapping at weakly bound Rydberg states in the long range Coulomb potential. The effect of the breathing mode volume relaxation of the phosphorus vacancy pair on positron lifetime was demonstrated. ESA

MEASUREMENT OF THE BRANCHING RATIO FOR D(+) YIELDS (BAR-K)*(892)(SUP 0)MU(+)NU

1992 22 p

(Contract DE-FG02-91ER-40682)

(DE93-002414; DOE/ER-40682/5; CMU-HEP-92-10) Avail: CASI HC A03/MF A01

The branching ratio for the decay mode D(sup +) yields (bar K)*(sup 0) (mu)(sup +)(nu) has been measured with two methods. The first uses D(sup 0) yields (bar K) (sup (minus))(mu)(sup +)(nu) for normalization, and yields the result B(D(sup +)) yields (bar K)*(sup 0) (mu)(sup +)(nu) = (3.25 (plus minus) 0.71 (plus minus) 0.75) percent. From this method we also obtain the direct measurement (Gamma)(D(sup +) (yields)(bar K)*(sup 0)(mu)(sup +) (nu)/(Gamma)(D(sup 0) (yields) K(sup (minus)) (mu)(sup +) (nu))= 0.43 (plus minus) 0.09 (plus minus) 0.09. The second method uses the mode D(sup +) (yields) K(sup (minus))(pi)(sup +) (pi)(sup +) for normalization and yields B(D(sup +) (yields) (bar K)*(sup 0) (mu)(sup +)(nu)) = 4.18 +/- 0.66 +/- 0.96) percent. Combining the results of the two methods yields B(D(sup +) (yields) (bar K)*(sup 0)(mu)(sup +)(nu)) = 3.57 +/- 0.96 percent. DOE

A TWO BODY RELATIVISTIC EQUATION FOR INTERACTING NUCLEONS

M. DeSanctis (Istituto Nazionale di Fisica Nucleare, Rome, Italy) and D. Prosperi (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 20 Mar. 1991 9 p

(Nota-Interna-976; ETN-92-92604) Avail: CASI HC A02/MF A01

A relativistic equation for the study of nuclear systems is proposed. The aim of the work is to modify the Mandelzweig and Wallace equation to allow the correct treatment of the one and two pion exchange processes between nucleons. This equation can be also applied to the exchange of different isovector bosons. If the exchanged bosons are vectorial particles, some additional corrections are required. The starting point of the approach is to search for a quasi potential equation which fits the on-shell scattering amplitude. The effects due to the isovector nature of the pion field are taken into account by an additional contribution to the Green function. The equation can be used to study nuclear interactions both in the momentum and configuration space. ESA

EXPERIMENTAL INVESTIGATIONS OF ELECTRON CAPTURE FROM ATOMIC HYDROGEN AND DEUTERIUM BY ALPHA PARTICLES

T. J. Gay and J. T. Park 1992 106 p

(Contract DE-FG02-84ER-53188)

(DE93-002654; DOE/ER-53188/9) Avail: CASI HC A06/MF A02

We report progress made during the period 15 September 1991--14 September 1992 on the project 'Experimental Investigations of Electron Capture from Atomic Hydrogen and Deuterium by Alpha Particles'. In the past year we have developed reliable, narrow energy spread, high-current sources of He(++) based on direct-current magentron and electron-cyclotron resonance discharges. These sources have been proven on our test bench accelerator which has been upgraded to also allow us to test atomic hydrogen effusive targets. We have thus made substantial progress toward our goal of studying single electron capture from atomic hydrogen by doubly-ionized helium. A research plan for the upcoming year is also presented. DOE

STRONGLY INTERACTING FERMION SYSTEMS Annual Progress Report, 15 Nov. 1992 - 14 Nov. 1993

1992 7 p

(Contract DE-FG02-88ER-45347)

(DE93-002839; DOE/ER-45347/32) Avail: CASI HC A02/MF A01

The research has been concentrated in four areas: Methodology for large-scale or innovative computing; computation of complex structures or properties; many-body fermion systems (but not including superconductors); properties of many-body fermion systems believed to be relevant for high-temperature superconductors. All of these areas we put under the rubric of 'strongly interacting fermions systems'. The first two areas are more concerned with computational aspects and the latter two to specific problems with a stronger analytic aspect. However, in our Proposal Section we return to the appropriateness of the rubric strongly interacting fermions. DOE

METHODS DEVELOPMENT FOR ELECTRON TRANSPORT Final Report, May 1990 - May 1991

Barry D. Ganapol Apr. 1992 145 p Prepared for Calspan-Buffalo Univ. Research Center, NY

(Contract F30602-88-D-0026)

(AD-A257986; RL-TR-92-48) Avail: CASI HC A07/MF A02

This report consists of two code manuals and an article recently published in the proceedings of the American Nuclear Society Mathematics and Computation Topical Meeting held in Pittsburgh. In these presentations, deterministic calculational methods simulating electron transport in solids are detailed. The first method presented (Section 2) is for the solution of the Spencer-Lewis equation in which electron motion is characterized by continuous slowing down theory and a pathlength formulation. The FN solution to the standard monoenergetic transport equation for electron transport with isotropic scattering in finite media is given in Section 3. For both codes, complete flow charts, operational instructions and sample problems are included. Finally, in Section 4, an application of the multigroup formulation of electron transport in an infinite medium is used to verify an equivalent SN formulation. For this case, anisotropic scattering is also included. GRA

RELATIVISTIC CALCULATIONS OF EXCITATION AND IONIZATION OF HIGHLY CHARGED IONS BY ELECTRON IMPACT
D. H. Sampson 15 Apr. 1992 13 p
(Contract DE-FG02-90ER-54104)
(DE93-002129; DOE/ER-54104/1) Avail: CASI HC A03/MF A01

Our rapid relativistic atomic structure program and relativistic distorted-wave programs for excitation and ionization of highly charged ions were further improved. The generalized Briet interaction and other QED corrections were added to the atomic structure program, and the speed of the distorted-wave excitation program was increased by over an order of magnitude over what it was when our initial large-scale relativistic calculations of excitation of Ne-like ions were made. The improved programs were then used to calculate collision strengths for 330 transitions in F-like ions with 22 less than or = Z less than or = 92 and 248 transitions in Ni-like ions with 60 less than or = Z less than = 92. We expanded the relativistic collision program to include an option to use atomic structure data by the well-known multi-configuration Dirac-Fock (MCDF) program of Grant and coworkers. This was used in calculating collision strengths for the 45 Delta(n) = 0 transitions with n=2 in Be-like ions with 8 less than or = Z less than or = 92. This relativistic collision strength program was also extended to include an option to include the generalized Breis interaction in the scattering matrix elements and the importance of this for He-like, He-like and Li-like ions with Z = 26, 54 and 92 was studied. The factorization method was applied to ionization. Regardless of the complexity of the ion the ionization cross sections could be written as a sum of the products of a readily calculated coefficient that depends only on ion properties and a hydrogen-like cross section. Work was also done on excitation and ionization by directive and, in some cases spin-polarized electrons, which is of interest for some EBIT experiments and the study of solar flares. We also used our extensive collision strength results to test the reliability of the well-known and widely used Van Regemorter approximation. DOE

(Contract DE-FG03-90ER-40546)
(DE93-000305; DOE/ER-40546/1) Avail: CASI HC A02/MF A01

This is a progress report on the first year of the five year proposal of the UCSD high energy physics group. The main activity of our group continues to be the L3 experiment at LEP. During the last year in L3, we have worked principally on physics analysis. We have also fulfilled our duties in running the detector and contributing to L3 software and computing. In addition, we have made a major effort toward the development of the GEM detector at the SSC. Our SSC work is done in collaboration with the other UCSD groups which are primarily supported by the NSF. In this progress report, we will review our recent activities and describe the current status of the group. Some of the publications and documents which display the work of our group over the last year are included as appendices. We will also outline our research plan to continue our participation in L3 physics and upgrades and to work on the design and construction of the GEM detector. DOE

RELIABILITY OF NUMERICAL SOLUTIONS OF A DIFFUSION EQUATION MODELING RF NOISE-INDUCED DILUTION IN PARTICLE BEAMS
H. J. Shih, W. E. Schiesser, and J. A. Ellison (New Mexico Univ., Albuquerque.) Jul. 1992 15 p Presented at the 7th International Association of Mathematics and Computer Simulation (IMACS) International Conference on Computer Methods for Partial Differential Equations, New Brunswick, NJ, 22-24 Jun. 1992
(Contract DE-AC35-89ER-40486)
(DE92-040620; SSCL-Preprint-138; CONF-9206185-10) Avail: CASI HC A03/MF A01

The dilution process in particle beams caused by noise in the RF accelerating system has been modeled using a diffusion equation. Particle tracking can also be undertaken to determine the effects of RF noise, though it is much more computationally extensive than integrating the diffusion equation. In this paper we present the integration results using the Method of Lines (MOL) for certain important classes of noise. We will describe the numerical algorithms in detail, including those that are made to remove anomalous solutions. Reliability of the numerical results will be checked using both finite-difference and finite-element (Galerkin) methods in discretization and applying the same algorithms to the cases of linear and quadratic diffusion coefficients where exact solutions are known. (DE92-040340; DOE/ER-40665/1) Avail: CASI HC A04/MF A01

This Progress Report presents a review of the research done in 1992 by the Duke High Energy Physics Group. This is the first year of a three-year grant which was approved by the Office of High Energy Physics at DOE after an external review of our research program during the summer of 1991. Our research is centered at Fermilab where we are involved with two active experiments, one using the Tevatron collider (CDF, the Collider Detector Facility) and the other using a proton beam in the high intensity laboratory (E771, study of beauty production). In addition to these running experiments we are continuing the analysis of data from experiments E735

(collider search for a quark-gluon plasma), E705 (fixed target study of direct photon and Chi meson production), and E597 (particle production from hadron-nucleus collisions). Finally, this year has seen an expansion of our involvement with the design of the central tracking detector for the Solenoidal Detector Collaboration (SDC) and an increased role in the governance of the collaboration. Descriptions of these research activities are presented in this report. DOE

BEAM LOADING COMPENSATION WITH VARIABLE GROUP VELOCITY
Z. D. Farkas Aug. 1992 3 p Presented at the 16th International LINAC Conference, Ottawa, Onterio, 23-28 Aug. 1992
(Contract DE-AC03-76SF-00515)
(DE93-001810; SLAC-PUB-5879; CONF-9208109-45) Avail: CASI HC A01/MF A01

Consider a section with linearly variable group velocity and a beam pulse shorter than the section fill time. Choose the current amplitude so that the gradient of the last bunch equals the gradient of the first bunch. For beam pulses less than about 15 percent of fill time, the voltage deviation during the beam pulse is small, but as the pulse width increases the voltage deviation also increases. We show that by decreasing the output to input group velocity ratio, we can reduce the first order voltage deviation, and that we can remove the remaining second-order voltage deviation by linearly decreasing the section input power by a small amount starting at beam injection time. This way we can increase the beam pulse width to more than half the fill time, and thereby increase the RF to beam energy transfer efficiency and the luminosity without increasing the voltage deviation. RECONSTRUCTION OF (x, Q SQUARED) AND EXTRACTION OF STRUCTURE FUNCTIONS IN NEUTRAL CURRENT SCATTERING AT HERA
Stan Bentvelsen, Jos Engelen, and Paul Kooijman Jan. 1992 20 p
(NIKHEF-H/92-02; ETN-93-92813) Avail: CASI HC A03/MF A01

A method of extracting the kinematic variables in neutral current deeply inelastic scattering at HERA (German acronym for hadron electron storage ring) is presented. A determination of x and Q(sup 2) using the angles of the electron and current jet only turns out to be remarkably powerful. A method for determining x and Q(sup 2) that is insensitive to initial state radiation is achieved. Structure functions F(sub 2) and xF(sub 3) are extracted and the systematic errors are studied. The use of several (x, Q(sup 2)) reconstruction methods, each with different systematic errors will provide complementarity and redundancy for structure function analysis. ESA

GRAVITATIONALLY INDUCED SYNCHROTRON RADIATION: A NEW TEST FOR GENERAL RELATIVITY
Daniele Fargion (Technion - Israel Inst. of Tech., Haifa.) 13 Sep. 1991 12 p Presented at ICFA Workshop Meeting, Los Angeles, CA Sponsored by Istituto Nazionale di Fisica Nucleare
(Preprint-822; ETN-93-92909) Avail: CASI HC A03/MF A01

The relativistic radiation by a bunch of n charged particles under stationary gravitational fields is considered. The expected gravitational induced synchrotron emission radiation may reach the total power of 2.185 erg/sec N/10(exp 12)exp 2 gamma/100,000(exp 4) and the monofrequency radio power at the peak of the spectrum, corresponding to a wavelength of 5 m/gamma/100,000(exp 3), P sub em approx. = 1/10(exp 15) erg/sec N/10(exp 12) exp 2 gamma/100,000. The corresponding monochromatic signal flux has a value of 0.53 Jansky N/10(exp 12) exp 2. The equivalence principle for charged leptons and barions and their antiparticles may be tested for the first time. Gravity and electromagnetism coupling, the tensorial behavior of General Relativity and the spin two nature of graviton, can be verified. ESA

THEORY WORKING GROUP: SUMMARY OF THE RESULTS
Luciano Maiani (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 23 May 1991 15 p Sponsored in part by Ministry of University and Scentific and Technological Research
(Preprint-803; ETN-93-92912) Avail: CASI HC A03/MF A01

The results obtained by the working group of DAFNE are summarized. The most important task concerned the measurement of epsilon'/epsilon, from comparisons of different charge conjugation and space inversion violating decay modes of the K(sub L)-K(sub S) pair produced in phi-decays. The possible contributions of DAFNE to the exploration of processes determined by the chiral dynamics, particularly in K decays, are summarized. The hadronic contributions to the muon g-2 and the contributions of DAFNE's data to spectroscopy are underlined. ESA

THE GLOBAL SECOND LEVEL TRIGGER FOR ZEUS Ph.D. Thesis
Hendrikus Alphonsus Uijterwaal 1992 205 p Sponsored by Stichting voor Fundamenteel Onderzoek der Materie and Hamburg Univ.
(ETN-92-92816) Avail: CASI HC A10/MF A03

The Global Second Level Trigger (GSLT), the ZEUS detector, and the data acquisition system are presented. Two detectors are under construction for the HERA (German acronym for hadron electron storage ring) collider: ZEUS and H1. The task of the ZEUS trigger system is to select online whether an event is interesting physics or background. The trigger system is divided into three levels. The results of all component trigger processors are transferred to the global first level trigger or GSLT respectively. The global triggers combine and cross check the information from the various components and decide to accept or reject the event. The experimental environment that the GSLT has to cope with is discussed. The hardware implementation of and the software of the processors in the GSLT are presented. The maximum (empty) event rate that the GSLT can handle is (3.2 +/- 0.2) KHz. The GSLT introduces a latency of 1.3 +/- 0.15 ms. Both numbers agree with expected values of 3.3 kHz and 1.1 ms respectively. The GSLT was integrated with the other components in the ZEUS trigger and data acquisition system. A variety of tests were performed and the results are presented. ESA

CONDITIONER FOR A HELICALLY TRANSPORTED ELECTRON BEAM
Changbiao Wang May 1992 17 p Presented at the Advanced Accelerator Concepts Workshop, Port Jefferson, NY, 14-20 Jun. 1992
(Contract DE-AC03-76SF-00098)
(DE92-041169; LBL-32222-Exc; ESG-182; CONF-9206193-11) Avail: CASI HC A03/MF A01

The kinetic theory is developed to investigate a conditioner for a helically imported electron beam. Linear expressions for axial velocity spread are derived. Numerical simulation is used to check the theoretical results and examine nonlinear aspects of the conditioning process. The results show that in the linear regime the action of the beam conditioner on a pulsed beam mainly depends on the phase at which the beam enters the conditioner and depends only slightly on the operating wavelength. In the nonlinear regime, however, the action of the conditioner strongly depends on the operating wavelength and only slightly upon the entrance phase. For a properly chosen operating wavelength, a little less than the electron's relativistic cyclotron wavelength, the conditioner can decrease the axial velocity spread of a pulsed beam down to less than one-third of its initial value. DOE

AN INVESTIGATION OF COHERENT QUADRUPOLE BEAM--BEAM EFFECTS
S. Krishnagopal and R. H. Siemann (Stanford Linear Accelerator Center, CA.) Jul. 1992 3 p Presented at the International Conference on High Energy Accelerators, Hamburg, Germany, 20-24 Jul. 1992
(Contracts DE-AC03-76SF-00098; DE-AC03-76SF-00515)
(DE92-041191; LBL-32581; ESG-207; SLAC-PUB-5869; CONF-920706-34) Avail: CASI HC A01/MF A01

We use a new simulation technique that allows us to calculate the beam-beam kick from non-Gaussian beams, to discriminate between the predications of two different theoretical models. Our results are in agreement with one of these models. We employ the simulation to better understand the nature of the coherent effects, and to explore their dependence on damping. We discuss the drawbacks in the other model and suggest improvements. DOE

SYSTEM MODEL DEVELOPMENT FOR NUCLEAR THERMAL PROPULSION
Nelson A. Hannan (Argonne National Lab., IL.), Brian A. Worley (Oak Ridge National Lab., TN.), James T. Walton, Ken R. Perkins (Brookhaven National Lab., Upton, NY.), John J. Buska (Los Alamos National Lab., NM.), and Dean Dobranich (Sandia National Labs., Albuquerque, NM.) 1992 11 p Presented at the 43d Congress of the International Astronautical Federation, Washington, DC, 28 Aug. - 5 Sep. 1992
(Contract DE-AC05-84OR-21400)
(NASA-TM-108157; NAS 1.15:108157; DE92-041262; CONF-9208154-1)
Avail: CASI HC A03/MF A01

A critical enabling technology in the evolutionary development of nuclear thermal propulsion (NTP) is the ability to predict the system performance under a variety of operating conditions. This is crucial for mission analysis and for control subsystem testing as well as for the modeling of various failure modes. Performance must be accurately predicted during steady-state and transient operation, including startup, shutdown and post operation cooling. The development and application of verified and validated system models has the potential to reduce the design, testing, cost and time required for the technology to reach flight-ready status. Since October 1991, the US Department of Energy (DOE), Department of Defense (DOD) and NASA have initiated critical technology development efforts for NTP systems to be used on Space Exploration Initiative (SEI) missions to the Moon and Mars. This paper presents the strategy and progress of an interagency NASA/DOE/DOD team for NTP system modeling. DOE

STUDY OF AN ORBITAL ACCELERATOR FOR ION IMPLANTATION AND OF PROTECTIVE COATINGS FOR MATERIALS Final Report [ETUDE D'UN ACCELERATEUR ORBITAL POUR L'IMPLANTATION IONIQUE ET DES COUCHES PROTECTRICES POUR MATERIAUX]
E. J. Knystautas and R. J. Slobodrian 31 May 1989 35 p In FRENCH
(Contract DSS-31098-8-6044/01-SW)
(CTN-93-60614) Avail: CASI HC A03/MF A01

A study was conducted to examine different possible designs for an ion source and accelerator assembly, suitable for operating in space. Such an assembly could serve to treat products in space such as the surfaces of space structures eroded by micrometeorites and atomic oxygen, and could also be used in ion propulsion research. For treating large surfaces and for propulsion, the ion beam produced must be of a high intensity and cover a large surface, while for studying surface properties and implantation of small samples the beam must be well defined. Two designs are presented, each optimized for one of those two requirements. The first is based on an electron cyclotron resonance source coupled to a short electrostatic acceleration stage. The second is based on a Danfysik 910 source followed by a Wien filter and two stages of electrostatic acceleration. In a related study, the effect of ion beam mixing on the tribologic properties of Cr-coated Armco iron was studied. At an optimal dose of argon ions, the Knoop microhardness, dynamic coefficient of friction, rate of abrasive wear, and corrosion resistance had improved values. An alternative method for increasing microhardness, involving formation of quasi crystalline icosahedric crystals at the surface, was also investigated. The increase in microhardness observed with this method was found to be on the order of 5 pct. CISTI

PROCEEDINGS OF THE SPECIALISTS' MEETING ON HIGH ENERGY NUCLEAR DATA
Tokio Fukahori, ed. Mar. 1992 216 p Presented at the Specialists' Meeting on High Energy Nuclear Data, Tokai, Japan, 3-4 Oct. 1991
(DE92-012299; JAERI-M-92-039; INDC(JPN)-158/L; CONF-9110373)
Avail: CASI (US Sales Only)

This report consists of the Proceedings of the Specialists' Meeting on High Energy Nuclear Data. The meeting was held on October 3-4, 1991, at the Tokai Research Establishment, Japan Atomic Energy Research Institute with the participation of forty-odd specialists, who were the evaluators, theorists, experimentalists, and users of high energy nuclear data including the members of Japanese Nuclear Data Committee. The need of the nuclear data in the high energy region up to a few GeV was stressed in the meeting for many applications, such as spallation neutron sources for radioactive waste treatment, accelerator shielding design, medical isotope production, radiation therapy, the effects of space radiation on astronauts and their equipment, and the cosmic history of meteorites and other galactic substances. Although the neutron nuclear data below 20 MeV have been well evaluated for fission and fusion reactor applications, the nuclear data in the high energy region have never been prepared in Japan. With the view of producing an evaluated high energy nuclear data file, theoretical models and codes, available and necessary measurements, needs of nuclear data, and various applications were reviewed and discussed. The consensus, that the wide collaboration was necessary to produce the evaluated file and should be established, has been obtained. DOE

IMPROVEMENTS IN MANUFACTURE OF IRIDIUM ALLOY MATERIALS
E. K. Ohriner 1992 6 p Presented at the 10th Symposium on Space Nuclear Power and Propulsion, Albuquerque, NM, 10-14 Jan. 1993
(Contract DE-AC05-84OR-21400)
(DE92-017126; CONF-930103-2) Avail: CASI HC A02/MF A01

Iridium alloys are used as fuel-cladding material in radioisotope thermoelectric generators (RTG's). Hardware produced at the Oak Ridge National Laboratory (ORNL) has been used in Voyager 1 and 2, Galileo, and Ulysses spacecraft. This hardware was fabricated from small, 500-g drop-cast ingots. Porosity in these ingots and the resulting defects in the rolled sheets caused rejection of about 30 percent of the product. An improved manufacturing process was developed with the goal of substantially reducing the level of defects in the rolled sheets. The ingot size is increased to 10 kg and is produced by vacuum arc remelting. In addition, the ingot is hot extruded prior to rolling. Since implementation of the process in 1989, the average rate of rejection of the product has been reduced to below 10 percent. DOE

STATUS OF QCD
G. Martinelli (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 3 Dec. 1991 27 p
(Preprint-842; ETN-93-92944) Avail: CASI HC A03/MF A01

Recent experimental and theoretical progress in perturbative and nonperturbative Quantum Chromodynamics (QCD) are reported. The electron-positron annihilation, deep inelastic lepton-hadron scattering and hadron-hadron collisions are considered. The results of non perturbative studies of decay constants and mixing parameters for heavy mesons are presented. The experimental tests of QCD at the Large Electron Positron (LEP) collider are summarized. Related theoretical developments are summarized. New measurements of the structure functions are reported, together with reanalyses of the older EMC and SLAC data. The derivation of the parton densities from the structure functions, the problem of the measurement of the gluon distribution and the behavior of the parton densities at small x are discussed. Collider results for jet physics, W + jets cross sections, W production asymmetry and direct photon production are presented. The problem of heavy flavor production at present and future colliders are discussed. Non perturbative QCD is summarized. The symmetries of the QCD lagrangian in the limit in which the mass of a quark goes to infinity are discussed. This problem is important for the theoretical understanding of the physics of B mesons. New lattice calculations which have important consequences for charge conjugation and space inversion violation in B decay to J/psi K(sub S) are presented. ESA

FUNDAMENTALS OF HIGH ENERGY ELECTRON BEAM GENERATION
B. N. Turman, M. G. Mazarakis, and E. L. Neau 1992 13 p Presented at the American Welding Society Meeting, Cambridge, MA, 21-23 Sep. 1992
(Contract DE-AC04-76DP-00789)
(DE93-000745; SAND-92-1938C; CONF-9209238-1) Avail: CASI HC A03/MF A01

High energy electron beam accelerator technology has been developed over the past three decades in response to military and energy-related requirements for weapons simulators, directed-energy weapons, and inertially-confined fusion. These applications required high instantaneous power, large beam energy, high accelerated particle energy, and high current. These accelerators are generally referred to as 'pulsed power' devices, and are typified by accelerating potential of millions of volts (MV), beam current in thousands of amperes (KA), pulse duration of tens to hundreds of nanoseconds, kilojoules of beam energy, and instantaneous power of gigawatts to teffawatts (10(exp 9) to 10(exp 12) watts). Much of the early development work was directed toward single pulse machines, but recent work has extended these pulsed power devices to continuously repetitive applications. These relativistic beams penetrate deeply into materials, with stopping range on the order of a centimeter. Such high instantaneous power deposited in depth offers possibilities for new material fabrication and processing capabilities that can only now be explored. Fundamental techniques of pulse compression, high voltage requirements, beam generation and transport under space-charge-dominated conditions will be discussed in this paper. DOE

OBJECT-ORIENTED SIMULATION FOR THE SUPERCONDUCTING SUPER COLLIDER
J. Zhou Jun. 1992 18 p Presented at the Object Oriented Simulation Conference, San Diego, CA, 17-20 Jan. 1992
(Contract DE-AC35-89ER-40486)
(DE92-015962; SSCL-Preprint-122; CONF-930113-1) Avail: CASI HC A03/MF A01

The design and implementation of an object-oriented simulation environment called OZ for the Superconducting Super Collider (SSC) is described. The design applies object-oriented technology to data visualization, behavior modeling, dynamic simulation and version control. A meta class structure is proposed to model different types of objects in large systems by their functionality. OZ provides a direct-manipulation user interface which allows the user to visualize the data as an object in the database and interactively model the component of the system. Modeling can be exercised at different levels of the class hierarchy and then can be dynamically bound into a system for simulation. Inheritance is used to derive new configurations of the system or subsystem from the existing one, and specify an object's behavior. Delegation is used to construct a system by instantiating existing objects and 'stealing' their methods by delegators. The implementation uses C++, GLISTK library, InterViews 2.6, ISTK library, GNU C++ library, GLISH event sequencer, NIH class library, and ObjectStore. DOE

PROBING THE WWZ VERTEX AT 500 GeV E(+)E(-) COLLIDER
S. Ambrosanio and B. Mele (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 16 Oct. 1991 6 p Presented at Workshop on E(+)E(-) Collisions at 500 GeV, the Physics Potential, Hamburg, Germany, 2-3 Sep. 1991
(Preprint-831; ETN-93-92934) Avail: CASI HC A02/MF A01

The cross sections and distributions for the process of positron-electron decays to Z neutral-nu-nu(bar) versus the possible charge conjugation and space inversion (CP) conserving anomalous couplings are studied. An explicit form for the squared matrix element is presented, as well as total cross sections and distributions for several square root of s versus the eta(sub Z) and lambda(sub Z). The total cross section versus eta for lambda = 0 or versus lambda for eta 0 at square root of s = 500 GeV is shown. The effect of the anomalous WWZ couplings on the Z's energy, transverse momentum and rapidity distributions is presented. The bounds on the (eta, lambda) plane are derived. ESA

(Contract DE-FG02-91ER-40671)
(DE93-001793; DOE/ER-40671/1) Avail: CASI HC A03/MF A01

The goal of this research is to understand the fundamental constituents of matter and their interactions. At this time, the following activities are

underway: e(+)e(-) interactions and Z(sup 0) physics at CERN; studies to upgrade the L3 detector at LHC; very high statistics charm physics at Fermilab; search for the H particle at BNL; search for the fifth force; rare kaon decay experiments at BNL; study of B-meson physics at hadron colliders; e(+)e(-) pair creation by light at SLAC; R&D related to SSC experiments and the GEM detector; and theoretical research in elementary particle physics and cosmology. The main additions to the activities described in detail in the original grant proposal are the following: (1) an experiment at SLAC (E-144) to study strong-field QED effects in e-laser and gamma-laser collisions; and (2) a search for the H particle at BNL (E-188). The R&D efforts for the GEM detector have also considerably expanded. In this paper we give a brief status report for each activity currently under way. DOE

ENERGY MEASUREMENT IN COLLIDER EXPERIMENTS AND SEARCH FOR SCALAR QUARKS IN NEUTRAL Z DEGREE DECAYS AT LEP 1 Ph.D. Thesis
Reino Keranen 1991 71 p Sponsored by Suomen Akatemia and Ministry of Education, Science and Culture
(HU-SEFT-1991-09; ETN-92-92609) Avail: CASI HC A04/MF A01

Research performed during the construction, commissioning, and first year operation of the Detector with Lepton, Photon, and Hadron Identification (DELPHI) Experiment at the Large Electron Positron (LEP1) Storage Ring is reported. The individual contributions described follow the evolution of the experiment. The contributions to hardware, software development, and the final physics analysis are discussed. Special attention is given to topics on techniques of the energy measurement in collider experiments and the search for supersymmetry in elementary particle phenomenology. Motivation for the study was to understand to what extent complete event detection and reconstruction are realized in modern particle experiments. The results from the high statistics LEP data improved the precision of the basic free parameters of the Standard Model, and they have constrained the most popular scenarios of the new physics beyond it. The model is being verified at the level of quantum corrections, thus, conceptually approaching the status of quantum electrodynamics. ESA

SEARCH FOR pp DECAY TO NEUTRAL H DECAY TO (NEUTRAL Z)(NEUTRAL Z) DECAY TO (mu +)(mu -)(mu +)(mu -) AT THE LHC
Aleandro Nisati (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 18 Jan. 1991 18 p Presented at Large Hadron Collider Workshop, Aachen, Germany, 4-9 Oct. 1990
(Nota-Interna-970; ETN-92-92599) Avail: CASI HC A03/MF A01

The requirements on the lepton momentum resolution in experiments at the Large Hadron Collider (LHC) are analyzed. The detection of the decay of the neutral Higgs boson into four leptons is used as a test bench. The results of the calculation of the main sources of events with at least four muons in the region m(sub 4)mu greater than m sub neutral Z are reported. Different muon momentum resolution effects are discussed. The possibility of using a 'modest' resolution of about 10 together with a simple technique to improve the Higgs mass resolution is reported. ESA

MUON RATES AT THE LHC
Aleandro Nisati (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 18 Jan. 1991 16 p Presented at Large Hadron Collider Workshop 3, Aachen, Germany, 4-9 Oct. 1990
(Nota-Interna-971; ETN-92-92601) Avail: CASI HC A03/MF A01

The muon production cross sections calculated with the Isajet Monte Carlo generator are reported. The Isajet Monte Carlo incorporates corrections with the parton shower approach. The heavy quarks are fragmented into hadrons using the fragmentation ansatz field and Feynman with the Peterson form. The size of the heavy flavor cross section combined with the luminosity of the Large Hadron Collider (LHC) gives more than 100,000 Hz for the muon transverse momentum greater than 5 GeV/c and more than 1000 Hz for the muon transverse momentum greater than 20 GeV/c. The request of having a rate of the order of 100 Hz for a transverse momentum greater than 50 GeV/c is not possible since much physics is suppressed by such a high cut of the P sub T. By demanding two muons with p sub T above 20 GeV/c, the rate does not exceed 30 Hz and is dominated by Z and heavy quark production. ESA

NOVEL METHODS OF ACCELERATION Final Report, 30 Sep. 1988 - 29 Jan. 1992
John A. Nation 29 Jan. 1992 28 p
(Grant AF-AFOSR-0328-88)
(AD-A258045; AFOSR-92-0926TR) Avail: CASI HC A03/MF A01

The work summarized in this report covers two research topics. The first deals with a feasibility study of the use of induction linac technology for the production of a multistage proton accelerator, while the second deals with the generation and application of intense microwave radiation signal for use in a compact high average current electron accelerator. The induction linac study was motivated by the objective of obtaining a high current (several kA) deuteron beam of about 3O MeV for neutron production and also to model the late stages of an induction linac system for use in a heavy ion fusion reactor, and the latter study by the possibility of using ultra high power microwave sources developed in our laboratory and elsewhere for the construction of an electron accelerator for use in applications such as FEL drivers. In this report, we summarized both programs. Details of the results obtained may be found in the published papers, copies of which are appended to this report. GRA

EFFECTS OF IONIZING RADIATION ON SELECTED OPTICAL MATERIALS: AN OVERVIEW
G. R. Wirtenson and R. H. White 30 Jul. 1992 9 p
(Contract W-7405-eng-48)
(DE93-001324; UCRL-ID-111453) Avail: CASI HC A02/MF A01

This report gives an overview of the effects of ionizing radiation on optical materials that may be used in spacecraft sensors. It introduces the relevant phenomena and indicates were more detailed information can be found. The topics covered include radiation induced absorption in ultraviolet transmitting materials, ordinary optical glasses, cerium stabilized optical glasses, and infrared transmitting materials; bleaching and annealing, and radioluminesence. PHOTOELECTROCHEMICAL FABRICATION OF SPECTROSCOPIC DIFFRACTION GRATINGS, PHASE 2 Final Report

R. David Rauh, Michael M. Carrabba, Jianguo Li, Robert F. Cartland, John P. Hachey, and Sam Mathew Feb. 1990 52 p
(Contract NAS5-30086)
(NASA-CR-190875; NAS 1.26:190875) Avail: CASI HC A04/MF A01

This program was directed toward the production of Echelle diffraction gratings by a light-driven, electrochemical etching technique (photoelectrochemical etching). Etching is carried out in single crystal materials, and the differential rate of etching of the different crystallographic planes used to define the groove profiles. Etching of V-groove profiles was first discovered by us during the first phase of this project, which was initially conceived as a general exploration of photoelectrochemical etching techniques for grating fabrication. This highly controllable V-groove etching process was considered to be of high significance for producing low pitch Echelles, and provided the basis for a more extensive Phase 2 investigation. THE COMPONENTS OF AN OPTICAL RS FLIP-FLOP FOR AN INTEGRATED OPTICAL PROCESSOR Report, Sep. 1990 - Jan. 1992
Michael A. Parker, Stuart I. Libby, and Paul D. Swanson Jul. 1992 18 p
(AD-A256879; RL-TR-92-87) Avail: CASI HC A03/MF A01

This report discusses the design, fabrication and test of an optical RS Flip-Flop as an integrated optical memory element. The Flip-Flop has three GaAs-AlGaAs heterostructure lasers with total internal reflection mirrors. A main laser incorporates a saturable absorber to develop the bistable output characteristics. A pump laser bleaches the absorber to set the logic 1 state. A third laser quenches the main laser to reset the device to logic 0. Experiments and data for the laser quenching and bistability are presented. GRA

FIBER-OPTIC THREE AXIS MAGNETOMETER PROTOTYPE DEVELOPMENT
Thomas D. Wang, David G. McComb, Bradley R. Kingston, C. Michael Dube, Kenneth A. Poehls, and Keith Wanser Oct. 1989 82 p
(Contract NAS7-1001; SBIR-08.10-5433)
(NASA-CR-191882; NAS 1.26:191882; DT-8619-89007) Avail: CASI HC A05/MF A01

The goal of this research program was to develop a high sensitivity, fiber optic, interferometric, three-axis magnetometer for interplanetary spacecraft applications. Dynamics Technology, Inc. (DTI) has successfully integrated a low noise, high bandwidth interferometer with high sensitivity metallic glass transducers. Also, DTI has developed sophisticated signal processing electronics and complete data acquisition, filtering, and display software. The sensor was packaged in a compact, low power and weight unit which facilitates deployment. The magnetic field sensor had subgamma sensitivity and a dynamic range of 10(exp 5) gamma in a 10 Hz bandwidth. Furthermore, the vector instrument exhibited the lowest noise level when only one axis was in operation. A system noise level of 1 gamma rms was observed in a 1 Hz bandwidth. However, with the other two channels operating, the noise level increased by about one order of magnitude. Higher system noise was attributed to cross-channel interference among the dither fields. FEATURE EXTRACTION AND CLASSIFICATION OF FLIR IMAGERY USING RELATIVE LOCATIONS OF NON-HOMOGENEOUS REGIONS WITH FEEDFORWARD NEURAL NETWORKS Ph.D. Thesis
Kevin L. Priddy Apr. 1992 119 p
(AD-A256468; AFIT/DS/ENG/92-01) Avail: CASI HC A06/MF A02

The classification of forward looking infrared (FLIR) imagery is explored using Gabor transform decomposition and relative locations of non-homogeneous regions combined with feedforward neural networks. A feature saliency metric is developed from a Bayesian sensitivity analysis of feedforward neural networks. This metric is then used to reduce the dimensionality of the feature vectors used to identify FLIR imagery without any degradation of classification accuracy. Several system architectures are developed using a roving window combined with a series of Gabor filters to produce feature vectors for presentation to a neural network classifier. One architecture uses the Gabor filter coefficients to learn the gestalt of known images. Several of the gestalt networks are then combined to determine the class of an unknown image. Another architecture uses centroid metrics for the cluster of Gabor resonances to feed a backpropagation network acting as a traditional Bayesian classifier. A system architecture is developed which uses the relative locations of texture regions within a user defined template to classify imagery. The relative location architecture is shown to outperform traditional matched filter classifiers. The relative location architecture is shown to be robust in solving the problems presented by crepuscular lighting conditions. GRA

SPATIAL LIGHT MODULATOR NONLINEARITY EFFECTS IN OPTICAL PATTERN RECOGNITION Final Report, Dec. 1990 - Nov. 1991
Tracy D. Hudson Jun. 1992 70 p
(AD-A256184; AD-E951866; AMSMI/TR-RD-WS-92-7) Avail: CASI HC A04/MF A01

Spatial Light Modulators (SLM's) are key elements in real-time optical signal processors. The performance limitations of SLM's have significantly hampered the application of optical pattern recognition systems, such as optical correlators, to Real World problems. Exploration of nonlinear transformations in the Fourier plane of optical processors, such as correlators is of considerable interest. Computer simulations have been extensively reported. Several optically addressed SLM's responses, proposed for use in nonlinear transformation processes, have not been characterized. This report provides experimental data on candidate SLM's: Hughes LCLV, GEC-Marconi SLM, and the University of Colorado-Boulder ferroelectric liquid crystal SLM. Data reported are variations in the driving waveform frequency and amplitude, incident read beam intensity, and spectral variations in the read beam. Equivalent circuit models have been developed to explain modulator response. The nonlinear transformation function of optically addressed SLM's may be used to improve optical processor performance for use as correlators. GRA

SYNTHESIS AND CHARACTERIZATION OF DIPOLAR ORGANIC MOLECULES FOR NONLINEAR OPTICAL MATERIALS Final Report, 1991 - 1992
Dennis J. Rivet 8 May 1992 75 p
(AD-A257111; USNA-TSPR-195) Avail: CASI HC A04/MF A01

The object of this investigation is to design, synthesize, and characterize novel organic materials for efficient second-harmonic generation. Second-harmonic generation is a nonlinear optical phenomenon that can be observed for a variety of inorganic and organic materials, some of which have been incorporated into electrical devices to perform various operations. While most devices at the present time utilize inorganic compounds, the search for highly efficient and easily processable materials has led to the investigation of various classes of organic compounds. In this project, the synthesis of three general classes of molecules was attempted: (1) amphiphilix azo dyes, (2) polymeric p-(dialkyamino)arylamines, and (3) poly(pyridinevinylene). These molecules appear to possess the electronic and structural properties necessary for efficient second-harmonic generation. GRA

HETERODYNE ARRAY FOR MEASUREMENT OF TARGET VELOCITY Patent Application
Marc D. Mermelstein, inventor (to Navy) 30 Jun. 1992 36 p
(AD-D015402; US-Patent-Appl-SN-906649) Avail: CASI HC A03/MF A01

This is a system for determining the angular velocity of a mobile target relative to a station. The system develops first and second reference beams and a beam to the target to enable the target to generate first and second signals. Optical devices, preferably fiber optical devices, responsive to the first and second reference beams and to the first and second signals respectively received from the target at discrete first and second positions on the station, respectively produce first and second interference pattern signals. Each of the received signals has a Doppler shift as a function of the movement of the target. An electrical processing circuit then processes the interference pattern signals to develop a signal indicative of the target's angular velocity. GRA

DIELECTRIC OPTICAL WAVEGUIDE SENSORS INTEGRATED WITH GaAs ACTIVE DEVICES
R. F. Carson, S. A. Casalnuovo, and M. B. Sinclair 1992 11 p
Presented at the The International Society for Optical Engineering (SPIE) Meeting, Boston, MA, 8-11 Sep. 1992
(Contract DE-AC04-76DP-00789)
(DE93-000750; SAND-92-0651C; CONF-9209184-3) Avail: CASI HC A03/MF A01

Dielectric optical waveguides exhibit properties that are well suited to sensor applications. They have low refractive index and are transparent to a wide range of wavelengths. They can react with the surrounding environment in a variety of controllable ways. In certain sensor applications, its is advantageous to integrate the dielectric waveguide on a semiconductor substrate with active devices. In this work, we demonstrate a tamper sensor based on dielectric waveguides that connect epitaxial GaAs-GaAlAs sources and detectors. The tamper sensing function is by attaching particles of absorbing material with high refractive index to the surface of the waveguides. These absorbers are then attached to a lid or cover, as in an integrated circuit package or multi-chip module. The absorbers attenuate the light in the waveguides as a function of absorber interaction. The absorbers are placed randomly on the waveguides, to form a unique attenuation pattern that is registered by the relative signal levels on the photodetectors. When the lid is moved, the pattern of absorbers changes, altering the photodetector signals. The dielectric waveguide arrangement is applicable to a variety of sensor functions, and can make use of resonant coupling properties between low refractive index dielectric waveguides and high-index absorbing materials. (Contract N00014-91-C-0090)
(AD-A256994; UTC-R92-970069-F) Avail: CASI HC A03/MF A01

High contrast ratio exceeding 1200:1 has been obtained in Fabry-Perot structures consisting of InGaAs-GaAs multiple quantum well layers and AlAs-GaAs dielectric mirrors on GaAs substrates. The tuning voltage ranges between 5 to 25 volts, and the wavelength shifts between 4 to 10 nm. The on-loss is about 5 dB. The design of couples-cavity Fabry-Perot structures were completed to obtain a contrast of over 6000:1, and the fabrication is in progress. These structures are designed to yield lower on-loss along with a wider transmission spectrum of greater than 1 nm. Heterojunction Acoustic Charge Transport (HACT) devices were fabricated in various formats including freeze frame features. The HACT device is a type of CCD which uses a surface acoustic wave to propagate charge along an AlGaAs/GaAs heterostructure. It provides a method of addressing the SLM array without using multiple interconnect circuits. GRA

ARMORED FIBER OPTIC CABLES STATEMENT OF GOVERNMENT INTEREST Patent Application
Gerald Holmberg, inventor (to Navy) 10 Jun. 1992 10 p

(AD-D015459; US-Patent-Appl-SN-896633; Navy-Case-72277) Avail: CASI HC A02/MF A01

An armored fiber optic cable is disclosed having both fiber optics and armor wires located outside the cable core in position where the fiber optics experience low strain when the cable is under stress. In one embodiment, metal armor wires and optical fibers embedded in metal tubes are arrayed in one or more layers about and outside the cable core. In another embodiment, KEVLAR armor wires and optical fibers embedded within a hard composite shell are arrayed in one or more layers about and outside the cable core, and a layer of KEVLAR armor is provided surrounding the one or more layers. In each of the embodiments the strains that the fiber optics experience due to core stresses and due to core residual strain is materially reduced over the heretofore known armored fiber optic cables. HIGH-STRENGTH IN-LINE FIBER OPTIC CONNECTOR Patent
Roger L. Morency, inventor (to Navy) and Gregory H. Ames, inventor (to Navy) 19 May 1992 5 p Filed 26 Apr. 1991
(AD-D015446; US-Patent-5,115,483; US-Patent-Appl-SN-691767; US-Patent-Class-385-60) Avail: US Patent and Trademark Office

An in-line fiber optic connector has a pair of ferruled components having ferrules enclosing optical fibers. The optical fibers are connected by placing the faces of said ferrules in abutment with each other inside a split tube. Threaded components that abut the ferruled components bring the faces of the ferrules together by being threaded to each other. This enables the compression between the faces of the ferrules to be closely controlled. GRA

N93-16480 Department of the Navy, Washington, DC.
POLARIZATION INDEPENDENT NARROW CHANNEL WAVELENGTH DIVISION MULTIPLEXING FIBER COUPLER AND METHOD FOR PRODUCING SAME Patent
Richard J. Orazi, inventor (to NAvy) and Matthew N. McLandrich, inventor (to Navy) 9 Jun. 1992 13 p Filed 12 Jun. 1991
(AD-D015473; US-Patent-5,121,453; US-Patent-Appl-SN-718317; US-Patent-Class-385-51) Avail: US Patent and Trademark Office

The invention provides a method for fabricating a polarization independent narrow channel wavelength division multiplexing fiber optic coupler, comprising the following steps: holding two optical fibers in an abutting longitudinal relation along a predetermined length of the fibers; injecting light energy into one of the fibers; fusing the optical fibers together along the predetermined length to form a fused length of a fiber optic coupler; elongating the fused length of the fusing optical fibers; measuring the light energy output from the ends of the first and second fibers; ceasing the fusing and elongating when the measured light energy output from the ends of the first and second fibers indicates that a predetermined number, Ns, of one-half power transfer cycles have occurred in the coupler, where the Nsth one-half power transfer cycle occurs within a K pi phase region of a polarization envelope associated with the coupler, where K is a positive integer. GRA

N93-16481 Department of the Navy, Washington, DC.
GRID FREE, MODULAR, LARGE SCREEN DISPLAY Patent
Parviz Soltan, inventor (to Navy) 7 Jul. 1992 9 p Filed 1 Nov. 1990
(AD-D015474; US-Patent-5,129,028; US-Patent-Appl-SN-608135; US-Patent-Class-385-120) Avail: US Patent and Trademark Office

An improvement for a large screen display eliminates the gap/grid line which is otherwise present between abutted display modules. Each of the display modules has a light emanating/reflecting display surface which provides a visual indication of the information content on a problem of a visual display for the large screen. A diverging strip is superimposed over each gap/grid line and at least a portion of the butting light-radiating display surfaces so that light is diverged from the abutted light-radiating surfaces to optically mask the gap/grid line and present a continuous uninterrupted display across the surface of the large screen display. The diverging strip can be tilted hollow fiber microchannels, tilted optical fibers or tilted plastic fibers inclined or fan-shaped at about a 10-15 deg angle so that the gap/grip lines are optically masked. Optionally, a diverger panel as big as the display module is superimposed over each module extending over the gap/grid line for diverging the light projected from the abutted light radiating panels, thereby optically masking each gap/grid line. A linear face plate is mounted on the strip to improve the viewing angle. GRA

N93-16495 Department of the Navy, Washington, DC.
OPTICAL SYSTEM FOR LINEARIZING NON-LINEAR ELECTRO-OPTIC Patent
J. K. Pillow, inventor (to Navy) 28 Jul. 1992 5 p Filed 19 Feb. 1991
(AD-D015496; US-Patent-5,134,361; US-Patent-Appl-SN-657015) Avail: US Patent and Trademark Office

A device for rapidly measuring voltages by electro-optic or magneto-optic means exhibits a substantially linear response over much of its operating range. The device employs the Pockels effect in which the orientation of polarized light is altered in direct response to applied voltages. The response of the subject device is made substantially more linear by dividing the polarized light into two beams and retarding the phase of the second beam by one-quarter wavelength, attenuating its intensity by a factor of approximately four, and passing it through a second Pockels cell having a transducer constant of one half that of the first Pockels cell and then recombining, or superpositioning, the first and second beams of light, thus yielding a substantially linear response over much of the applied voltage range. GRA

EXACT CALCULATION OF LIGHT SCATTERING FROM A PARTICLE ON A MIRROR
B. R. Johnson 15 Nov. 1992 23 p
(ATR-92(8476)-1) Avail: CASI HC A03/MF A01

Exact methods have been developed for calculating light scattering from particles on a perfectly reflecting surface. The computed solutions obey Maxwell's equations and the appropriate boundary conditions. A brief discussion of the theory is followed by a presentation and discussion of selected scattering results. Comparisons are made with the predictions of Young's forward scatter Mie theory model. Under certain conditions the exact results differ significantly from Mie theory. The exact differential cross sections exhibit large amplitude oscillations that are not predicted by Mie theory. The bidirectional reflectance distribution function (BRDF) is also calculated using exact scattering theory for both spherical and hemispherical particles that are both absorptive (complex index of refraction) and nonabsorptive (real index of refraction). These exact BRDF results are compared to the predictions of Young's model. Author

SELF-SIMILARITY IN STIMULATED RAMAN SCATTERING
D. Levi (Maryland Univ., Baltimore.), C. R. Menyuk, and P. Winternitz (Montreal Univ., Quebec) 8 Apr. 1992 15 p Submitted for publication Sponsored in part by NRL; Canadian Natural Sciences and Engineering Research Council; FCAR; Istituto Nazionale di Fisica Nucleare; and NATO
(Grant NSF ECS-91-14191)
(Preprint-878; ETN-93-92978) Avail: CASI HC A03/MF A01

The transient stimulated Raman scattering is discussed. The equations which govern stimulated Raman scattering in the transient limit are integrable. In contrast, solitons are transient and the behavior of the system at long distances is dominated by self similar solutions which may be found by symmetry reduction. Rules to determine the self similar solution, toward which a system tends to, are given. Numerical results indicating the correctness of the rules are included. An experiment to verify theoretical predictions is presented. It is shown for general initial conditions precisely which self similar solution the system tends toward at long distances. It is argued that this behavior, in which self similar solutions dominate the long distance evolution, should appear in nonlinear optical systems with memory. ESA

AN INTERFEROMETER HAVING FUSED OPTICAL FIBERS, AND APPARATUS AND METHOD USING THE INTERFEROMETER Patent Application
Richard F. Hellbaum, inventor (to NASA), Richard O. Claus, inventor (to NASA), Kent A. Murphy, inventor (to NASA), and Michael F. Gunther, inventor (to NASA) 1 Oct. 1992 25 p
(NASA-Case-LAR-14640-1-CU; NAS 1.71:LAR-14640-1-CU; US-Patent-Appl-SN-956685) Avail: CASI HC A03/MF A01

An interferometer includes a first optical fiber coupled to a second optical fiber by fusing. At a fused portion, the first and second optical fibers are cut to expose respective cores. The cut or fused end of the first and second optical fibers is arranged to oppose a diaphragm or surface against which a physical phenomenon such as pressure or stress, is applied. In a first embodiment, a source light which is generally single-mode monochromatic, coherent light, is input to the first optical fiber and by evanescence, effectively crosses to the second optical fiber at the fused portion. Source light from the second optical fiber is reflected by the diaphragm or surface, and received at the second optical fiber to generate an output light which has an intensity which depends upon interference of reference light based on the source light, and the reflected light reflected from the diaphragm or surface. The intensity of the output light represents a positional relationship or displacement between the interferometer and the diaphragm or surface. NASA

Phase zone plates of high focusing efficiency and submicron resolution have been demonstrated in the hard x-ray region. A scanning microscope based on these focusing optics will create many new applications. Preliminary results in the applications of the microscope are reported. In the area of imaging, we have utilized absorption contrast to clearly identify the locations of Au and Ni constituents in a sample of two interleaved grids. Micro-EXAFS spectra has also been obtained on a Ni foil. Fluorescence from a nuclear fuel sample, as an example of microanalysis, has revealed the elemental distribution at the interfaces. Lastly, microdiffraction from AgBr crystallites was studied. DOE

DUAL-BAND INFRARED IMAGING APPLICATIONS: LOCATING BURIED MINEFIELDS, MAPPING SEA ICE, AND INSPECTING AGING AIRCRAFT
N. K. DelGrande, P. F. Durbin, and D. E. Perkins Sep. 1992 8 p Presented at the Quantitative Nondestructive Evaluation Conference, San Diego, CA, 19-24 Jul. 1992
(Contract W-7405-eng-48)
(DE93-000516; UCRL-JC-111214; CONF-9207155-1) Avail: CASI HC A02/MF A01

We discuss the use of dual-band infrared (DBIR) imaging for three quantitative NDE applications: location buried surrogate mines, mapping sea ice thicknesses, and inspecting subsurface flaws in aging aircraft parts. Our system of DBIR imaging offers a unique combination of thermal resolution, detectability, and interpretability. Pioneered at Lawrence Livermore Laboratory, it resolves 0.2 C differences in surface temperatures needed to identify buried mine sites and distinguish them from surface features. It produces both surface temperature and emissivity-ratio images of sea ice, needed to accurately map ice thicknesses (e.g., by first removing clutter due to snow and surface roughness effects). The DBIR imaging technique depicts subsurface flaws in composite patches and lap joints of aircraft, thus providing a needed tool for aging aircraft inspections. DOE

OPERATOR-TAILORED ADJUSTABLE CONTROL STATION WITH MOVABLE MONITORS AND CAMERAS FOR VIEWING SYSTEMS IN ROBOTICS AND TELEOPERATIONS Patent Application
Daniel B. Diner, inventor (to NASA) 28 Sep. 1992 33 p
(NASA-Case-NPO-17837-1-CU; NAS 1.71:NPO-17837-1-CU; US-Patent-Appl-SN-954109) Avail: CASI HC A03/MF A01

Real-time video presentations are provided in the field of operator-supervised automation and teleoperation, particularly in control stations having movable cameras for optimal viewing of a region of interest in robotics and teleoperations for performing different types of tasks. Movable monitors to match the corresponding camera orientations (pan, tilt, and roll) are provided in order to match the coordinate systems of all the monitors to the operator internal coordinate system. Automated control of the arrangement of cameras and monitors, and of the configuration of system parameters, is provided for optimal viewing and performance of each type of task for each operator since operators have different individual characteristics. The optimal viewing arrangement and system parameter configuration is determined and stored for each operator in performing each of many types of tasks in order to aid the automation of setting up optimal arrangements and configurations for successive tasks in real time. Factors in determining what is optimal include the operator's ability to use hand-controllers for each type of task. Robot joint locations, forces and torques are used, as well as the operator's identity, to identify the current type of task being performed in order to call up a stored optimal viewing arrangement and system parameter configuration. MULTISENSOR PERCEPTION AND SCENE INTERPRETATION Ph.D. Thesis - Toulouse Univ.
Pierrick Grandjean 1991 185 p In FRENCH
(LAAS-91305; ETN-92-92546) Avail: CASI HC A09/MF A02

The problem of scene interpretation by a multisensor perception machine is considered. Interpreting means representing the environment by a set of geometric primitives (three dimensional modeling) and object models (recognition). Both accuracy and reliability can be improved by using multiple and/or different sensors. A synthetic approach for modeling the sensor abilities and the structure of a multisensor system is proposed, and a generic technique for numeric fusion, based on probabilistic representation of primitive accuracy, is presented. On the basis of these concepts and techniques, a three dimensional polyhedral modeling system and a generic multisensor system for three dimensional object recognition were developed. The latter relies on the hypothesize and test paradigm and uses declarative object and sensor models that were previously compiled into specific knowledge structures. It is validated by experimental results in real environments, with real life objects (pieces of furniture) in cluttered scenes. The experimental set up is composed of the three dimensional modeling system, a stereovision system, and several black and white and color cameras. The problem of estimating the confidence of multisensory interpretation hypotheses is analyzed and it appears to be made of two complementary notions: similarity and ambiguity. An approach is developed, in a Bayesian framework, that relies on an experimental determination of

the sensor data ambiguity. This work enables one to tackle the problems of controlling the algorithm and choosing the sensor to use, that become central issues in a multisensor system. This system is part of the experimental demonstrator of the Esprit Project, SKIDS. Some of its other interpretation functionalities are presented: consistency maintenance and perception planning. A STUDY ON FOCUSING IN TELESCIENCE USING THE TELEPODI BREADBOARD

C. L. Pinches (Imperial Coll. of Science and Technology, London England), E. A. Kuijpers, and F. Spaan 25 Jan. 1991 52 p

(Contract NIVR-02607-N)

(NLR-TP-91036-U; ETN-92-92513) Copyright Avail: CASI HC A04/MF A01

Research was conducted using the Prototype Optical Diagnostic Instrument (PODI). This breadboard was extended to TelePODI (Teleoperated PODI) to allow for the study of telescience and image processing for microgravity related instrumentation. Microgravity experiments operated using telescience concepts face certain constraints. The effect of the constraints on the focusing task are identified. Four types of focusing strategies, which provide a natural means of focusing in the presence of these constraints, are described. Three specific strategies are implemented as part of the teleoperated prototype optical diagnostic instrument breadboard using a task dependent man machine interface. Evaluation of these strategies is based on considerations of accuracy of focus, working range and human factors issues. ESA

ENHANCED POLARIZATION-DEPENDENT COUPLING BETWEEN AN OPTICAL WAVEGUIDE AND LATERALLY COUPLED PHOTODETECTOR

Konrad Kapser and Peter P. Deimel 1991 5 p Repr. from J. Appl. Phys., v. 70, no. 1, 1 Jul. 1991 p 13-16 Sponsored by BMFT

(MBB-Z-0338-90-PUB; ETN-92-92744) Avail: CASI HC A01/MF A01

Parameters for an optimal matching layer between a waveguide and a laterally coupled photodetector for transverse electric (TE) and transverse magnetic (TM) modes were calculated. A difference was found in the order of a few percent between the classical and exact calculations based on optical models concerning the optimal matching layer thickness. Also, the thickness of the matching layer depends critically on the thickness of the absorbing layer. Comparing TE and TM modes, the absorption maxima for TE(TM) and the minima for TM(TE) coincide approximately, and the maxima and minima depend on the matching layer thickness. ESA

(Contract MDA972-92-C-0053; ARPA Order 8557)

(AD-A257695) Avail: CASI HC A03/MF A01

We have included the gradient correction to the local density approximation, and used it to calculate the cohesive energies for HgTe, CdTe, ZnTe, and ZnSe. We find excellent agreement with experiment. The gradient correction was also added to the defect formation energies in HgTe (used as a model for HgCdTe). Again, the calculated defect densities are in very good agreement with experiment. We have also examined the band structure of HgCdTe and find it to be highly nonparabolic; we have begun to explore the consequences on the defect densities and other device properties. We have examined the properties of dislocations in HgCdTe and conclude that the trapping of carriers at localized states at the dislocation core is not responsible for the observed effects of dislocations on devices. We are currently examining the effect of dislocation-related strain fields on the piezoelectric HgCdTe and their consequences on device properties. We have begun to calculate the defect formation energies in ZnSe, including relaxation of the nearest neighbors. GRA

MOLECULAR FILMS FOR OPTO-ELECTRONICS Final Report, 1 Oct. 1989 - 30 Jun. 1992

J. O. Williams 24 Sep. 1992 43 p

(Contract DAJA45-89-C-0036)

(AD-A258070) Avail: CASI HC A03/MF A01

Molecular dynamics computer simulations have been used to model monolayer and trilayer Langmuir-Blodgett films formed by model amphiphilic molecules. Several factors have been identified that control film structure and stability, thus giving insight into optimum molecular design. Head-groups and the substituent position of hydrocarbon chains should be designed to maximize the stability of layer-like packing. Molecular tilt is an important factor since it results in local structural defects and roughening of interfaces which could lead to formation of long range inhomogeneities. Numerical calculations of non-linear optical response have been performed for model LB films in which molecules are treated as rigid strings of beads to represent their size, shape and orientation. Interactions between molecules are obtained as planewise dipole sums which prove to be negligible except within a layer. GRA

PHOTOREFRACTIVE PROPERTIES OF DOPED BaTiO 3 AND SBN Final Report, Feb. 1986 - May 1992

Cardinal Warde Dec. 1991 88 p

(Contract F19628-85-K-0050; DARPA Order 5397)

(AD-A257989; RL-TR-91-382) Avail: CASI HC A05/MF A01

Several novel photorefractive scattering processes were studied. Isotropic scattering of a single intense pump beam was observed and modeled. Numerical calculations, performed using material parameters consistent with the previous experiments, yielded scattering cross sections in excellent agreement with the observations. Anisotropic scattering of a single extraordinary polarized beam into conical rings of light was also observed. Using a phase matching condition and the electrooptic tensor symmetry properties of BaTiO3, the scattering process of the inner ring was uniquely determined. A model which describes the formation of the outer ring was also proposed. GRA

MICROCOMPUTER SIMULATION OF A FOURIER APPROACH TO OPTICAL WAVE PROPAGATION M.S. Thesis

John G. Upton Jun. 1992 114 p

(AD-A257598) Avail: CASI HC A06/MF A02

This thesis uses spatial impulse response theory adapted from continuous-wave Fourier diffraction theory as the basis for a microcomputer program to model pulsed optical wave propagation. Programs to generate uniform circular and uniform square excitation functions are included, along with examples of the spatial impulse response for each. Additionally, two new excitation functions with circular Gaussian and circular Bessel spatial distributions are modelled for use in future research. All programs have been written using the MATLAB software package. This effort provides a means to analyze the transient optical wave propagation of a spatially filtered optical source. GRA

MHD INTEGRATED TOPPING CYCLE PROJECT

Jul. 1992 71 p

(Contract DE-AC22-87PC-90274)

(DE92-041285; DOE/PC-90274/T19; MHD-ITC-92-168) Avail: CASI HC A04/MF A01

This eighteenth quarterly technical progress report of the MHD Integrated Topping cycle Project presents the accomplishments during the period November 1, 1991 to January 31, 1992. The precombustor is fully assembled. Manufacturing of all slagging stage components has been completed. All cooling panels were welded in place and the panel/shell gap was filled with RTV. Final combustor assembly is in progress. The low pressure cooling subsystem (LPCS) was delivered to the CDIF. Second stage brazing issues were resolved. The construction of the two anode power cabinets was completed. DOE

PARTICLE SIMULATION ALGORITHMS WITH SHORT-RANGE FORCES IN MHD AND FLUID FLOW

S. Cable, T. Tajima, and K. Umegaki Jul. 1992 17 p

(Contract DE-FG05-80ET-53088)

(DE93-000407; DOE/ET-53088/564; IFSR-564) Avail: CASI HC A03/MF A01

Attempts are made to develop numerical algorithms for handling fluid flows involving liquids and liquid-gas mixtures. In these types of systems, the short-range intermolecular interactions are important enough to significantly alter behavior predicted on the basis of standard fluid mechanics and magnetohydrodynamics alone. We have constructed a particle-in-cell (PIC) code for the purpose of studying the effects of these interactions. Of the algorithms considered, the one which has been successfully implemented is based on a MHD particle code developed by Brunel et al. In the version presented here, short range forces are included in particle motion by, first, calculating the forces between individual particles and then, to prevent aliasing, interpolating these forces to the computational grid points, then interpolating the forces back to the particles. The code has been used to model a simple two-fluid Rayleigh-Taylor instability. Limitations to the accuracy of the code exist at short wavelengths, where the effects of the short-range forces would be expected to be most pronounced. DOE

TOROIDAL EFFECTS ON DRIFT WAVE TURBULENCE

M. J. LeBrun, T. Tajima, M. G. Gray, G. Furnish, and W. Horton 23 Sep. 1992 77 p

(Contract DE-FG05-80ET-53088)

(DE93-000498; DOE/ET-53088/563; IFSR-563) Avail: CASI HC A05/MF A01

The universal drift instability and other drift instabilities driven by density and temperature gradients in a toroidal system are investigated in both linear and nonlinear regimes via particle simulation. Runs in toroidal and cylindrical geometry show dramatic differences in plasma behavior, primarily due to the toroidicity-induced coupling of rational surfaces through the poloidal mode number m. In the toroidal system studied, the eigenmodes are seen to possess (1) an elongated, nearly global radial extent (2) a higher growth rate than in the corresponding cylindrical system, (3) an eigenfrequency nearly constant with radius, (4) a global temperature relaxation and enhancement of thermal heat conduction. Most importantly, the measured Xi shows an increase with radius and an absolute value on the order of that observed in experiment. On the basis of our observations, we argue that the increase in Xi with radius observed in experiment is caused by the global nature of heat convection in the presence of toroidicity-induced mode coupling. MHD INTEGRATED TOPPING CYCLE PROJECT

Jul. 1992 83 p

(Contract DE-AC22-87PC-90274)

(DE92-041284; DOE/PC-90274/T20; MHD-ITC-92-126) Avail: CASI HC A05/MF A01

This seventeenth quarterly technical progress report of the MHD Integrated Topping Cycle Project presents the accomplishments during the period August 1, 1991 to October 31, 1991. Manufacturing of the prototypical combustor pressure shell has been completed including leak, proof, and assembly fit checking. Manufacturing of forty-five cooling panels was also completed including leak, proof, and flow testing. All precombustor internal components (combustion can baffle and swirl box) were received and checked, and integration of the components was initiated. A decision was made regarding the primary and backup designs for the 1A4 channel. The assembly of the channel related prototypical hardware continued. The cathode wall electrical wiring is now complete. The mechanical design of the diffuser has been completed. DOE

SALIENT ISSUES OF EDGE PHYSICS PERTAINING TO LOSS OF CONFINEMENT: A RESISTIVE MHD ANALYSIS

D. R. Thayer 1991 7 p

(Contract DE-FG03-90ER-54071)

(DE93-000600; DOE/ER-54071/T2) Avail: CASI HC A02/MF A01

The progress that has been made during this fiscal year is significant in the area of tokamak edge plasma transport. The drift-rippling mode model of edge turbulent transport was extended. In particular, the research areas on which they were concentrated include the following topics: (1) The theoretical investigation of the radiatively enhanced transport due to the effects of impurity driven radiation instabilities has been expanded to include a situation with multiple impurities (such as carbon, C(sup 4+), and oxygen, O(sup 6+)); (2) In order to validate the use of the impurity radiation input from the tokamak bolometer experiments in the theoretical edge turbulent transport calculations, the analysis that is utilized to transform impurity brightness data to radiated power profiles has been checked for state population and Abel inversion correctness; (3) The drift-rippling model of edge turbulent transport has been extended to include ionization particle sources in addition to the impurity driven thermal instability drive; and (4) The detailed limiter and realistic edge geometric effects on the edge turbulent transport has been included in the drift-rippling model. PHYSICS OF THE L-MODE TO H-MODE TRANSITION IN TOKAMAKS

K. H. Burrell, T. N. Carlstrom, P. Gohil, R. J. Groebner, J. Kim, T. H. Osborne, H. St.John, R. D. Stambaugh, E. J. Doyle, and R. A. Moyer et al Jul. 1992 11 p Presented at the 14th International Conference on Plasma and 19th EPS Conference on Controlled Fusion and Plasma Physics, Innsbruck (Austria), 29 Jun. - 3 Jul. 1992

(Contract DE-AC03-89ER-51114)

(DE92-040697; GA-A-20993; CONF-920610-14) Avail: CASI HC A03/MF A01

Combined theoretical and experimental work has resulted in the creation of a paradigm which has allowed semi-quantitative understanding of the edge confinement improvement that occurs in the H-mode. Shear in the E x B flow of the fluctuations in the plasma edge can lead to decorrelation of the fluctuations, decreased radial correlation lengths and reduced turbulent transport. Changes in the radial electric field, the density fluctuations, and the edge transport consistent with shear stabilization of turbulence were seen in several tokamaks. The purpose of this paper is to discuss the most recent data in the light of the basic paradigm of electric field shear stabilization and to critically compare the experimental results with various theories. DIAGNOSIS OF PLASMA STATES IN X RAY LASER EXPERIMENTS
Yang Shangjin, Cai Yuqin, and Chunyu Shutai 8 Oct. 1992 16 p Transl. into ENGLISH from unidentified Chinese language document p 73-78
(AD-A256909; FASTC-ID(RS)T-0619-92) Avail: CASI HC A03/MF A01

At an LF-12 laser installation, an Nd glass laser of approximately 1.5 ns pulse width with 500 to 600 J was focussed into a line 120 micrometers wide and 20 mm long and then onto a 1.5 mm thick germanium plane target. A plane crystal spectrograph (wavelength measurement range was between 0.6 and 0.9 nm) with a spatial resolving power was placed in the target chamber to diagnose the germanium plasma state. The corresponding intensity ratio between the quasi-Ne ion spectral lines with 2p-nd (n greater than or equal to 4) energy level transition was used to estimate the plasma electron temperature at 400 to 600 eV. In the laboratory, the measured line spectrum was mainly generated by quasi-Ne Ge XXIII ions; next were the spectral lines generated by quasi-F Ge XXIV ions; the spectral lines generated by quasi-Na Ge XXII ions were relatively weak. In addition, the axial-direction distribution uniformity of linear plasma, and the lateral-direction distribution characteristics of ions were provisionally observed. GRA

TRITIUM PELLET INJECTOR FOR THE TOKAMAK FUSION TEST REACTOR
M. J. Gouge, L. R. Baylor, S. K. Combs, P. W. Fisher, C. R. Foust, and S. L. Milora 1992 14 p Presented at the 43rd Aeroballistic Range Association Meeting, Columbus, OH, 28 Sep. - 2 Oct. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001205; CONF-9209211-1) Avail: CASI HC A03/MF A01

The tritium pellet injector (TPI) for the Tokamak Fusion Test Reactor (TFTR) will provide a tritium pellet fueling capability with pellet speeds in the 1- to 3-km/s range for the TFTR deuterium-tritium (D-T) plasma phase. An existing deuterium pellet injector (DPI) was modified at Oak Ridge National Laboratory (ORNL) to provide a four-shot, tritium-compatible, pipe-gun configuration with three upgraded single-stage pneumatic guns and a two-stage light gas gun driver. The TPI was designed for frozen pellets ranging in size from 3 to 4 mm in diameter in arbitrarily programmable firing sequences at tritium pellet speeds up to approximately 1.5 km/s for the three single-stage drivers and 2.5 to 3 km/s for the two-stage driver. Injector operation is controlled by a programmable logic controller (PLC). The new pipe-gun injector assembly was installed in the modified DPI guard vacuum box, and modifications were also made to the internals of the DPI vacuum injection line, including a new pellet diagnostics package. Assembly of these modified parts with existing DPI components was then completed and the TPI was tested at ORNL with deuterium pellets. Results of the testing program at ORNL are described. The TPI has been installed and operated on TFTR in support of the FY-92 deuterium plasma run period. In 1993, the tritium pellet injector will be retrofitted with a D-T fuel manifold and tritium gloveboxes and integrated into TFTR tritium processing systems to provide full tritium pellet capability. SIMULATION OF A STRONGLY COUPLED PLASMA EXPERIMENT
W. R. Shanahan, J. F. Benage, Jr., and A. E. Greene 1992 4 p Presented at the International Conference on the Physics of Strongly Coupled Plasmas, Rochester, NY, 17-21 Aug. 1992
(Contract W-7405-eng-36)
(DE92-040351; LA-UR-92-2649; CONF-9208135-2) Avail: CASI HC A01/MF A01

An experiment designed to study the properties of moderately to strongly coupled plasmas, featuring the discharge of a capacitor bank through hollow and metal-filled capillaries encased in an insulating block, is simulated with a magnetohydrodynamic numerical code. Emphasis is placed on those features of the experiment which determine the maximum coupling achievable. For the hollow capillary, rapid heating of plasma blown off the sides of the capillary yields elevated temperatures that limit the ion-ion coupling to 0.5. Simulations employing an aluminum-fined capillary yield lower temperatures and persistent coupling parameters greater than 1. Comparisons with experimental data are presented. DOE

ADVANCED MATERIALS: THE KEY TO ATTRACTIVE MAGNETIC FUSION POWER REACTORS
E. E. Bloom 1992 10 p Presented at the 4th International Symposium on Advanced Nuclear Research, Mito City (Japan), 1-8 Feb. 1992
(Contract DE-AC05-84OR-21400)
(DE92-040637; CONF-920264-2) Avail: CASI HC A02/MF A01

Fusion is one of the most attractive central station power sources from the viewpoint of potential safety and environmental impact characteristics. Studies also indicate that fusion can be economically competitive with other options such as fission reactors and fossil-fired power stations. However, to achieve this triad of characteristics we must develop advanced materials with properties tailored for performance in the various fusion reactor systems. This paper discusses the desired characteristics of materials and the status of materials technology in four critical areas: (1) structural material for the first wall and blanket (FWB); (2) plasma-facing materials; (3) materials for superconducting magnets; and (4) ceramics for electrical and structural applications. THE 3D MHD STUDY OF HELIAS AND HELIOTRON

T. Hayashi, T. Sato, W. Lotz, P. Merkel, J. Nuehrenberg, and U. Schwenn Sep. 1992 16 p
(AD-A257116; NIFS-168) Avail: CASI HC A03/MF A01

Properties of magnetic islands induced by the finite pressure effect are numerically analyzed for three-dimensional magnetohydrostatic equilibria of Helias and l = 2 heliotron/torsatron types. For Helias, it is found that an island chain is generated on the 5/6 rational surface, when such a surface appears in the plasma region of a finite-B equilibrium. The island chain, however, is not so dangerous as to destroy the plasma confinement even if it appears in a vanishingly small shear region. Moreover, it is definitely confirmed that the finite pressure effect sometimes exhibits a surprisingly good aspect, namely, that the vacuum islands are removed as B increases, which can be called 'self-healing' of islands. This property can be explained by the numerically discovered fact that the phases of islands induced by the finite pressure effect are always locked, i.e. do not change regardless of B. The way islands appear at finite-B for heliotron/torsatron is significantly different from that for Helias. However, we find the self-healing of islands can also occur for the heliotron configuration. This phenomenon can partly explain the reason why the fragility of surfaces decreases when they are shifted inward by control of the external vertical field Bv, though the configuration develops a magnetic hill. Furthermore, we analyze the diversion properties of the magnetic field outside the last closed magnetic surface for finite-B equilibria, and find that divertor concepts which have been developed from the diversion properties of the corresponding vacuum fields can be maintained for finite-B equilibria for both configurations. NEW HIGH TEMPERATURE PLASMAS AND SAMPLE INTRODUCTION SYSTEMS FOR ANALYTICAL ATOMIC EMISSION AND MASS SPECTROMETRY
A. Montaser 1992 40 p
(Contract DE-FG05-87ER-13659)
(DE92-040602; DOE/ER-13659/6) Avail: CASI HC A03/MF A01

New high temperature plasmas and new sample introduction systems are explored for rapid elemental and isotopic analysis of gases, solutions, and solids using mass spectrometry and atomic emission spectrometry. Emphasis was placed on atmospheric pressure He inductively coupled plasmas (ICP) suitable for atomization, excitation, and ionization of elements; simulation and computer modeling of plasma sources with potential for use in spectrochemical analysis; spectroscopic imaging and diagnostic studies of high temperature plasmas, particularly He ICP discharges; and development of new, low-cost sample introduction systems, and examination of techniques for probing the aerosols over a wide range. DOE

FLUCTUATION STUDIES OF ECH PLASMAS IN THE ATF TORSATRON AND THE IMS STELLARATOR
J. H. Harris, J. B. Wilgen, M. Murakami, L. R. Baylor, T. S. Bigelow, R. J. Colchin, R. A. Dory, N. Dominguez, J. L. Dunlap, and G. R. Dyer et al 1992 11 p Presented at the 14th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Wuerzburg (Germany), 30 Sep. - 7 Oct. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001204; CONF-920913-4) Avail: CASI HC A03/MF A01

The results of experimental studies of fluctuations and transport in ECH plasmas in the ATF torsatron and the IMS stellarator are presented. In ATF, a variety of diagnostics have been used to measure turbulence amplitudes and spectral characteristics throughout the plasma. In the plasma core, density fluctuations with characteristics like those expected for drift waves (possibly connected with trapped electron effects) are seen. In the gradient region, the density fluctuation levels are consistent with those expected for resistive interchange turbulence. In the edge, fluctuations appear to be correlated with density gradients, and the fluctuation-induced particle flux and global particle confinement can be influenced by positive limiter biasing. In IMS, whose parameters model those in the edge of larger devices, two-dimensional (2-D) probe measurements show substantial poloidal variations in the fluctuation-induced particle flux that are most pronounced at the plasma edge; as in ATF, the particle flux can be reduced by positive limiter biasing. The 2-D probe measurements also show good agreement between the plasma poloidal flow velocities determined from the Reynolds stress and force balance. DOE

THEORETICAL PLASMA PHYSICS
A. H. Boozer and G. M. Vahala May 1992 24 p
(Contract DE-FG05-84ER-53176)
(DE92-040854; DOE/ER-53176/8) Avail: CASI HC A03/MF A01

Work during the past year in the areas of classical and anomalous transport, three-dimensional equilibria, divertor physics, and diagnostic techniques using waves is reported. Although much work was done on classical transport, the validity of the guiding-center drift equations, which are the basis of much of the theory, has received little attention. The limitations of the drift approximation are being studied. Work on three-dimensional equilibria, which shows that quasi-helical symmetry is broken in third order in the inverse aspect ratio, on the modification of the current profile due to tearing modes was completed. This work is relevant to the maintenance of a steady-state tokamak by the bootstrap current. Divertor physics is a primary area that required development for ITER. One of the few methods by which the physics of the divertor can be modified or controlled is magnetic perturbations. The effect of magnetic perturbations on the divertor scrapeoff layer in collaboration with Hampton University is being studied. The evolution of magnetic field embedded in a moving plasma is a dynamics problem of potential importance. Renormalization techniques gave important insights first in the theory of phase transitions. The applications of these techniques has extended to many areas of physics, including turbulence in fluids and plasmas. Essentially no diagnostics for magnetic fluctuations inside a fusion-grade plasma exist. A collaborative program with Old Dominion University and the Princeton Plasma Physics Laboratory to develop such a diagnostic based on the conversion of electromagnetic waves from the ordinary to the extraordinary mode is underway. DIAGNOSTIC BEHAVIOR OF THE WIRE ARC PLASMA SPRAY PROCESS
K. A. Kowalsky (Flame-Spray Industries, Inc., Port Washington, NY.), D. R. Marantz (Flame-Spray Industries, Inc., Port Washington, NY.), R. A. Neiser, and M. F. Smith 1992 7 p Presented at the 1992 International Thermal Spray Conference, Orlando, FL, 1-5 Jun. 1992
(Contract DE-AC04-76DP-00789)
(DE93-000717; SAND-92-1288C; CONF-9206135-7) Avail: CASI HC A02/MF A01

Laser two-focus (L2F) velocimetry has been used to measure particle velocities in the Wire Arc Plasma spray process. Particle velocities were measured for aluminum, stainless steel, and copper feedstock with wire diameters of 1.6 mm and 0.9 mm. The Wire Arc Plasma gun was operated in both a single-gas mode, using air, and in a two-gas mode, using a mixture of argon/35 percent hydrogen as the primary plasma gas with pure argon as the secondary gas. The results indicate that maximum particle velocities are as high as 180 m/s for aluminum sprayed using air and 130 m/s using the argon/hydrogen mixture. The results also show that arc current and wire feed rate have little effect on particle velocity; however, particle velocities increase significantly with decreasing wire diameter and with decreasing density of the feedstock material. EXPERIMENTAL EVIDENCE OF OFF-DIAGONAL TRANSPORT TERM AND THE DISCREPANCY BETWEEN ENERGY/PARTICLE BALANCE AND PERTURBATION ANALYSES
Keisuke Nagashima (Japan Atomic Energy Research Inst., Naka.) and Takeshi Fukuda (Japan Atomic Energy Research Inst., Naka.) Dec. 1991 23 p
(DE92-556732; JAERI-M-91-208) Avail: CASI HC A03/MF A01

Evidence of temperature gradient driven particle flux was observed from the sawtooth induced density propagation phenomenon in JT-60. This off-diagonal particle flux was confirmed using the numerical calculation of measured chord integrated electron density. It was shown that the discrepancies between thermal and particle diffusivities estimated from the perturbation method and energy/particle balance analysis can be explained by considering the flux equations with off-diagonal transport terms. These flux equations were compared with the E x B convective fluxes in an electro-static drift wave instability and it was found that the E x B fluxes are consistent with several experimental observations. SMALL STEADY-STATE TOKAMAK (TST) FOR DIVERTOR TESTING
Y. M. Peng, R. J. Colchin, D. W. Swain, B. E. Nelson, J. F. Monday, J. Blevins (Canadian Fusion Fuels Technology Project, Mississauga, Ontario), M. Delisle (Canadian Fusion Fuels Technology Project, Mississauga, Ontario), J. Stringer (Canadian Fusion Fuels Technology Project, Mississauga, Ontario), P. Bonoli (Massachusetts Inst. of Tech., Cambridge.), and M. DeLisle (Canadian Fusion Fuels Technology Project, Mississauga, Ontario) et al 1992 22 p Presented at the 17th Symposium on Fusion Technology, Rome, Italy, 14-18 Sep. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001213; CONF-920930-2) Avail: CASI HC A03/MF A01

The TST is a small steady-state tokamak designed for testing diverters under conditions similar to those anticipated in future large tokamaks. An initial design has R sub 0/a = 2.5, R sub 0 = 0.75 m, a = 0.3 m, and Bt sub 0 = 2.2 T with full inductive capability. With heating and current drive power of 4.5 MW, the heat flux at the plasma edge Q(perpendicular) can be as high as 0.3 MW/sq m. Plasma currents I sub p above 500 kA can be maintained by 1 MW of lower hybrid power (2.45 GHz) for average densities n sub e up to 3 x 10(exp 19)/cu m. Additional power via ICRF (2 MW) and neutral beams (1.5 MW) maintain current for n sub e up to 5 x 10(exp 19)/cu m. Fully demountable, actively cooled, steady state toroidal field coils permit ample access for the auxiliary systems and diverter cassettes. The toroidal field magnets require a steady state supply of less than 40 MW. The size and cost of the TST can be reduced by eliminating the solenoid, reducing Bt sub 0 to 1.4 T, and lowering R sub 0/a to 1.7. This option permits low-R sub 0/a experimentation while maintaining the capability for testing divertors but requires successful noninductive current initiation and maintenance in the low-R sub 0/a regime. DOE

ENHANCEMENT OF D3-D NEUTRAL BEAM SYSTEM FOR HIGHER PERFORMANCE
R. Hong, A. P. Colleraine, D. H. Kellman, J. Kim, J. L. Luxon, A. Nerem, J. Phillips, and J. Wight Sep. 1992 5 p Presented at the 17th Symposium on Fusion Technology, Rome, Italy, 14-18 Sep. 1992
(Contract DE-AC03-89ER-51114)
(DE93-000878; GA-A-21034; CONF-920930-6) Avail: CASI HC A01/MF A01

The D3-D tokamak employs eight neutral beam systems for plasma heating and current drive experiments. These positive ion source neutral beam systems have gone through several improvements in operational technique and in system hardware since the start of conditioning of the first long pulse ion source in December 1986. These improvements have led to the routine operation in deuterium at beam power levels of 20 MW. The improvements in operational technique include filament power supply operating mode, accelerator grid voltage holding capability, mid changes in grid potential gradients. The hardware improvements include installation of arc notching, arc discharge density regulation, and control of neutralizer gas puffing. Each of these improvements are discussed in this paper. Successful testing and operation of the ion source at 93 kV deuterium beam energy, well above the design value of 80 kV, also led to the possibility of enhancing system capability to 28 MW power level, nearly twice the original design value. Upgrading of the beam system to 60 second pulse duration at the currently achieved power level is under consideration. Studies have shown that this pulse length extension can be achieved with improvements in beamline heat handling components and auxiliary systems, especially the power supply system. The drift duct (the section between neutral beam beamline and tokamak) upgrade and protection for the long pulse duration present the greatest challenges, and are crucial to achieving long pulse beam injection into the tokamak plasma. CORRELATION THEORY OF A TWO-DIMENSIONAL PLASMA TURBULENCE WITH SHEAR FLOW
Y. Z. Zhang and S. M. Mahajan Sep. 1992 63 p
(Contract DE-FG05-80ET-53088)
(DE93-000880; DOE/ET-53088/570; IFSR-570) Avail: CASI HC A04/MF A01

When the ion sound effect is neglected, a wide class of electrostatic plasma turbulence can be modelled by a two-dimensional equation for the generalized enstrophy (Psi), an inviscid constant of motion along the turbulent orbits. Under the assumption of a Gaussian stochastic electrostatic potential, an averaged Green's function method is used to rigorously derive equations for the N-particle correlation functions for a dissipative and sheared flow. This approach is equivalent to the cumulant expansion method used to study the Vlasov-Poisson system. For various cases of interest, appropriate equations are solved to obtain the absolute level as well as the detailed structure of the two-point correlation function C(r), and its Fourier transform, the enstrophy spectral function I(k). Uniformly valid analytical expressions are derived for the dissipative but shearless case resulting in a 'fluctuation-dissipation' theorem relating the total spectral intensity to classical viscosity. These self-consistent results show a strong logarithmic modification of the mixing length estimates for the turbulence levels. DOE

ELECTRON-TEMPERATURE-GRADIENT-INDUCED INSTABILITY IN TOKAMAK SCRAPE-OFF LAYERS
H. L. Berk, R. H. Cohen (Lawrence Livermore National Lab., CA.), D. D. Ryutov (Academy of Sciences, USSR, Novosibirsk), and Y. A. Tsidulko (Academy of Sciences, USSR, Novosibirsk) Aug. 1992 42 p
(Contracts DE-FG05-80ET-53088; W-7405-eng-48; DE-FG03-90ER-54079)
(DE93-000623; DOE/ET-53088/568; IFSR-568) Avail: CASI HC A03/MF A01

An electron temperature instability driven by the Kunkel-Guillory sheath impedance, has been applied to the scrape-off layer of tokamaks. The formalism has been generalized to more fully account for parallel wavelength dynamics, to differentiate between electromagnetic and electrostatic perturbations and to account for particle recycling effects. It is conjectured that this conducting wall instability leads to edge fluctuations in tokamaks that produce scrape-off widths of many ion Larmor radii approx. greater than 10. The predicted instability characteristics correlate somewhat with DIII-D edge fluctuation data, and the scrape-off layer width in the DIII-D experiment agrees with theoretical estimates that can be derived from mixing length theory. PLASMA PHYSICS, AND TRANSPORTATION AND USE OF POSITIVELY CHARGED PARTICLE BEAMS Patent Application
Steven P. Slinker, inventor (to Navy), Richard F. Hubbard, inventor (to Navy), and Glenn Joyce, inventor (to Navy) 13 Dec. 1991 17 p
(AD-D015398; US-Patent-Appl-SN-801248) Avail: CASI HC A03/MF A01

The invention pertains to plasma physics, and in particular to and transportation and use of positively charged particle beams. Particle beams of positively charged atoms have potentially a number of useful applications, among which are thin film deposition, semiconductor doping, use as a general laboratory tool, a source of pulsed neutrons (i.e., by impacting a suitable target), shock hardening of materials, advanced military weaponry, and, most interestingly, as the trigger in a nuclear fusion reactor. Unfortunately, a number of these applications require that after the beams are created in particle accelerators, they must travel a considerable distance to their targets. GRA

TOKAMAK TURBULENCE IN SELF-REGULATED DIFFERENTIALLY ROTATING FLOW AND L-H TRANSITION DYNAMICS
P. W. Terry (Wisconsin Univ., Madison.), P. H. Diamond (California Univ., San Diego, La Jolla.), B. A. Carreras, and K. Sidikman 1992 34 p Presented at the International Topical Conference on New Ideas in Tokamak Confinement, La Jolla, CA, 27-29 Jan. 1992
(Contracts DE-AC05-84OR-21400; DE-FG02-89ER-53291)
(DE93-000443; CONF-920142-2) Avail: CASI HC A03/MF A01

An analytical study of turbulence in the presence of turbulently generated differentially rotating flow is presented as a paradigm for fluctuation dynamics in L- and H-mode plasmas. Using a drift wave model, the role of both flow shear and flow curvature (second radial derivative of the poloidal ExB flow) is detailed in linear and saturated turbulence phases. In the strong turbulence saturated state, finite amplitude induced modification of the fluctuation structure near low order rational surfaces strongly inhibits flow shear suppression. Suppression by curvature is not diminished, but it occurs through a frequency shift. A description of L-H mode transition dynamics based on the self-consistent linking of turbulence suppression by differentially rotating flow and generation of flow by turbulent momentum transport is presented. In this model, rising edge temperature triggers a transition characterized by spontaneous generation of differentially rotating flow and decreasing turbulence intensity. DOE

ELECTRON ENERGY LOSS INVESTIGATION OF HOLE-PLASMON EXCITATION FOLLOWING THE IN SITU DOPING OF Si(111) BY BORON
P. J. Chen, J. E. Rowe, and J. T. Yates, Jr. 28 Sep. 1992 24 p
(Contract N00014-82-C-0280)
(AD-A256924; TR-53) Avail: CASI HC A03/MF A01

High resolution electron energy loss spectroscopy (HREELS) measurements have been performed on Si(111) surfaces heavily p-doped by the decomposition of adsorbed decaborane. After thermal decomposition of the decaborane to produce B atoms on the surface, the low energy electron diffraction pattern shows a (square root of 3 x square root of 3) R30 deg periodicity due to the presence of 1/3 monolayer of boron in the second complete layer. The HREELS data exhibit two strong features: (1) the B-Si dipole mode at 96 meV and (2) a broad surface plasmon mode is observed at approx. 100 meV loss energy due to the free carriers in the region below the B-reconstructed surface layer. The electron energy dependence was studied of the surface plasmon mode in order to determine the feasibility of using HREELS to determine the depth profile of the free carriers due to B diffusion into the region 100 to 1000 A below the surface. Unexpectedly, it was found that kinematic factors play an important role in the electron energy range used, 1.5 to 28 eV, and thus limit the degree of quantitative information that can be obtained about the carrier depth profile from HREELS data. GRA

HIGH BETA AND SECOND STABILITY REGION TRANSPORT AND STABILITY ANALYSIS
M. H. Hughes, M. W. Phillps, A. M. M. Todd, J. Krishnaswami, and R. Hartley Sep. 1992 90 p
(Contract DE-FG02-89ER-51124)
(DE93-000886; DOE/ER-51124/7) Avail: CASI HC A05/MF A01

This report describes ideal and resistive studies of high-beta plasmas and of the second stability region. Emphasis is focused on 'supershot' plasmas in TFIR where MHD instabilities are frequently observed and which spoil their confinement properties. Substantial results are described from the analysis of these high beta poloidal plasmas. During these studies, initial pressure and safety factor profiles were obtained from the TRANSP code, which is used extensively to analyze experimental data. Resistive MBD stability studies of supershot equilibria show that finite pressure stabilization of tearing modes is very strong in these high beta(p) plasmas. This has prompted a detailed re-examination of linear tearing mode theory in which we participated in collaboration with Columbia University and General Atomics. This finite pressure effect is shown to be highly sensitive to small scale details of the pressure profile. Even when an ad hoc method of removing this stabilizing mechanism is implemented, however, it is shown that there is only superficial agreement between resistive MBD stability computation and the experimental data. While the mode structures observed experimentally can be found computationally, there is no convincing correlation with the experimental observations when the computed results are compared with a large set of supershot data. We also describe both the ideal and resistive stability properties of TFIR equilibria near the transition to the second region. It is shown that the highest beta plasmas, although stable to infinite-n ideal ballooning modes, can be unstable to the so called 'infernal' modes associated with small shear. The sensitivity of these results to the assumed pressure and current density profiles is discussed. Finally, we describe results from two collaborative studies with PPPL. The first involves exploratory studies of the role of the 1/1 mode in tokamaks and, secondly, a study of sawtooth stabilization using ICRF. DOE

JT-60 CONFIGURATION PARAMETERS FOR FEEDBACK CONTROL DETERMINED BY REGRESSION ANALYSIS
Makoto Matsukawa, Nobuyuki Hosogane, and Hiromasa Ninomiya Dec. 1991 33 p
(DE92-556731; JAERI-M-91-206) Avail: CASI HC A03/MF A01

The stepwise regression procedure was applied to obtain measurement formulas for equilibrium parameters used in the feedback control of JT-60. This procedure automatically selects variables necessary for the measurements, and selects a set of variables which are not likely to be picked up by physical considerations. Regression equations with stable and small multicollinearity were obtained and it was experimentally confirmed that the measurement formulas obtained through this procedure were accurate enough to be applicable to the feedback control of plasma configurations in JT-60. DOE

B4C SOLID TARGET BORONIZATION OF THE MST REVERSED-FIELD PINCH
D. J. DenHartog, M. Cekic, G. Fiksel, S. A. Hokin, R. D. Kendrick, S. C.

Prager, and M. R. Stoneking Oct. 1992 25 p
(Contract DE-FG02-85ER-53198)
(DE93-002736; DOE/ER-53198/205) Avail: CASI HC A03/MF A01

A solid rod of hot-pressed boron carbide is being used as the source of boron during boronization of MST. The most striking result of this procedure is the reduction in oxygen contamination of the plasma (O 3 radiation, characteristic of oxygen at the edge, falls by about a factor of 3 after boronization.). The radiated power fraction drops to about half its initial value. Particle reflux from the wall is also lowered, making density control simpler. The rod (12.7 mm diameter) is inserted into the edge plasma of normal high-power RFP discharges. B4C is ablated from the surface of the rod and deposited in a thin film (a-B/C:H) on the walls and limiters. The energy flux carried by 'superthermal' (not 'runaway') electrons at the edge of MST appears to enhance the efficient, non-destructive ablation of the boron carbide rod. DOE

THERMAL PLASMA PROCESSING OF MATERIALS
E. Pfender and J. Heberlein Feb. 1992 33 p
(Contract DE-FG02-85ER-13433)
(DE93-003118; DOE/ER-13433/4) Avail: CASI HC A03/MF A01

Emphasis has been on plasma synthesis of fine powders, plasma chemical vapor deposition (CVD), related diagnostics, and modeling work. Since plasma synthesis as well as plasma CVD make frequent use of plasma jets, the beginning has been devoted to plasma jets and behavior of particulates injected into such plasma jets. Although most of the construction of the Triple-Torch Plasma Reactor (TTPR) has already been done, modifications have been made in particular modifications required for plasma CVD of diamond. A new reactor designed for Counter-Flow Liquid Injection Plasma Synthesis (CFLIPS) proved to be an excellent tool for synthesis of fine powders as well as for plasma CVD. An attempt was made to model flow and temperature fields in this reactor. Substantial efforts were made to single out those parameters which govern particle size, size distribution, and powder quality in our plasma synthesis experiments. This knowledge is crucial for controlling the process and for meaningful diagnostics and modeling work. Plasma CVD of diamond films using both reactors has been very successful and we have been approached by a number of companies interested in using this technology for coating of tools. DOE

MAP MODEL FOR NONLINEAR ALPHA PARTICLE INTERACTION WITH TOROIDAL ALFVEN WAVES
H. L. Berk, B. N. Breizman, and H. Ye Sep. 1992 30 p
(Contract DE-FG05-80ET-53088)
(DE93-001851; DOE/ET-53088/566; IFSR-566) Avail: CASI HC A03/MF A01

A map model has been developed for studying the nonlinear interaction of alpha particles with the toroidal Alfven eigenmodes. The map is constructed by assuming a linear interaction during a single poloidal transit, which allows the study of the nonlinear interaction over many transits. By using this map, analytic expressions are obtained for the particle nonlinear bounce frequency, and the wave amplitude threshold for the onset of particle orbit stochasticity. The map model can also facilitate self-consistent simulations which incorporate the time variation of the waves. DOE

MULTIPLE-GAP THEORY OF TOROIDAL ALFVEN WAVES WITH KINETIC EFFECTS
X. D. Zhang, Y. Z. Zhang, and S. M. Mahajan Sep. 1992 20 p
(Contract DE-FG05-80ET-53088)
(DE93-001852; DOE/ET-53088/573; IFSR-573) Avail: CASI HC A03/MF A01

The stability of kinetic toroidal Alfven waves with multi-gap coupling is analyzed by using the two-dimensional ballooning transform. An alternate convergence scheme, based on the smallness of the inverse aspect ratio, is devised. The resulting wave functions are oscillatory and do not balloon in contrast to the wave functions of conventional ballooning theory. It is shown that the single-gap theory is a special, weak shear (s yields 0) limit of the formalism. Analytical and numerical results for the two fundamental branches, the ideal toroidal Alfven eigenmode (TAE), and the kinetic toroidal Alfven eigenmode (KTAE) are presented and discussed. DOE

CURRENT DRIVE WITH FAST WAVES, ELECTRON CYCLOTRON WAVES, AND NEUTRAL INJECTION IN THE D3-D TOKAMAK
R. Prater, C. C. Petty, R. I. Pinsker, S. C. Chiu, J. S. deGrassie, R. W. Harvey, H. Ikel, Y. R. Lin-Liu, T. C. Luce, and R. A. James Sep. 1992 18 p Presented at the Topical Conference Meeting on Radio Frequency Heating and Current Drive of Fusion Devices, Brussels (Belgium), 7-10 Jul. 1992
(Contracts DE-AC03-89ER-51114; DE-AC02-78ET-51013; DE-AC02-76CH-03073; DE-AC05-84OR-21400)
(DE93-001359; GA-A-21003; CONF-920717-5) Avail: CASI HC A03/MF A01

Current drive experiments have been performed on the D3-D tokamak using fast waves, electron cyclotron waves, and neutral injection. Fast wave experiments were performed using a 4-strap antenna with 1 MW of power at 60 MHz. These experiments showed effective heating of electrons, with a global heating efficiency equivalent to that of neutral injection even when the single pass damping was calculated to be as small as 5 percent. The damping was probably due to the effect of multiple passes of the wave through the plasma. Fast wave current drive experiments were performed with a toroidally directional phasing of the antenna straps. Currents driven by fast wave current drive (FWCD) in the direction of the main plasma current of up to 100 kA were found, not including a calculated 40 kA of bootstrap current. Experiments with FWCD in the counter current direction showed little current drive. In both cases, changes in the sawtooth behavior and the internal inductance qualitatively support the measurement of FWCD. Experiments on electron cyclotron current drive have shown that 100 kA of current can be driven by 1 MW of power at 60 GHz. Calculations with a Fokker-Planck code show that electron cyclotron current drive (ECCD) can be well predicted when the effects of electron trapping and of the residual electric field are included. Experiments on driving current with neutral injection showed that effective current drive could be obtained and discharges with full current drive were demonstrated. Interestingly, all of these methods of current drive had about the same efficiency, 0.015(10)(exp 20) MA/MW/sq m. DOE

MAGNETIC FUSION THEORY AND EXPERIMENTAL RESEARCH AND DEVELOPMENT
1992 35 p
(Contract DE-FG03-86ER-53225)
(DE93-002539; DOE/ER-53225/T7) Avail: CASI HC A03/MF A01

Radial currents have been used for generating plasma rotation. Particularly, oscillating torque experiments were performed. The resulting changes in the particle and heat transport were studied. Controlled variation in the poloidal asymmetry as well as in the plasma potential were induced by biasing. The particle confinement appears to be related to the sign of the radial electric potential. This is connected to the radial electric field and the direction of rotation. The electron diamagnetic drift direction is better. This corresponds to negative electric fields and potential. The poloidal asymmetry was studied in relation to heat confinement. DOE

THEORETICAL REVERSED FIELD PINCH AND TOKAMAK STUDIES
1992 3 p
(Contract DE-FG02-85ER-53212)
(DE93-002775; DOE/ER-53212/198) Avail: CASI HC A01/MF A01

In previous work, electrostatic fluctuations that couple the free energy sources of resistive interchange turbulence (resistive g mode) and resistivity gradient driven turbulence (Rippling mode) were studied analytically and numerically. Evaluation of the predicted fluctuation levels using realistic MST parameters and the best estimates of equilibrium profiles yielded levels that appeared to be too small to agree with experiment. This work calls into question the standard scenario in which g modes (or rippling modes) are presumed to govern edge transport and account for the high frequency fluctuation activity in the RFP. DOE

LONG WAVELENGTH MAGNETIC FLUCTUATIONS IN TOROIDAL PLASMAS
C. C. Hegna and J. D. Callen Oct. 1992 7 p Presented at the 1992 Cargese Magnetic Turbulence and Transport Workshop, Cargese, France, 6-12 Jul. 1992
(Contract DE-FG02-86ER-53218)
(DE93-002352; UW-CPTC-92-5; CONF-9207157-1) Avail: CASI HC A02/MF A01

Fluctuating bootstrap currents provide a mechanism for long wavelength electromagnetic fluctuations in tokamak plasmas. The existence of micro-magnetic islands may be responsible for the experimental observations of core density fluctuations. A fluctuation model is introduced for the tokamak that describes the magnetic topology as a time-varying mix of magnetic islands, stochastic zones, and 'good' magnetic surfaces. DOE

MHD SEED RECOVERY/REGENERATION
1992 12 p
(Contract DE-AC22-87PC-79672)
(DE93-000904; DOE/PC-79672/T3) Avail: CASI HC A03/MF A01

Task 1 calls for the design, procurement, construction, and installation of the Seed Regeneration Proof-of-Concept Facility (SRPF) that will produce tonnage quantities of recyclable potassium formate seed at a design rate of 250 lb/hr for testing in the channel at the CDIF while collecting data that will be used to upgrade the design of a 300 MW(sub t) system. Approximately 12 tons of KCOOH (dry basis) as 70-75 wt percent solution were produced. The front end of the plant (potassium sulfate reaction and solids separation/washing units) was operated for five days in March. Most of the operations were conducted at a spent seed feed rate of 250 pounds/hour. A total of 8,500 gallons of dilute KCOOH solution was generated containing approximately 2.6 tons of potassium formate (dry basis). The average KCOOH content of this solution was 7 wt percent. The design KCOOH solution concentration for the front end of the plant is 8.5 wt percent. The evaporation unit was operated for a total of six days during March. Approximately 2.5 tons of potassium formate (dry basis) were processed through the evaporator and concentrated to greater then 7 wt percent. DOE

NEW D3-D TOKAMAK PLASMA CONTROL SYSTEM
G. L. Campbell, J. R. Ferron, E. McKee, A. Nerem, T Smith, C. M. Greenfield, R. I. Pinsker, and E. A. Lazarus (Oak Ridge National Lab., TN.) Sep. 1992 5 p Presented at the 17th Symposium on Fusion Technology, Rome (Italy), 14-18 Sep. 1992
(Contract DE-AC03-89ER-51114)
(DE93-000877; GA-A-21036; CONF-920930-5) Avail: CASI HC A01/MF A01

A state-of-the-art plasma control system has been constructed for use on the DIII-D tokamak to provide high speed real time data acquisition and feedback control of DIII-D plasma parameters. This new system has increased the precision to which discharge shape and position parameters can be maintained and has provided the means to rapidly change from one plasma configuration to another. The capability to control the plasma total energy and the ICRF antenna loading resistance has been demonstrated. The speed and accuracy of this digital system will allow control of the current drive and heating systems in order to regulate the current and pressure profiles and divertor power deposition in the DIII-D machine. Use of this system will allow the machine and power supplies to be better protected from undesirable operating regimes. The advanced control system is also suitable for control algorithm development for future machines in these areas and others such as disruption avoidance. The DIII-D tokamak facility is operated for the U.S. Department of Energy by General Atomics Company (GA) in San Diego, California. The DIII-D experimental program will increase emphasis on rf heating and current drive in the near future and is installing a cryopumped divertor ring during the fall of 1992. To improve the flexibility of this machine for these experiments, the new shape control system was implemented. The new advanced plasma control system has enhanced the capabilities of the DIII-D machine and provides a data acquisition and control platform that promises to be useful far beyond its original charter. PRELIMINARY OBSERVATIONS OF ELECTROMAGNETIC RADIATION FROM PLASMA IN PRESENCE OF A DOUBLE LAYER
Lennart Lindberg Oct. 1991 21 p Sponsored by Swedish Natural Science Research Council
(TRITA-EPP-91-02; ETN-92-92623) Avail: CASI HC A03/MF A01

The electromagentic radiation in the near field region, outside the plasma, measured by means of small, electrostatically shielded loop probes is presented. In investigations of a double layer, a plasma region, with an intense, spontaneous HF generation was observed by means of internal HF probes. The region was located 50 to 200 Debyelengths from the double layer, on the high potential side. It was concluded that the HF field is generated by beam-plasma interaction, and can best be classified as electrostatic Langmuir waves. Such a wave field should in first approximation not radiate electromagnetic waves. The results of the analysis with the loop probes are presented. At the electron gyro frequency, a broad peak is seen in the spectrum, with spatial maximum outside the region in internal HF generation. Unexpectedly the azimuthal magnetic HF component is stronger than the axial component. At the plasma frequency a broad range of HF emission is seen, extending to the upper hybrid frequency. The spatial maximum is outside the region of intense interaction, and the axial component dominates, suggesting oscillations at the upper hybrid frequency. Groups of intensity peaks are also seen near the hybrid frequency. Probe design, shielding and calibration technique is described. ESA

EXPERIMENTAL OBSERVATIONS OF ANOMALOUS POTENTIAL DROPS OVER ION DENSITY CAVITIES
M. Bohm Aug. 1991 33 p
(TRITA-EPP-91-04; ETN-92-92625) Avail: CASI HC A03/MF A01

Experiments showing the plasma potential response when a step voltage is applied over the plasma column between the two plasma sources on a triple plasma machine are reported. The time resolution is sufficient to resolve potential variations caused by the electron motion, and two independent probe methods are used to obtain this time resolution. Two different responses were observed on the time scale of the electron motion. When the initial ion density varies along the plasma column and has a local minimum the applied potential drop becomes distributed over the cavity after a few electron transit times. Later the profile steepens to a double layer in the time scale of the ion motion. The width of the cavity is comparable to the length of the plasma column. When the initial density is axially uniform, most of the potential drop instead concentrates to a narrow region at the low potential end of the plasma column after a few electron transit times. On the time scale of the ion motion this potential drop begins to propagate into the plasma as a double layer. The results obtained

are consistent with those from numerical simulations with similar boundary conditions. Further experiments are necessary to get conclusive insight into the voltage supporting capability of an ion density cavity. ESA

STABILITY OF WEAK DOUBLE LAYERS
S. K. Turitsyn (Academy of Sciences, USSR, Novosibirsk), J. Juul Rasmussen (Risoe National Lab., Roskilde, Denmark), and Michael A. Raadu Apr. 1991 30 p
(TRITA-EPP-91-01; ETN-92-92622) Avail: CASI HC A03/MF A01

The transverse stability of weak double layers in plasmas with a two temperature electron component is investigated. The double layers appear as shocklike solutions of the modified Korteweg-de Vries equation with a negative coefficient of the cubic nonlinear term. The investigations are performed for an unmagnetized and a magnetized plasma. In the former case the two dimensional evolution of the double layer is governed by a modified Kadomstev-Petvishvili equation and the double layer is unstable. In a magnetized plasma the two dimensional evolution is governed by a modified Zakharov-Kuznetsov equation and the double layer is found to be stable. ESA

FORCE-FREE TIME-HARMONIC PLASMOIDS Interim Report, Nov. 1991 - Jul. 1992
Jack Nachamkin Oct. 1992 62 p
(Contract F04611-88-C-0020)
(AD-A257765; AD-E201274; PL-TR-92-3044) Avail: CASI HC A04/MF A01

An unexplored solution of Maxwell's equations is investigated for time-harmonic waves in a partially ionized gas. The analysis is focused on the spherically symmetric cases that behave like electromagnetic energy trapped in the form of a plasmoid. It will be shown that a critical frequency exists, below which the current cannot be carried by electrons and the plasmoid remains stable. Resonant sizes will be shown to exist such that plasmoids will not exchange energy with their external surroundings, and their boundary conditions can be met by vacuum solutions to Maxwell's equations. Virial analysis calculates free-change density and critical frequency to be consistent with Newtonian mechanics and classical electromagnetics. A stable vortical motion of the plasma will be shown to exactly cancel the dominant component of the electromechanical stresses, with the residual stresses being a strongly decreasing function of frequency. MICROWAVE INTERACTION WITH PLASMAS Final Report, 1 May 1989 - 30 Apr. 1992
Igor Alexeff 30 Apr. 1992 10 p
(Grant AF-AFOSR-0348-89)
(AD-A258044; AFOSR-92-0927TR) Avail: CASI HC A02/MF A01

During the past year, we have made progress on frequency shifting by means of plasmas. Theoretically we have demonstrated that a rising plasma density tends to slow down and trap microwaves passing through the plasma-filled region. This increases the interaction time, so that a very rapid rise in plasma density is not required to produce very high frequency shifts. A preliminary version has been submitted to the Transactions of Plasma Science, and a more updated version is in progress. An attempt to provide frequency upshifts by use of multiple transverse arcs was attempted without the use of equalizing resistors. The plasma discharge was observed, and the frequency upshift was seen, as was expected but it was not as extensive as in previous systems. A more balanced system is being developed. GRA

CORROSION AND ARC EROSION IN MHD CHANNELS
R. J. Rosa and R. J. Pollina Aug. 1992 61 p
(Contract DE-FG22-88PC-88928)
(DE93-001721; DOE/PC-88928/T17) Avail: CASI HC A04/MF A01

The problems connected with gas side corrosion for the design of the 1A4 (POC) channel hardware are explored and results of gas side wear rate tests in the Textron Mark VII facility are presented. It is shown that the proposed designs meet a 2000 hour lifetime criterion based upon these materials tests. Improvement in cathode lifetime is demonstrated with lower voltage intercathode gaps. The corrosion of these materials is discussed and it is shown how lifetimes are dependent upon gap voltage and average metal temperature. The importance of uniformity of slagging to the durability of the anode wall is demonstrated. The wear mechanism of the anodes in the MHD channel is analyzed. In addition to gas-side corrosion, the results of specific water corrosion tests of sidewall materials are discussed. All of the tests reported here were carried out to confirm the gas-side performance and the manufacturability of anode and sidewall designs and to address questions posed about the durability of tungsten-copper on the waterside. The results of water corrosion tests of the tungsten copper alloy sidewall material are presented to show that with proper control of waterside pH and, if necessary, dissolved oxygen, one can obtain reliable performance with no degradation of heat transfer with this material. The final choice of materials was determined primarily by the outcome of these tests and also by the question of the manufacturability of the prospective designs. DOE

STUDIES OF DYNAMIC PROCESSES RELATED TO ACTIVE EXPERIMENTS IN SPACE PLASMAS Final Report, 1 Aug. 1990 - 30 Sep. 1992
Peter M. Banks and Torsten Neubert 1992 74 p
(Grant NAGw-2055)
(NASA-CR-191771; NAS 1.26:191771) Avail: CASI HC A04/MF A01

This is the final report for grant NAGw-2055, 'Studies of Dynamic Processes Related to Active Experiments in Space Plasmas', covering research performed at the University of Michigan. The grant was awarded to study: (1) theoretical and data analysis of data from the CHARGE-2 rocket experiment (1keV; 1-46 mA electron beam ejections) and the Spacelab-2 shuttle experiment (1keV; 100 mA); (2) studies of the interaction of an electron beam, emitted from an ionospheric platform, with the ambient neutral atmosphere and plasma by means of a newly developed computer simulation model, relating model predictions with CHARGE-2 observations of return currents observed during electron beam emissions; and (3) development of a self-consistent model for the charge distribution on a moving conducting tether in a magnetized plasma and for the potential structure in the plasma surrounding the tether. Our main results include: (1) the computer code developed for the interaction of electrons beams with the neutral atmosphere and plasma is able to model observed return fluxes to the CHARGE-2 sounding rocket payload; and (2) a 3-D electromagnetic and relativistic particle simulation code was developed. WAVELENGTH TUNABLE LIQUID CRYSTAL IMAGING FILTERS FOR REMOTE SENSING FROM GEOSYNCHRONOUS PLATFORMS Final Report
Peter Foukal 22 Oct. 1992 16 p
(NASA Order H-11987-D)
(NASA-CR-184487; NAS 1.26:184487) Avail: CASI HC A03/MF A01

Recent advances in liquid crystal technology have enabled us to construct tunable birefringent filters with bandwidths between approximately 0.1 nm and 50 nm. The center wavelength of these filters can be selected electronically, in a few tens of milliseconds, with no moving parts. These liquid crystal tunable filters (LCTF's), together with existing CCD detectors, make possible a new generation of lightweight, rugged, high-resolution imaging spectrophotometers. Such instruments would be particularly interesting for remote sensing applications from geosynchronous platforms. Important advantages exist in the aperture, absence of image shift, power consumption, size, weight, and absence of high drive frequencies, compared to current instruments used or considered for multispectral scene analysis. In the present work, we have reviewed spectral requirements of planned NASA geosynchronous remote sensing missions and identified several applications of the liquid crystal tunable filter technology. We have modeled the LCTF performance in the visible and near-infrared, and carried out a literature study on space-hardening of the filter components, to evaluate the suitability of LCTF's for geosynchronous missions. We have also compared the power consumption, weight, size, reliability, and optical performance of an imaging spectrophotometer using a LCTF monochromator, to other instruments that have been put forward for remote sensing from geosynchronous platforms. We put forward some conceptual designs for LCTF's that seem to offer important reliability, over the mechanical filter wheels presently baselined for the HEPI and ALM experiments. The extremely wide acceptance angle achievable with LCTF's could also avoid the present need for large-aperture interference filters in the ALM (and LIS) experiments. Thermal vacuum testing and radiation damage analysis is required to investigate the space hardening of these new filters for geosynchronous flight. Author

GROWTH STUDIES OF CVD-MBE BY IN-SITU DIAGNOSTICS Final Technical Report, 1 Jul. 1989 - 30 Jun. 1992
George N. Maracas and Timothy C. Steimle 29 Oct. 1992 39 p
(Contract N00014-89-J-3120)
(AD-A257216; DWA-1757) Avail: CASI HC A03/MF A01

This is the final technical report for the three year DARPA-URI program 'Growth Studies of CVD-MBE by in-situ Diagnostics'. The goals of the program were to develop non-invasive, real time epitaxial growth monitoring techniques and combine them to gain an understanding of processes that occur during MBE growth from gas sources. We have adapted these techniques to a commercially designed gas source MBE system (Vacuum Generators Inc.) to facilitate technology transfer out of the laboratory into industrial environments. The in-situ measurement techniques of spectroscopic ellipsometry (SE) and laser induced fluorescence (LIF) have been successfully implemented to monitor the optical and chemical properties of the growing epitaxial film and the gas phase reactants. The ellipsometer was jointly developed with the J. Woolam Co. and has become a commercial product. The temperature dependence of group 3 and 5 desorption from GaAs and InP has been measured as well as the incident effusion cell fluxes. The temporal evolution of the growth has also been measured both by SE and LIF to show the smoothing of heterojunction surfaces during growth interruption. Complicated microcavity optical device structures have been monitored by ellipsometry in real time to improve device quality. This data has been coupled with the structural information obtained from reflection high energy electron diffraction (RHEED) to understand the growth processes in binary and ternary bulk 3-5 semiconductors and heterojunctions. THE EVOLUTION OF ELECTRONIC STRUCTURE IN Al(n)Co(m)
W. J. C. Menezes and M. B. Knickelbein 16 Sep. 1992 8 p Presented at the 6th International Symposium on Small Particles and Inorganic Clusters, Chicago, IL, 16-22 Sep. 1992
(Contract W-31-109-eng-38)
(DE92-040737; ANL/CP-76999; CONF-920921-2) Avail: CASI HC A02/MF A01

The ionization potentials of Al(n)Co(m) have been bracketed using laser photoionization mass spectrometry. We find that the electronic shell structure observed in the ionization potentials of Al(n) by Whetten and coworkers (Phys. Rev. Letters 64, 2539 (1990)) is largely preserved for Al(n)Co and Al(n)CO2, and is consistent with cobalt contributing one electron to the conduction band of the cluster. However, with increasing number of cobalt atoms, this simple model breaks down; all vestiges of aluminum cluster electronic shell structure are absent for m greater than 4. DOE

(Contract W-31-109-eng-38)
(DE92-040748; ANL/CP-76908; CONF-9208132-2) Avail: CASI HC A02/MF A01

The organic electron-donor molecule ET (bis(ethylenedithio) tetrathiafulvalene) was synthesized twice by the identical route: (1) with natural C-12 carbon isotopic distribution; and (2) with 95 percent C-13, in the central C=C double bond position. The superconducting transition temperatures (in magnetic fields of 0.0-0.4 T) of single crystals prepared by both routes of ET synthesis were found, by the use of ac susceptibility measurements, to be identical within the precision of the measurements (approximately O.1 K or 1 percent) for the ambient-pressure superconductors kappa-(ET)2Cu(NCS)2 and kappa-(ET)2Cu(N(CN)2)Br. The absence of an effect of such isotopic replacement on Tc indicates that the central C=C stretching vibration (a high-energy optical mode at approximately 1500 cm(exp -1)) is not the dominant contributor to the superconducting pairing mechanism in these systems. DOE

PHOTOLUMINESCENCE STUDY OF Si(1-x)Ge(x)/Si AND Si/Ge STRAINED LAYER SUPER LATTICES Ph.D. Thesis
Todd D. Steiner 13 Jul. 1992 228 p
(AD-A256467; AFIT/DS/ENP/92-002) Avail: CASI HC A11/MF A03

In this dissertation, long-period Si(1-x)Ge(x)/Si superlattices grown by MBE at 500 C and annealed post-growth using rapid thermal annealing were investigated using photoluminescence (PL). The as-grown samples have broad PL bands from isoelectronic centers related to Ge complexes as well as sharp near-edge bound exciton lines. The broad PL band was

found to be 120 meV below the band gap, after accounting for the effects of confinement of holes. Annealing resulted in a reduction in the broad PL band activation energies and a shift of the broad band to higher energies. The reduction in the activation energies of the broad band were found to be due to the position of the emission centers within the Si(1-x)Ge(x) layers.The emission centers in the middle of the Si(1-x)Ge(x) were deactivated at higher temperatures than those at the edges, which caused the shift of the broad band to lower energies as the sample temperature increased. The shifts of the broad PL band as the annealing temperature increased were found to be due to a net shift of the emission centers towards the interfaces. GRA

LASER-INDUCED DISSOCIATION OF HN3(DN3) ON GaAs(100) K
Y. Bu, L. Ma, and M. C. Lin 1992 20 p
(Contract N00014-89-J-1235)
(AD-A257426; TR-13) Avail: CASI HC A03/MF A01

HN3 (DN3) molecularly adsorbed on GaAs (100) at 100 K and formed dimers at higher dosages (greater than 20 L). Exposing the sample to 308 nm excimer laser radiation caused the dissociation of HN3 into HN and N2 species. The N2, residual HN3 and some HN species desorbed from the surface, as the irradiated sample was further annealed at 200 to 550 K. Both HREELS and XPS results indicated that NH species bonded to the As rather than the Ga atom on GaAs (100) under the present experimental conditions. GRA

CENTIMETER WAVE ABSORPTION IN MOLECULAR CRYSTALS Final Report, Jan. 1990 - Jun. 1991
Steve G. Cornelison, Arthur Gauss, Jr., Robert B. Bossoli, H. M. Lu, and J. R. Hardy Sep. 1992 29 p
(AD-A257453; BRL-MR-4002) Avail: CASI HC A03/MF A01

Molecular dynamics calculations performed at the University of Nebraska predict that temperature dependent microwave activity is present in some ionic molecular crystals. This activity is due to the excitation of 'hindered rotations' or thermally activated 'hopping' modes for the molecular ions. Microwave reflectometer measurements performed at the BRL show temperature dependent microwave losses occur in several ionic molecular crystals at or near the calculated order/disorder transition temperatures. These measurements, performed from 2 to 20 GHz from room temperature to about 300 C on the BRL 'arch,' were made on powder samples of the nitrates and nitrites of potassium, sodium, and other materials. Potassium nitrate displays an interesting temperature dependence with the absorption 'turning on' at about 1200 C, near the calculated order/disorder transition temperature. Measurements were also performed on selected ionic salts which uniformly show small microwave losses at any of the temperatures measured. GRA

SUMMARY OF PHASE SEPARATION, STRUCTURE AND SUPERCONDUCTIVITY IN SUPER-OXYGENATED La2CuO(4+DELTA)
P. C. Hammel, E. T. Ahrens, A. P. Reyes, J. D. Thompson, Z. Fisk, P. C. Canfield, and J. E. Schirber 1992 18 p Presented at the Conference on Phase Separation in Cuprate Superconductors, Sicily (Italy), 6-12 May 1992
(Contract W-7405-eng-36)
(DE93-000855; LA-UR-92-3086; CONF-9205236-4) Avail: CASI HC A03/MF A01

We report the measurements of the excess content in oxygen-annealed La2CuO(4+delta). Below the phase separation temperature, T(PS), several features of the phase diagram for this material are unusual. The oxygen content changes discontinuously in both the oxygen-poor and oxygen-rich phases. Below this temperature, these change very little. We propose that the phase separation temperature is determined by the excess content of the oxygen-poor (antiferromagnetic) phase which in turn determines the Neel temperature. Phase separation occurs when the resulting sublattice magnetization is approximately 1/2 the zero temperature value. Bulk magnetization measurements show that the superconducting (Tc) is dependent on the cooling rate in a narrow temperature range well separated from T(PS). This and nuclear quadrupole resonance (NQR) provide evidence for the role of temperature dependent structural changes in this effect. The possible role of such changes in determining the normal state properties and the superconductivity is discussed. DOE

Ag-clad wires have been fabricated from Bi2Sr2CaCu2O(x), Bi(1.8)Pb(0.4)Sr2Ca2Cu3O(x), and TlBa2Ca2Cu3O(x) superconductors by 'powder in tube' techniques. Critical current densities of 1 x 10(exp 5) A/sq cm at 4.2 K and 3 x 10(exp 4) A/sq cm at 77 K have been obtained. Additions of particulate Ag have been used to improve mechanical properties and promote partial melting during heat treatment. The processing sequences for the compounds had many common features, but also significant differences. The effects of processing on microstructure and properties are discussed. DOE

PROCESSING HIGH-(Tc) SUPERCONDUCTORS WITH GeV HEAVY IONS
A. D. Marwick, L. Civale, L Krusin-Elbaum, T. K. Worthington, F. Holtzberg, R. Wheeler, and M. A. Kirk 1992 29 p Presented at the 8th International Conference on Ion Beam Modification of Materials, Heidelberg (Germany), 7-11 Sep. 1992
(Contract W-31-109-eng-38)
(DE92-040755; ANL/CP-77183; CONF-9209200-3) Avail: CASI HC A03/MF A01

Irradiation of high Tc superconducting crystals with low doses (10(exp 10) to 10(exp 11) ions/sq cm)) of GeV heavy ions (0.58 GeV Sn-116; 1.0 GeV Au-197) produces a unique microstructure consisting of discrete amorphous columns which are only a few nm in diameter but tens of microns long. It has been found recently that this columnar microstructure causes larger increases in magnetization and critical current at high temperature and high magnetic field than other types of defects in these materials. This can be understood as a consequence of the effective pinning of magnetic vortex lines provided by the columnar defects. Measurements confirm that the pinning is strongest when the magnetic field is aligned with the ion tracks. Differences in the pinning in different materials can be related to differences in their anisotropy, which affects the structure of the vortices and their pinning at columnar defects. DOE

EFFECT OF OXIDE THICKNESS ON INTERFACE-TRAP BUILDUP RATES
M. R. Shaneyfelt, J. R. Schwank, D. M. Fleetwood, and P. S. Winokur 1992 3 p Presented at the 1992 IEEE Semiconductor Interface Specialists Conference, San Diego, CA, 9-13 Dec. 1992
(Contract DE-AC04-76DP-00789)

(DE92-040981; SAND-92-1920C; CONF-921226-1) Avail: CASI HC A01/MF A01

The time dependence of radiation-induced interface-trap charge buildup for MOS transistors of varying gate-oxide thickness was investigated in order to clarify how the location of hydrogen in the SiO2 contributes to N(sub it) buildup. Radiation-induced interface-trap buildup in wet and dry gate oxides is compared for irradiations and anneals at constant positive bias and for negative-bias irradiations followed by positive-bias anneals. Implications of these results for different models of interface-trap buildup are discussed. DOE

RADIO-FREQUENCY SURFACE IMPEDANCE OF TYPE-2 SUPERCONDUCTORS: DEPENDENCE UPON THE MAGNITUDE AND ANGLE OF AN APPLIED STATIC MAGNETIC FIELD
J. R. Clem and M. W. Coffey 1991 2 p Presented at the 3rd International Conference on Materials and Mechanisms of Superconductivity High Temperature Superconductors (M2S-HTSC-3): The Science of HTSC, Kanazawa, Japan, 22-26 Jul. 1991
(Contract W-7405-eng-82)
(DE92-040583; IS-M-719; CONF-910736-27) Avail: CASI HC A01/MF A01

The application of a static magnetic field introduces vortices into a type-2 superconductor. The dynamic response of these vortices strongly affects the surface impedance (surface resistance and surface reactance) of the superconductor. Using a self-consistent approach for including the influence of the vortices upon the complex-valued radio-frequency penetration depth, we calculate in this paper how the surface impedance depends upon the static magnetic field's magnitude and angle relative to the surface and to the RF magnetic field. The surface resistance is maximized when the induced RF currents are perpendicular to the static field. DOE

NQR STUDY OF LOCAL STRUCTURES AND COOLING RATE DEPENDENT SUPERCONDUCTIVITY IN La2CuO(4+DELTA)
A. P. Reyes, E. T. Ahrens, P. C. Hammel, R. H. Heffner, J. D. Thompson, P. C. Canfield, Z. Fisk, and J. E. Schirber 1992 12 p Presented at the 36th Conference on Magnetism and Magnetic Materials, Houston, TX, 1-4 Dec. 1992
(Contract W-7405-eng-36)
(DE93-000680; LA-UR-92-3022; CONF-921201-2) Avail: CASI HC A03/MF A01

Structural properties of oxygen-annealed polycrystals of La2CuO(4 + delta) (delta is approximately equal to 0.03) were studied using La-139 NQR spectroscopy. Superconducting critical temperatures were found to depend on the rate of cooling through a narrow temperature range at about 195 K. Preliminary analysis of the La-139 NQR spectra suggest that the oxygen-rich phase-separated region is composed of two structurally distinct phases, both of which are metallic and super-conducting. One phase has a structure closely related to the stoichiometric oxygen-poor compound. The second shows a considerable amount of apical oxygen disorder, a large shift in NQR frequency nu(sub Q), and a volume fraction which increases with cooling rate. The formation of the second phase below approximately 200 K is indicative of the freezing Of CuO6 octahedral tilting. Abrupt shifts in nu(sub Q) above T(sub c) were also observed for both phases, suggestive of a local structural anomaly or charge transfer to the Cu-O plane. DOE

TEMPERATURE DEPENDENCE OF SPECIES CONCENTRATIONS NEAR THE SUBSTRATE DURING CVD DIAMOND GROWTH
E. J. Corat and D. G. Goodwin 1 Oct. 1992 31 p
(Contract N00014-90-J-1386)
(AD-A256762; TR-4) Avail: CASI HC A03/MF A01

Measurements have been made of the temperature dependence of CH3, CH4, and C2H2 very near the substrate during filament-assisted diamond growth. CH3 was detected using (2+1) resonance-enhanced multiphoton ionization (REMPI), and CH4 and C2H2 concentrations were measured using sampling mass spectrometry. A strong dependence of the CH3 REMPI signal on substrate temperature was observed, which at low temperatures may be characterized as having an activation energy of approximately 4 +/- 1 kcal/mole. Methane and acetylene, on the other hand, are relatively independent of substrate temperature. These results are most likely due to recombination of methyl to methane in the cool gas layer near the substrate or on the surface at low substrate temperatures. GRA

CHARACTERIZATION OF SEMI-INSULATING GALLIUM ARSENIDE Final Technical Report
John S. Blakemore 30 Sep. 1992 18 p
(Contract N00014-92-P-2000)
(AD-A257295) Avail: CASI HC A03/MF A01

This project's purpose was the electrical and optical characterization of samples from melt-grown crystals of gallium arsenide (GaAs). Almost all of the samples measured were undoped (nominally undoped), and almost all samples came from crystals grown at NRL by the vertical zone melt (VZM) method. A synopsis is provided of dc low-field electrical transport measurements in semi-insulating (SI) samples, as a function of temperature; observations of time dependent photoconductivity in SI GaAs; and two types of optical transmittance measurement - in the near infrared for observation of absorption by EL2 defects and in the mid infrared for observation of carbon local vibrational model absorption. Examples are provided. GRA

STRAINED QUANTUM WELL MODULATION-DOPED InGaSb/AlGaSb STRUCTURES GROWN BY MOLECULAR BEAM EPITAXY
J. F. Klem, J. A. Lott, J. E. Schirber, S. R. Kurtz, and S. Y. Lin (Princeton Univ., NJ.) 1992 14 p Presented at the Electronic Materials Conference, Cambridge, MA, 24-26 Jun. 1992
(Contract DE-AC04-76DP-00789)
(DE93-000755; SAND-92-0392C; CONF-920676-2) Avail: CASI HC A03/MF A01

Strained single quantum well InGaSb/AlGaSb structures for field-effect transistor applications have been grown by molecular beam epitaxy. Modulation-doped p-type structures have been characterized by a variety of techniques, including Hall effect, Shubnikov de Haas measurements, and cyclotron resonance. These structures exhibit improved hole transport in comparison to similar GaSb/AlGaSb structures as a result of strain-splitting of the valence band. P-channel field-effect transistors fabricated in this system exhibited a maximum transconductance of 51 and 161 ms/mm at 300 and 77K, respectively, for a 1.2 micron gate-length device. DOE

Si ATOMIC LAYER EPITAXY BASED ON Si2H6 AND REMOTE He PLASMA BOMBARDMENT
A. Mahajan, J. Irby, D. Kinosky, R. Qian, and S. Thomas 3 Jun. 1992

3 p
(AD-A255569; TR-1) Avail: CASI HC A01/MF A01

Atomic layer epitaxy (ALE) of silicon has been demonstrated by using remote helium plasma low energy bombardment to desorb H from a H-passivated Si(100) surface at low temperatures and subsequently chemisorbing disilane on the surface in a self limiting fashion in a Remote Plasma Chemical Vapor Deposition (RPCVD) System in which the substrate is downstream from an r-f noble gas (He or Ar) glow discharge in order to minimize plasma damage. It was found necessary to desorb the H from the Si surface to create adsorption sites for Si bearing species such as Si2H6. Optimal He bombardment parameters were to be 30 W at 100 mTorr He at 400 C for 1-3 min. Helium was found to be more effective than Ar bombardment because of the closer match of the He and H masses compared to that between Ar and H. Monte Carlo TRIM simulations of He and Ar bombardment of H-terminated Si surfaces were performed to validate this hypothesis and to predict that approximately 3 surface H atoms are displaced by the incident He atoms, with no Si atom displacement for the energies in the range of 15-60 eV. Alternate Si2H6 dosing and He low energy bombardment cycles (approximately 100-200) were performed to confirm ALE-mode of growth. It was found that the growth per cycle saturates with long Si2H6 dosing at a level which increases with He bombardment time. GRA

The general goal of this research program has been and continues to be the investigation of high-speed carrier transport in 3-5 compound semiconductors, 3-5 alloy materials, other advanced electronic and optical materials, and novel device structures which utilize these materials. This research program has made significant contributions to the understanding and knowledge base of hot electron transport in materials and devices. It has provided scientific guidance to the U.S. Navy in the formulation of a part of its basic and applied research program. Our research results have helped stimulate commercial ventures, particularly in the development of GaInAsP-based materials and devices. GRA

CONDUCTION IN ION IMPLANTED SINGLE CRYSTAL DIAMOND
J. D. Hunn, N. R. Parikh, M. L. Swanson, and R. A. Zuhr 1992 18 p Presented at the 3rd International Conference on the New Diamond Science and Technology and Third European Conference on Diamond, Diamond-Like and Related Coatings, Heidelberg (Germany), 31 Aug. - 4 Sep. 1992
(Contract DE-AC05-84OR-21400)
(DE92-040861; CONF-920854-1) Avail: CASI HC A03/MF A01

We have implanted sodium, phosphorus and arsenic into single crystal type IIa diamond as possible n-type dopants. Particular emphasis was applied to the implantation of sodium at different temperatures and doses; combined implantation energies of 55, 80 and 120 keV were used to provide a uniformly doped layer over approx. 100 nm depth. The implanted layers exhibited semiconducting behavior with a single exponential activation energy between 0.40 and 0.48 eV, as determined by temperature dependent resistance measurements. A sample implanted to a concentration of 5.10(exp 19) Na(+)/cu cm at 550 C exhibited a single activation energy of 0.415 eV over a temperature range from 25 to 500 C. Thermal annealing above 900 C was found to remove implantation damage as measured by optical absorption and RBS/channeling. However, concomitant increases in the resistance and the activation energy were observed. Implantation of Ne-22 was used to introduce a damage density equivalent to the Na-23 implant, while not introducing an electrically active species. The activation energy and electrical resistance were similar but higher than those produced by implantation with sodium. We conclude that the electrical properties of the Na-implanted samples were at least partly due to electrically active Na, but that residual implantation damage was still important. DOE

Work during this phase of the diamond program began to focus on issues which were limiting diamond technology: (1) The role of oxygen in diamond CVD; (2) Why the limited success of heteroepitaxy on Ni; (3) Tools for quantitative microstructural characterization; (4) Techniques for separation and lift-off of thin single crystal sheets of diamond; (5) Epitaxial consolidation of individual diamond crystals; and (6) High quality homoepitaxy. Highlights of this period include expounding the role of O in diamond CVD through surface chemistry, expounding the role of subsurface species to CH3 adsorption on Ni(111) surfaces, developing ion implantation annealing procedures for separation of diamond platelets, plan-view TEM characterization of type Ia and IIb diamonds, epitaxial consolidation of two adjacent diamonds, and critical evaluation of H2/CH4, H2/CH4/CO, H2/CO chemistries for homoepitaxial growth. THE CRYSTAL STRUCTURES OF OXYGEN DEFICIENT RARE EARTH OXIDES
Jie Zhang, L. Eyring (Arizona State Univ., Tempe.), and R. VonDreele 1992 9 p Presented at the 15th Applied Crystallography Conference, Cieszyn (Poland), 10-12 Aug. 1992
(Contract W-7405-eng-36)
(DE92-040331; LA-UR-92-2601; CONF-9208134-1) Avail: CASI HC A02/MF A01

We have solved the structures of five members of the homologous series MnO(2n-2) for M = Pr and Tb from high resolution time-of-flight neutron powder diffraction data. All these structures are derived from the parent MO2 fluorite by creation of oxygen vacancies and subsequent lattice distortion. All have at least one common cell edge which is 1/2 of the zone axes (211) vector in fluorite. Apart from Tb7O12, these materials have remarkably low symmetry and very large unit cells; most are either monoclinic or triclinic. One of the largest of those solved is Pr10O18 whose monoclinic unit cell contains 112 atoms and is described by 84 atomic coordinates. The basic trend thus far observed in a comparison of these structures is that in the higher oxides where the mean lattice volume for each vacancy is ca. 200 cu A or larger, the vacancies are no longer paired on opposite sides of a metal atom as found in the rhombohedral M7O12 structure. This is consistent with the fact that the dominant bonding forces in rare-earth oxide systems is mainly ionic in nature. Thus, the formation of any intermediate phase in the homologous series is the result of minimizing the interactions between defect centers and does not involve any covalency effects which might preserve a large defect cluster in a dilute array of vacancies. DOE

LOW-ENERGY PHYSICS OF HIGH-TEMPERATURE SUPERCONDUCTORS
V. J. Emery and S. A. Kivelson (California Univ., Los Angeles.) 1992 8 p Presented at the Conference on Fermiology of High Tc Superconductors, Argonne, IL, 25-27 Mar. 1991
(Contract DE-AC02-76CH-00016)
(DE92-040672; BNL-47823; CONF-9103112-8) Avail: CASI HC A02/MF A01

It is argued that the low-energy properties of high temperature superconductors are dominated by the interaction between the mobile holes and a particular class of collective modes, corresponding to local large-amplitude low-energy fluctuations in the hole density. The latter are a consequence of the competition between the effects of long-range Coulomb interactions and the tendency of a low concentration of holes in an antiferromagnet to phase separate. The low-energy behavior of the system is governed by the same fixed point as the two-channel Kondo problem, which accounts for the 'universality' of the properties of the cuprate superconductors. Predictions of the optical properties and the spin dynamics are compared with experiment. The pairing resonance of the two Kondo problem gives a mechanism of high temperature superconductivity with an unconventional symmetry of the order parameter. DOE

(DE92-040760; ANL/CP-77139; CONF-920802-13) Avail: CASI HC A02/MF A01

Long lengths of flexible silver-clad Bi-2223 high-(Tc) superconductors have been fabricated by the powder-in-tube technique. By improving process conditions, dc transport measurements at liquid helium (4.2 K) and hydrogen (20 K) temperatures yield J(sub c)'s greater than 10(exp 5) A/cm(exp 2) at zero field and exceed 3 x 10(exp 4) A/cm(exp 2) at liquid nitrogen (77K) temperature in short tape samples. Detailed microstructural analysis and J(sub c) measurements with applied fields up to 20 T are reported. Coils have been fabricated from 1 meter lengths of conductor with J(sub c)'s at 77 K approaching 10(exp 4) A/cm(exp 2). Measurements on small pancake coils made from 10 meter tapes are also reported. SIMULATION OF VORTEX-LINE PINNING BY DEFECTS IN THE Y-Ba-Cu-O SYSTEM
R. Jamison, C. P. Burmester, R. Gronsky, and L. T. Wille (Florida Atlantic Univ., Boca Raton.) Mar. 1992 6 p Presented at the Material Research Society Spring Meeting, San Francisco, CA, 27 Apr. - 2 May 1992
(Contract DE-AC03-76SF-00098)
(DE92-041185; LBL-32513; CONF-920402-59) Avail: CASI HC A02/MF A01

The temperature properties of a two-dimensional flux lattice are studied by Monte Carlo simulation, with particular attention to the effects of twin-boundaries. The parameters selected are appropriate for the YBa2Cu3O7 high-temperature superconducting system. The intrinsic properties of the vortex state are investigated by monitoring system evolution at fixed temperature and applied magnetic field. By varying the temperature, the loss of type-2 superconductivity via fluxoid lattice melting is also examined. The introduction of model defects induces the creation of metastable and glassy states which reduce overall hexane order but are found to enhance system resistance to flux-lattice melting. DOE

GROWTH AND PROPERTIES OF ULTRATHIN YBa2Cu3O7-DELTA LAYERS
D. P. Norton and D. H. Lowndes Sep. 1992 8 p Presented at the 6th Annual New York State Institute on Superconductivity Conference on Superconductivity and Applications, Buffalo, NY, 15-17 Sep. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001210; CONF-920944-1) Avail: CASI HC A02/MF A01

We report on the superconducting properties of ultrathin c-axis-oriented YBa2Cu3O(7-8) (YBCO) layers grown by pulsed-laser deposition. For single YBCO layers embedded in a PrBa2Cu3O(7-8) matrix, with a YBCO layer thickness as small as one unit cell, there is evidence of a superconducting transition. We also find that the superconducting properties of ultrathin YBCO layers can be significantly enhanced by use of more conductive buffer and cap layers. In particular, Pr(0.5)Ca(0.5)Ba2Cu3O(7-8) /YBCO/Pr(0.5)Ca(0.5)Ba2Cu3O(7-8) ultrathin structures have transport properties superior to PrBa2Cu3O(7-8) /YBCO/PrBa2Cu3O(7-8) including an increase in (Tc) and a narrower superconducting transition. DIFFUSION-INDUCED GRAIN BOUNDARY MIGRATION DURING ION BEAM MIXING OF Au/Cu BILAYERS
D. E. Alexander, P. M. Baldo, and L. E. Rehn Sep. 1992 12 p Presented at the 8th International Conference on Ion Beam Modification of Materials, Heidelberg, Germany, 7-11 Sep. 1992
(Contract W-31-109-eng-38)
(DE93-000508; ANL/CP-76009; CONF-9209200-4) Avail: CASI HC A03/MF A01

Experiments were performed to evaluate the effect of 1.5 MeV Kr irradiation on diffusion-induced grain boundary migration (DIGM) in Au/Cu bilayers in the temperature range of 300 less than or = T less than or = 050 K. The experimental results were consistent with DIGM occurring in bilayers both during irradiation and during annealing treatments. Rutherford backscattering spectrometry showed a nearly uniform distribution of Cu present through the entire thickness of appropriately prepared polycrystalline Au films irradiated or annealed at temperatures greater than or = 400 K. No parallel effect was seen in similarly treated single-crystal films. In each polycrystalline sample studied, irradiation resulted in greater amounts of Cu present uniformly in the Au compared to annealing-only. The magnitudes of measured Cu compositions were substantially greater than that expected solely from grain boundary diffusion. A simple analysis of the process indicated that ion irradiation affects DIGM by increasing the composition of Cu present in alloyed zones and/or by increasing the grain boundary velocity in the Au. The reaction kinetics and mechanism that control the conversion of (Bi,Pb)2Sr2CaCu2O(z) (Bi-2212) + alkaline earth cuporates to (Bi,Pb)2Sr2Ca2Cu3O(y) (Bi-2223) in silver-clad wires were investigated as a function of equilibration temperature and time at a fixed oxygen partial pressure (7.5 pct. O2). Measured values for the fractional conversion of Bi-2223 versus time have been evaluated based on the Avrami equation. SEM and TEM studies of partially and fully converted wires have revealed that (1) the growth of Bi-2223 is two-dimensional and controlled by a diffusion process, (2) liquid phases are present during part of the Bi-2212 yields Bi-2212 conversion, and (3) segregation of the second phases occurs in early time domains of the reaction. SCALING LAWS FOR THE CRITICAL CURRENT DENSITY OF NbN FILMS IN HIGH MAGNETIC FIELDS
D. P. Hampshire (Durham Univ., England), K. E. Gray, and R. T. Kampwirth Aug. 1992 8 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992

(Contract W-31-109-eng-38)
(DE93-000604; ANL/CP-77433; CONF-920802-20) Avail: CASI HC A02/MF A01

The critical current density (Jc) was measured of two NbN films (500 and 1550 A thick) as a function of temperature in magnetic fields up to 25 Tesla using transport measurements. In both films, the functional form of the volume pinning force, F sub p, obeys the Fietz-Webb scaling law throughout the entire magnetic field and temperature range such that: F sub p = J sub c x B = alpha(B)sub c2 sup m(T)b sup 1/2 (1-b) sup 2 = (alpha)*(1-T/T sub c) sup m(b)sup 1/2 (1-b) sup 2 where alpha and (alpha)* are constants dependent on the film, B sub c2(T) is the upper critical field, b = B/B sub c2(T) is the reduced magnetic field, (Tc) is the critical temperature and we find m = 2.7 (+ or -) 0.1. Over a limited range of magnetic fields close to B sub c2(T), we can approximate this functional form by: F sub p = Beta(B)sub c2 sup M (T)b(1-b) sup 2 = (Beta)*(1-T/Tc) sup M(b)1-b sup 2 where (Beta) and (Beta)* are constants and we find M = 2.6(+ or -)0.2. Values of J sub c derived from D.C. magnetization data obtained using Bean's model show qualitative agreement with the transport measurements throughout the superconducting phase. Despite the marked granularity in the microstructure of these films, we interpret our results as evidence that a flux pinning mechanism determines the transport current density in NbN films in high magnetic fields. (DE93-000607; ANL/CP-76266; CONF-920762-6) Avail: CASI HC A02/MF A01

Three examples of magnetic coupling across metallic spacer layers are considered. Fe/Nb sputtered superlattices are observed to have as many as five antiferromagnetic oscillations, but a weak magnetoresistive anomaly. Epitaxial trilayers of Fe/Mo/Fe grown on Mo(100) and Co/Cu/Co grown on Cu(100) are observed to have short and long period oscillations, respectively. The trilayers are grown with wedged spacer layers and characterized in-situ by means of the magneto-optic Kerr effect. DOE

GROWTH OF EPITAXIAL THIN FILMS BY PULSED LASER ABLATION
D. H. Lowndes 1992 90 p Presented at the International Conference on Crystal Growth, San Diego, CA, Aug. 1992
(Contract DE-AC05-84OR-21400)
(DE92-040515; CONF-920878-2) Avail: CASI HC A05/MF A01

High quality, high temperature superconductor (HTSc) films can be grown by the pulsed laser ablation (PLA) process. A detailed introduction is provided to the advantages and current limitations of PLA for epitaxial film growth. Emphasis is placed on experimental methods and on exploitation of PLA to control epitaxial growth at either the unit cell or the atomic-layer level. Examples are taken from recent HTSc film growth. GROWTH ON THE RECONSTRUCTED DIAMOND (100) SURFACE
S. J. Harris and D. G. Goodwin 1 Oct. 1992 39 p
(Contract N00014-90-J-1386)
(AD-A256954; TR-5) Avail: CASI HC A03/MF A01

A thermochemical kinetics analysis has been carried out for growth on the (100)-(2x1):H diamond surface using a pair of previously proposed mechanisms which operate sequentially. Half of the growth on such a surface is accounted for by insertion into dimer bonds, while the other half is accounted for by addition across troughs between dimer bonds. The latter mechanism is slower and therefore controls the over-all growth rate on this surface. This result can explain the success that the latter mechanism has had in predicting growth rates in a variety of systems. We suggest that growth at step sites is favored on steric and thermochemical grounds and can account for atomically smooth surfaces on diamond. GRA

THREE-TERMINAL DEVICES OF HIGH-T(SUB c) SUPERCONDUCTORS: A STATUS REPORT AND FUTURE CHALLENGES
Pang-Jen Kung 1992 5 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contract W-7405-eng-36)
(DE93-000654; LA-UR-92-3055; CONF-920802-15) Avail: CASI HC A01/MF A01

A study has been conducted on the recent progress of the three-terminal devices with transistor-like characteristics fabricated from the high-T(sub c) superconducting materials. This study explored the operating principles and characteristics of these devices in relation to the relevant materials and techniques. A comparison of a variety of techniques for superconducting thin film deposition will be given. This study indicates that the feasibility of fabricating hybrid devices composed of semiconductors and superconductors appear to be the key issue to push forward the applications of high-T(sub c) superconductors in microelectronics. The junction field-effect transistors with a semiconductor base controlled by the proximity effect are likely to be more manufacturable. The factors that influence the operating reliability of devices and the problems arising from integrating and packaging the devices will also be discussed. DOE

THE TETRAGONAL-MONOCLINIC TRANSFORMATIONS OF ZIRCONIA STUDIED BY SMALL ANGLE NEUTRON SCATTERING AND DIFFERENTIAL THERMAL ANALYSIS
Z. Li, J. E. Epperson, Y. Fang, and S. K. Chan Aug. 1992 15 p Presented at the 5th International Conference on the Science and Technology of Zirconia, Melbourne (Australia), 16-21 Aug. 1992
(Contract W-31-109-eng-38)
(DE92-040718; ANL/CP-75748; CONF-9208144-1) Avail: CASI HC A03/MF A01

The tetragonal-monoclinic transformations of zirconia have been studied on pristine single crystals and on their cycled crystallites. Two complementary techniques have been used. Small angle neutron scattering experiments were carried out to monitor the degree of completion of a transformation under equilibrium conditions for collections of 20-30 large crystals using the total internal and external surface area as an indicator. Differential thermal analysis experiments were carried out on smaller single-domain crystals of different sizes individually during heating and cooling to measure the rates of latent heat absorption and emission. The investigation establishes the upper limit of stability of the monoclinic phase, the lower limit of stability of the tetragonal phase, and the coexistence temperature between the two phases. The characteristics of the transformations are also inferred from these experiments. DOE

NUCLEATION IN STRESS-INDUCED TETRAGONAL-MONOCLINIC TRANSFORMATION OF CONSTRAINED ZIRCONIA
S. K. Chan Aug. 1992 22 p Presented at the 5th International Conference on the Science and Technology of Zirconia, Melbourne (Australia), 16-21 Aug. 1992
(Contract W-31-109-eng-38)
(DE92-040720; ANL/CP-75749; CONF-9208144-2) Avail: CASI HC A03/MF A01

A theory for stress-induced tetragonal to monoclinic transformation of constrained zirconia is presented based on the assumption that when forcibly strained to a regime of absolute instability where the free energy

density of the tetragonal phase has a negative curvature, the constrained tetragonal zirconia becomes unstable with respect to the development of a modulated strain pattern that will evolve into a band of twin monoclinic domains. The temperature range for such an instability, the critical size of the inclusion, the corresponding critical strain, and the periodicity of the modulation are derived in terms of parameters that can be related to the elastic stiffness coefficients of various orders of the inclusion and the shear modulus of the host matrix. An entirely different mechanism is suggested for the reverse monoclinic to tetragonal transformation because the monoclinic phase is metastable when the extrinsic stress is removed. Estimates for the parameters are inferred from a variety of experimental data for pure zirconia and the numerical values for the predicted physical quantities are obtained. DOE

CURRENT TRANSPORT ACROSS GRAIN BOUNDARIES IN TlBa2Ca2Cu3O(x) THICK POLYCRYSTALLINE FILMS AND YBa2Cu3O7 STEP EDGES

J. D. Hettinger, D. H. Kim, D. J. Miller, J. G. Hu, K. E. Gray, J. E. Sharping, K. Daly (TRW Space Technology Labs., Redondo Beach, CA.), C. Pettiett-Hall (TRW Space Technology Labs., Redondo Beach, CA.), and J. E. Tkaczyk (General Electric Co., Schenectady, NY.) Aug. 1992 5 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992

(Contract W-31-109-eng-38)

(DE93-000610; ANL/CP-77430; CONF-920802-21) Avail: CASI HC A01/MF A01

We have performed transport measurements in magnetic fields (H//c) up to 10T on a series of YBa2Cu3O7 grain boundaries induced by epitaxial growth on a substrate containing a series of step edges. For this material we find an activation energy which goes as U(T) approximately (1-t). Electric field versus current density curves taken at a constant temperature while varying the magnetic field allows a determination of the magnetic field dependence of the activation energy using the Ambagaokar-Halperin Model. These values agree with results extracted from the resistive transitions. Similar characterizations of a sample of TlBa2Ca2Cu3O(x) are also presented. The temperature dependence of the activation energy for this system may be summarized as U(T) approximately (1-t)(sup 2), suggesting that the grain boundaries behave as SNS juctions. DOE

MEASUREMENT OF FRACTURE TOUGHNESS IN THIN FILMS AND SMALL VOLUMES USING NANOINDENTATION METHODS

G. M. Pharr (Rice Univ., Houston, TX.), D. S. Harding (Rice Univ., Houston, TX.), and W. C. Oliver 1992 13 p Presented at the NATO Advanced Study Institute on Mechanical Properties of Materials Having Ultra-Fine Microstructure, Porto Novo, Portugal, 17 Jun. - 1 Jul. 1992

(Contract DE-AC05-84OR-21400)

(DE92-040711; CONF-9206271-2) Avail: CASI HC A03/MF A01

Nanoindentation methods are now used routinely in the characterization of the elastic modulus and hardness of thin films and small volumes of material. Herein, preliminary results are reported of a study aimed at developing a technique by which the toughness of a thin film or small volume can be determined. The method is based on the radial cracking which occurs when brittle materials are indented by a sharp indenter such as a Vickers diamond. In microindentation experiments, the lengths of radial cracks have been found to correlate reasonably well with fracture toughness, and a simple, semi-empirical method has been developed to compute toughness from measured crack lengths. However, a problem is encountered in extending the method into the nanoindentation regime in that there are well defined loads, called cracking thresholds, below which indentation cracking does not occur in most brittle materials. For a Vickers indenter, cracking thresholds in most ceramics are about 25 grams or more, i.e., loads well above those which would normally be used in nanoindentation. It was recently found, however, that the problems imposed by the cracking threshold can largely be overcome by changing the indenter geometry. Preliminary studies using a three-sided indenter with the geometry of a corner of a cube have revealed that cracking thresholds can be reduced to loads as small as 0.5 grams, for which indentations and crack lengths in most materials are sub-micron in dimension. The studies also indicate that the simple relationships between toughness and crack length used for Vickers indenters still applies provided a different empirical constant is used. Results of these studies are presented along with a brief review of the theory on which the method is based. DOE

CRYSTALLOGRAPHY OF Co/Pt MULTILAYERS AND NANOSTRUCTURES

Bing Zhang, K. M. Krishnan, and R. F. C. Farrow (IBM Research Lab., San Jose, CA.) Apr. 1992 24 p Presented at the 4th Conference on Frontiers of Electron Microscopy in Materials Science, Oakland, CA, 21-24 Apr. 1992

(Contract DE-AC03-76SF-00098)

(DE92-041212; LBL-32290; CONF-920450-1) Avail: CASI HC A03/MF A01

Atomically engineered nanostructures and multilayers of Co/Pt exhibit strong perpendicular anisotropy. This unique property, that determines their potential as a magneto-optic recording media, is dependent on a variety of microstructural parameters that include the overall crystallography, thickness of the layers, orientation, defect formation, interface reactions etc. A series of Co/Pt multilayer samples with different thickness of the Co layer were studied by electron diffraction. It has been determined that the Co layers persists in the fcc structure up to a thickness of 50 A. As the thickness is varied from 3 to 50 A in the multilayers, the Co film gradually relaxed to its bulk lattice parameter. (111) twinning and lattice strain at the interfaces between Pt and Co layers are also observed. The symmetry forbidden reflections observed at 1/3 (224) positions in (111) zone diffraction patterns of the multilayer are due to (111) twinning and compositional modulations along the multilayer growth direction. DOE

THE CENTRAL BOND C-13 DOUBLE BOND C-13 ISOTOPE EFFECT FOR SUPERCONDUCTIVITY IN THE HIGH-T(SUB c) BETA*-(ET)(SUB 2)I(SUB 3) PHASE AND ITS IMPLICATIONS REGARDING THE SUPERCONDUCTIVITY PAIRING MECHANISM IN TTF-BASED ORGANIC SUPERCONDUCTORS

K. D. Carlson, J. M. Williams, U. Geiser, A. M. Kini, H. H. Wang, R. A. Klemm, S. K. Kumar, J. A. Schlueter, J. R. Ferraro, and K. R. Lykke et al 1992 10 p Presented at the European Conference on Molecular Electronics, Padua (Italy), 24-28 Aug. 1992

(Contracts W-31-109-eng-38; DE-AC04-76DP-00789)

(DE92-040725; ANL/CP-75668; CONF-920850-1) Avail: CASI HC A02/MF A01

We report a new study, based on magnetization measurements, of the isotope effect for C-13 substitution in the electronically active central double-bonded carbon atoms of the TTF moiety of ET (bis(ethylenedithio)tetrathiafulvalene) in beta*-(ET)(sub 2)I(sub 3) which is the crystallographically ordered form of beta-(ET)(sub 2)I(sub 3) produced by application of pressure. A recent report by Merzhanov et al. (C. R. Acad. Sci., Paris, 314, 563 (1992)) has shown that this same C-13 substitution leads to a 'giant' isotope effect (Delta T(c) = -0.6 K) in resistive determinations of T(c) (approximately 8 K) for beta*-(ET)(sub 2)I(sub 3), which lends experimental support to a theory by Yamaji (Solid State Common., 61, 413 (1987)) for salts of TTF-analogue donor molecules that includes optical phonons of symmetric intramolecular vibrations as a source of mediation for superconducting pairing of charge-carriers. In contrast to this result, our study shows the absence of an isotope effect within a precision of plus/minus 0.1 K (approximately 1 percent), indicating that the central atom C=C stretching motion (approximately 1500 cm(sup -1)) of ET cannot be a dominant mechanism for phonon exchange. Our results are consistent with those of a very recent study of the same isotope effect for kappa-(ET)(sub 2)Cu(N(CN(sub 2))Br and kappa-(ET)(sub 2)Cu(NCS)(sub 2) (Inorg. Chem., 32, 3356 (1992)). Large oriented crystals greater than one millimeter in length of high

T(c) superconducting compounds are grown by mixing starting materials in the correct proportions to make the superconducting compound, forming a mixture. The CO2 is removed from the mixture and the ternary oxide of the compound is formed from the mixture. Next, the mixture is formed into a self-supporting green body and sintered at a sintering temperature at which the top of the self-supporting green body is molten and the bottom surface is solid. The self-supporting green body is held at the sintering temperature for a time, forming a sintered body. Next, the sintered body is cooled so that crystals form. After this step, the crystals can be further processed to increase their superconducting properties. Finally, the crystals are removed and processed for use. GRA

ASPECTS OF ELECTRON TRANSPORT IN SEMICONDUCTOR NANOSTRUCTURES Ph.D. Thesis
Frank Willem Jan Hekking 1992 101 p Sponsored by Stichting voor Fundamenteel Onderzoek der Materie and Shell International Research Maatschappij N. V.
(ETN-92-92787) Avail: CASI HC A06/MF A02

Transport properties of systems which are smaller than some characteristic coherence length are studied. Focus is on quantum transport in a two Dimensional Electron Gas (2DEG), present at the interface of a semiconductor heterostructure. Small conductors can be defined in the 2DEG, through which an electron propagates phase coherently. Some basic theoretical concepts of quantum transport in such systems are reviewed. Magneto-transport properties of an array of 15 coupled quantum dots are studied. Effect of transport and gate voltage fluctuations in conductance quantization was studied. A simple device based on quantum adiabatic transport, that can work as an electron pump, is proposed. The photovoltaic effect due to gate voltage modulation in an asymmetric construction was studied. Transport properties of a superconductor, which is smaller than the temperature dependent coherence length, are discussed. ESA

INVESTIGATION OF III-V SUPERLATTICES AND HETEROSTRUCTURES BY CONVERGENT-BEAM ELECTRON DIFFRACTION Ph.D. Thesis
Hao Gong 1992 160 p
(ETN-92-92784) Avail: CASI HC A08/MF A02

The Convergent Beam Electron Diffraction (CBED) technique is developed and used for the evaluation of III-V semiconductors (with emphasis on GaAs/AlAs superlattices and GaInAsP heterostructures). The theory of CBED computation is outlined. Particular attention is given to the investigation of GaAs/AlAs multilayers. The fine structure of the First Order Laue Zone (FOLZ) reflections in CBED patterns of GaInAsP heterostructures is investigated. By using many beam dynamical calculations, the features in FOLZ reflections are explained. The effect of various parameters on the fine features in FOLZ discs is discussed and values of some parameters are estimated from the CBED patterns. The effect of illumination coherence as a first step to future CBED work is considered. ESA

EFFECTS OF NON-CRYSTALLOGRAPHIC SYMMETRY ON STRUCTURE FACTOR STATISTICS M.S. Thesis

Romem Shach Oct. 1992 132 p In HEBREW
(ITN-93-85182) Copyright Avail: Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel

Investigations of the effects of the presence of noncrystallographic (NC) symmetry, i.e., local symmetry not shared by the space group, on the distribution of the magnitude of the normalized structure factor, the absolute value of E, are presented. Several such symmetry elements were investigated for a range of crystallographic space groups by constructing exact Fourier representations of the probability density function (PDF) of the absolute value of E, which allow for the atomic composition and overall (crystallographic or NC) symmetry of the models studied. The investigations consist of (1) derivation of the Fourier coefficients for each PDF of interest, (2) a careful simulation of the PDF, based on the relevant structure-factor expression; and (3) a comparison of the exact Fourier PDF with the simulated one, and with the corresponding ideal PDF's: those based entirely on the central limit theorem approximation. The floating zone process is ideal for high temperature (greater than 3000 K) growth of titanium carbide because it is containerless. However, float zoning requires small melt volumes in order to maintain a stable melt configuration. The short melt columns make it difficult to achieve a controlled thermal profile, a necessity for producing crystals of high quality. Thus, an automated control strategy based upon continuous monitoring of the growth process with processing parameters adjusted to values based upon the physical transport processes of the growth process is very desirable for maintaining stability and reproducibility of the process. The present work developed a Float-zone Acquisition and Control Technology (FACT) system which uses relations derived by combining empirical relations with a knowledge data base deduced from detailed numerical analysis of fluid mechanics and thermal transport of the growth process. The FACT system was assembled, tested and employed to grow two TiC ingots. One of the ingots was characterized by x-ray diffraction at different axial locations. The x-ray rocking curves showed consistent characteristics of a manually grown ingot. It was also found that with the FACT system, the process conditions can be operated closer to the stability limits, due to fast response time and repetitive amounts of adjustment from the FACT system. The FACT system shows a major potential in growing quality TiC crystals in a cost-effective manner. Author

SPECTROSCOPIC AND MICROSTRUCTURAL CHARACTERIZATION OF SOLUTION CHEMISTRY EFFECTS IN PZT THIN FILM PROCESSING
R. W. Schwartz, R. A. Assink, and T. J. Headley 1992 11 p Presented at the Material Research Society Symposium, Boston, MA, 2-6 Dec. 1992
(Contract DE-AC04-76DP-00789)
(DE92-008675; SAND-92-0175C; CONF-921206-1) Avail: CASI HC A03/MF A01

Ferroelectric PZT 53:47 thin films were prepared by two different solution deposition methodologies. Both routes utilized carboxylate and alkoxide precursors and acetic acid, which served as both a solvent and a chemical modifier. We have studied the effects of solution preparation conditions on film microstructure and ferroelectric properties, and have used NMR spectroscopy to characterize chemical differences between the two precursor solutions. Films prepared by a sequential precursor addition (SPA) process were characterized by slightly lossy hysteresis loops, with a P(sub r) of 18.7 micro-C/cm(exp 2) and an E(sub c) of 55.2 kV/cm. Films prepared by an inverted mixing order (IMO) process were characterized by well saturated hysteresis loops, a P(sub r) of 26.2 micro-C/cm (exp 2) and an E(sub c) of 43.3 kV/cm. While NMR investigations indicated that the chemical environments of both the proton and carbon species were similar for the two processes, differences in the amounts of by-products (esters, and therefore, water) formed were noted. These differences apparently impacted ceramic microstructure. Although both films were characterized by a columnar growth morphology, the SPA derived film displayed a residual pyrochlore layer at the film surface, which did not transform into the stable perovskite phase. The presence of this layer resulted in poor dielectric properties and lossy ferroelectric behavior. DOE

(DE92-010080; LA-UR-92-684; CONF-921206-3) Avail: CASI HC A02/MF A01

We have investigated the dependence of electrical and material properties of buried CoSi2 layers on Co(+) implantation and annealing conditions. The results indicated that the electrical resistivity and crystalline quality of the implanted buried CoSi2 layers depend strongly on the implantation temperature. CoSi2 layers with the lowest resistivity and best crystalline quality (chi(sub min) as low as 3.6 percent) were obtained from samples implanted at 300-400 C. Implantation at higher temperatures (e.g., 580 C) produced cobalt disilicide layers with significantly higher electrical resistivity and a chi(sub min) of about 10.7 percent. DOE

DISCREPANCIES BETWEEN CHARGE-PUMPING, DUAL-TRANSISTOR, AND MIDGAP MEASUREMENTS OF D(SUB IT)
J. R. Schwank, D. M. Fleetwood, and M. R. Shaneyfelt 1992 3 p Presented at the 1992 IEEE Semiconductor Interfact Specialists Conference, San Diego, CA, 9-13 Dec. 1992
(Contract DE-AC04-76DP-00789)
(DE92-040977; SAND-92-1919C; CONF-921226-4) Avail: CASI HC A01/MF A01

Several different techniques are used to electrically characterize defects at or near the Si/SiO2 interface. Three common methods are the charge-pumping, midgap, and dual-transistor techniques. Each of these techniques offer advantages and disadvantages compared to the others. For instance, charge-pumping measurements are not significantly affected by charge lateral non-uniformities and can provide high-sensitivity measurements of the average density of interface traps. However, charge-pumping measurements cannot provide accurate measurements of the number of charged oxide traps. In contrast, both the dual-tranistor and midgap techniques can provide good estimates for threshold-voltage shifts due to oxide traps and interface traps, but these estimates can break down when significant charge lateral non-uniformities are present in the oxide. Considering the widespread use of these techniques, it is of practical and theoretical importance to quantitatively compare them. At the SISC, we will present a detailed comparison of the charge-pumping, midgap, and dual-transistor techniques. Values for the density of interface traps measured using the three techniques will be compared for n- and p-channel transistors fabricated using several different process technologies; under different process technologies; and under different irradiation and anneal conditions. Discrepancies between the different techniques are observed. Causes for the discrepancies will be explored at the SISC. DOE

SU(3) LATTICE GAUGE FIXING WITH OVERRELAXATION AND GRIBOV COPIES
Maria Luigia Paciello (Istituto Nazionale di Fisica Nucleare, Rome, Italy), Claudio Parrinello (New York Univ., New York.), Silvano Petrarca (European Organization for Nuclear Research, Geneva, Switzerland), Bruno Taglienti (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and Anastassios Vladikas (Tor Vergata Univ., Rome, Italy) 31 Oct. 1991 13 p
(Preprint-839; ETN-93-92941) Avail: CASI HC A03/MF A01

The phenomenology of SU(3) lattice Landau gauge fixing as obtained by using an overrelaxation algorithm is reported. A result obtained using this algorithm is that distinct Gribov copies are generated by simply modifying the value omega of the overrelaxation parameter for a fixed starting configuration. By generating random gauge equivalent configurations, the variation of the number of copies with the lattice volume and gauge coupling are studied. Different minimization algorithms for F may converge to different Gribov copies. A preliminary study of the occurrence of Gribov copies in

the SU(3) Landau gauge as a function of (beta, V) is presented. An analysis on larger lattices enables the possible relation between the (gauge invariant) deconfinement transition and the decreased density of Gribov copies in the Landau gauge to be investigated. ESA

TEM STRUCTURE INVESTIGATIONS OF LOW-TEMPERATURE MBE GROWN InAlAs LAYERS ON InP GROUP OF ZONE AXES (001) SUBSTRATE
P. Werner, Z. Liliental-Weber, K. M. Yu, E. R. Weber, Z. Rek, and R. Metzger Apr. 1992 6 p Presented at the 1992 Material Research Society Spring Meeting, San Francisco, CA, 27 Apr. - 2 May 1992
(Contract DE-AC03-76SF-00098)
(DE92-041199; LBL-32470; CONF-920402-58) Avail: CASI HC A02/MF A01

The real crystal structure of In(0.52)Al(0.48)As layers grown on InP group of zone axes (001) substrate as a function of the growth temperature (between 150 and 450 C) was investigated. The following structural/electrical analyses were applied to the samples: transmission electron microscopy (TEM), x-ray diffraction, and particle induced x-ray emission (PIXE). In the temperature range between 200 and 450 C good epitaxial growth of InAlAs layers can be achieved with a low density of dislocations and stacking faults. Ordering of group-3 elements on (111) planes was observed for these layers. Structure models of such ordered domains are discussed. At growth temperatures below 300 C additional As (approximately 2 percent) is incorporated in the lattice. Growth at temperatures below 200 C leads to the formation of pyramidal defects with As grains in their cores. As-grown as well as annealed InAlAs layers show a nearly constant, high electrical resistance (10(exp 6)-10(exp 7)(Omega)cm) in the whole temperature range. DOE

ELECTRONIC STRUCTURE AND PHASE SEPARATION IN SUPERCONDUCTING CUPRATES
C. DiCastro and M. Grilli 27 May 1992 31 p
(Preprint-889; ETN-93-92989) Avail: CASI HC A03/MF A01

The implications of possible pairing mechanisms of the electronic structure and its correlation with the maximum critical temperature attained in the different cuprate families are reviewed. The three band Hubbard model and the technical tools used are presented. A magnetic Heisenberg coupling between the copper spin is added to the three band Hubbard model. The resulting extended tJ model is described. The model introducing the Kondo-like magnetic coupling is described. The related physics is discussed and phase separation and superconducting instabilities are analyzed. The extended Hubbard model is generalized by introducing the d(sub Z) orbital of the copper and the p(sub z) orbital of the out of plane oxygen ions. In this context the semiphenomenological correlation between the maximum critcal temperature in the various classes of materials and the symmetry of the hole states is presented. ESA

METHOD AND APPARATUS FOR CONTROLLING PROTEIN CRYSTALLIZATION Patent Application
David A. Noever, inventor (to NASA) 28 Aug. 1992 10 p
(NASA-Case-MFS-28688-1; NAS 1.71:MFS-28688-1;
US-Patent-Appl-SN-936376) Avail: CASI HC A02/MF A01

A method and apparatus for controlling the crystallization of protein by solvent evaporation including placing a drop of protein solution between and in contact with a pair of parallel plates and driving one of the plates toward and away from the other plate in a controlled manner to adjust the spacing between the plates is presented. The drop of solution forms a liquid cylinder having a height dependent upon the plate spacing thereby effecting the surface area available for solvent evaporation. When the spacing is close, evaporation is slow. Evaporation is increased by increasing the spacing between the plates until the breaking point of the liquid cylinder. One plate is mounted upon a fixed post while the other plate is carried by a receptacle movable relative to the post and driven by a belt driven screw drive. The temperature and humidity of the drop of protein solution are controlled by sealing the drop within the receptacle and mounting a heater and dessicant within the receptacle. NASA

PRESSURE AS A PROBE OF DEEP LEVELS AND DEFECTS IN SEMICONDUCTORS: GaAs, GaP AND THEIR ALLOYS
G. A. Samara 1992 6 p Presented at the 5th International Converence on High Pressure in Semiconductor Physics, Kyoto (Japan), 18-21 Aug. 1992
(Contract DE-AC04-76DP-00789)
(DE93-000714; SAND-92-2006C; CONF-9208165-1) Avail: CASI HC A02/MF A01

Measurements of the effects of pressure on the thermal electron emission rate and capture cross section for a variety of deep electronic levels in GaAs, GaP and their alloys have yielded the pressure dependences of the energies of these levels in the bandgaps, allowed evaluation of the breathing mode lattice relaxations accompanying carrier emission or capture by these levels and revealed trends which lead to new insights into the nature of the responsible defects. Emphasis is on deep levels believed to be associated with simple defects. Specifically, results will be summarized for the donor levels of the dominant native defect known as EL2 in CAM, which is believed to be associated with the arsenic antisite, and on the radiation-induced El and E2 levels in GaAs, GaP and their alloys, which are believed to be due to arsenic (or phosphorous) vacancies. The results are discussed in terms of models for the defects responsible for these deep levels. DOE

CP-VIOLATION IN K(SUP +/-) TO 3 PI DECAYS AND LATTICE QCD B-FACTORS
Gino Isidori (Istituto Nazionale di Fisica Nucleare, Rome, Italy), Luciano Maiani (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and Alessandra Pugliese (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 12 Dec. 1991 26 p
(Preprint-848; ETN-93-92950) Avail: CASI HC A03/MF A01

The Charge Conjugation and Space Inversion (CP) violating asymmetries in K(sup +/-) decays to 3 pi are evaluated in the framework of chiral perturbation theory. Lattice Quantum Chromodynamics (QCD) B factors are used to determine the matrix elements of the chiral operators. The effect of electroweak penguin operators are included. The resulting asymmetries are very small, of the order of few units in 10(exp 6) for the slope, and in 10(exp 8) for decay rates. The structure of the four quark effective hamiltonian and the numerical values of the quantities used in the analysis are given. The Lagrangian description of the amplitudes of the k decays to 2 pi and 3 pi is discussed. Formulae and results concerning the integrals that appear in the phase space and rescattering calculations are presented. ESA

To increase the current density and pinning of magnetic flux in high temperature superconductors, defects with point-like and line-like geometries were created in controlled numbers using ion irradiation methods. Single crystals of Y1Ba2Cu3O7 and Bi2Sr2Ca1Cu2O8 superconductors were studied using dc magnetic methods. These studies showed greatly increased irreversibility in the vortex state magnetization and enhanced intragrain current density J(sub c) following irradiation. Linear defects, created by irradiation with energetic heavy ions, are particularly effective in pinning vortices at higher temperatures and magnetic fields. Further investigations of 'flux creep' (the time dependence of magnetization) are well described by recent vortex glass and collective pinning theories. Complementary investigations have delineated the role of oxygen deficiency (delta) on pinning in aligned Y1Ba2Cu3O(7-delta) materials. DOE

(Contract DE-FG02-89ER-14017)
(DE93-002707; DOE/ER-14017/4) Avail: CASI HC A02/MF A01

We have studied the behavior of fluctuation effects in superconducting systems using numerical simulations of XY and Coulomb gas models. The fluctuation of vortex lines in high temperature superconductors, in the presence of an external magnetic field, has been studied using a three dimensional XY model. We have carried out new simulations on a more dilute vortex line model than we considered previously, and find surprising evidence that the process of vortex line lattice melting occurs as two distinct phase transitions. As the vortex line lattice is heated, it melts first into a vortex line liquid of straight unentangled lines, having superconducting properties in the direction along the lines (parallel to the external field), but not in directions transverse to the lines. At a higher temperature, the thermal excitation of closed vortex line loops links all the lines together, leading to a tangled vortex line liquid, with completely normal metal properties in all directions. We have also continued simulations of the two dimensional Coulomb gas, as a model for vortex fluctuations in two dimensional arrays of Josephson junctions. We find phase transitions which do not have the critical behavior expected from standard symmetry analyses. DOE

THE LOCAL STRUCTURE OF HIGH-TEMPERATURE SUPERCONDUCTORS
J. MustredeLeon, S. D. Conradson, A. R. Bishop, and I. D. Raistrick 1992 6 p Presented at the 7th International Conference on X Ray Absorption Fine Structure, Kobe (Japan), 23-29 Aug. 1992
(Contract W-7405-eng-36)
(DE93-000653; LA-UR-92-3057; CONF-9208160-1) Avail: CASI HC A02/MF A01

We show how x-ray absorption fine structure (XAFS) has been successfully used in the determination of the local crystal structure of high-temperature superconductors, with advantages over traditional diffraction techniques. We review the experimental results that yielded the first evidence for an axial-oxygen-centered lattice instability connected with the superconductivity transition. The interpretation of this instability in terms of a dynamical tunneling model suggests the presence of polarons in these materials. XAFS on Tl2Ba2CuO6 and other Tl-based superconductors indicate the presence of local instabilities in the CuO2 planes of these materials, in addition to axial-oxygen instabilities. DOE

X-RAY STUDIES OF MICROSTRUCTURES IN SEMICONDUCTORS AND SUPERCONDUCTING MATERIALS
Y. H. Kao Apr. 1992 17 p
(Contract DE-FG02-87ER-45283)
(DE93-001953; DOE/ER-45283/11) Avail: CASI HC A03/MF A01

The objective is to use synchrotron x rays to probe short-range-order (SRO) structures in these materials. These SRO structures, with a scale of a few angstroms, include these around interfaces in multilayers, strain and local environs around impurity or constituent atoms, as well as lattice mismatch, intermixing of atoms across interfaces, annealing, etc. A new soft x-ray detector has been built and was used to measure x-ray fluorescence from O and F in bulk materials. The research on microstructure in both semiconductors and high-T(sub c) superconductors is being continued with emphasis on multilayer materials. X-ray absorption fine structure spectroscopy is being used in many of the studies, as is grazing incidence x-ray fluorescence and scattering. Total electron yield is used with fluorescence to probe surfaces and interfaces. Effects of doping on superconducting properties, especially these related to microstructures around impurities or constituent atoms, were studied. Resulting papers are listed. DOE

N93-17206# Los Alamos National Lab., NM.
CRYSTALLOGRAPHIC AND MAGNETIC PROPERTIES OF UPdSn
S. W. Johnson, R. A. Robinson, Allen C. Larson, H. Nakotte (Amsterdam Univ., Netherlands), E. Brueck (Amsterdam Univ., Netherlands), and F. R. deBoer (Amsterdam Univ., Netherlands) 1992 12 p Presented at the Conference on Magnetism and Magnetic Materials, Houston, TX, 1-4 Dec. 1992 Submitted for publication
(Contract W-7405-eng-36)
(DE92-040243; LA-UR-92-2701; CONF-921201-1) Avail: CASI HC A03/MF A01

A single crystal of the intermetallic compound UPdSn was studied by means of neutron diffraction using the white-beam Laue diffractometer SCD at the Los Alamos spallation neutron source. Data were taken in the paramagnetic phase at 55 K and just below the Neel point at 37 K. The crystallographic data refine well within the space group P6(sub 3)mc and confirm the results obtained previously on powders, namely that the Pd and Sn atoms are ordered. At low temperature, UPdSn undergoes two phase transitions at 40 K and 25 K to complicated non-collinear antiferromagnetic structures. All three pairs of magnetic domains are observed, in roughly equal populations, in the intermediate-temperature orthorhombic magnetic structure (Phase 1). We obtain a uranium moment of 0.863 mu(sub B) and canting angles phi = 57.52 deg and theta = 18.63 deg, in reasonable agreement with previous powder neutron data for this temperature. The observed form factor is characteristic of the tetravalent f(sup 2) configuration. DOE

APICAL OXYGEN IONS AND THE ELECTRONIC STRUCTURE OF THE HIGH T(SUB c) CUPRATES
L. F. Feiner, M. Grilli, and C. DiCastro (Philips Gloeilampenfabrieken N.V., Eindhoven, Netherlands) 7 Oct. 1991 85 p
(Preprint-828; ETN-93-92931) Avail: CASI HC A05/MF A01

A five band extended Hubbard model involving four orbitals on the CuO2 planes of the high temperature superconducting oxides and the 2p(sub Z) orbital(s) for the out of plane apical oxygen ion(s) are analyzed. The strong local repulsion between holes on copper is treated by means of a slave boson approach in mean field approximation. The nearest neighbor Cu-O coulombic repulsion is studied within a Hartree decoupling scheme. The variation of the resulting band structure with doping and with varying model parameters is studied and its stability with respect to lattice deformations is examined. The results are compared with experimental data. The effects of the apical oxygen(s) on the electronic structure are analyzed and the amount of holes in states with local a(sub 1) symmetry is identified. An analysis of ten different classes of compounds reveals a correlation between the maximum critical temperature and the excess of a(sub 1) holes. This correlation indicates that the highest critical temperature can be reached in the compounds where the interaction between apical oxygen(s) and CuO2 plane is weakest. The implication of these results is discussed in the light of various theoretical models. ESA

EFFECT OF SUBSTRATE-TWIN-INDUCED MICROSTRUCTURE ON TRANSPORT PROPERTIES OF EPITAXIAL Tl2Ba2CaCu2O(x) FILMS IN A MAGNETIC FIELD
D. H. Kim, D. J. Miller, J. D. Hettinger, K. E. Gray, P. G. Landis, J. E. Sharping, and M. Eddy (Superconducting Technology, Inc., Mountain View, CA.) Aug. 1992 4 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-000605; ANL/CP-77431; CONF-920802-18) Avail: CASI HC A01/MF A01

The role of substrate-induced microstructure on transport properties in c-axis oriented epitaxial Tl2Ba2CaCu2O(x) films grown on LaAlO3 and SrTiO3 was studied. For a magnetic field parallel to the Cu-O planes, resistivity and the critical current density, J(sub c), were measured as a function of angle (theta) between the applied field and the direction of transport current. Resistivity dips and enhancement of the critical current density, J(sub c), were observed for magnetic fields applied parallel to the substrate twins in LaAlO3 in high fields (greater than or = 2 T). Meanwhile for films on SrTiO3, resistivity and J(sub c) were Lorentz-force independent. DOE

ENHANCED SUPERCONDUCTING PROPERTIES IN Bi2Sr2Ca1Cu2O(y) BY THERMAL AND MECHANICAL PROCESSING
D. J. Miller, T. G. Holesinger, J. D. Hettinger, K. C. Goretta, and K. E. Gray Aug. 1992 5 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-000609; ANL/CP-77432; CONF-920802-22) Avail: CASI HC A01/MF A01

The practical application of high temperature superconductors has been limited by low transport currents in bulk samples. The effect of processing on transition temperature, grain boundary coupling, and flux pinning has been examined for Bi2Sr2CaCu2O(y). Enhancement of (Tc) based on composition can be achieved by control of crystallization and subsequent annealing processes while thermo-mechanical processing may be used to modify weak link and flux pinning behavior. The microstructural basis for these changes are related to the composition of the superconducting phase and the presence of defects associated with deformation processing. The implications of these results on conductor development are related to the selection of alloy composition for optimum transition temperature and controlled thermo-mechanical processing which yields a uniform defect structure. DOE

N93-17228# Los Alamos National Lab., NM.
TRANSPORT AND MAGNETIZATION CRITICAL CURRENT DENSITIES IN TlBa2Ca2Cu3O(x) TAPES
J. O. Willis, M. P. Maley, P. J. Kung, J. Y. Coulter, D. E. Peterson, P. G. Wahlbeck, J. F. Bingert, and D. S. Phillips 1992 4 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contract W-7405-eng-36)
(DE93-000651; LA-UR-92-3069; CONF-920802-17) Avail: CASI HC A01/MF A01

The powder in tube process was used to produce silver-sheathed tapes of TlBa2Ca2Cu3O(8+x) (Tl-1223). The powder was produced by thalliating a precursor powder mixture to produce the Tl-2223 phase and then beating to drive off excess Tl and reach the Tl-1223 stoichiometry. The tapes were rolled and pressed, each step followed with a 3 hr. sintering. The 200 micron thick tapes show little sign of texturing; however, the critical current shows a small (approximately 50 percent) dependence on the direction of the applied magnetic field. Both transport and magnetization measurents indicate relatively strong pinning at high temperatures. The 75 K self field critical current density is 62 MA/m(exp 2). Transport measurements reveal the presence of weak links at all temperatures, but with a relatively weak field dependence above approximately 0.1 T. DOE

(Contract DE-AC02-83CH-10093)
(DE93-000022; NREL/TP-451-5094) Avail: CASI HC A06/MF A02

Phase 2 results of a research program on polycrystalline thin film heterojunction solar cells are presented. Relations between processing, materials properties, and device performance were studied. The analysis of these solar cells explains how minority carrier recombination at the interface and at grain boundaries can be reduced by doping of windows and absorber layers, such as in high efficiency CdTe and CuInSe2 based solar cells. The additional geometric dimension introduced by the polycrystallinity must be taken into consideration. The solar cells are limited by the diode current, caused by recombination in the space charge region. J-V characteristics of CuInSe2/(CdZn)S cells were analyzed. Current-voltage and spectral response measurements were also made on high efficiency CdTe/CdS thin film solar cells prepared by vacuum evaporation. Cu-In bilayers were reacted with Se and H2Se gas to form CuInSe2 films; the reaction pathways and the precursor were studied. Several approaches to fabrication of these thin film solar cells in a superstrate configuration were explored. A self-consistent picture of the effects of processing on the evolution of CdTe cells was developed. DOE

PHASE EQUILIBRIA, SUPERCONDUCTIVITY, AND FLUX CREEP IN Nd(1+x)Ba(2-x)Cu3O(7+DELTA) SUPERCONDUCTORS Ph.D. Thesis
Sang-Im Yoo Sep. 1992 119 p
(Contract W-7405-eng-82)
(DE93-001223; IS-T-1613) Avail: CASI HC A06/MF A02

NdBa2CU3O7(Nd123) is one of REBa2CU3O7(RE123) superconductors (RE = Y and rare earths), having T(sub c) of about 90 K. The phase diagram in the Nd-Ba-Cu-O system, superconductivity in Nd123ss, and the role of Nd substitution for Ba sites as the magnetic flux pinning sites were investigated. The discrepancies in published phase diagrams were clarified. Significant results contain the solubility limits of 0.04 is less than or equal to x is less than or equal to 0.6 in Nd123ss, the existence of Nd2BaCuO10 having a solid solution, and a discovery of a new phase NdBa6CU3Oy. Superconductivity in Nd(1+x)Ba(2-x)CU3O(7+delta) was studied for well-characterized samples with sharp transitions. With the substitution of Nd(+3) for Ba(+2), there is an increase in the O(5) sites surrounding this substitution. While for x greater than 0.1 there is a significant depression of T(sub c), for x less than 0.1 there is no substantial decrease in T(sub c) within experimental error. T(sub c) vs x is characterized by two plateaus analogous to T(sub c) vs d in YBa2CU3O(7-d). Analysis of O content of Nd123ss suggests the analogy with Y123 is valid. Transition width and Meissner fraction for all Nd123ss samples are strongly dependent on the sintering temperature. Hysteresis show good intragranular critical currents (J(sub c)) at high fields but still low intergranular. Since the magnetic fields penetrate a Type II superconductor at high field, flux lines must be pinned to increase the J(sub c). While T(sub c) is not affected over the range 0 is less than x is less than 0.1, the oxygens surrounding the substituted Ba sites are expected to locally suppress the superconducting order parameter. Such a local suppression of the order parameter may act as a flux pinning site. Hysteresis exhibits a small increase in the magnetic J(sub c), but flux creep measurements show no apparent effects of this substitution on flux pinning energy. DOE

DISTANCE ANALYSIS OF PATTERSON CALCULATIONS AND MOLECULAR MECHANICS AS AIDS IN STRUCTURE SOLUTION Ph.D. Thesis
C. L. Day Sep. 1992 142 p
(Contract W-7405-eng-82)
(DE93-001224; IS-T-1620) Avail: CASI HC A07/MF A02

Two methods (SUPSYMM and MMXRAY) for crystal structures insoluble through normal crystallography were developed. SUPSYMM needs only a list of Patterson superposition peaks as its starting point. Using distance analysis and vector projections, symmetry relations between the superposition peaks are identified which are exploited to identify probable peak positions for least-squares refinement. MMXRAY solves large organometallic structures by using Patterson superposition and molecular mechanics. Patterson superposition techniques can usually locate at least the heavy atoms. Molecular mechanics is used to model the remaining organic parts of the structure. MMXRAY converts the modeled structure to the original crystallographic reference system. Two programs designed to teach the basics of both powder and single crystal X-ray diffraction methods to undergraduate physical chemistry students are presented in the Appendix. Several crystal structures solved through routine crystallographic routes are also discussed. DOE

The ability to measure critical currents in high T(sub c) superconducting tapes on a local scale is valuable for optimizing the fabrication process. This paper describes the use of induced currents from a small noncontacting electromagnetic probe to determine the critical current density in a (Bi,Pb)2Sr2Ca2Cu3O(x)/Ag tape on a local scale. The technique forces full field penetration into the tape locally and infers the critical current density from the Bean critical state model, accounting for the Ag overlayers. Critical current images of the tape can be obtained by scanning the probe over the tape surface with spatial resolution on the order of 1.0 mm. Results for tapes with different microstructures are discussed. DOE

(DE93-000655; LA-UR-92-3054; CONF-920802-16) Avail: CASI HC A01/MF A01

Epitaxial Tl(0.5)Pb(0.5)Sr2CaCu2O7 films produced by rf magnetron sputtering followed by annealing in the presence of thallium oxide vapor have been produced on (100) LaAlO3 substrates. These films are highly c-axis oriented with rocking curve full width at half maximum less than 0.4 degrees. The resulting two copper oxide layer films exhibit microwave surface resistance at 10 GHz of 60 +/- 3 micro-ohms at 4.2 K and 498 +/- 10 micro-ohms at 70 K (T(sub c) = 88 +/- 2 K). The degree of lattice mismatch between this phase and the LaAlO3 substrate is very small resulting in epitaxial thin films. This material exhibits very little intrinsic defect structure. DOE

Oak Ridge National Laboratory (ORNL) operates the Isotope Enrichment Facility for the purpose of providing enriched stable isotopes, selected radioactive isotopes (including the actinides), and isotope-related materials and services for use in various research applications. ORNL is responsible for isotope enrichment and the distribution of approximately 225 nongaseous stable isotopes from 50 multi-isotopic elements. Many enriched isotope products are of prime importance in the fabrication of nuclear targets and the subsequent production of special radionuclides. State-of-the-art techniques to achieve special isotopic, chemical, and physical requirements are performed at ORNL. This report describes the status and capabilities of the Isotope Enrichment Facility and the Isotope Research Materials Laboratory as well as emphasizing potential advancements in enrichment capabilities. DESIGN AND MODELING OF SUPERCONDUCTING RFQ STRUCTURES
J. R. Delayen and W. L. Kennedy 1992 3 p Presented at the 16th International LINAC Conference, Ottawa, Ontario, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-000511; ANL/CP-77442; CONF-9208109-65) Avail: CASI HC A01/MF A01

Tests of the first superconducting RFQ structure indicated that high surface electric fields could be sustained in a quadrupole geometry. However, the geometry used in those tests was not appropriate for an accelerating structure and the area sustaining the high electric field was too small to assume that such fields could be achieved in actual RFQ structures. We have initiated a program to analyze and model a variety of geometries suitable for superconducting RFQ structures. We are also designing a niobium RFQ 'sparker' to experimentally measure the surface electric fields that can be achieved on large areas in an actual RFQ structure. DOE

DESIGN AND TEST OF A SUPERCONDUCTING STRUCTURE FOR HIGH-VELOCITY IONS
J. R. Delayen, W. L. Kennedy, and C. T. Roche 1992 3 p Presented at the 16th International LINAC Conference, Ottawa, Ontario, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-000513; ANL/CP-77443; CONF-9208109-64) Avail: CASI HC A01/MF A01

Following the successful development of a niobium coaxial half-wave structure we have designed, built and tested a new half-wave geometry: the spoke resonator. This geometry is better suited for high frequency resonators and for the acceleration of high velocity ions. The prototype cavity is a 2-gap structure resonating at 855 MHz, and optimized for particle velocity of 0.30 c. It is easier to manufacture than the coaxial half-wave resonator and the geometry can be straightforwardly extended to multigap designs. Rf-tests have been performed on this cavity both prior to and after high temperature annealing. An accelerating gradient of 7.2 MV/m (cw) and 7.8 MV/m (pulsed) was observed at 4.2 K. After annealing, a low power Q(sub 0) of 1.2 x 10(exp 8) was observed with small Q degradation due to field emission at high accelerating fields. DOE

SIMULATED HIGH HEAT LOAD PERFORMANCE OF AN INCLINED CRYSTAL MONOCHROMATOR
A. T. Macrander, A. M. Khounsary, and M. Graham Sep. 1992 13 p Presented at the Society of Photo-Optical Instrumentation Engineers International Symposium on Optical Applied Science and Engineering, San Diego, CA, 19-24 Jul. 1992
(Contract W-31-109-eng-38)
(DE93-000506; ANL/CP-77394; CONF-920792-34) Avail: CASI HC A03/MF A01

Thermal distortions of an inclined silicon crystal subjected to the high heat loads expected for a 2.5 m long undulator at the Advanced Photon Source were simulated, and the distortions were then used to calculate (111), (111) (+,-) double crystal rocking curves. The inclination angle for all the simulations was either 80 degree or 85 degree. The first crystal was assumed to be a slab that was uniformly cooled on its underside with liquid gallium. For some of the simulations, the undulator gap was set to 11.5 mm corresponding to K = 2.2 and the crystals were oriented to diffract the first harmonic energy at 4.2 keV. For K = 2.2, the total x-ray power incident on the crystal is 3.8 kW, and the peak power density transverse to the beam is 148 W/sq mm. Rocking curve broadening in these cases was found to be no more than 0.42 arcsec. Simulations for the third harmonic at K = 2.2 were also performed, and the broadening was found to be no more than 1.87 arcsec. In other simulations the undulator gap was widened, and rocking curves for the third harmonic at K = 1.5 (19.9 key) and the first harmonic at K = 1.2 (8.2 keV) were obtained. Only weak broadening was found for these cases as well. Finally, rocking curves at 4.2 keV were not altered if a slit that passed only the central cone of the undulator was placed in front of the first crystal. DOE

MULTILAYER MONOCHROMATORS AND SUPERMIRRORS FOR NEUTRON PROTEIN CRYSTALLOGRAPHY USING A QUASI LAUE TECHNIQUE
B. P. Schoenborn 1992 7 p Presented at the Society of Photo-Optical Instrumentation Engineers International Symposium on Optical Applied Science and Engineering, San Diego, CA, 19-24 Jul. 1992
(Contract DE-AC02-76CH-00016)
(DE93-001654; BNL-47954; CONF-920792-38) Avail: CASI HC A02/MF A01

The major problem in neutron protein crystallography is the low flux of present neutron sources. The collection of a data set using a conventional rotation technique and a 2D detector takes many weeks. One way to increase the flux at the sample is to increase the wavelength bandwidth. The conventional technique using a standard monochromator like Cu or

Be has a typical bandwidth of 1 percent. A multilayer monochromator can however be tailored to give bandwidth up to 25 percent or even larger and have an angular acceptance angle of approximately 3 percent. This can be achieved by a multiple spacing multilayer. In this case the diffraction geometry is such that the reflection in diffraction condition is 'scanned' by the Delta lambda and not by rotating the reciprocal lattice point through the Ewald sphere. Wavelength bandwidth of 10 percent satisfy this condition. It is important to tailor the bandwidth to the size needed by the extend of the reciprocal lattice 'point' to minimize background. The intensity of the reflection is proportional to the Delta lambda r that just covers the width of the reciprocal 'point' while the background is proportional to the full wavelength spread (Delta)(lambda) that hits the crystal. The conventional Laue technique is not suitable since it increases the background by the ratio of Delta lambda Delta lambda r, a ratio that can easily reach multiples of 10. DOE

THE CHARACTERIZATION OF ORGANIC MONOLAYERS AT GOLD SURFACES USING SCANNING TUNNELING MICROSCOPY AND ATOMIC FORCE MICROSCOPY CORRELATION WITH MACROSTRUCTURAL PROPERTIES Ph.D. Thesis

C. A. Alves Sep. 1992 193 p

(Contract W-7405-eng-82)

(DE93-001218; IS-T-1628) Avail: CASI HC A09/MF A03

Monolayer films formed by self-assembly of organothiols at epitaxially grown Au(111) films at mica were examined in air using scanning tunneling (STM) and atomic force microscopies (AFM). n-Alkanethiolate monolayers exhibit a hexagonal packing arrangement with nearest-neighbor and next-nearest-neighbor spacings of 0.50 and 0.87 nm. This arrangement is consistent with (the square root of 3 x the square root of 3)R30 deg adlayer structure at Au(111). STM reveals the structure of the Au-bound sulfur, while AFM details the structure at the monolayer/air interface, revealing that the order at the Au-S interface is retained up to the monolayer/air interface. The investigation of the self-assembled (CF3CF2)7(CH2)2SH monolayer at Au(111) by AFM reveals a (2 x 2) adlayer structure, with nearest-neighbor and next-nearest-neighbor spacings of 0.58 plus or minus 0.02 nm and 1.0 plus or minus 0.02 nm, respectively. This is consistent with the larger van der Waals diameter of the fluorinated chain. Coverage of this fluorinated thiolate monolayer is (6.3 plus or minus 0.8) x 10(exp -10) mol/cm(sup 2), consistent with the expected 0.25 monolayer coverage of the (2 x 2) adlayer structure at Au(111). Infrared reflection spectroscopy also confirmed this. Upon prolonged exposure to air, the thiolate species is oxidized to elemental sulfur in the forms of cyclooctasulfur (cyclo-S8) and other allotropes. STM reveals square structures on aged thiolate monolayers. Dimensions of these squares (0.40-0.50 nm per side) are close to those of cyclo-S8. Electrochemical reductive desorption experiments also reveal a change in the surface species with time, with a second desorption wave. DOE

CONCEPTION AND MOLECULAR BEAM EPITAXIAL GROWTH OF (Ga,Al)As-(Ca,Sr)F2 MULTILAYERS FOR OPTICAL APPLICATION Ph.D. Thesis - Toulouse Univ.

Philippe Requena 1991 137 p In FRENCH

(LAAS-91306; ETN-92-92547) Avail: CASI HC A07/MF A02

The conception and molecular beam epitaxy growth of multilayer structures for optics, involving GaAs, (Ga,Al)As semiconductors, and (Ca,Sr)F2 fluorides are addressed. The structures studied are Bragg reflectors and interference filters. The theoretical and experimental tools used for conceiving, growing, and characterizing the structures are described. The method for calculating the reflectance spectra of the multilayers is detailed. The calculation takes into account the effect of an applied electric field. The molecular beam epitaxy system, the experimental conditions used for growing the structures, the set up for optical characterization, and the technological processes developed are presented. Good optical and mechanical properties of (Ga,Al)As-(Ca,Sr)F2 reflectors were obtained by using a geometry based on the generalization of the standard Bragg geometry. Interference filters including these reflectors are designed in view of application to electrooptical modulation. The feasilbility of these devices is discussed in terms of the sensitivity of their optical performances to growth conditions. ESA

MINORITY CARRIER TRANSPORT IN HEAVILY DOPED SILICON Ph.D. Thesis

Yang Pan 1992 146 p

(Contract IC-DEL88-032)

(ETN-92-92527) Avail: CASI HC A07/MF A02

The physics of minority carrier transport in heavily doped regions of small bipolar transistors is investigated. Minority carrier transport in heavily doped quasi neutral regions can be modeled by two coupled differential equations of the first order including the effects of density of states distortion. The energy dependent mobility and lifetime are incorporated into the transport equations. The quantum mechanical tail model is simplified by an empirical exponential expression. Densities of states, for both conduction and valence bands, are derived from photoluminescence spectra. At room temperatures, the presence of band tails in both bands increases the equilibrium minority carrier concentration by a factor of two. For modeling of very small bipolar transistors, classical macroscopic models cannot be used. The fluctuation in the base current was studied by using the two dimensional ensemble Monte Carlo technique. The most important result is that the fluctuation in the minority carrier current is a limitation for scaling bipolar transistors. The minority hole transport parameters were measured in highly doped emitters. A numerical method to solve the inhomogeneous profile problem was developed. The transport parameters were measured on doped arsenic. No lifetime degradation in arsenic implanted layers was observed. This suggests a controlled annealing process and gettering, expected to remove most of the defects from the emitters. ESA

MAGNETIC CIRCULAR DICHROISM IN X RAY ABSORPTION AND CORE-LEVEL PHOTOEMISSION OF Fe/Cu(001)

J. G. Tobin, G. D. Waddill, and D. P. Pappas Jul. 1992 4 p Presented at the 10th International Conference on Vacuum Ultraviolet Radiation Physics, Paris, France, 27-31 Jul. 1992

(Contract W-7405-eng-48)

(DE93-001305; UCRL-JC-108837; CONF-920735-4) Avail: CASI HC A01/MF A01

We report the first observation of magnetic circular dichroism in both x-ray absorption and core-level photoemission of ultra thin magnetic films using circularly polarized x-rays. Iron films (1-4 ML) grown on a Cu(001,) substrate at 150 K and magnetized perpendicular to the surface show dramatic changes in the L(sub 2,3) branching ratio for different x-ray

polarizations. For linearly-polarized x-rays perpendicular to the magnetic axis of the sample the branching ratio was 0.75. For films greater than or equal to 2 ML, this ratio varied from 0.64 to 0.85 for photon spin parallel and anti-parallel, respectively, to the magnetic axis. This effect was observed either by changing the x-ray helcity for a fixed magnetic axis, or by reversing the magnetic axis for a fixed x-ray helicity. Our observation can be analyzed within a simple one-electron picture, if the raw branching ratios are normalized so that the linear value becomes statistical. Furthermore, warming the films to approximately 300 K eliminated this effect, indicating a loss of magnetization in the film over a temperature range of approximately 30 K. Finally, reversing the relative orientation of the photon spin and the magnetic axis from parallel to anti-parallel allowed measurement of the exchange splitting of the Fe 2p core levels which was found to be approximately 0.2 eV. These results are consistent with earlier studies, but the use of off-plane circularly-polarized x-rays from a bending magnet monochromator offers approximately 2 orders of magnitude greater intensity than typical spin-polarization measurements. ION-BEAM MODIFICATION OF Gd2Ti2O7
W. J. Weber and N. J. Hess Sep. 1992 16 p Presented at the 8th International Conference on Ion Beam Modification of Materials, Heidelberg, Germany, 7-11 Sep. 1992
(Contract DE-AC06-76RL-01830)
(DE93-001514; PNL-SA-20885; CONF-9209200-6) Avail: CASI HC A03/MF A01

Irradiation of Gd2Ti2O7 with 3 MeV Ar(+) ions results in expansion of the unit-cell volume from defect accumulation as well as irradiation-induced amorphization. The damage cross-section for amorphization determined from X-ray diffraction analysis is 0.023 nm(exp 2). Transmission electron microscopy and electron diffraction have confirmed the irradiation-induced amorphous character at high fluences. Raman spectroscopy indicates a decrease in scattered intensity and an increase in linewidth with fluence for the principal vibrational modes, consistent with increasing irradiation-induced disorder. The wavenumber of the most intense Raman peak at approximately 310 cm(exp -1) (attributed to the O-Gd-O bending mode) decreases with fluence, indicating a change in bond Angle. The increase in the wavenumber of the Raman peak at approximately 515 cm(exp -1) (attributed to the Gd-O stretching mode) with fluence suggests a decrease in bone length. At intermediate fluences, a forbidden peak at 765 cm(exp -1) becomes slightly activated by irradiation-induced disorder on the cation sites. DOE

(Contract F19628-85-C-0002)
(AD-A257723; RL-TR-92-173) Avail: CASI HC A03/MF A01

The integration of GaAs with ferrimagnetic garnets was investigated and demonstrated. A hybrid technique was first used to integrate two GaAs circuits with yttrium-iron garnet (YIG) delay lines, demonstrating the feasibility and benefits of combining the two materials in special microwave operations. The epitaxial growth of single-crystal GaAs on gadolinium-gallium garnet (GGG) was then accomplished, demonstrating a first step in the monolithic integration of the two materials. The hybrid circuit, consisting of a GaAs microwave circuit integrated with a tapped YIG delay line, formed an oscillator with an extremely short external delay loop, and taps provided multiple outputs with long delay times. The oscillator was tunable from 2.76 to 2.95 GHz with a 3-dB bandwidth of 1OkHz. The first growth of GaAs on GGG was successfully performed by using an InAs buffer layer and an InAs/GaAs multilayer structure between the GGG and the GaAs. The unintentionally doped InAs layers were n-type with room-temperature donor concentrations in the range of 7 x 10(exp 16) to 2 x 10(exp 18) cm(exp -3), and corresponding mobilities were 3.5 x 10(exp 3) to 1 x 10(exp 3) sq cm/V s. Hall measurements indicated that the GaAs was conducting. These were the first electrical measurements ever reported for any III-V compound semiconductor deposited on a garnet. GRA

THE 16TH INTERNATIONAL CONFERENCE ON DEFECTS IN SEMICONDUCTORS Final Report, 1 May 1991 - 30 Apr. 1992
M. Stavola and G. DeLeo 30 Apr. 1992 328 p Conference held in Bethlehem, PA, 22-26 Jul. 1991
(Grant AF-AFOSR-0217-91)
(AD-A258035; Lehigh-429054) Avail: CASI HC A15/MF A03

This report consists of the abstracts for the 16th International Conference on Defects in Semiconductors held at Lehigh University, Bethlehem, PA on July 22-26, 1991. Approximately 250 papers were presented. This meeting addressed the fundamental science of imperfection in semiconductor materials. A wide range of defects of both fundamental and technological interest that include native defects, impurities, dislocations, and defects at surfaces and interfaces in a variety of semiconductor materials (Si, Ge, diamond, III-V and II-VI compounds, and related alloys) were discussed. Properties of interest included defect structures (atomic and electronic), defect introduction, reactions, motion, electrical and optical characteristics, etc. The following are a few examples of recent work that is breaking new ground in the field: (1) oxygen in GaAs has been identified recently and has metastable characteristics; and (2) after many years of effort, there has been progress in the doping of II-VI materials. Investigations have focused primarily on surface structure and dynamics of ionic insulators, epitaxial growth onto alkali halide crystals and multiphoton studies. The surface dynamics of RbCl has been re-examined. We have developed a simple force constant model which provides insight into the dynamics of KBr overlayers on NaCl(001), a system with a large lattice mismatch. The KBr/NaCl(001) results are compared to Na/Cu(001) and NaCl/Ge(001). We have completed epitaxial growth experiments for KBr onto RbCl(001). Slab dynamics calculations using a shell model for this system with very small lattice mismatch are being carried out in collaboration with Professor Manson of Clemson University and with Professor Schroeder in Regensburg, Germany. Extensive experiments on multiphoton scattering of helium atoms onto NaCl and, particularly, LiF have been carried out and the theory has been developed to a rather advanced stage by Professor Manson. This work will permit the extraction of more information from time-of-flight spectra. It is shown that the theoretical model provides a very good description of the multiphoton scattering from organic films. Work has started on self-assembling organic films on gold (alkyl thiols/Au(111)). We have begun to prepare and characterize the gold crystal; one of the group members has spent two weeks at the Oak Ridge National Laboratory learning the proper Au(111) preparation techniques. One of our students has carried out neutron scattering experiments on NiO, measuring both bulk phonon and magnon dispersion curves. DOE

MODE ANALYSIS AND WARD IDENTITIES FOR PERTURBATIVE QUANTUM GRAVITY IN DE SITTER SPACE
N. C. Tsamis (Crete Univ., Iraklion, Greece) and R. P. Woodard Jun. 1992 12 p
(Contract DE-FG05-86ER-40272)
(DE92-040503; DOE/ER-40272/167; UFIFT-HEP-92-20) Avail: CASI HC A03/MF A01

We study linearized gravitons on the D-dimensional open submanifold spanned by de Sitter conformal coordinates. The physical modes are found in the same way as for flat space by imposing exact gauge conditions on the invariant field equations and then exploiting the residual gauge freedom of solutions. The resulting polarization tensors have vanishing zero

components and are transverse and traceless, just as in flat space. We also show that vacua exist such that the ghost and graviton propagators obey the Ward identity relating them. DOE

CLASSICAL FLUIDS OF NEGATIVE HEAT CAPACITY
P. T. Landsberg (Southampton Univ., England) and R. P. Woodard Jun. 1992 13 p
(Contract DE-FG05-86ER-40272)
(DE92-040507; DOE/ER-40272/166; UFIFT-HEP-92-18) Avail: CASI HC A03/MF A01

It is shown that new parameters X can be defined such that the heat capacity C(sub X) (equivalent to) T(partial derivative of S/partial derivative of T)X is negative, even when the canonical ensemble (i.e. at fixed T = (partial derivative of U/partial derivative of S) and Y not equal to X) is stable. As examples we treat black body radiation and general gas systems with nonsingular kappa(sub T). For the case of a simple ideal gas we even exhibit an apparatus which enforces a constraint X(p,V) = const. that makes C(sub X) less than 0. Since it is possible to invent constraints for which canonically stable systems have negative heat capacity, we speculate that it may also be possible to infer the statistical mechanics of canonically unstable systems - for which even the traditional heat capacities are negative - by imposing constraints that stabilize the associated, inoncanonical ensembles. The improvements that have occurred in calorimetry measurement technology in the past few years will help current users of calorimeters to achieve better use of their existing systems. These include a more user-friendly operator-computer interface, a more detailed printout at the end of each run, improved data processing to eliminate operator error, and improved system monitoring to detect system or environmental problems. In addition, an electrical calibration heater was developed to replace plutonium-238 heat standards for calibrating calorimeters, and several automation systems allow for easier and safer system operation. OPTIMIZATION OF AN INTERNALLY FINNED ROTATING HEAT PIPE M.S. Thesis
Geraldine L. Olson Jun. 1992 72 p
(AD-A256725) Avail: CASI HC A04/MF A01

A finite element formulation with linear triangular elements was used to solve the steady-state, two-dimensional conduction heat transfer equation in the condenser wall section of an internally finned rotating heat pipe. A FORTRAN program using this method was coupled with the ADS program for automated design of the internal heat pipe fin geometry to optimize heat transfer. An increase in surface area, which increases heat transfer, also increases the condensate level, which decreases heat transfer. The additional condensate level does not offset the advantage gained by the increased surface area. The investigation provided combinations of fin half angle, number of fins, and fin height for an optimum design. Water is used as the working fluid and the heat pipe is constructed from copper. GRA

THERMOPHYSICAL PROPERTIES
R. F. Kayser Jul. 1992 52 p
(Contract DE-FG02-91CE-23810)
(DE93-000493; DOE/CE-23810/3A) Avail: CASI HC A04/MF A01

Numerous fluids have been identified as promising alternative refrigerants, but much of the information needed to predict their behavior as pure fluids and as components in mixtures does not exist. In particular, reliable thermophysical properties data and models are needed to predict the performance of the new refrigerants in heating and cooling equipment, and to design and optimize equipment to be reliable and energy efficient. The objective is to provide highly accurate, selected thermophysical properties data for Refrigerants 32, 123, 124, and 125, and to use these data to fit simple and complex equations of state and detailed transport property models. The new data will fill gaps in the existing data sets and resolve the problems and uncertainties that exist in and between the data sets. DOE

QUANTUM MECHANICS AND POLARIZATION CORRELATIONS FOR PHOTONS
J. W. deRoever and M. Streng Feb. 1992 13 p
(MEMO-1035; ETN-92-92463) Avail: CASI HC A03/MF A01

An argument that both the satisfaction and the violation of the Bell inequalities have a quantum mechanical explanation is presented. The study concerns polarization correlation between two photons emitted by a common source. It is generally believed that experiments involving these correlations have shown that: the quantum mechanics was right; there is no signal faster than light. In the Copenhagen interpretation, where for 'quantum mechanics' one should read 'discrimination of our knowledge', the second statement is trivial because nobody can transfer knowledge faster than light. As to the first statement, it is explained that in the theory a choice concerning the way to describe these correlations has been made, which can only be justified by experiments. So it is not right to speak about the quantum mechanics. The two possibilities are compared. It is argued that in quantum mechanics alone, a reason to prefer the one above the other cannot be found. The only way to decide is to be convinced by experiments. ESA

RENORMALIZATION GROUP IN DIFFERENT FIELDS OF THEORETICAL PHYSICS
D. V. Shirkov (Joint Inst. for Nuclear Research, Dubna, USSR) Feb. 1992 87 p
(DE92-556707; KEK-91-13) Avail: CASI HC A05/MF A01

A very simple and general approach to the symmetry that is widely known as a Renormalization Group symmetry is presented. It essentially uses a functional formulation of group transformations that can be considered as a generalization of self-similarity transformations well known in mathematical physics since last century. This generalized Functional Self-Similarity symmetry and corresponding group transformations are discussed first for a number of simple physical problems taken from diverse fields of classical physics as well as for QED. Then we formulate the Renorm-Group Method as a regular procedure that essentially improves the approximate solutions near the singularity. After that we discuss relations between different formulations of Renormalization Group as they appear in various parts of a modern theoretical physics. Finally we present several topics of RGM application in modern QFT. DOE

A CONTINUUM STRING MODEL FOR D GREATER THAN 1
M. Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy), M. Spreafico (Milan Univ., Italy), and K. Yoshida (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 8 Jan. 1992 14 p
(Preprint-853; ETN-93-92955) Avail: CASI HC A03/MF A01

The non critical string (two dimensional gravity coupled to the matter with central charge D) is quantized taking care of both diffeomorphism and Weyl symmetries. In incorporating the gauge fixing with respect to the Weyl symmetry, through the condition R(sub g) = const, one modifies the classical result of Distler and Kawai. The real string tension for an arbitrary value of central charge D is obtained. ESA

THE 2 + 1 DIMENSIONAL QUANTUM GRAVITY AS A GAUSSIAN FERMIONIC SYSTEM AND THE 3D-ISING MODEL
Giuseppe Bonacina (Milan Univ., Italy), Maurizio Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and Mario Rasetti (Politecnico di Torino, Italy) 15 Jan. 1992 37 p
(Preprint-855; POLFIS-TH18-91; ETN-93-92957) Avail: CASI HC A03/MF A01

The aim of the study is to show that 2 + 1 dimensional Euclidean quantum gravity is equivalent, under topological assumptions, to a Gaussian fermionic system. For manifolds topologically equivalent to (sigma(sub g)) times the set R of real numbers, with (sigma(sub g)) a closed and oriented Riemann surface of genus g, the coresponding 2 + 1 dimensional Euclidean quantum gravity may be related to the three dimensional lattice Ising model before its thermodynamic limit. ESA

NON-LINEAR WKB ANALYSIS OF THE STRING EQUATION
F. Fucito (Tor Vergata Univ., Rome, Italy), A. Gamba (Milan Univ., Italy), M. Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and O. Ragnisco (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 28 Jan. 1992 30 p
(Preprint-862; ETN-93-92964) Avail: CASI HC A03/MF A01

Nonlinear WKB analysis is applied to the study of the string equation. The solutions obtained with this method are not exact. However, they approximate extremely well the true solutions, as explicitly shown using numerical simulations. 'Physical' solutions are seen to be separatrices corresponding to degenerate Riemann surfaces. An analytic approximation, in agreement with the numerical solution found by Parisi et al. for the k = 3 case, is obtained. The following topics are presented: the Whitham method; the Painleve type 1 equation; and degenerate solutions. ESA

INTERACTING EUCLIDEAN THREE-DIMENSIONAL QUANTUM GRAVITY
Giuseppe Bonacina (Milan Univ., Italy), Andrea Gamba (Milan Univ., Italy), and Maurizio Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 25 Feb. 1992 22 p
(Preprint-867; IFUM-400/FT; ETN-93-92967) Avail: CASI HC A03/MF A01

The purpose of the study is to show that Euclidean three dimensional gravity coupled to a Gaussian scalar massive matter field in first order dreibein formalism gives a quantum theory which has a finite perturbative expansion around a nonvanishing background. A possible mechanism to generate a nontrivial background metric starting from some gauge invariant and diff-invariant nonlocal observables of the pure topological theory is discussed. These observables and their algebra were introduced by Rovelli and Smolin in the frame of Ashtekar's reformulation of canonical four dimensional general relativity and specialized to the case of 2 + 1 dimensional Einstein gravity. ESA

QUANTIZED ALGEBRAS, FIELD THEORY, AND DEFORMED GOLDSTONE BOSONS
S. Meljanac (Zagreb Univ., Yugoslavia) and S. Pallua (Trieste Univ., Italy) 29 Oct. 1991 14 p
(Preprint-836; INFN-AE-9114; ETN-93-92939) Avail: CASI HC A03/MF A01

A field theory with a deformed sl(2) internal symmetry is constructed for the simple case of a scalar complex field. Among other properties, the spontaneous breakdown is found to break the mass degeneracy, keeping nonvanishing masses that tend to Goldstone bosons in the classical symmetry limit. This theory can be regarded as an sl(2)(sub q) = 1 theory with operators delta J less than or equal to 2 breaking the usual symmetry. The deformed symmetry does not require identity of the particles involved. Two cases are considered: in one the full Lagrangian is sl(2)(sub q) invariant and in the other only the potential is invariant. The results show that spontaneous violations of sl(2)(sub q) break the degeneracy of the masses and that a class of field theories, invariant under deformed symmetries, can be defined. ESA

FLUCTUATIONS AND THERMODYNAMIC VARIABLES IN MEAN FIELD SPIN GLASS MODELS
Francesco Guerra (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 30 Apr. 1992 21 p Sponsored in part by Italian Ministry of University Research and Science and Technology, and Istituto Nazionale di Fisica Nucleare
(Preprint-883; ETN-93-92983) Avail: CASI HC A03/MF A01

Two rigorous results on the Sherrington-Kirkpatrick mean field model for spin glasses are presented. Elementary methods, based on properties of fluctuations, with respect to the external quenched noise, of the thermodynamic variables and order parameters, are applied. The first result gives the uniform convergence of the quenched average of the free energy in the thermodynamic limit to its annealed approximation, in the high temperature regime, including the assumed critical point. The second result shows that the free energy can be expressed through a functional order parameter, of the type introduced by Parisi in the frame of the replica symmetry breaking method. The functional order parameter is implicitly given in terms of fluctuations of thermodynamic variables. ESA

REGULARIZATION OF CHIRAL GAUGE THEORIES
Gian Carlo Rossi (Tor Vergata Univ., Rome, Italy), Renata Sarno (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and Renata Sisto (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 28 May 1992 32 p Sponsored in part by Italian Ministry of University Research and Science and Technology
(Preprint-888; ROM2-F-22; ETN-93-92988) Avail: CASI HC A03/MF A01

An explicit two loop calculation is presented. The investigation shows that, as a consequence of the breaking of chiral gauge symmetry induced by the regularization, non-gauge invariant counterterms are presented in the ghost sector of a chiral gauge theory. This occurrence prevents inversion of the Faddeev-Popov procedure and removal of the gauge fixing in numerical simulations. The theoretical framework of this investigation and the results are discussed. Calculations, conclusions, and technical details are provided. The expression of the Becchi-Rouet-Stora transformations and the Feynman rules of a chiral gauge theory are given. The formalism of dimensional regularization is reviewed. The one loop calculation of the three point gauge boson Green function is described. ESA

GRIBOV COPIES AND SMEARED CORRELATION FUNCTIONS IN LATTICE QCD
Maria Luigia Paciello (Istituto Nazionale di Fisica Nucleare, Rome, Italy), Claudio Parrinello (New York Univ., New York.), Silvano Petrarca (Istituto Nazionale di Fisica Nucleare, Rome, Italy), Bruno Taglienti (Istituto Nazionale di Fisica Nucleare, Rome, Italy), and Anastassios Vladikas (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 24 Jun. 1992 13 p Sponsored by CNR, and Istituto Nazionale di Fisica Nucleare
(Preprint-892; ETN-93-92991) Avail: CASI HC A03/MF A01

The influence of Gribov copies in the Coulomb gauge in the smeared hadronic correlation functions, involved in the determination of the B meson decay constant, are studied. The current understanding of Quantum Chromodynamics (QCD) phenomenology in the lattice often proceeds through Monte Carlo simulations involving gauge dependent operators, like smeared sources for hadronic correlation functions. The residual gauge freedom associated to Gribov copies induces observable noise effects; at the level of numerical accuracy of the simulation these effects are not relevant to the final determination of f(sub B). The results indicate that such effects may become important on bigger lattices. ESA

QCD ON THE LIGHT CONE
S. J. Brodsky Sep. 1992 18 p Presented at the QCD: 20 Years Later Workshop, Aachen, Germany, 9-13 Jun. 1992
(Contract DE-AC03-76SF-00515)
(DE93-001822; SU-SLAC-PUB-5917; CONF-9206302-1) Avail: CASI HC A03/MF A01

The quantization of gauge theory at fixed light-cone time, tau = t - z/c, provides new perspectives for solving non-perturbative problems in quantum chromodynamics. The light-cone Fock state expansion provides

both a precise definition of the relativistic wavefunctions of hadrons as bound-states of quarks and gluons and a general calculus for predicting QCD processes at the amplitude level. Applications to exclusive processes and weak decay amplitudes are discussed. The problem of computing the hadronic spectrum and the corresponding light-cone wavefunctions of QCD in one space and one time dimension has been successfully reduced to the diagonalization of a discrete representation of the light-cone Hamiltonian. The problems confronting the solution of gauge theories in 3 + 1 dimensions in the light-cone quantization formalism, including zero modes and non-perturbative renormalization, are reviewed. DOE

DRESSED SKELETON EXPANSION AND THE COUPLING SCALE AMBIGUITY PROBLEM
Hung Jung Lu Sep. 1992 126 p
(Contract DE-AC03-76SF-00515)
(DE93-002516; SU-SLAC-406) Avail: CASI HC A07/MF A02

Perturbative expansions in quantum field theories are usually expressed in powers of a coupling constant. In principle, the infinite sum of the expansion series is independent of the renormalization scale of the coupling constant. In practice, there is a remnant dependence of the truncated series on the renormalization scale. This scale ambiguity can severely restrict the predictive power of theoretical calculations. The dressed skeleton expansion is developed as a calculational method which avoids the coupling scale ambiguity problem. In this method, physical quantities are expressed as functional expansions in terms of a coupling vertex function. The arguments of the vertex function are given by the physical momenta of each process. These physical momenta effectively replace the unspecified renormalization scale and eliminate the ambiguity problem. This method is applied to various field theoretical models and its main features and limitations are explored. For quantum chromodynamics, an expression for the running coupling constant of the three-gluon vertex is obtained. The effective coupling scale of this vertex is shown to be essentially given by mu(exp 2) approximately = Q(sub min)(exp 2)Q(sub med)(exp 2)/Q(sub max)(exp 2) where Q(sub min)(exp 2)Q(sub med)(exp 2)/Q(sub max)(exp 2) are, respectively, the smallest, the next-to-smallest, and the largest scale among the three gluon virtualities. This functional form suggests that the three-gluon vertex becomes non-perturbative at asymmetric momentum configurations. Implications for four-jet physics is discussed. DOE

QUANTUM CHAOS WITHOUT CLASSICAL COUNTERPART
Giovanni Jona-Lasinio, Carlo Presilla, and Federico Capasso (Bell Telephone Labs., Inc., Murray Hill, NJ.) 15 Oct. 1991 11 p
(Preprint-830; ETN-93-92933) Avail: CASI HC A03/MF A01

A quantum many body system undergoing multiple resonant tunneling which exhibits chaotic behavior in numerical simulations of a mean field approximation is described. This phenomenon has no counterpart in the classical limit and is due to effective nonlinearities in the tunneling process. The phenomena can be observed in principle within a heteorostructure. The objective of the study is to discuss whether it is possible to have quantum chaos, transient or persistent, independently of what happens in the classical limit. The system analyzed consists of a cloud of electrons moving in a three well heterostructure, and the heterostructure is shaped in such a way that the system is closed. The state of the electrons is described with a one particle wave function obeying a nonlinear Hartree equation. ESA

CP VIOLATION IN THE DECAYS B(SUP 0) YIELDS (PSI)K(SUB s) AND B(SUP 0) YIELDS (PI)(+)(PI)(-): A PROBE FOR NEW PHYSICS
J. M. Soares and L. Wolfenstein 27 May 1992 15 p
(Contract DE-FG02-91ER-40682)
(DE93-002413; DOE/ER-40682/6; CMU-HEP-92-11) Avail: CASI HC A03/MF A01

We point out the strong correlation between the CP-violating asymmetries in the decays B(sup 0) yields psi(K sub s) and B(sup 0) yields pi(+)pi(-) that is predicted by the Kobayashi-Maskawa model. This results in a very restricted allowed region for the asymmetries, and so their measurement will provide a powerful test of the standard model. To show how new physics may give very different results, we look at the predictions of a simple model where both the standard model and superweak contributions to the K(sup 0) and B(sup 0) mass matrices coexist. We find that, for possible values of the parameters, practically any values are allowed for the asymmetries. DOE

METASTABLE COSMIC STRINGS IN REALISTIC MODELS
R. Holman, S. Hsu (Harvard Univ., Cambridge, MA.), and T. Vachaspati (Tufts Univ., Medford, MA.) 1992 25 p
(Contract DE-FG02-91ER-40682)
(DE93-002647; DOE/ER-40682/15; FERMILAB-Pub-92/228-A; HUTP-92/A032; CMU-HEP-92-20) Avail: CASI HC A03/MF A01

The stability of the electroweak Z-string is investigated at high temperatures. The results show that, while finite temperature corrections can improve the stability of the Z-string, their effect is not strong enough to stabilize the Z-string in the standard electroweak model. Consequently, the Z-string will be unstable even under the conditions present during the electroweak phase transition. Phenomenologically viable models based on the gauge group SU(2)(sub L) x SU(2)(sub R) x U(1)(sub B-L) are then considered, and it is shown that metastable strings exist and are stable to small perturbations for a large region of the parameter space for these models. It is also shown that these strings are superconducting with bosonic charge carriers. The string superconductivity may be able to stabilize segments and loops against dynamical contraction. Possible implications of these strings for cosmology are discussed. DOE

(Contract DSS-31098-7-6027/SW)
(CTN-93-60623) Avail: CASI HC A03/MF A01

TVOntario has initiated a space education project whose objectives include the development of expertise in microgravity or space broadcasting and to produce quality educational programs on space science. As part of this project, TVOntario is working with industry and university scientists to develop flight qualified experiments that would illustrate certain characteristics of the microgravity environment and that would be videotaped for broadcast. The University of Toronto Institute for Aerospace Studies was asked to design and build a generic test bed and a series of microgravity experimental cells for use on the June 1988 KC-135 aircraft flight. Experiments were selected to demonstrate the influence of microgravity on a range of liquid properties, and the effects in the cells were intended to represent various stages of manufacturing processes which could be improved by transfer to a microgravity environment. The test bed incorporates a broadcast quality video package. The technical design requirements and hardware description of this microgravity experiment and broadcast apparatus are presented. On the KC-135 flight, the experimental package performed extremely well, capturing the desired phenomena with excellent resolution. From a mechanical viewpoint, the package performed at perhaps an 80 percent level. CISTI

THE NASA HIGH-SPEED RESEARCH PROGRAM **c05**
Sherilee F. Beam *In its* NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 71-74 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Since its inception, one of NASA's commitments has been to develop the technology to advance aeronautics. As such, a new High-Speed Research Program was activated to develop the technology for industry to build a High-Speed Civil Transport - a second generation Supersonic Transport (SST). The baseline for this program is the British Concorde, a major technological achievement for its time, but an aircraft which is now both technologically and economically outdated. Therefore, a second generation SST must satisfy environmental concerns and still be economically viable. In order to do this, it must have no significant effect on the ozone layer, meet Federal Air Regulation 36, Stage 3 for community noise, and have no perceptible sonic boom over populated areas. These three concerns are the focus of the research efforts in Phase 1 of the program and are the specific areas covered in the technical video report. L.R.R.

AN INTELLIGENT DECOMPOSITION APPROACH FOR EFFICIENT DESIGN OF NON-HIERARCHIC SYSTEMS **c61**
Christina L. Bloebaum *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 75-78 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The design process associated with large engineering systems requires an initial decomposition of the complex systems into subsystem modules which are coupled through transference of output data. The implementation of such a decomposition approach assumes the ability exists to determine what subsystems and interactions exist and what order of execution will be imposed during the analysis process. Unfortunately, this is quite often an extremely complex task which may be beyond human ability to efficiently achieve. Further, in optimizing such a coupled system, it is essential to be able to determine which interactions figure prominently enough to significantly affect the accuracy of the optimal solution. The ability to determine 'weak' versus 'strong' coupling strengths would aid the designer in deciding which couplings could be permanently removed from consideration or which could be temporarily suspended so as to achieve computational savings with minimal loss in solution accuracy. An approach that uses normalized sensitivities to quantify coupling strengths is presented. The approach is applied to a coupled system composed of analysis equations for verification purposes. There is currently a great deal of interest in using response surfaces in the optimization of aircraft performance. The objective function and/or constraint equations involved in these optimization problems may come from numerous disciplines such as structures, aerodynamics, environmental engineering, etc. In each of these disciplines, the mathematical complexity of the governing equations usually dictates that numerical results be obtained from large computer programs such as a finite element method program. Thus, when performing optimization studies, response surfaces are a

convenient way of transferring information from the various disciplines to the optimization algorithm as opposed to bringing all the sundry computer programs together in a massive computer code. Response surfaces offer another advantage in the optimization of aircraft structures. A characteristic of these types of optimization problems is that evaluation of the objective function and response equations (referred to as a functional evaluation) can be very expensive in a computational sense. Because of the computational expense in obtaining functional evaluations, the present study was undertaken to investigate under-determinined approximations. An under-determined approximation is one in which there are fewer training pairs (pieces of information about a function) than there are undetermined parameters (coefficients or weights) associated with the approximation. Both polynomial approximations and neural net approximations were examined. Three main example problems were investigated: (1) a function of one design variable was considered; (2) a function of two design variables was considered; and (3) a 35 bar truss with 4 design variables was considered. UNDERSTANDING CRYSTALLINITY IN AROMATIC POLYIMIDES c27
Edward A. Celarier *In its* NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 87-90 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Aromatic polyimides are a class of polymers that show remarkable thermal stability, strength, and toughness. These properties make them attractive candidates for use in high-performance carbon fiber composites for airborne and spaceborne structural components. Our research centered on the development of an understanding of the underlying process of crystallite formation in a particular class of aryl polyimides for which there are some x-ray crystallographic data available. The ultimate aim of the project is to be able to develop a model sufficiently flexible to be able, on the basis of the chemical structure of a polymer in this class, to predict: (1) whether it will be prone to form crystallites; (2) crystallographic features of the crystallites; and (3) synthesis and/or processing conditions that will be favorable or unfavorable to crystallite formation. This will provide guidance to the laboratory chemists in their choice of candidate polymers and processing methods. Author

INTERFEROMETRIC RECONSTRUCTION OF THREE-DIMENSIONAL HIGH-SPEED AERODYNAMIC FLOWS c02
Soyoung Stephen Cha *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 91-92 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Holographic interferometry can be a very useful diagnostic tool in high-speed aerodynamic testing. During this summer research period, various possible approaches for accurately reconstructing three-dimensional flows from limited data were examined. The approach based on the combination of the following three techniques appears to be promising: (1) Continuous Local Basis Function Method - this computational tomographic method has a power to accurately reconstruct continuous regions and is appropriate from well-conditioned to moderately limited data; (2) Variable Basis Method - this computational tomographic method provides accuracy near discontinuities, i.e., shock regions, and is appropriate from moderately-limited to severely-limited data; and (3) Complementary Field Method - this is a general iterative reconstructor that can be coupled with any computational tomographic techniques. Mathematically, it can be shown that this method can provide better accuracy than the direct reconstruction as in a conventional approach. Our numerical simulation of experiments demonstrated improved reconstruction results even when these techniques were individually tested. Author

PHYSICAL AGING AND SOLVENT EFFECTS ON THE FRACTURE OF LARC-TPI ADHESIVES c27
David A. Dillard (Virginia Polytechnic Inst. and State Univ., Blacksburg.), Terry L. St.Clair, and W. Steven Johnson *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 93-96 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

When amorphous materials are quenched below their glass transition temperature, excess enthalpy is trapped in the glassy material because the viscosity is too great to allow the material to remain in volumetric equilibrium. Over time, this excess free volume is reduced as the material slowly approaches its equilibrium configuration. This process, known as physical aging, leads to substantial changes in the constitutive behavior of polymers, as has been widely discussed in the literature. Less is known about the effects of this physical aging process on fracture and fatigue properties of aged materials. The original goal of the summer was to investigate the effects of physical aging on the fracture and fatigue behavior of LaRC-TPI, a thermoplastic polyimide developed at NASA-Langley. Preliminary results are reported, although a lack of equipment availability prevented completion of this task. In the process of making specimens, the current LaRC-TPI was observed to be extremely susceptible to environmental stress cracking. A study of the unique failure patterns resulting from this degradation process in bonded joints was conducted and is also reported herein. Author

FATIGUE DAMAGE STUDY IN ALUMINUM-2024 T3 ALLOYS c26
Milton W. Ferguson *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 97-98 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The grain structure of aluminum 2024, a commonly used commercial alloy is investigated, and these findings are correlated with the fatigue property of the material. Samples of aluminum 2024 were polished and etched in different reagents. Optical micrographs (at 500X) of samples etched in Keller's reagent revealed grain boundaries as well as some particles present in the microstructure. Normal x-ray scans of samples etched for different intervals of time in Keller's reagent indicate no significant variations in diffraction peak positions; however, the width of the rocking curve increased with the time of etching. These results are consistent with the direct dependence of the width of the rocking curve on the range of grain orientation. Etching removes the preferred orientation layer of the sample produced by polishing; thereby, causing the width to increase. Author

A few years ago the Structural Dynamics Division at LaRC started ambitious experimental research efforts known as the Benchmark Models Program. The primary objective of this program was to provide experimental data that may serve as a calibration source for computational fluid dynamics (CFD) efforts that deal with aeroelastic unsteady flow configurations. It also focuses on the understanding of complex flow phenomenon associated with unsteady flow developments. The overall plan for the program has been described by Bennett, including a presentation of initial test results of flutter of a rigid wing mounted on flexible supports. An example of a test model employed to measure the dynamic response along with corresponding pressure distributions is shown. This model incorporates eighty pressure transducers distributed along two spanwise stations. In addition, the models are equipped with four accelerometers and two strain gages. The data handling system for the Benchmark Model Program is under development. Several interactive computer routines designed for the user interface, dynamic memory allocation, unsteady flow measurements data extraction, and further data processing were developed. To present a few examples of measured data, the unsteady pressure distributions and the wing model dynamic response were plotted. Author

A great deal of analysis and testing is conducted at the NASA Langley Research Center to support the development of safe and reliable helicopter rotor systems. This work is performed by the Rotorcraft Aeroelasticity Group located in the Transonic Dynamics Tunnel (TDT) facility. Over the past two decades a wide variety of tests have been successfully conducted in the TDT and their results have contributed significantly to the understanding of aeromechanical phenomena in rotor systems. This has led to improved tools for analysis and design, and ultimately to the development, of improved rotor systems. The TDT facility is ideally suited for these tests due to its unique ability to use a heavy gas as a working medium. This allows the model to be scaled such that the results obtained may be readily extrapolated to full scale. Until recently, the rotor system to be tested has been mounted on a fixed balance which is attached to the longeron which is attached to the stand through a single pitching degree of freedom. The testbed used is known as the Aeroelastic Rotor Experimental System (ARES 1). In order to extend the experimental capabilities to investigate the full rotor/body dynamic coupling present in a rotorcraft, a very ambitious project has been undertaken to design and construct a six degree of freedom system that can be controlled so as to emulate the inertial characteristics of a prescribed model fuselage. The electronic and mechanical hardware for this system has already been designed and constructed. This system is known ar ARES II. The rotor and its drive system are mounted on the balance which is attached to the longeron via six hydraulic actuators. This six degree of freedom parallel linkage is referred to in the literature as a Stuart Platform. By properly adjusting the length of the hydraulic actuators it is possible to position and orient the balance relative to the longeron. The longeron is attached to the stand via a pitch degree of freedom to allow testing over various forward flight regimes. One major task remaining to complete this testbed is the design and synthesis of a control system. To do this properly requires an understanding of the kinematics and dynamics of the system and robust control design. A brief description of the development of a control design is given. Author

WIND TUNNEL SEEDING PARTICLES FOR LASER VELOCIMETER **c02**
Anthony Ghorieshi *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 110-115 (For primary document see N93-16760 05-80)
Avail: CASI HC A02/MF A03

The design of an optimal air foil has been a major challenge for aerospace industries. The main objective is to reduce the drag force while increasing the lift force in various environmental air conditions. Experimental verification of theoretical and computational results is a crucial part of the analysis because of errors buried in the solutions, due to the assumptions made in theoretical work. Experimental studies are an integral part of a good design procedure; however, empirical data are not always error free due to environmental obstacles or poor execution, etc. The reduction of errors in empirical data is a major challenge in wind tunnel testing. One of the recent advances of particular interest is the use of a non-intrusive measurement technique known as laser velocimetry (LV) which allows for obtaining quantitative flow data without introducing flow disturbing probes. The laser velocimeter technique is based on measurement of scattered light by the particles present in the flow but not the velocity of the flow. Therefore, for an accurate flow velocity measurement with laser velocimeters, two criterion are investigated: (1) how well the particles track the local flow field, and (2) the requirement of light scattering efficiency to obtain signals with the LV. In order to demonstrate the concept of predicting the flow velocity by velocity measurement of particle seeding, the theoretical velocity of the gas flow is computed and compared with experimentally obtained velocity of particle seeding. NEAR-WALL RECONSTRUCTION OF HIGHER ORDER MOMENTS AND LENGTH SCALES USING THE POD **c34**
Mark N. Glauser *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 116-120 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

An analysis of the near-wall behavior of the proper orthogonal decomposition (POD) eigenfunctions derived from direct numerical simulation (DNS) of channel flow is performed. Consistent with previous studies, a low order multi-mode reconstruction of the kinetic energy and Reynolds shear stress suffices. A similar reconstruction of the isotropic dissipation rate is shown to be insufficient, however. An analysis is performed of the multi-mode composition of the dissipation rate in the near-wall region, and it is shown that a significant number of higher-order modes are required to achieve the correct asymptotic consistency in the near-wall region. In an attempt to avoid this problem, a length scale definition is proposed in terms of an integration of the correlation tensor which factors in the presence of the wall. The wall is accounted for by only integrating out to $2y(+)$ and not over the entire domain. Viscous and inviscid estimates for the dissipation were used in the near-wall and core regions respectively, in conjunction with this length scale representation to obtain an estimate of the dissipation throughout the domain. The resulting dissipation exhibits the proper behavior near the wall and in the inertial layer. A 1 POD mode estimate of the length scale is computed and found to agree quite well with the length scale obtained when the entire correlation tensor is used. Author

In the past few years, significant interest has developed in using artificial neural networks to model and control nonlinear dynamical systems. While there exists many proposed schemes for accomplishing this and a wealth of supporting empirical results, most approaches to date tend to be ad hoc in nature and rely mainly on heuristic justifications. The purpose of this project was to further develop some analytical tools for representing nonlinear discrete-time input-output systems, which when applied to neural networks would give insight on architecture selection, pruning strategies, and learning algorithms. A long term goal is to determine in what sense, if any, a neural network can be used as a universal approximator for nonliner input-output maps with memory (i.e., realized by a dynamical system). This property is well known for the case of static or memoryless input-output maps. The general architecture under consideration in this project was a single-input, single-output recurrent feedforward network. Author

As the development of complex computer hardware accelerates at increasing rates, the ability of software to keep pace is essential. The development of software design tools, however, is falling behind the development of hardware for several reasons, the most prominent of which is the lack of a software infrastructure to provide an integrated environment for all parts of a software system. The research was undertaken to provide a basis for answering this problem by investigating the requirements of open environments. Author

VIRTUAL REALITY SYSTEMS c60
David W. Johnson *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 130-132 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Virtual realities are a type of human-computer interface (HCI) and as such may be understood from a historical perspective. In the earliest era, the computer was a very simple, straightforward machine. Interaction was human manipulation of an inanimate object, little more than the provision of an explicit instruction set to be carried out without deviation. In short, control resided with the user. In the second era of HCI, some level of intelligence and control was imparted to the system to enable a dialogue with the user. Simple context sensitive help systems are early examples, while more sophisticated expert system designs typify this era. Control was shared more equally. In this, the third era of the HCI, the constructed system emulates a particular environment, constructed with rules and knowledge about 'reality'. Control is, in part, outside the realm of the human-computer dialogue. Virtual reality systems are discussed. L.R.R.

THE DAMPER PLACEMENT PROBLEM FOR LARGE FLEXIBLE SPACE STRUCTURES c18
Rex K. Kincaid *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 133-135 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The damper placement problem for large flexible space truss structures is formulated as a combinatorial optimization problem. The objective is to determine the p truss members of the structure to replace with active (or passive) dampers so that the modal damping ratio is as large as possible for all significant modes of vibration. Equivalently, given a strain energy matrix with rows indexed on the modes and the columns indexed on the truss members, we seek to find the set of p columns such that the smallest row sum, over the p columns, is maximized. We develop a tabu search heuristic for the damper placement problems on the Controls Structures Interaction (CSI) Phase 1 Evolutionary Model (10 modes and 1507 truss members). The resulting solutions are shown to be of high quality. Author

QUANTIFYING PARAMETERS FOR BAYESIAN PRIOR ASSUMPTIONS WHEN ESTIMATING THE PROBABILITY OF FAILURE OF SOFTWARE c61
Jacquelyn E. Long *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 136-138 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Software reliability has become increasingly important, especially in life-critical situations. The ability to measure the results of testing and to quantify software reliability is needed. If this is accomplished, a certain minimum amount of reliability for a piece of software can be specified, and testing and/or other analysis may be done until that minimum number has been attained. There are many models for estimating software reliability. The accuracy of these models has been challenged and many revisions for the models and recalibration techniques have been devised. Of particular interest is the method of estimating the probability of failure of software when no failures have yet occurred in its current version as described by Miller. This model uses black box testing with formulae based on Bayesian estimation. The focus is on three interrelated issues: estimating the probability of failure when testing has revealed no errors; modifying this estimation when the input use distribution does not match the test distribution; and combining the results from random testing with other relevant information to obtain a possibly more accurate estimate of the probability of failure. Obtaining relevant information about the software and combining the results for a better estimate for the Miller model are discussed. Author

VARIATIONAL DERIVATION OF EQUATION FOR GENERALIZED PAIR CORRELATION FUNCTION c61
F. Bary Malik *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 139-141 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The wavefunction of a system is explicitly written down in a fully anti-symmetric way between a fermion pair and a medium, and the equations for each one of them are derived from the variation of total energy for bound systems and by forming appropriate scalar products for continuum states. High-energy particles, such as protons, electrons, and nuclei impinging upon spacecraft, produce secondary radiations. In order to protect the internal environment of spacecraft from these radiations, their intensities are determined in many instances theoretically, and an appropriate program has been developed in the High Energy Science Branch. The purpose of this research is to investigate the problem of indistinguishability of an incident projectile with one of the same in a target. Author

FUZZY SET APPROACH TO QUALITY FUNCTION DEPLOYMENT: AN INVESTIGATION Abstract Only Final Report c64
Abu S. M. Masud *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 142 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The final report of the 1992 NASA/ASEE Summer Faculty Fellowship at the Space Exploration Initiative Office (SEIO) in Langley Research Center is presented. Quality Function Deployment (QFD) is a process, focused on facilitating the integration of the customer's voice in the design and development of a product or service. Various input, in the form of judgements and evaluations, are required during the QFD analyses. All the input variables in these analyses are treated as numeric variables. The purpose of the research was to investigate how QFD analyses can be performed when some or all of the input variables are treated as linguistic variables with values expressed as fuzzy numbers. The reason for this consideration is that human judgement, perception, and cognition are often ambiguous and are better represented as fuzzy numbers. Two approaches for using fuzzy sets in QFD have been proposed. In both cases, all the input variables are considered as linguistic variables with values indicated as linguistic expressions. These expressions are then converted to fuzzy numbers. The difference between the two approaches is due to how the QFD computations are performed with these fuzzy numbers. In Approach 1, the fuzzy numbers are first converted to their equivalent crisp scores and then the QFD computations are performed using these crisp scores. As a result, the output of this approach are crisp numbers, similar to those in traditional QFD. In Approach 2, all the QFD computations are performed with the fuzzy numbers and the output are fuzzy numbers also. Both the approaches have been explained with the help of illustrative examples of QFD application. Approach 2 has also been applied in a QFD application exercise in SEIO, involving a 'mini moon rover' design. The mini moon rover is a proposed tele-operated vehicle that will traverse and perform various tasks, including autonomous operations, on the moon surface. The output of the moon rover application exercise is a ranking of the rover functions so that a subset of these functions can be targeted for design improvement. The illustrative examples and the mini rover application exercise confirm that the proposed approaches for using fuzzy sets in QFD are viable. However, further research is needed to study the various issues involved and to verify/validate the methods proposed. Author

PREDICTION OF THERMAL CYCLING INDUCED MATRIX CRACKING **c24**

Hugh L. McManus *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 143-146 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Thermal fatigue has been observed to cause matrix cracking in laminated composite materials. A method is presented to predict transverse matrix cracks in composite laminates subjected to cyclic thermal load. Shear lag stress approximations and a simple energy-based fracture criteria are used to predict crack densities as a function of temperature. Prediction of crack densities as a function of thermal cycling is accomplished by assuming that fatigue degrades the material's inherent resistance to cracking. The method is implemented as a computer program. A simple experiment provides data on progressive cracking of a laminate with decreasing temperature. Existing data on thermal fatigue is also used. Correlations of the analytical predictions to the data are very good. A parametric study using the analytical method is presented which provides insight into material behavior under cyclical thermal loads. Author

DIODE INJECTION - SEEDED, 940 NANOMETER (nm), TITANIUM - SAPPHIRE LASER FOR H2O DIAL (DIFFERENTIAL ABSORPTION LIDAR), MEASUREMENTS **c36**

George E. Miller *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 147-152 (For primary document see N93-16760 05-80)
Avail: CASI HC A02/MF A03

Differential absorption of laser radiation by various molecular species represents both a selective and a sensitive method of measuring specific atmospheric constituents. DIAL measurements can be carried out via two different means. Both involve using two laser pulses with slightly different wavelengths (lambda), (one lambda at a strong absorption line of the molecule of interest, the other detuned into the wing of the line), and comparing the attenuation of the pulses. One approach relies on scattering of the radiation from some conveniently located topographical target. In the other technique elastic scattering from atmospheric aerosols and particulates is used to return the radiation to the lidar receiver system. This case is referred to as the differential absorption and scattering technique, and is the technique we are interested in to measure water vapor at 940 nm. The 940 nm wavelength is extremely desirable to atmospheric scientist interested in accurate DIAL measurements of H2O in the upper and lower troposphere. Simulated measurements using approximately 940 nm and 815 nm lasers at a range of altitudes and experimental conditions are shown. By offering access to larger absorption cross-sections, injected seeded, 940 nm DIAL laser transmitters would allow for more accurate water profile measurements at altitudes from 6 to 16 km than is currently possible with 730 nm and 815 nm DIAL laser transmitters. We have demonstrated the operation of an injected seeded titanium-sapphire (TS) laser operating at approximately 940 nm with an energy of more than 90 mJ per pulse. The TS laser is pumped by a commercial, 600 mJ, 532 nm, 10 Hz Nd:YAG laser. The slope efficiency of the laser using a flat 50 percent R output coupler and a 10 m end-mirror is shown. The laser was injected seeded with a CW, AlGaAs, semiconductor diode laser which had an output of 83 mW. The CW diode seed beam was introduced into the TS laser cavity through a HR end-mirror. When the diode beam is aligned to the TS resonator, it controls the TS laser output wavelength and its spectral line width with the required resolution for DIAL applications. This work supports the need for the development of 940 nm, titanium-sapphire DIAL transmitters. Author

COGNITIVE AND AFFECTIVE COMPONENTS OF MENTAL WORKLOAD: UNDERSTANDING THE EFFECTS OF EACH ON HUMAN DECISION MAKING BEHAVIOR **c53**

Thomas E. Nygren *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 154-156 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Human factors and ergonomics researchers have recognized for some time the increasing importance of understanding the role of the construct of mental workload in flight research. Current models of mental workload suggest that it is a multidimensional and complex construct, but one that has proved difficult to measure. Because of this difficulty, emphasis has usually been placed on using direct reports through subjective measures such as rating scales to assess levels of mental workload. The NASA Task Load Index (NASA/TLX, Hart and Staveland) has been shown to be a highly reliable and sensitive measure of perceived mental workload. But a problem with measures like TLX is that there is still considerable disagreement as to what it is about mental workload that these subjective measures are actually measuring. The empirical use of subjective workload measures has largely been to provide estimates of the cognitive components of the actual mental workload required for a task. However, my research suggests that these measures may, in fact have greater potential in accurately assessing the affective components of workload. That is, for example, TLX may be more likely to assess the positive and negative feelings associated with varying workload levels, which in turn may potentially influence the decision making behavior that directly bears on performance and safety issues. Pilots, for example, are often called upon to complete many complex tasks that are high in mental workload, stress, and frustration, and that have significant dynamic decision making components -- often ones that involve risk as well. DIGITAL DATA ACQUISITION AND PRELIMINARY INSTRUMENTATION STUDY FOR THE F-16 LAMINAR FLOW CONTROL VEHICLE **c02**

Cyrus Ostowari *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 157-163 (For primary document see N93-16760 05-80)
Avail: CASI HC A02/MF A03

Preliminary studies have shown that maintenance of laminar flow through active boundary-layer control is viable. Current research activity at NASA Langley and NASA Dryden is utilizing the F-16XL-1 research vehicle fitted with a laminar-flow suction glove that is connected to a vacuum manifold in order to create and control laminar flow at supersonic flight speeds. This experimental program has been designed to establish the feasibility of obtaining laminar flow at supersonic speeds with highly swept wing and to provide data for computational fluid dynamics (CFD) code calibration. Flight experiments conducted as supersonic speeds have indicated that it is possible to achieve laminar flow under controlled suction at flight Mach numbers greater than 1. Currently this glove is fitted with a series of pressure belts and flush mounted hot film sensors for the purpose of determining the pressure distributions and the extent of laminar flow region past the stagnation point. The present mode of data acquisition relies on out-dated on board multi-channel FM analogue tape recorder system. At the end of each flight, the analogue data is digitized through a long laborious process and then analyzed. It is proposed to replace this outdated system with an on board state-of-the-art digital data acquisition system capable of a through put rate of up to 1 MegaHertz. The purpose of this study was three-fold: (1) to develop a simple algorithm for acquiring data via 2 analogue-to-digital convertor boards simultaneously (total of 32 channels); (2) to interface hot-film/wire anemometry instrumentation with a PCAT type computer; and (3) to characterize the frequency response of a flush mounted film sensor. A brief description of each of the above tasks along with recommendations are given. Author

A VARIATIONAL METHOD FOR FINITE ELEMENT STRESS RECOVERY: APPLICATIONS IN ONE-DIMENSION **c39**
H. Ronald Riggs *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 164-168 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

It is well-known that stresses (and strains) calculated by a displacement-based finite element analysis are generally not as accurate as the displacements. In addition, the calculated stress field is typically discontinuous at element interfaces. Because the stresses are typically of more interest than the displacements, several procedures have been proposed to obtain a smooth stress field, given the finite element stresses, and to improve the accuracy. Hinton and Irons introduced global least squares smoothing of discrete data defined on a plane using a finite element formulation. Tessler and co-workers recently developed a conceptually similar formulation for smoothing of two-dimensional data based on a discrete least square approximation with a penalty constraint. The penalty constraint results in a stress field which is C(exp 1)-continuous, a result not previously obtained. The approach requires additional, 'smoothing' finite element analysis and for their two-dimensional application, they used a conforming C(exp 0)-continuous triangular finite element based on a conforming plate element. This paper presents the results of a detailed investigation into the application of Tessler's smoothing procedure to the smoothing of finite element stresses from one-dimensional problems. Although the one-dimensional formulation has some practical applicability, such as in truss, beam, axisymmetric mechanics, and one-dimensional heat conduction, the primary motivation for developing the one-dimensional smoothing case is to explore the characteristics of the general smoothing strategy. In particular, it is used to describe the behavior of the method and to explore the suitability of criteria proposed for the smoothing analysis. Prior to presenting numerical results, the variational formulation of the smoothing strategy is presented and a criterion for the smoothing analysis is described. Author

COMPARISON OF METHODOLOGIES FOR DESCRIBING RELAXATION IN NONEQUILIBRIUM GASEOUS SYSTEMS **c34**
Willard C. Schreiber *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 169-170 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The heat transfer process in hypervelocity vehicles is dominated by nonequilibrium gas dynamics. One model used in computational fluid dynamics (CFD) codes to predict hypervelocity heat transfer is the 'two-temperature' model. An analysis has been made to test the validity of the two-temperature model for predicting another nonequilibrium phenomenon, sound absorption and deviation of signal speed in a high temperature gas. It is found that the two temperature model's prediction capabilities degenerate with increasing temperature. These results are felt to have significance concerning the two-temperature's ability to predict heat transfer in hypervelocity flows. Author

BOUNDARY-LAYER MEASUREMENTS ON A HIGH REYNOLDS NUMBER THREE-ELEMENT AIRFOIL **c02**
Gregory V. Selby *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 171-172 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

An experimental investigation is being conducted to evaluate the boundary layer associated with a two-dimensional three-element single-flap airfoil at high Reynolds numbers. The present measurements are being made in the Langley Low-Turbulence (centerline turbulence intensity level is 0.034 percent at a Mach number of 0.2 and a total pressure of 60 psia) Pressure Tunnel (LTPT). The LTPT is a closed-circuit wind tunnel with a test section which is 3 ft wide, 7.5 ft high, and 7.5 ft long. Operating total pressure for the LTPT varies from 10 atmospheres to near-vacuum conditions. Tests are being conducted at a Mach number of 0.2 and Reynolds numbers (based on chord length) of 5, 9, and 16 million. Measurements include boundary-layer velocity surveys at several chordwise locations and surface skin-friction measurements using Preston tubes. Author

TOTAL QUALITY MANAGEMENT: STRENGTHS AND BARRIERS TO IMPLEMENTATION AND CULTURAL ADAPTATION **c38**
Denise V. Siegfeldt, Michael Glenn, and Louise Hamilton *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 173-174 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

NASA/Langley Research Center (LaRC) is in the process of implementing Total Quality Management (TQM) throughout the organization in order to improve productivity and make the Center an even better place to work. The purpose of this project was to determine strengths and barriers to TQM being implemented and becoming a part of the organizational culture of the Human Resources Management Division (HRMD) at Langley. The target population for this project was both supervisory and nonsupervisory staff of the HMRD. In order to generate data on strengths and barriers to TQM implementation and cultural adaptation, a modified nominal group technique was used. L.R.R.

ADVANCED NDE RESEARCH IN ELECTROMAGNETIC, THERMAL, AND COHERENT OPTICS **c38**
S. Ballou Skinner *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 175 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

A new inspection technology called magneto-optic/eddy current imaging was investigated. The magneto-optic imager makes readily visible irregularities and inconsistencies in airframe components. Other research observed in electromagnetics included (1) disbond detection via resonant modal analysis; (2) AC magnetic field frequency dependence of magnetoacoustic emission; and (3) multi-view magneto-optic imaging. Research observed in the thermal group included (1) thermographic detection and characterization of corrosion in aircraft aluminum; (2) a multipurpose infrared imaging system for thermoelastic stress detection; (3) thermal diffusivity imaging of stress induced damage in composites; and (4) detection and measurement of ice formation on the space shuttle main fuel tank. Research observed in the optics group included advancements in optical nondestructive evaluation (NDE). L.R.R.

ANTENNA ANALYSIS USING NEURAL NETWORKS **c32**
William T. Smith *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 176-177 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Conventional computing schemes have long been used to analyze problems in electromagnetics (EM). The vast majority of EM applications require computationally intensive algorithms involving numerical integration and solutions to large systems of equations. The feasibility of using neural network computing algorithms for antenna analysis is investigated. The ultimate goal is to use a trained neural network algorithm to reduce the computational demands of existing reflector surface error compensation techniques. Neural networks are computational algorithms based on neurobiological systems. Neural nets consist of massively parallel interconnected nonlinear computational elements. They are often employed in pattern recognition and image processing problems. Recently, neural network analysis has been applied in the electromagnetics area for the design of frequency selective surfaces and beam forming networks. The backpropagation training algorithm was employed to simulate classical antenna array synthesis techniques. The Woodward-Lawson (W-L) and Dolph-Chebyshev (D-C) array pattern synthesis techniques were used to train the neural network. The inputs to the network were samples of the desired synthesis pattern. The outputs are the array element excitations required to synthesize the desired pattern. Once trained, the network is used to simulate the W-L or D-C techniques. Various sector patterns and cosecant-type patterns (27 total) generated using W-L synthesis were used

to train the network. Desired pattern samples were then fed to the neural network. The outputs of the network were the simulated W-L excitations. A 20 element linear array was used. There were 41 input pattern samples with 40 output excitations (20 real parts, 20 imaginary). A comparison between the simulated and actual W-L techniques is shown for a triangular-shaped pattern. Dolph-Chebyshev is a different class of synthesis technique in that D-C is used for side lobe control as opposed to pattern shaping. The interesting thing about D-C synthesis is that the side lobes have the same amplitude. Five-element arrays were used. Again, 41 pattern samples were used for the input. Nine actual D-C patterns ranging from -10 dB to -30 dB side lobe levels were used to train the network. A comparison between simulated and actual D-C techniques for a pattern with -22 dB side lobe level is shown. The goal for this research was to evaluate the performance of neural network computing with antennas. Future applications will employ the backpropagation training algorithm to drastically reduce the computational complexity involved in performing EM compensation for surface errors in large space reflector antennas. STABILITY OF GENERALLY STIFFENED ANISOTROPIC NONCIRCULAR CYLINDERS **c39**

Nahil Atef Sobh *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 178-179 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Continuous filament grid-stiffened structure is a stiffening concept that combines structural efficiency and damage tolerance. However, finite element design of such structures against buckling is expensive due to the complexities of the structure. An analytical model of such a structure is developed using a penalty method (artificial springs) with a first order shear deformation theory (FSDT). The buckling analysis under combined loadings is done using energy method with a penalty/Rayleigh-Ritz technique. The penalty/Rayleigh-Ritz approach is computationally less demanding when compared to the finite element solution and mesh generation. Apart from the published research works on buckling of stiffened plates and shells by finite element and finite strips, research works on buckling of stiffened plates and shells utilize three different approaches; smeared, column, and discrete approaches. The discrete approach considers the discrete effects of the stiffeners in the buckling behavior by modeling stiffeners as line of bending (EI) and torsion (GJ) stiffnesses on panel skin. Some local deformations are lost when stiffeners are modeled as (EI) and (GJ) stiffeners. This approach becomes difficult in the case of plate stiffened in more than two directions. Most of the work done using the discrete approach involved the Classical Plate Theory (CLPT) rather than the FSDT. We report on our formulation of a discrete approach coupled with a penalty formulation and FSDT. Author

STUDIES ON SPECTRAL ANALYSIS OF RANDOMLY SAMPLED SIGNALS: APPLICATION TO LASER VELOCIMETRY DATA **c34**

David Sree *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 180-182 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Spectral analysis is very useful in determining the frequency characteristics of many turbulent flows, for example, vortex flows, tail buffeting, and other pulsating flows. It is also used for obtaining turbulence spectra from which the time and length scales associated with the turbulence structure can be estimated. These estimates, in turn, can be helpful for validation of theoretical/numerical flow turbulence models. Laser velocimetry (LV) is being extensively used in the experimental investigation of different types of flows, because of its inherent advantages; nonintrusive probing, high frequency response, no calibration requirements, etc. Typically, the output of an individual realization laser velocimeter is a set of randomly sampled velocity data. Spectral analysis of such data requires special techniques to obtain reliable estimates of correlation and power spectral density functions that describe the flow characteristics. FORTRAN codes for obtaining the autocorrelation and power spectral density estimates using the correlation-based slotting technique were developed. Extensive studies have been conducted on simulated first-order spectrum and sine signals to improve the spectral estimates. A first-order spectrum was chosen because it represents the characteristics of a typical one-dimensional turbulence spectrum. Digital prefiltering techniques, to improve the spectral estimates from randomly sampled data were applied. Studies show that the spectral estimates can be increased up to about five times the mean sampling rate. Author

MODE INTERACTION IN STIFFENED COMPOSITE SHELLS UNDER COMBINED MECHANICAL AND THERMAL LOADINGS **c39**

Srinivasan Sridharan *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 183-184 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Stiffened shells of various configurations fabricated out of composite materials find extensive applications in aircraft structures. Two distinctive modes of buckling dominate structural response of stiffened panels, viz. the short-wave local mode in which the shell skin buckles essentially between the stiffeners and the long-wave overall mode in which the shell skin buckles carrying the stiffeners with it. In optimized designs, the critical stresses corresponding to these modes of buckling would be close to each other. This leads to a nonlinear mode interaction which is recognized to be the principal cause of the failure of stiffened structures. If the structure is subjected to through-the-thickness thermal gradients, then large-wave bending effects would begin to occur well below the overall critical load and these would play the role of overall imperfections. The load carrying capacity would be significantly diminished as a result of interaction of local buckling with overall thermal distortions. The analysis of this problem using standard finite element techniques can be shown to be prohibitively expensive for design iterations. A concept which would greatly facilitate the analysis of mode interaction is advanced. We note that the local buckling occurs in a more or less periodic pattern in a structure having regular spacings of stiffeners. Thus it is a relatively simple matter to analyze the local buckling and the second order effects (which are essential for modeling postbuckling phenomena) using a unit cell of the structure. Once analyzed, these dormations are embedded in a shell element. Thus, a shell element could span several half-waves of local buckling and still be able to depict local buckling effects with requisite accuracy. A major consequence of the interaction of overall buckling/bending is the slow variation of the local buckling amplitude across the structure - the phenomenon of 'amplitude modulation' - and this is accounted for in the present model by letting the scaling parameter of the local mode vary according to a 'slowly varying' function. The construction of the analytical model involves essentially two stages and these are described briefly. Author

CHARACTERIZATION OF RADIATION-INDUCED DAMAGE IN HIGH PERFORMANCE POLYMERS BY ELECTRON PARAMAGNETIC RESONANCE IMAGING SPECTROSCOPY **c27**

Naushadalli K. Suleman *In its* NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 185-186 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The potential for long-term human activity beyond the Earth's protective magnetosphere is limited in part by the lack of detailed information on the effectiveness and performance of existing structural materials to shield the crew and spacecraft from highly penetrating space radiations. The two radiations of greatest concern are high energy protons emitted during solar flares and galactic cosmic rays which are energetic ions ranging from protons to highly oxidized iron. Although the interactions of such high-energy radiations with matter are not completely understood at this time, the effects of the incident radiation are clearly expected to include the formation of paramagnetic spin centers via ionization and bond-scission reactions in the molecular matrices of structural materials. Since this type of radiation damage is readily characterized by Electron Paramagnetic Resonance (EPR) spectroscopy, the NASA Langley Research Center EPR system was repaired and brought on-line during the 1991 ASEE term. A major goal of the 1992 ASEE term was to adapt the existing core of the LaRC EPR system to meet the requirements for EPR Imaging--a powerful new technique which provides detailed information on the internal structure

of materials by mapping the spatial distribution of unpaired spin density in bulk media. Major impetus for this adaptation arises from the fact that information derived from EPRI complements other methods such as scanning electron microscopy which primarily characterize surface phenomena. The modification of the EPR system has been initiated by the construction of specially designed, counterwound Helmholtz coils which will be mounted on the main EPR electromagnet. The specifications of the coils have been set to achieve a static linear magnetic field gradient of 10 gauss/mm/amp along the principal (Z) axis of the Zeeman field. Construction is also in progress of a paramagnetic standard in which the spin distribution is known in all three dimensions. This sample will be used to assess the linearity of the magnetic field gradient and to ensure authentic image reconstruction. A second major task was to secure the computer capability to enable image reconstruction from projection data generated by the magnetic field gradients. To this end, commercially available and public domain software packages which perform inverse Fourier Transform and convoluted (filtered) back projection functions are being integrated into the existing EPR data processing system. DESKTOP COMPUTING INTEGRATION PROJECT **c61**

Robert L. Tureman, Jr. *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 187-188 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

The Desktop Computing Integration Project for the Human Resources Management Division (HRMD) of LaRC was designed to help division personnel use personal computing resources to perform job tasks. The three goals of the project were to involve HRMD personnel in desktop computing, link mainframe data to desktop capabilities, and to estimate training needs for the division. The project resulted in increased usage of personal computers by Awards specialists, an increased awareness of LaRC resources to help perform tasks, and personal computer output that was used in presentation of information to center personnel. In addition, the necessary skills for HRMD personal computer users were identified. The Awards Office was chosen for the project because of the consistency of their data requests and the desire of employees in that area to use the personal computer. Author

MULTIDISCIPLINARY DESIGN OPTIMIZATION USING RESPONSE SURFACE ANALYSIS **c05**

Resit Unal *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 189-190 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Aerospace conceptual vehicle design is a complex process which involves multidisciplinary studies of configuration and technology options considering many parameters at many values. NASA Langley's Vehicle Analysis Branch (VAB) has detailed computerized analysis capabilities in most of the key disciplines required by advanced vehicle design. Given a configuration, the capability exists to quickly determine its performance and lifecycle cost. The next step in vehicle design is to determine the best settings of design parameters that optimize the performance characteristics. Typical approach to design optimization is experience based, trial and error variation of many parameters one at a time where possible combinations usually number in the thousands. However, this approach can either lead to a very long and expensive design process or to a premature termination of the design process due to budget and/or schedule pressures. Furthermore, one variable at a time approach can not account for the interactions that occur among parts of systems and among disciplines. As a result, vehicle design may be far from optimal. Advanced multidisciplinary design optimization (MDO) methods are needed to direct the search in an efficient and intelligent manner in order to drastically reduce the number of candidate designs to be evaluated. The payoffs in terms of enhanced performance and reduced cost are significant. A literature review yields two such advanced MDO methods used in aerospace design optimization; Taguchi methods and response surface methods. Taguchi methods provide a systematic and efficient method for design optimization for performance and cost. However, response surface method (RSM) leads to a better, more accurate exploration of the parameter space and to estimated optimum conditions with a small expenditure on experimental data. These two methods are described. Author

NAVIER-STOKES CALCULATION OF TRANSONIC FLOW PAST THE NTF 65-DEG DELTA WING **c02**

Chivey Wu *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 191-199 (For primary document see N93-16760 05-80)
Avail: CASI HC A02/MF A03

Viscous flow past a wind tunnel model of a 65-degree swept angle Delta wing at transonic speeds is being studied. The model was tested in the 8-foot cryogenic transonic wind tunnel at the National Transonic Facility. Aerodynamic forces and wing surface pressure data were obtained at various angles of attack, Mach numbers, and Reynold's numbers for four different leading edges of the wing. The objectives of the present investigation are: (1) to perform numerical modeling of the flow around the wing; (2) to validate the experimental data with a Navier-Stokes computational fluid dynamics code and vice versa; (3) to investigate the effects of the sting mount of the wing; (4) to evaluate the effects of leading edge radius on the flow; and (5) to explain the Reynold's number effect as indicated by the test data. Several computer programs were developed to define the surfaces of the wing, the four leading edges, and the sting mount. Based on these geometric databases, the surface grids of a single-block computational domain was generated interactively on the IRIS workstation using the GRIDGEN2D module of GRIDGEN. To refine the grids and to avoid excessive loss of grid points due to collapsed edges, a 9-block computational domain containing approximately 750,000 grid points was developed with the GRIDBLOCK module to replace the single-block grid. IMPROVEMENT IN THE CONTROL ASPECT OF LASER FREQUENCY STABILIZATION FOR SUNLITE PROJECT **c36**

Omar Zia *In* Hampton Univ., NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992 Sep. 1992 p 200-203 (For primary document see N93-16760 05-80)
Avail: CASI HC A01/MF A03

Flight Electronics Division of Langley Research Center is developing a spaceflight experiment called the Stanford University and NASA Laser In-Space Technology (SUNLITE). The objective of the project is to explore the fundamental limits on frequency stability using an FM laser locking technique on a Nd:YAG non-planar ring (free-running linewidth of 5 KHz) oscillator in the vibration free, microgravity environment of space. Compact and automated actively stabilized terahertz laser oscillators will operate in space with an expected linewidth of less than 3 Hz. To implement and verify this experiment, NASA engineers have designed and built a state of the art, space qualified high speed data acquisition system for measuring the linewidth and stability limits of a laser oscillator. In order to achieve greater stability and better performance, an active frequency control scheme requiring the use of a feedback control loop has been applied. In the summer of 1991, the application of control theory in active frequency control as a frequency stabilization technique was investigated. The results and findings were presented in 1992 at the American Control Conference in Chicago, and have been published in Conference Proceedings. The main focus was to seek further improvement in the overall performance of the system by replacing the analogue controller by a digital algorithm. Author

1992 NASA/ASEE SUMMER FACULTY FELLOWSHIP PROGRAM

L. Michael Freeman, Charles R. Chappell, Frank Six, and Gerald R. Karr Dec. 1992 307 p
(Grant NGT-01-002-099)
(NASA-CR-184505; NAS 1.26:184505) Avail: CASI HC A14/MF A03

For the 28th consecutive year, a NASA/ASEE Summer Faculty Fellowship Program was conducted at the Marshall Space Flight Center (MSFC). The program was conducted by the University of Alabama and MSFC during the period June 1, 1992 through August 7, 1992. Operated under the auspices of the American Society for Engineering Education, the MSFC

program, was well as those at other centers, was sponsored by the Office of Educational Affairs, NASA Headquarters, Washington, DC. The basic objectives of the programs, which are the 29th year of operation nationally, are (1) to further the professional knowledge of qualified engineering and science faculty members; (2) to stimulate and exchange ideas between participants and NASA; (3) to enrich and refresh the research and teaching activities of the participants' institutions; and (4) to contribute to the research objectives of the NASA centers. For individual titles, see N93-17280 through N93-17340.

HEAT FLOW IN VARIABLE POLARITY PLASMA ARC WELDS c37

Amanie N. Abdelmessih *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 6 p (For primary document see N93-17279 05-80)

Avail: CASI HC A02/MF A03

The space shuttle external tank and the space station Freedom are fabricated by the variable polarity plasma arc (VPPA) welding. Heat sink effects (taper) are observed when there are irregularities in the work-piece configuration especially if these irregularities are close to the weld bead. These heat sinks affect the geometry of the weld bead, and in extreme cases they could cause defects such as incomplete fusion. Also, different fixtures seem to have varying heat sink effects. The objective of the previous, present, and consecutive research studies is to investigate the effect of irregularities in the work-piece configuration and fixture differences on the weld bead geometry with the ultimate objective to compensate automatically for the heat sink effects and achieve a perfect weld. DESIGN AND ANALYSIS OF SEALS FOR EXTENDED SERVICE LIFE c37

Mark V. Bower *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Space Station Freedom is being developed for a service life of up to thirty years. As a consequence, the design requirements for the seals to be used are unprecedented. Full scale testing to assure the selected seals can satisfy the design requirements are not feasible. As an alternative, a sub-scale test program has been developed by MSFC to calibrate the analysis tools to be used to certify the proposed design. This research has been conducted in support of the MSFC Integrated Seal Test Program. The ultimate objective of this research is to correlate analysis and test results to qualify the analytical tools, which in turn, are to be used to qualify the flight hardware. This research is totally focused on O-rings that are compressed by perpendicular clamping forces. In this type of seal the O-ring is clamped between the sealing surfaces by loads perpendicular to the circular cross section. Author

INVESTIGATION OF RAINFALL DATA WITH REGARD TO LOW-LEVEL WIND FLOW REGIME FOR EAST CENTRAL FLORIDA c47

Joni Brooks *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Previous research has been conducted to investigate the effect of the low-level wind region on summertime convective storms in the east central Florida area. These effects were described by analyzing the distribution of lightning flashes within classifications based on the low-level wind regime for the months June through September of 1987 to 1990. The present research utilizes the same classification strategy to study rainfall patterns for data gathered for the CaPE (Convection and Precipitation/Electrification Experiment) field program. The CaPE field program was conducted in east central Florida from July 8, 1991 to August 18, 1991. Author

The following list of requirements specifies the proposed revisions to the Experiment Scheduling Program (ESP2) which deal with schedule repair. These requirements are divided into those which are general in nature, those which relate to measurement and analysis functions of the software, those which relate specifically to conflict resolution, and those relating directly to the user interface. (This list is not a complete list of requirements for the user interface, but only a list of those schedule repair requirements which relate to the interface.) Some of the requirements relate only to uses of the software in real-time operations. Others are clearly for future versions of the software, beyond the upcoming revision. In either case, the fact will be clearly stated. Author

A SECOND GENERATION EXPERT SYSTEM FOR CHECKING AND DIAGNOSING AXAF'S ELECTRIC POWER SYSTEM c33

Alex Bykat *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty

Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

AXAF - Advanced X-ray Astrophysics Facility - is a third NASA's great space observatory. Each of these observatories is intended to cover different parts of the electromagnetic spectrum (x-ray for AXAF) and to provide high resolution images of celestial sources in our universe. While the spacecraft is in orbit, the electric power system (EPS) performance is monitored via sensors measuring voltages, currents, pressures, and temperatures. The sensor data are sent from the spacecraft to the ground station as telemetry and analyzed on arrival. Monitoring, diagnosis and maintenance of such EPS is an arduous task which requires expertise and constant attention of the ground personnel. To help the ground crew in this task, much of it should be automated and delegated to expert systems, which draw engineer's attention to possible malfunctions and allows him to review the telemetry to determine the source of the trouble, diagnose the suspected fault and to propose a corrective action. Those systems are built on assumptions such as: (1) domain knowledge is available and can be represented as a set of rules; (2) domain knowledge is circumscribed, static, and monotonic; and (3) expert decision making can be emulated by a logical inference mechanism. PREDICTION OF NONLINEAR OPTICAL PROPERTIES OF LARGE ORGANIC MOLECULES **c27**
Beatriz H. Cardelino *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The preparation of materials with large nonlinear responses usually requires involved synthetic processes. Thus, it is very advantageous for materials scientists to have a means of predicting nonlinear optical properties. The prediction of nonlinear optical properties has to be addressed first at the molecular level and then as bulk material. For relatively large molecules, two types of calculations may be used, which are the sum-over-states and the finite-field approach. The finite-field method was selected for this research, because this approach is better suited for larger molecules. I.I.C.

CFD ANALYSIS ON CONTROL OF SECONDARY LOSSES IN STME LOX TURBINES WITH ENDWALL FENCES **c34**
Mingking K. Chyu *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The rotor blade in the newly designed LOX turbine for the future Space Transportation Main Engine (STME) has a severe flow turning angle, nearly 160 degrees. The estimated secondary loss in the rotor alone accounts for nearly 50 percent of the total loss over the entire stage. To reduce such a loss, one of the potential methods is to use fences attached on the turbine endwall (hub). As a prelude to examining the effects of endwall fence with actual STME turbine configuration, the present study focuses on similar issues with a different, but more generic, geometry - a rectangular duct with a 160-degree bend. The duct cross-section has a 2-to-1 aspect ratio and the radii of curvature for the inner and outer wall are 0.25 and 1.25 times the duct width, respectively. The present emphasis lies in examining the effects of various fence-length extending along the streamwise direction. The flowfield is numerically simulated using the FDNS code developed earlier by Wang and Chen. The FDNS code is a pressure based, finite-difference, Navier-Stokes equations solver. I.I.C.

OPTIMAL TRAJECTORIES FOR ORBITAL TRANSFERS USING LOW AND MEDIUM THRUST PROPULSION SYSTEMS **c13**
Shannon S. Cobb *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 4 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

For many problems it is reasonable to expect that the minimum time solution is also the minimum fuel solution. However, if one allows the propulsion system to be turned off and back on, it is clear that these two solutions may differ. In general, high thrust transfers resemble the well-known impulsive transfers where the burn arcs are of very short duration. The low and medium thrust transfers differ in that their thrust acceleration levels yield longer burn arcs which will require more revolutions, thus making the low thrust transfer computational intensive. Here, we consider optimal low and medium thrust orbital transfers. Author

A PLAN FOR ACCURATE ESTIMATION OF DAILY AREA-MEAN RAINFALL DURING THE CAPE EXPERIMENT **c47**
Claude E. Duchon *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The Convection and Precipitation/Electrification (CaPE) experiment took place in east central Florida from 8 July to 18 August, 1991. There were five research themes associated with CaPE. In broad terms they are: investigation of the evolution of the electric field in convective clouds, determination of meteorological and electrical conditions associated with lightning, development of mesoscale numerical forecasts (2-12 hr) and nowcasts (less than 2 hr) of convective initiation and remote estimation of rainfall. It is the last theme coupled with numerous raingage and streamgage measurements, satellite and aircraft remote sensing, radiosondes and other meteorological measurements in the atmospheric boundary layer that provide the basis for determining the hydrologic cycle for the CaPE experiment area. The largest component of the hydrologic cycle in this region is rainfall. An accurate determination of daily area-mean rainfall is important in correctly modeling its apportionment into runoff, infiltration and evapotranspiration. In order to achieve this goal a research plan was devised and initial analysis begun. The overall research plan is discussed with special emphasis placed on the adjustment of radar rainfall estimates to raingage rainfall. Author

A STUDY OF THE LUTE METERING STRUCTURE **c39**
James W. Foreman *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 4 p (For primary document

see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Two Metering Structure configurations were investigated. The first case was the traditional style metering structure which is larger than the outside diameter of the primary mirror. The second case investigated was the center support concept in which the outside diameter of the structure is less than the inside diameter of the primary mirror. Beryllium was used as the baseline material for this study. Four other materials were considered as candidates for the metering structure. These materials are: Graphite Epoxy, Aluminum, Titanium, and Invar. The loading conditions used for this study were estimated to be: Quasi Static: 6.0 G (all three directions); and Random Vibration: 30.0 G (applied 1 axis at a time). Taking advantage of symmetry, it was necessary to apply the lateral loading to only one axis. These loads were applied to both concepts and to all material configurations. The loadings as described above were based on the best available information and is felt to be adequate for this study since it was consistently used for all configurations. A load factor 2.00 was applied to both quasi static and random vibration loads. The allowable stresses are conservatively based yield strength of the material, except for the struts which are controlled by elastic stability. The stresses determined from each individual loading direction were conservatively combined by the absolute sum method. Author

HYBRID ROCKET PERFORMANCE **c20**
Robert A. Frederick, Jr. *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

A hybrid rocket is a system consisting of a solid fuel grain and a gaseous or liquid oxidizer. Figure 1 shows three popular hybrid propulsion cycles that are under current consideration. NASA MSFC has teamed with industry to test two hybrid propulsion systems that will allow scaling to motors of potential interest for Titan and Atlas systems, as well as encompassing the range of interest for SEI lunar ascent stages and National Launch System Cargo Transfer Vehicle (NLS CTV) and NLS deorbit systems. Hybrid systems also offer advantages as moderate-cost, environmentally acceptable propulsion system. The objective of this work was to recommend a performance prediction methodology for hybrid rocket motors. The scope included completion of: a literature review, a general methodology, and a simplified performance model. Author

EXPERIMENTAL INVESTIGATION OF A SIMULATED LOX INJECTOR FLOW FIELD AND OTHER NONINTRUSIVE MEASUREMENT EFFORTS **c20**
Roy J. Hartfield, Jr. *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Efforts to improve the characteristics of fuel-oxidizer mixing in liquid rocket combustors have lead to a swirl element design for a liquid oxygen injector which is being considered for use on the STME. For the design which is the subject of this investigation, the oxygen enters the injector element perpendicular to the injector axis and nearly tangent to the circular injector wall. This swirl element is at one end of a tube and the injector exit is at the other. This geometric configuration creates a plume in the shape of a conical sheet. This sheet is either primarily contiguous liquid or droplets depending on the pressure drop in the injector and the distance from the injector exit. Probe-based devices such as two-dimensional grid patternators have been used to investigate simulated LOX injector flow fields (Hulka). The primary work described herein is an effort to use optical techniques to investigate the plume of a swirl injector element. For this investigation, a high pressure (500 psig) cold flow test facility was constructed. Water was used as the LOX simulate and air pressure was used to drive the injector flow field. Laser-induced fluorescence (LIF) from dye seeded into the water was used to obtain quantitative measurements of the time-averaged water concentration distribution in the plume. Scattered laser light and LIF were used for time averaged plume visualization and scattered light from a strobe with a 1 microsecond pulse was used for time-resolved plume visualization. During the Summer Faculty Fellowship for which this report was developed, an additional effort, unrelated to the swirl injector investigation, was made to resolve fluctuations in the combustion product composition in the exhaust of a hybrid rocket motor. A brief description of this effort is included herein. Author

POST-IMPACT BEHAVIOR OF COMPOSITE SOLID ROCKET MOTOR CASES **c20**
Alton L. Highsmith *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

In recent years, composite materials have seen increasing use in advanced structural applications because of the significant weight savings they offer when compared to more traditional engineering materials. The higher cost of composites must be offset by the increased performance that results from reduced structural weight if these new materials are to be used effectively. At present, there is considerable interest in fabricating solid rocket motor cases out of composite materials, and capitalizing on the reduced structural weight to increase rocket performance. However, one of the difficulties that arises when composite materials are used is that composites can develop significant amounts of internal damage during low velocity impacts. Such low velocity impacts may be encountered in routine handling of a structural component like a rocket motor case. The ability to assess the reduction in structural integrity of composite motor cases that experience accidental impacts is essential if composite rocket motor cases are to be certified for manned flight. The study described herein was an initial investigation of damage development and reduction of tensile strength in an idealized composite subjected to low velocity impacts. Author

SOME EFFECTS OF TIME USAGE PATTERNS ON THE PRODUCTIVITY OF ENGINEERS **c81**

Conrad N. Jackson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The performance of the 1500+ engineers at MSFC is critical to the Center's mission. Worker's performance, however, is a variable affected by ability, motivation, role understanding, and other factors. Managing subordinates' performance is a great challenges to managers. Special challenges confront the managers of engineers because engineers often work with general goals, long deadlines, and considerable autonomy. The productivity of a team or branch is a function of the productivity of each of its members. While many managers have personal theories about how to run their work group, surprisingly little systematic scientific knowledge exerts about the effects of various factors on engineers' productivity. This study is intended to help lay the foundation for such a program of research. Author

SPACE ENVIRONMENTAL EFFECTS ON POLYMERS AND COMPOSITES **c27**

Bor Z. Jang *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The response of polymers and polymer-based composites to the space environment is being investigated. A wide range of materials are covered in this study, including elastometer seals for Space Station Freedom, polymer films for thermal control, and composites for space structural elements. Space environmental agents of concern include atomic oxygen, thermal cycling, space debris impacts, UV, charged particles and other forms of high-energy radiation. This ambitious project is potentially a multi-year research effort and the success of such a project could be expected to have a profound impact on the design of future space-based structures. The research goal of this first Summer is to identify the priority areas of research and to carry out the initial phase task so that a collaborative research can proceed smoothly and fruitfully in the near future. GROUND TESTING OF BIOCONVECTIVE VARIABLES SUCH AS MORPHOLOGICAL CHARACTERIZATIONS AND MECHANISMS WHICH REGULATE MACROSCOPIC PATTERNS **c51**

Adriel D. Johnson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 3 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Conditions simulating low- and high-gravity, reveal changes in macroscopic pattern formation in selected microorganisms, but whether these structures are gravity dependent is not clear. Two theories have been identified in the fluid dynamics community which support macroscopic pattern formation. The first one is gravity dependent (fluid density models) where small concentrated regions of organisms sink unstably, and the second is gravity independent (wave reinforcement theory) where organisms align their movements in concert, such that either their swimming strokes beat in phase or their vortices entrain neighbors to follow parallel paths. Studies have shown that macroscopic pattern formation is consistent with the fluid density models for protozoa and algae and wave reinforcement hypothesis for caprine spermatozoa. Author

ENERGETICS AND STRUCTURAL PROPERTIES OF TWIST GRAIN BOUNDARIES IN Cu **c26**

Majid Karimi *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Structural and energetics properties of atoms near a grain boundary are of great importance from theoretical and experimental standpoints. From various experimental work it is concluded that diffusion at low temperatures at polycrystalline materials take place near grain boundary. Experimental and theoretical results also indicate changes of up to 70 percent in physical properties near a grain boundary. The Embedded Atom Method (EAM) calculations on structural properties of Au twist grain boundaries are in quite good agreement with their experimental counterparts. The EAM is believed to predict reliable values for the single vacancy formation energy as well as migration energy. However, it is not clear whether the EAM functions which are fitted to the bulk properties of a perfect crystalline solid can produce reliable results on grain boundaries. One of the objectives of this work is to construct the EAM functions for Cu and use them in conjunction with the molecular static simulation to study structures and energetics of atoms near twist grain boundaries in Cu. This provides tests of the EAM functions near a grain boundary. In particular, we determine structure, single vacancy formation energy, migration energy, single vacancy activation energy, and interlayer spacing as a function of distance from grain boundary. Our results are compared with the available experimental and theoretical results from grain boundaries and bulk. Author

Avail: CASI HC A01/MF A03

NASA is currently assessing several programmatic possibilities. The desire is to maintain the current capability for transportation to orbit provided by the Space Shuttle and the existing fleet of commercial vehicles, develop the Space Station Freedom, and initiate a new program of exploration of the Moon and Mars, called the Space Exploration Initiative (SEI). At the same time, the NASA budget is likely to be held to current levels. Cost estimates indicate that it will not be possible to satisfy all the goals without cost reductions. One of the concepts being considered for cost reduction is to replace the Space Shuttle and existing commercial vehicles with a new set of vehicles called the National Launch System (NLS). Several concepts have been studied, but none of the concepts studied to date provides the desired combination of cost/flight reduction, acceptable development cost, and technology readiness. An additional goal is to provide a path to grow the NLS capability into a heavy-lift capability for SEI missions. Author

THE IONOSPHERE AS A GAMMA RAY BURST DETECTOR **c46**
Charles H. McGruder, III *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Unlike all man made detectors, which are only sensitive to relative narrow regions of the electromagnetic spectrum, the ionosphere is practically a perfect detector for high energy radiation because it absorbs all radiation from the far-ultraviolet to the higher energy gamma-rays. Therefore, it may be possible to employ the terrestrial atmosphere as a detector of high energy celestial photons. As early as the 1940's solar flares were detected by the disturbance they caused to the ionosphere. The VLF (3 - 30 kHz) approach for detecting ionospheric disturbances is based on the following physical circumstance: celestial high energy radiation ionizes the atoms of the earth's ionosphere leading to the production of free electrons. These free electrons influence the propagation of electromagnetic waves. By studying the phase and amplitude changes of VLF radio wave propagating in the earth-ionosphere waveguide, it was hoped to ascertain the electron density in these regions and draw conclusions about the celestial radiation which caused them. To detect gamma-ray bursts, two conditions for the optimal detection are: (1) large zenith angle; and (2) alignment of burst and propagation path. I.I.C.

CORRELATED OPTICAL OBSERVATIONS WITH BATSE/CGRO ON SCO X-1 **c89**
Bernard McNamara *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The Burst and Transient Source Experiment (BATSE) instrument on the Compton Gamma-Ray Observatory consists of two banks of eight instruments referred to as the Large Area Detectors (LADs) and the Spectroscopic Detectors (SDs). Each LAD crystal is 50.8 cm in diameter by 1.27 cm thick while for a SD these values are 12.7 cm in diameter by 7.62 cm in diameter. Both the LADs and SDs are NaI(Tl) scintillation detectors. The LADs and SDs are situated on the CGRO spacecraft so as to provide all sky coverage for both sets of detectors. The SDs have the ability to measure energies in the 8-16 keV range whereas the minimum energy at which the LADs operate is near 20 keV. SCO X-1 is the brightest continuous x-ray source in the sky. It is believed to consist of a low mass star orbiting and transferring mass onto a neutron star. It is representative of a class of similar objects referred to as low mass x-ray binaries (LMXB). Because SCO X-1 serves as the prototype of this class of x-ray emitters and since its detectable emission is so large, it warrants extended study. One of the most fruitful techniques of studying a LMXB system is by simultaneously monitoring its emission at a variety of different wavelengths. These correlated datasets can be used to probe the source environment, investigate emission mechanisms, and examine the mass transfer process itself. In principle, the BATSE SDs have the capability of providing a nearly continuous 8-16 keV record of SCO X-1 activity. The aim of this study was to investigate the feasibility of using the BATSE SDs along with simultaneous optical measurements to study this source. Author

PROBLEMS INVOLVING COMBINED LOADING **c39**
Lunelle Miller *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The first problem was to determine the capability of a ground support equipment (GSE) rack knee bracket for handling a spacelab rack. The geometric center of gravity was calculated for the upper and lower part of the rack and found to be in the center of gravity's allowable envelope.

The second problem was to determine the exact margin of safety for an axial load and a shear load on a bolt. The equation for failure is axial load squared plus shear load cubed equal one. The third problem was to simplify an expression for stress on a generic non-symmetrical bolt configuration to a form familiar to 'bolt people'. The final problem was the structural analysis of the spacelab rack corner posts. I.I.C.

A PROCESS FOR PROTOTYPING ONBOARD PAYLOAD DISPLAYS FOR SPACE STATION FREEDOM **c12**

Loretta A. Moore *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Significant advances have been made in the area of Human-Computer Interface design. However, there is no well-defined process for going from user interface requirements to user interface design. Developing and designing a clear and consistent user interface for medium to large scale systems is a very challenging and complex task. The task becomes increasingly difficult when there is very little guidance and procedures on how the development process should flow from one stage to the next. Without a specific sequence of development steps each design becomes difficult to repeat, to evaluate, to improve, and to articulate to others. This research contributes a process which identifies the phases of development and products produced as a result of each phase for a rapid prototyping process to be used to develop requirements for the onboard payload displays for Space Station Freedom. The functional components of a dynamic prototyping environment in which this process can be carried out is also discussed. Some of the central questions which are answered here include: How does one go from specifications to an actual prototype? How is a prototype evaluated? How is usability defined and thus measured? How do we use the information from evaluation in redesign of an interface? and Are there techniques which allow for convergence on a design? Author

DEVELOPMENT OF VENDOR EVALUATION CRITERIA AND POST-IMPLEMENTATION CONSIDERATIONS FOR MSFC CENTER-WIDE EXECUTIVE INFORMATION SYSTEM **c82**

Gary P. Moynihan *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

In June 1991, the MITRE Corporation submitted a series of recommendations as part of a Marshall Space Flight Center (MSFC) Management Information System Requirements Study, initiated by the Information Systems Office (ISO). A major recommendation of the study was to develop an Executive Information System (EIS) for MSFC executives. ISO was directed, by center management, to proceed with the development of a Center-Wide Executive Information System. Existing EIS prototypes, developed by the Space Shuttle Projects Office and the Payload Projects Office, were reviewed. These existing MSFC prototypes were considered not to encompass the required functionality needed on a center-wide basis. A follow-up study by MITRE provided top-level system requirements. These were later incorporated into a final requirements specification document by Boeing Computer Support Services. Author

ON THE CONSEQUENCES OF BI-MAXWELLIAN PLASMA DISTRIBUTIONS FOR PARALLEL ELECTRIC FIELDS **c33**

Richard C. Olsen *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The objective is to use the measurements of the equatorial particle distributions to obtain the parallel electric field structure and the evolution of the plasma distribution function along the field line. Appropriate uses of kinetic theory allows us to use the measured (and inferred) particle distributions to obtain the electric field, and hence the variation on plasma density along the magnetic field line. The approach, here, is to utilize the adiabatic invariants, and assume the plasma distributions are in equilibrium. I.I.C.

SIMULATION OF CRYOGENIC TURBOPUMP ANNULAR SEALS **c37**

Alan B. Palazzolo *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The goal of the current work is to develop software that can accurately predict the dynamic coefficients, forces, leakage and horsepower loss for annular seals which have a potential for affecting the rotordynamic behavior of the pumps. The fruit of last year's research was the computer code SEALPAL which included capabilities for linear tapered geometry, Moody friction factor and inlet pre-swirl. This code produced results which in most cases compared very well with check cases presented in the literature. TAMUSEAL Icode, which was written to improve SEALPAL by correcting a bug and by adding more accurate integration algorithms and additional capabilities, was then used to predict dynamic coefficients and leakage for the NASA/Pratt and Whitney Alternate Turbopump Development (ATD) LOX Pump's seal. I.I.C.

STUDIES OF THE CHARGING OF A THIN DUST LAYER IN A PLASMA **c75**

Lennart R. Peterson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

When an infinite plane layer of dust having a number-density profile normal to the plane is exposed to an ambient e(sup -), p(sup +) plasma, one can imagine the features of the charging process near the layer boundary. If the e(sup -), p(sup +) temperatures are equal, and the B field is normal to the dust layer, the controlling factor is the large electron relative to proton speeds. Since the collision rate between plasma particles of number density n and speed v and an uncharged dust grain of radius a is estimated as the product n v pi a(exp 2), electrons dominate the charging process. The outer edge of the layer charges negatively, setting up an electrical potential that inhibits penetration of electrons into the layer and at the same time accelerates protons inward. Interior to the outer negative region then, one would expect many energetic protons compared to a reduced number of electrons from the ambient plasma. Charge imbalances are bound to arise, but the details are not so easy to deduce from simple arguments. These details are the subject of the present study. Author

SEDS1 MISSION SOFTWARE VERIFICATION USING A SIGNAL SIMULATOR **c61**

William E. Pierson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 4 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The first flight of the Small Expendable Deployer System (SEDS1) is schedule to fly as the secondary payload of a Delta 2 in March, 1993. The objective of the SEDS1 mission is to collect data to validate the

concept of tethered satellite systems and to verify computer simulations used to predict their behavior. SEDS1 will deploy a 50 lb. instrumented satellite as an end mass using a 20 km tether. Langley Research Center is providing the end mass instrumentation, while the Marshall Space Flight Center is designing and building the deployer. The objective of the experiment is to test the SEDS design concept by demonstrating that the system will satisfactorily deploy the full 20 km tether without stopping prematurely, come to a smooth stop on the application of a brake, and cut the tether at the proper time after it swings to the local vertical. Also, SEDS1 will collect data which will be used to test the accuracy of tether dynamics models used to stimulate this type of deployment. The experiment will last about 1.5 hours and complete approximately 1.5 orbits. Radar tracking of the Delta II and end mass is planned. In addition, the SEDS1 on-board computer will continuously record, store, and transmit mission data over the Delta II S-band telemetry system. The Data System will count tether windings as the tether unwinds, log the times of each turn and other mission events, monitor tether tension, and record the temperature of system components. A summary of the measurements taken during the SEDS1 are shown. The Data System will also control the tether brake and cutter mechanisms. Preliminary versions of two major sections of the flight software, the data telemetry modules and the data collection modules, were developed and tested under the 1990 NASA/ASEE Summer Faculty Fellowship Program. To facilitate the debugging of these software modules, a prototype SEDS Data System was programmed to simulate turn count signals. During the 1991 summer program, the concept of simulating signals produced by the SEDS electronics systems and circuits was expanded and more precisely defined. During the 1992 summer program, the SEDS signal simulator was programmed to test the requirements of the SEDS Mission software, and this simulator will be used in the formal verification of the SEDS Mission Software. The formal test procedures specification was written which incorporates the use of the signal simulator to test the SEDS Mission Software and which incorporates procedures for testing the other major component of the SEDS software, the Monitor Software.

RELIABILITY ANALYSIS OF EXTERNAL TANK ATTACK RING (ETA) **c38**

Chandra S. Putcha *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 4 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The present study is restricted to External Tank Attachment Rings (ETA), but the concepts discussed are general in nature and can be applied to any structural component. The objective of this research work is to use some of the existing probabilistic methods to calculate the reliability of ETA Rings at various critical sections for the limit state of stress. This is done both in terms of the traditional probability of failure and reliability levels as well as the well known safety indices (beta) which have become a commonly accepted measure of safety. EMERGENCY EGRESS REQUIREMENTS FOR CAUTION AND WARNING, LOGISTICS, MAINTENANCE, AND ASSEMBLY STAGE MB-6 OF SPACE STATION FREEDOM **c18**

Paul S. Ray *In its* 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The safety and survival of the crewmembers has been the prime concern of NASA. Previous studies have been conducted mainly for emergencies occurring during the operating mode of the fully assembled Station. The present study was conducted to evaluate the emergency requirements for the caution and warning, logistics, maintenance, and assembly stage MB-6 of the Station in space. Effective caution and warning is essential to achieve safe egress in emergencies. In order to survive a long period in space, the safety and emergency requirements for maintenance, logistics, and extravehicular assembly operation in space must be met. Author

ANALYSIS OF WAVES IN SPACE PLASMA (WISP) NEAR FIELD SIMULATION AND EXPERIMENT **c75**

James E. Richie *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The WISP payload scheduler for a 1995 space transportation system (shuttle flight) will include a large power transmitter on board at a wide range of frequencies. The levels of electromagnetic interference/electromagnetic compatibility (EMI/EMC) must be addressed to insure the safety of the shuttle crew. This report is concerned with the simulation and experimental verification of EMI/EMC for the WISP payload in the shuttle cargo bay. The simulations have been carried out using the method of moments for both thin wires and patches to stimulate closed solids. Data obtained from simulation is compared with experimental results. An investigation of the accuracy of the modeling approach is also included. The report begins with a description of the WISP experiment. A description of the model used to simulate the cargo bay follows. The results of the simulation are compared to experimental data on the input impedance of the WISP antenna with the cargo bay present. A discussion of the methods used to verify the accuracy of the model is shown to illustrate appropriate methods for obtaining this information. Finally, suggestions for future work are provided. INDUSTRY SURVEY OF SPACE SYSTEM COST BENEFITS FROM NEW WAYS OF DOING BUSINESS **c83**

Russell L. Rosmait *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 3 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The cost of designing, building and operating space system hardware has always been expensive. Small quantities of specialty parts escalate engineering design, production and operations cost. Funding cutbacks and shrinking revenues dictate aggressive cost saving programs. NASA's highest priority is providing economical transportation to and from space. Over the past three decades NASA has seen technological advances that provide grater efficiencies in designing, building, and operating of space system hardware. As future programs such as NLS, LUTE and SEI begin, these greater efficiencies and cost savings should be reflected in the cost models. There are several New Ways Of Doing Business (NWODB) which, when fully implemented will reduce space system costs. These philosophies and/or culture changes are integrated in five areas: (1) More Extensive Pre-Phase C/D & E, (2) Multi Year Funding Stability, (3) Improved Quality, Management and Procurement Processes, (4) Advanced Design Methods, and (5) Advanced Production Methods. Following is an overview of NWODB and the Cost Quantification Analysis results using an industry survey, one of the four quantification techniques used in the study. The NWODB Cost Quantification Analysis is a study performed at Marshall Space Flight Center by the Engineering Cost Group, Applied Research Incorporated and Pittsburg State University. This study took place over a period of four months in mid 1992. The purpose of the study was to identify potential NWODB which could lead to improved cost effectiveness within NASA and to quantify potential cost benefits that might accrue if these NWODB were implemented. DESIGN OF A WELDED JOINT FOR ROBOTIC, ON-ORBIT ASSEMBLY OF SPACE TRUSSES **c37**

William K. Rule *In its* 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

In the future, some spacecraft will be so large that they must be assembled on-orbit. These spacecraft will be used for such tasks as manned missions to Mars or used as orbiting platforms for monitoring the Earth or observing the universe. Some large spacecraft will probably consist of planar truss structures to which will be attached special purpose,

self-contained modules. The modules will most likely be taken to orbit fully outfitted and ready for use in heavy-lift launch vehicles. The truss members will also similarly be taken to orbit, but most unassembled. The truss structures will need to be assembled robotically because of the high costs and risks of extra-vehicular activities. Some missions will involve very large loads. To date, very few structures of any kind have been constructed in space. Two relatively simple trusses were assembled in the Space Shuttle bay in late 1985. Here the development of a design of a welded joint for on-orbit, robotic truss assembly is described. Mechanical joints for this application have been considered previously. Welded joints have the advantage of allowing the truss members to carry fluids for active cooling or other purposes. In addition, welded joints can be made more efficient structurally than mechanical joints. Also, welded joints require little maintenance (will not shake loose), and have no slop which would cause the structure to shudder under load reversal. The disadvantages of welded joints are that a more sophisticated assembly robot is required, weld flaws may be difficult to detect on-orbit, the welding process is hazardous, and welding introduces contamination to the environment. In addition, welded joints provide less structural damping than do mechanical joints. Welding on-orbit was first investigated aboard a Soyuz-6 mission in 1969 and then during a Skylab electron beam welding experiment in 1973. A hand held electron beam welding apparatus is currently being prepared for use on the MIR space station. Presently, Marshall Space Flight Center is evaluating processes appropriate for on-orbit welding. A low gravity environment has been found to have very minor effects on the welding processes appropriate for this application. This is based on tests run on-orbit as well as low gravity environments achieved by flying aircraft in parabolic trajectories. It appears that a modified form of gas tungsten arc welding (GTAW) will be most appropriate for welding together structures on-oribt. The process has been modified to work in a vacuum by providing gas to the arc zone by means of a hollow tungsten electrode with special shielding. A commercial tube welding head has been successfully modified for use on-orbit with a gas leakage rate of approximately 2.5 liters/min. To develop as realistic a joint as possible, a specific truss structure was selected on which to base the design. The structure considered was based on the 120 foot diameter aerobrake tetrahedral truss structure. The truss members were assumed to consist of graphite/epoxy tubes. Also, it was assumed that the nodes were constructed of 2219-T87 aluminum alloy. The magnitude of the member load assumed for design purposes was 100 kips. Author

ELECTROMAGNETIC SCATTERING IN CLOUDS **c32**

Richard Solakiewicz *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Techniques used to explain the nature of the optical effects of clouds on the light produced by lightning include a Monte Carlo simulation, an equivalent medium approach, and methods based on Boltzmann transport theory. A cuboidal cloud has been considered using transform methods and a diffusion approximation. Many simplifying assumptions have been used by authors to make this problem tractable. In this report, the cloud will have a spherical shape and its interior will consist of a uniform distribution of identical spherical water droplets. The source will be modeled as a Hertz dipole, electric or magnetic, inside or outside the cloud. An impulsive source is used. Superposition may be employed to obtain a sinusoid within an envelope which describes a lightning event. The problem is investigated by transforming to the frequency domain, obtaining Green's functions, and then using the Cagniard-DeHoop method to symbolically recover the time domain solution. Author

RELIABILITY EVALUATION METHODOLOGY FOR NASA APPLICATIONS **c38**

Vidya S. Taneja *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Liquid rocket engine technology has been characterized by the development of complex systems containing large number of subsystems, components, and parts. The trend to even larger and more complex system is continuing. The liquid rocket engineers have been focusing mainly on performance driven designs to increase payload delivery of a launch vehicle for a given mission. In otherwords, although the failure of a single inexpensive part or component may cause the failure of the system, reliability in general has not been considered as one of the system parameters like cost or performance. Up till now, quantification of reliability has not been a consideration during system design and development in the liquid rocket industry. Engineers and managers have long been aware of the fact that the reliability of the system increases during development, but no serious attempts have been made to quantify reliability. As a result, a method to quantify reliability during design and development is needed. This includes application of probabilistic models which utilize both engineering analysis and test data. Classical methods require the use of operating data for reliabiiity demonstration. In contrast, the method described in this paper is based on similarity, analysis, and testing combined with Bayesian statistical analysis. Author

ACCELERATION OF FDNS FLOW SIMULATIONS USING INITIAL FLOWFIELDS GENERATED WITH A PARABOLIZED NAVIER-STOKES METHOD **c34**

Peter W. TenPas *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The capability of computational fluid dynamics (CFD) analysis to predict complex flowfields has been greatly advanced by the widespread use of flow simulation programs based on the Navier-Stokes (NS) equations. The flow physics are theoretically well represented, and with proper care the numerical solution should not introduce appreciable uncertainties. However, the computational cost of a typical simulation in terms of both memory and execution time are large by current standards. Therefore, the efficiency of the numerical algorithm in solving the set of model equations is one factor determining the usefulness of CFD tools. The objective of the present study is to reduce the execution time of the FDNS flow simulation code by using the parabolized Navier-Stokes (PNS) equations to provide a 'good' starting condition. The technique is not universal, however the PNS model can be applied to convection dominated flows with moderate deflection in geometries that are free of large obstructions. Author

CONTROL-STRUCTURE-THERMAL INTERACTIONS IN ANALYSIS OF LUNAR TELESCOPES **c89**

Roger C. Thompson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The lunar telescope project was an excellent model for the CSTI study because a telescope is a very sensitive instrument, and thermal expansion or mechanical vibration of the mirror assemblies will rapidly degrade the resolution of the device. Consequently, the interactions are strongly coupled. The lunar surface experiences very large temperature variations that range from approximately -180 C to over 100 C. Although the optical assemblies of the telescopes will be well insulated, the temperature of the mirrors will inevitably fluctuate in a similar cycle, but of much smaller magnitude. In order to obtain images of high quality and clarity, allowable thermal deformations of any point on a mirror must be less than 1 micron. Initial estimates indicate that this corresponds to a temperature variation of much less than 1 deg through the thickness of the mirror. Therefore, a lunar telescope design will most probably include active thermal control, a means of controlling the shape of the mirrors, or a combination of both systems. Historically, the design of a complex vehicle was primarily a sequential process in which the basic structure was defined without concurrent detailed analyses or other subsystems. The basic configuration was then passed to the different teams responsible for each subsystem, and their task was to produce a workable solution without requiring major alterations to any principal components or subsystems. Consequently, the final design of the vehicle was not always the most efficient, owing to the fact that each subsystem design was partially

constrained by the previous work. This procedure was necessary at the time because the analysis process was extremely time-consuming and had to be started over with each significant alteration of the vehicle. With recent advances in the power and capacity of small computers, and the parallel development of powerful software in structural, thermal, and control system analysis, it is now possible to produce very detailed analyses of intermediate designs in a much shorter period of time. The subsystems can thus be designed concurrently, and alterations in the overall design can be quickly adopted into each analysis; the design becomes an iterative process in which it is much easier to experiment with new ideas, configurations, and components. Concurrent engineering has the potential to produce efficient, highly capable designs because the effect of one subystem on another can be assessed in much more detail at a very early point in the program. The research program consisted of several tasks: scale a prototype telescope assembly to a 1 m aperture, develop a model of the telescope assembly by using finite element (FEM) codes that are available on site, determine structural deflections of the mirror surfaces due to the temperature variations, develop a prototype control system to maintain the proper shape of the optical elements, and most important of all, demonstrate the concurrent engineering approach with this example. In addition, the software used for the finite element models and thermal analysis was relatively new within the Program Development Office and had yet to be applied to systems this large or complex; understanding the software and modifying it for use with this project was also required. The I-DEAS software by Structural Dynamics Research Corporation (SDRC) was used to build the finite element models, and TMG developed by Maya Heat Transfer Technologies, Ltd. (which runs as an I-DEAS module) was used for the thermal model calculations. All control system development was accomplished with MATRIX(sub X) by Integrated Systems, Inc.

STIFFNESSES BY (TtN) ENSEMBLE MOLECULAR DYNAMICS c64

Patrick Tibbits *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 4 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Calculation of elastic constants requires initializing a lattice of atoms, an h matrix defining the computational cell boundaries, and the parameters defining the interatomic potentials, then numerically integrating the equations of motion for the atoms and the computational cell boundaries, calculating strains and stresses at each timestep, and updating at each timestep the average quantities required for calculation of fluctuations. Enforcements of the DYNAMO FORTRAN code included addition of documentation, improved memory management and data flow, and enabling use of several interatomic potentials. Documentation included headers for each subroutine, which document the parameters input to the routine, algorithms employed, and output.

UPT SCENARIOS: IMPLICATIONS FOR SYSTEM RELIABILITY c38

Daniel W. Walsh *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The objective of this project was to examine the corrosion resistance of 316L stainless steel in several urine pre-treat solutions. Four solutions were examined: untreated urine (control); urine pretreated with oxone (potassium peroxymonosulfate sulfate); urine pretreated with sodium hypochlorite (NaOCl); and urine pretreated with ozone (O3). In accordance with current procedures, all solutions but the control were acidified to a pH of 2.5 using sulfuric acid--this suppresses the generation of ammonia in the solutions and is intended to limit microbial growth. Welded and unwelded coupons were exposed to each solution. In addition, Titanium coupons (welded and unwelded) were exposed to biologically active environmental control and life support system (ECLSS) water. Microbial attachment and biofilm growth were monitored. Ozone was examined as a biocide/oxidizer/corrosion preventative (simultaneous addition) and as a remediation method (added one week after exposure). In an unrelated effort, HP 9-4-30 coupons were exposed to biologically active solutions. Corrosion rates for welded and unwelded samples were determined--results were correlated to the ongoing HP 9-4-30 weldment stress corrosion study.

THERMOSTRUCTURAL RESPONSES OF CARBON PHENOLICS IN A RESTRAINED THERMAL GROWTH TEST c27

C. Jeff Wang *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

The thermostructural response of carbon phenolic components in a solid rocket motor (SRM) is a complex process. It involves simultaneous heat and mass transfer along with chemical reactions in a multiphase system with time-dependent material properties and boundary conditions. In contrast to metals, the fracture of fiber-reinforced composites is characterized by the initiation and progression of multiple failures of different modes such as matrix cracks, interfacial debonding, fiber breaks, and delamination. The investigation of thermostructural responses of SRM carbon phenolics is further complicated by different failure modes under static and dynamic load applications. Historically, there have been several types of post-firing anomalies found in the carbon phenolic composites of the Space Shuttle SRM nozzle. Three major failure modes which have been observed on SRM nozzles are pocketing (spallation), ply-lift, and wedge-out. In order to efficiently control these anomalous phenomena, an investigation of fracture mechanisms under NASA/MSFC RSRM (Redesigned Solid Rocket Motor) and SPIP (Solid Propulsion Integrity Program) programs have been conducted following each anomaly. This report reviews the current progress in understanding the effects of the thermostructural behavior of carbon phenolics on the failure mechanisms of the SRM nozzle. A literature search was conducted and a technical bibliography was developed to support consolidation and assimilation of learning from the RSRM and SPIP investigation efforts. Another important objective of this report is to present a knowledge-based design basis for carbon phenolics that combines the analyses of thermochemical decomposition, pore pressure stresses, and thermostructural properties. Possible areas of application of the knowledge-based design include critical material properties development, nozzle component design, and SRM materials control.

NATURE OF FLUID FLOWS IN DIFFERENTIALLY HEATED CYLINDRICAL CONTAINER FILLED WITH A STRATIFIED SOLUTION c34

Jai-Ching Wang *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)

Avail: CASI HC A01/MF A03

Semiconductor crystals such as Hg(1-x)Cd(x)Te grown by unidirectional solidification Bridgmann method have shown compositional segregations in both the axial and radial directions. Due to the wide separation between the liquidus and the solidus of its pseudobinary phase diagram, there is a diffusion layer of higher HgTe content built up in the melt near the melt-solid interface which gives a solute concentration gradient in the axial direction. Because of the higher thermal conductivity in the melt than that in the crystal there is a thermal leakage through the fused silica crucible wall near the melt-solid interface. This gives a thermal gradient in the radial direction. Hart (1971), Thorpe, Hutt and Soulsby (1969) have shown that under such condition a fluid will become convectively unstable as a result of different diffusivities of temperature and solute. It is quite important to understand the effects of this thermosolute convection on the compositional segregation in the unidirectionally solidified crystals. To reach this goal, we start with a simplified problem. We study the nature of fluid flows of a stratified solution in a cylindrical container with a radial temperature gradient. The cylindrical container wall is considered to be maintained at a higher temperature than that at the center of the solution and the solution in the lower gravitational direction has higher solute concentration which decrease linearly to a lower concentration and then remain constant to the top of the solution. The sample solution is taken to be salt water.

AN EXPERIMENT TO STUDY FULLERENE FORMATION UNDER REDUCED GRAVITY c29

Thomas J. Wdowiak *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

The activity of the summer focused on the design and construction of key components of a carbon arc/inert gas reactor for fullerene production, that is suitable for reduced gravity experiments onboard the KC-135 aircraft. The apparatus will be configured for both floor-mount and free-floating operation providing access to reduction to 10(exp -2) and 10(exp -3) of normal respectively. It is planned to incorporate 'seat belt' restraints that will allow a safe transition from reduced gravity free-float to full gravity, at the end of the parabolic. I.I.C.

NEURAL NETWORK ARCHITECTURES TO ANALYZE OPAD DATA c63
Kevin W. Whitaker *In its* 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

A prototype Optical Plume Anomaly Detection (OPAD) system is now installed on the space shuttle main engine (SSME) Technology Test Bed (TTB) at MSFC. The OPAD system requirements dictate the need for fast, efficient data processing techniques. To address this need of the OPAD system, a study was conducted into how artificial neural networks could be used to assist in the analysis of plume spectral data. I.I.C.

COMPUTERIZED REDUCTION OF ELEMENTARY REACTION SETS FOR CFD COMBUSTION MODELING c25
Carl V. Wikstrom *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Modeling of chemistry in Computational Fluid Dynamics can be the most time-consuming aspect of many applications. If the entire set of elementary reactions is to be solved, a set of stiff ordinary differential equations must be integrated. Some of the reactions take place at very high rates, requiring short time steps, while others take place more slowly and make little progress in the short time step integration. Author

THE INNER MAGNETOSPHERIC IMAGER (IMI): INSTRUMENT HERITAGE AND ORBIT VIEWING ANALYSIS c35
Gordon R. Wilson *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

For the last two years an engineering team in the Program Development Office at MSFC has been doing design studies for the proposed Inner Magnetospheric Imager (IMI) mission. This team had a need for more information about the instruments that this mission would carry so that they could get a better handle on instrument volume, mass, power, and telemetry needs as well as information to help assess the possible cost of such instruments and what technology development they would need. To get this information, an extensive literature search was conducted as well as interviews with several members of the IMI science working group. The results of this heritage survey are summarized below. There was also a need to evaluate the orbits proposed for this mission from the stand point of their suitability for viewing the various magnetospheric features that are planned for this mission. This was accomplished by first, identifying the factors which need to be considered in selecting an orbit, second, translating these considerations into specific criteria, and third, evaluating the proposed orbits against these criteria. The specifics of these criteria and the results of the orbit analysis are contained in the last section of this report. Author

ANALYSIS OF FILM COOLING IN ROCKET NOZZLES c20
Keith A. Woodbury *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Computational Fluid Dynamics (CFD) programs are customarily used to compute details of a flow field, such as velocity fields or species concentrations. Generally they are not used to determine the resulting conditions at a solid boundary such as wall shear stress or heat flux. However, determination of this information should be within the capability of a CFD code, as the code supposedly contains appropriate models for these wall conditions. Before such predictions from CFD analyses can be accepted, the credibility of the CFD codes upon which they are based must be established. This report details the progress made in constructing a CFD model to predict the heat transfer to the wall in a film cooled rocket nozzle. Specifically, the objective of this work is to use the NASA code FDNS to predict the heat transfer which will occur during the upcoming hot-firing of the Pratt & Whitney 40K subscale nozzle (1Q93). Toward this end, an M = 3 wall jet is considered, and the resulting heat transfer to the wall is computed. The values are compared against experimental data available in Reference 1. Also, FDNS's ability to compute heat flux in a reacting flow will be determined by comparing the code's predictions against calorimeter data from the hot firing of a 40K combustor. The process of modeling the flow of combusting gases through the Pratt & Whitney 40K subscale combustor and nozzle is outlined. What follows in this report is a brief description of the FDNS code, with special emphasis on how it handles solid wall boundary conditions. The test cases and some FDNS solution are presented next, along with comparison to experimental data. The process of modeling the flow through a chamber and a nozzle using the FDNS code will also be outlined. Author

STRESS ANALYSIS AND DAMAGE EVALUATION OF FLAWED COMPOSITE LAMINATES BY HYBRID-NUMERICAL METHODS c24
Yii-Ching Yang *In* Alabama Univ., 1992 NASA/ASEE Summer Faculty Fellowship Program Dec. 1992 5 p (For primary document see N93-17279 05-80)
Avail: CASI HC A01/MF A03

Structural components in flight vehicles is often inherited flaws, such as microcracks, voids, holes, and delamination. These defects will degrade structures the same as that due to damages in service, such as impact, corrosion, and erosion. It is very important to know how a structural component can be useful and survive after these flaws and damages. To understand the behavior and limitation of these structural components researchers usually do experimental tests or theoretical analyses on structures with simulated flaws. However, neither approach has been completely successful. As Durelli states that 'Seldom does one method give a complete solution, with the most efficiency'. Examples of this principle is seen in photomechanics which additional strain-gage testing can only average stresses at locations of high concentration. On the other hand, theoretical analyses including numerical analyses are implemented with simplified assumptions which may not reflect actual boundary conditions. Hybrid-Numerical methods which combine photomechanics and numerical analysis have been used to correct this inefficiency since 1950's. But its application is limited until 1970's when modern computer codes became available. In recent years, researchers have enhanced the data obtained from photoelasticity, laser speckle, holography and moire' interferometry for input of finite element analysis on metals. Nevertheless, there is only few of literature being done on composite laminates. Therefore, this research is dedicated to this highly anisotropic material. Author

THE EFFECTS OF PROCEDURAL STRUCTURE AND COMPUTER SUPPORT UPON SELECTING A TACTICAL COURSE OF ACTION Final Report, Feb. 1989 - Apr. 1992
Jon J. Fallesen, Charles F. Carter, Jr., Mike S. Perkins, Rex R. Michel, and James P. Flanagan Aug. 1992 143 p
(DA Proj. 2Q2-63007-A-793)
(AD-A257254; ARI-TR-960) Avail: CASI HC A07/MF A02

The U.S. Army wants its commanders and their staffs to consider a broad range of factors and to make tactical decisions quickly. The 'estimate of the situation' is a standard process for teaching tactical decision making. An experiment was conducted to compare structured procedures for the estimate to a condition where procedures were unspecified and to computer-supported procedures. The structured procedures were enforced through refresher training, written instructions, and manual job aids. In the unspecified condition, teams were explicitly instructed only to select a course of action (COA) and to justify their selection. Computer support was provided in the third condition by providing a prototype tactical data system with a spreadsheet tool for war gaming the COA's. The structured and computer-supported treatments led to significantly better justifications for COA selection than did the unspecified condition. Even though computer-supported teams had only about 2 hours of instruction, there was no difference in the quality of structured and computer-supported solutions. Most of the structured teams made arithmetic errors when comparing COA's; the computer-supported teams did not. Based on the results, future enhancements should be targeted at visualizing and understanding battle events and projecting battle outcomes. GRA

INFORMATION ENGINEERING AND THE INFORMATION ENGINEERING FACILITY VERSUS RAPID APPLICATION DEVELOPMENT AND FOCUS M.S. Thesis
Lucille C. Clark Dec. 1992 231 p
(AD-A257297) Avail: CASI HC A11/MF A03

The Management Information Systems Department of the Naval Postgraduate School (NPS) is considering using the information engineering methodology with Texas Instrument's Information Engineering Facility (IEF), an integrated computer-aided software engineering toolset, for application development. The costs and benefits of introducing information engineering and IEF versus the rapid application development methodology and fourth generation programming language, FOCUS, were analyzed through a case study developed in both EEF and FOCUS. IEF offers a one model implementation, a standard computerized methodology, consistency checking, management tools for the application developer, and superior diagramming features and screen design whereas FOCUS offers rapid prototyping, numeric functions, a report facility, security within the data model, inherent database management facilities and excellent documentation. The benefits of IEF did not outweigh its costs. RAD and FOCUS were determined to be the methodology and tool of choice respectively for application development for the MIS department. GRA

INTERFACING 1990 US CENSUS TIGER MAP FILES WITH New S GRAPHICS SOFTWARE
M. Rizzardi, M. S. Mohr, D. W. Merrill, and S. Selvin Jul. 1992 21 p
(Contract DE-AC03-76SF-00098)
(DE93-001518; LBL-32641) Avail: CASI HC A03/MF A01

In 1990, the United States Bureau of the Census released detailed geographic base files known as TIGER/Line (Topologically Integrated Geographic Encoding and Referencing) which contain detail on the physical features and census tract boundaries of every county in the United States. The TIGER database is attractive for two reasons. First, it is publicly available through the Bureau of the Census on tape or cd-rom for a minimal fee. Second, it contains 24 billion characters of data which describe geographic features of interest to the Census Bureau such as coastlines, hydrography, transportation networks, political boundaries, etc. Unfortunately, the large TIGER database only provides raw alphanumeric data; no utility software, graphical or otherwise, is included. On the other hand New S, a popular statistical software package by AT&T, has easily operated functions that permit advanced graphics in conjunction with data analysis. New S has the ability to plot contours, lines, segments, and points. However, of special interest is the New S function map and its options. Using the map function, which requires polygons as input, census tracts can be quickly selected, plotted, and shaded. New S graphics combined with the TIGER database has obvious potential. This paper reports on our efforts to use the TIGER map files with New S, especially to construct census tract maps of counties. While census tract boundaries are inherently polygonal, they are not organized as such in the TIGER database. This conversion of the TIGER 'line' format into New S 'polygon/polyline' format is one facet of the work reported here. Also we discuss the selection and extraction of auxiliary geographic information from TIGER files for graphical display using New S. DOE

N93-15868# Naval Postgraduate School, Monterey, CA.
AN INVESTIGATION OF REQUIREMENTS TRACEABILITY TO SUPPORT SYSTEMS DEVELOPMENT M.S. Thesis
Ann G. Abbott and Mona R. Busch Sep. 1992 62 p
(AD-A257444) Avail: CASI HC A04/MF A01

A primary concern in the development of large scale, real time, complex, computer intensive systems is ensuring that the system meets the specified requirement. Further, the requirements themselves evolve and undergo many changes during the development process. In such a context, it is essential to maintain traceability of requirements to various outputs to ensure that the systems meets the current set of requirements. An empirical study, utilizing focus group and protocol analysis techniques, was conducted with students from the Naval Postgraduate School. Their input, along with current literature, was used to explore factors to be taken into account while developing a model of traceability, and the appropriateness of the two data collection methods in future research. GRA

A FRAMEWORK FOR CLASSIFYING AND RESOLVING SEMANTIC CONFLICTS USING THE ENHANCED ENTITY-RELATIONSHIP MODEL M.S. Thesis
Daniel A. Lindsey Sep. 1992 137 p
(AD-A257452) Avail: CASI HC A07/MF A02

In today's organizations, information in current databases is stored in a variety of heterogeneous systems and data organizations. This situation causes problems when trying to integrate them into a federated or multidatabase solution. Particularly troublesome is semantic conflict, or differences in the meanings of data structures and definitions in heterogeneous databases. This thesis proposes a systematic approach towards identifying, classifying and resolving semantic conflicts. Using an entity relationship approach as the integrating model, a framework is developed which describes all possible semantic conflicts among the underlying schemas. This framework can be employed as a methodological tool during an integration effort. Possible resolution strategies are offered for each type of conflict and applied to the separate databases to realize a common global schema which could be used to formulate effective queries against the total original volume of data. GRA

EXTRACTING VIEWPOINTS FROM MULTIFUNCTIONAL KNOWLEDGE BASES Final Report, Feb. - Dec. 1991
Liane Acker and Bruce Porter Sep. 1992 17 p
(Contract F33615-90-C-0014)
(AD-A256008; AL-TR-1992-0091) Avail: CASI HC A03/MF A01

Viewpoints are coherent collections of facts that describe a concept from a particular perspective. They are essential for a wide variety of tasks, such as explanation generation and qualitative modeling. We have identified many types of viewpoints and developed a program, the View Retriever, for extracting them from knowledge bases, either singly or in combinations. The View Retriever provides a general solution to the central problem in extracting viewpoints: determining which facts are relevant to requested viewpoints. Our evaluation of the View Retriever indicates that it provides most of the types of viewpoints that people use, and its viewpoints are comparable in coherence to those constructed by people. GRA

PREPARATION OF THE PACIFIC REGION ENERGY INFORMATION EXCHANGE SYSTEM
Mar. 1992 302 p
(DE93-716353; NEDO-P-9174) Avail: CASI HC A14/MF A03

For the purpose of expanding the basis for collecting information concerning the energy situation in the pacific countries, the paper reports investigations that were made since 1989 by the Institute of Energy Economics contracting with NEDO. In FY-91 the development of a full-scale network was made necessary by participating in the energy supply/demand project of the Asia-Pacific Economic Cooperation Conference (APEC) and by collecting energy data from each participating nation and compiling statistics. As a result of the trial, it turns out that there are a lot of demands on the time limit of data submission: the format (pigeonholing of the items in every country, different energy sources peculiar to the country); unit standardization, etc. Furthermore, there are future subjects such as quality improvement and quantity increase of the data, that necessitate the development of a computer network. DOE

N93-15993# Naval Postgraduate School, Monterey, CA.
A RELATIONAL/OBJECT-ORIENTED DATABASE MANAGEMENT SYSTEM: R/OODBMS M.S. Thesis
Ronald L. Spear Sep. 1992 225 p
(AD-A257339) Avail: CASI HC A10/MF A03

During the last decade, the business sector has become increasingly reliant upon information management. This trend will most likely continue. Deficiencies/constraints in conventional database management systems continue to become more apparent as this reliance continues to grow. Primary areas of deficiency are in modeling, storing, and managing increasingly complex information as in CAD and CASE among others. The purpose of this thesis is to implement a combined relational/object-oriented database management system that will overcome these deficiencies and/or constraints. Three possible approaches to such a system exist: build the system from scratch, build object-oriented capabilities on top of an existing relational system, or build relational capabilities on top of an existing object-oriented system. The last approach is the one chosen for this work. This thesis expands previous work in this area and uses a commercial object-oriented database management system, IDB, in its implementation. GRA

N93-15995# Naval Postgraduate School, Monterey, CA.
ON INCREASING THE EFFECTIVE BLOCKING FACTOR OF A MATRIX FOR A GIVEN CACHE ORGANIZATION M.S. Thesis
Atilla N. Demirhan Sep. 1992 72 p
(AD-A257342) Avail: CASI HC A04/MF A01

Blocking (Tiling) techniques of iteration spaces to increase data reuse in the cache were reviewed. Results consistent with those previously

published were experimentally obtained. The relation between the sizes of the declared matrix and the cache was studied. Based on this relation, two algorithms were presented. Both algorithms attempt to increase the critical blocking factor with no self-interference (Bc) by changing the declared matrix size. Furthermore, the execution time of the second algorithm is independent of the matrix size. Experiments based on these algorithms were performed which showed a consistent superior performance (in terms of Mflops) relative to the performance obtained using previously published algorithms for deriving Bc. N93-16021# Energy Technology Data Exchange, Oak Ridge, TN.
INTERNATIONAL ENERGY SUBJECT CATEGORIES AND SCOPE
R. Rutkowski, ed. and L. Kane, ed. 1992 64 p
(DE92-018520; ETDE/Pub-1-R2) Avail: CASI HC A04/MF A01

The purpose of this publication is twofold: (1) to support organizations or individuals who select informational materials for inclusion in the ETDE Energy Data Base; and (2) for use as an aid in database searching. Subject categories and corresponding codes are established to define the scope of, or degree of interest in, energy information to be selected by those who enter machine-readable bibliographic records into the Energy Data Base. For persons conducting online searching or creating selective dissemination of information (SDI) subsets, this publication facilitates the selection of energy topics. These scope notes and category definitions also apply to online energy databases identified as ENERGY on STN International (Federal Republic of Germany) and as ENERGY SCIENCE & TECHNOLOGY offered by DIALOG Information Services, Inc. (USA). The subject scope of the database encompasses all technological aspects of energy production, conversion, and efficient utilization, as well as related economic, social, and political aspects. Major topical areas are fossil fuels, renewable energy sources, nuclear energy, fusion energy, energy storage and conversion, end-use technology, advanced energy systems, and energy policy. Coverage also includes aspects of chemistry, engineering, environmental science, biomedical science, physics, mathematics, computer science, materials, and instrumentation related to energy technology. Subject categories are used to define broad subject areas in the field of energy, and can also provide a powerful tool in both increasing the relevancy of retrieval and simplifying the search strategy needed to retrieve a specific concept. DEVELOPMENT OF A FACULTY RESEARCH AND PUBLICATION DATABASE SYSTEM M.S. Thesis
Brian E. Tansey Jul. 1992 109 p
(AD-A257107) Avail: CASI HC A06/MF A02

The Administrative Sciences (AS) Department of the Naval Postgraduate School (NPS) maintains a substantial amount of faculty research and publication data that is used to support its vast and varied informational needs. The data consists of all departmental publications that have been written by Administrative Science faculty members. This database requires constant maintenance to ensure accurate, up-to-date publication information that can be rapidly accessed at anytime. This thesis will define, design and implement a database application that the Administrative Sciences Department can use to systematically manage their faculty publication database for automatic retrieval and reporting. This new prototype software is named 'Faculty Research and Publication Database System (FPDS)', version 1.0. This thesis provides an in depth outline covering software requirements analysis, design and implementation. The system was written using dBase 4, version 1.1. GRA

N93-16116# Naval Postgraduate School, Monterey, CA.
ANALYSIS, DESIGN, AND IMPLEMENTATION OF A DATABASE MANAGEMENT SYSTEM FOR THE NAVAL POSTGRADUATE SCHOOL ALUMNI ASSOCIATION M.S. Thesis
Mark T. Kohlheim Sep. 1992 75 p
(AD-A257109) Avail: CASI HC A04/MF A01

The Naval Postgraduate School Alumni Association is a professional group consisting of graduates from the Postgraduate School. The Alumni Association is a self supporting entity that is not part of the administrative structure of the school. The Alumni Association supports itself through membership fees paid by graduates who join the association. The administrative work required to run the association is accomplished through a part-time employee and volunteers. Until recently, the Alumni Association was unorganized and lacked a firm plan of action to establish itself with the School's graduates and to increase its membership base. Records of graduates were located in various locations and in different formats which made tracking and contacting alumni an extremely time consuming operation. This thesis develops a database management system for the Naval Postgraduate School Alumni Association. This system provides a standardized format for storing data and tracking alumni. It also performs the time consuming accounting and billing functions associated with the Association's membership management. This thesis provides an outline covering the Alumni Association's system requirements analysis and design methodology. The system was written using dBASE IV, version 1.1. GRA

INFOTECH 1992: DOE TECHNICAL INFORMATION (TI) MEETING
J. M. Blanton 1992 186 p Presented at the Infotech 1992, Oak

Ridge, TN, 21-23 Oct. 1992
(DE93-000467; CONF-9210158) Avail: CASI HC A09/MF A02

Papers presented at the 1992 Department of Energy (DOE) Technical Information Meeting held at the Office of Scientific and Technical Information (OSTI), Oak Ridge, Tennessee, October 21-23, 1992 are included. It is composed of written presentations given orally at the meeting in either large-group or break-out sessions. The proceedings is provided as a reference tool for those who attended the meeting as well as an information document for those unable to attend. The annual DOE Technical Information meeting is designed for information professionals involved in the management of the Department's scientific and technical information (STI). Speakers include members of the OSTI staff as well as DOE and DOE contractors and other invited specialists in the field of information. The major objective of the meeting is to provide a forum within the Department for discussing current and future information policies, trends, and management techniques as well as the technologies and standards available for managing and accessing scientific and technical information. THE AEROSPACE DATABASE DATA ELEMENT DICTIONARY WITH ISSUES AND RECOMMENDATIONS FROM THE MEETINGS OF JULY 24-25, AUGUST 13-14, AND SEPTEMBER 24-25, 1991

Dec. 1991 143 p
(NASA-TM-108156; NAS 1.15:108156) Avail: CASI HC A07/MF A02

The present volume contains descriptions of the individual fields (data elements) which comprise the bibliographic records of the Aerospace Database. Indexes by field name and field mnemonic are provided. In addition, the issues and recommendations defined by the NASA STI Database Upgrade Working Group are included as annotations to the individual field descriptions and are listed at the end of the volume. The activities of the Working Group were initiated by the NASA STI Program Coordinating Council as part of an effort to improve overall database quality. Author

NSSDC CONFERENCE ON MASS STORAGE SYSTEMS AND TECHNOLOGIES FOR SPACE AND EARTH SCIENCE APPLICATIONS, VOLUME 2

Ben Kobler, ed., P. C. Hariharan, ed. (ST Systems Corp., Lanham, MD.), and L. G. Blasso, ed. (ST Systems Corp., Lanham, MD.) Washington Sep. 1992 257 p Conference held in Greenbelt, MD, 23-25 Jul. 1991
(RTOP 656-80-02-26)
(NASA-CP-3165-Vol-2; Rept-92B00093-Vol-2; NAS 1.55:3165-Vol-2) Avail: CASI HC A12/MF A03

This report contains copies of nearly all of the technical papers and viewgraphs presented at the NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Application. This conference served as a broad forum for the discussion of a number of important issues in the field of mass storage systems. Topics include the following: magnetic disk and tape technologies; optical disk and tape; software storage and file management systems; and experiences with the use of a large, distributed storage system. The technical presentations describe, among other things, integrated mass storage systems that are expected to be available commercially. Also included is a series of presentations from Federal Government organizations and research institutions covering their mass storage requirements for the 1990's. For individual titles, see N93-16321 through N93-16333.

STEWARDSHIP OF VERY LARGE DIGITAL DATA ARCHIVES

Patric Savage *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 5 p(SEE N93-16320 05-82) Sep. 1992 (For primary document see N93-16320 05-82)
Avail: CASI HC A01/MF A03

This paper addresses the problems foreseen by the author in stewarding the very large digital data archives that will accumulate during the mission of the Earth Orbiting Satellite (EOS). It focuses on the function of 'shepherding' archived digital data into an endless future. Stewardship entails a great deal more than storing and protecting the archive. It also includes all aspects of providing meaningful service to the community of users (scientists) who will want to access the data. The complete steward will be required to do the following: (1) provide against loss due to physical phenomena; (2) assure that data is not 'lost' due to storage technology obsolescence; (3) maintain data in a current formatting methodology with the additional requirement of being able to reconstitute the data to its original, as-received format; (4) secure against loss or pollution of data due to accidental, misguided, or willful software intrusion; (5) prevent unauthorized electronic access to the data, including unauthorized placement of data into the archive; (6) index the data in a metadatabase so that all anticipatable queries can be served without searching through the data itself; (7) provide responsive access to the metadatabase; (8) provide appropriately responsive access to the data; (9) incorporate additions and changes to the archive (and to the metadatabase) in a timely way; and (10) deliver only copies of data to clients - retain physical custody of the 'official' data. Items 1 through 4 are discussed in this paper. Author

AN OPEN, PARALLEL I/O COMPUTER AS THE PLATFORM FOR HIGH-PERFORMANCE, HIGH-CAPACITY MASS STORAGE SYSTEMS

Adrian Abineri and Y. P. Chen *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 10 p (For primary document see N93-16320 05-82)
Avail: CASI HC A02/MF A03

APTEC Computer Systems is a Portland, Oregon based manufacturer of I/O computers. APTEC's work in the context of high density storage media is on programs requiring real-time data capture with low latency processing and storage requirements. An example of APTEC's work in this area is the Loral/Space Telescope-Data Archival and Distribution System. This is an existing Loral AeroSys designed system, which utilizes an APTEC I/O computer. The key attributes of a system architecture that is suitable for this environment are as follows: (1) data acquisition alternatives; (2) a wide range of supported mass storage devices; (3) data processing options; (4) data availability through standard network connections; and (5) an overall system architecture (hardware and software designed for high bandwidth and low latency). APTEC's approach is outlined in this document. D.R.D.

EMASS (TM): AN EXPANDABLE SOLUTION FOR NASA SPACE DATA STORAGE NEEDS

Anthony L. Peterson and P. Larry Cardwell *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 14 p (For primary document see N93-16320 05-82)
Avail: CASI HC A03/MF A03

The data acquisition, distribution, processing, and archiving requirements of NASA and other U.S. Government data centers present significant data management challenges that must be met in the 1990's. The Earth Observing System (EOS) project alone is expected to generate daily data volumes greater than 2 Terabytes (2(10)(exp 12) Bytes). As the scientific community makes use of this data their work product will result in larger, increasingly complex data sets to be further exploited and managed. The challenge for data storage systems is to satisfy the initial data management requirements with cost effective solutions that provide for planned growth. This paper describes the expandable architecture of the E-Systems Modular Automated Storage System (EMASS (TM)), a mass storage system which is designed to support NASA's data capture, storage, distribution, and management requirements into the 21st century. DATA STORAGE AND RETRIEVAL SYSTEM
Glen Nakamoto *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 18 p Previously announced as N93-15036 (For primary document see N93-16320 05-82)
Avail: CASI HC A03/MF A03

The Data Storage and Retrieval System (DSRS) consists of off-the-shelf system components integrated as a file server supporting very large files. These files are on the order of one gigabyte of data per file, although smaller files on the order of one megabyte can be accommodated as well. For instance, one gigabyte of data occupies approximately six 9-track tape reels (recorded at 6250 bpi). Due to this large volume of media, it was desirable to 'shrink' the size of the proposed media to a single portable cassette. In addition to large size, a key requirement was that the data needs to be transferred to a (VME based) workstation at very high data rates. One gigabyte (GB) of data needed to be transferred from an archiveable media on a file server to a workstation in less than 5 minutes. Equivalent size, on-line data needed to be transferred in less than 3 minutes. These requirements imply effective transfer rates on the order of four to eight megabytes per second (4-8 MB/s). The DSRS also needed to be able to send and receive data from a variety of other sources accessible from an Ethernet local area network. Author

ICI OPTICAL DATA STORAGE TAPE
Robert A. McLean and Joseph F. Duffy *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 12 p (For primary document see N93-16320 05-82)
Avail: CASI HC A03/MF A03

Optical data storage tape is now a commercial reality. The world's first successful development of a digital optical tape system is complete. This is based on the Creo 1003 optical tape recorder with ICI 1012 write-once optical tape media. Flexible optical media offers many benefits in terms of manufacture; for a given capital investment, continuous, web-coating techniques produce more square meters of media than batch coating. The coated layers consist of a backcoat on the non-active side; on the active side there is a subbing layer, then reflector, dye/polymer, and transparent protective overcoat. All these layers have been tailored for ease of manufacture and specific functional characteristics. Author

STABILITY OF METAL PARTICLE AND METAL PARTICULATE MEDIA **c35**
Kazuhiro Okamoto *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 6 p(SEE N93-16320 05-82) Sep. 1992 (For primary document see N93-16320 05-82)
Avail: CASI HC A02/MF A03

Metal particulate (MP) video tape was launched for 8 mm video tape in 1985. Since then MP tapes have been applied to several consumer formats and instrumental formats because of its superior electrical performance. Recently data storage media, such as DDS and D-8, have started employing MP tape. However, there are serious concerns with archival stability of MP tape particularly in the case of data storage use, as metal particles essentially have problems with chemical instability and are susceptible to oxidation and corrosion. Although there were some studies about the archival stability of metal particles or MP tapes, a clear understanding has yet to be reached. In this paper, we report the stability of magnetic properties of current metal particles, and then discuss the new technologies to improve the stability further. Author

AN EMPIRICAL APPROACH TO PREDICTING LONG TERM BEHAVIOR OF METAL PARTICLE BASED RECORDING MEDIA **c35**
Allan S. Hadad *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 17 p Previously announced as N93-15043 (For primary document see N93-16320 05-82)
Avail: CASI HC A03/MF A03

Alpha iron particles used for magnetic recording are prepared through a series of dehydration and reduction steps of alpha-Fe2O3-H2O resulting in acicular, polycrystalline, body centered cubic (bcc) alpha-Fe particles that are single magnetic domains. Since fine iron particles are pyrophoric by nature, stabilization processes had to be developed in order for iron particles to be considered as a viable recording medium for long term archival (i.e., 25+ years) information storage. The primary means of establishing stability is through passivation or controlled oxidation of the iron particle's surface. A study was undertaken to examine the degradation in magnetic properties as a function of both temperature and humidity on silicon-containing iron particles between 50-120 C and 3-89 percent relative humidity. The methodology to which experimental data was collected and analyzed leading to predictive capability is discussed. Author

THE 19 mm DATA RECORDERS SIMILARITIES AND DIFFERENCES **c35**
Steve Atkinson *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 5 p(SEE N93-16320 05-82) Sep. 1992 Previously announced as N93-15042 (For primary document see N93-16320 05-82)
Avail: CASI HC A01/MF A03

Confusion over the use of non-video 19 mm data recorders is becoming more pronounced as we enter the world of high performance computing. This paper addresses the following: the differences between ID-1, ID-2, MIL-STD-2179 and DD-2; what the proper machine is for various applications; how the machine can be integrated into an environment; and any misconceptions there might be about 19 mm tape recorders. DD-2 and 19 mm instrumentation recorders have missions for which each is well designed.

While the differences may appear subtle, understanding the difference between the two is the key to picking the right recorder for a particular application. D.R.D.

N93-16332*# STX Corp., Hampton, VA.
DATA STORAGE AND RETRIEVAL SYSTEM ABSTRACT **c35**
Barbara Matheson *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 6 p(SEE N93-16320 05-82) Sep. 1992 (For primary document see N93-16320 05-82)
Avail: CASI HC A02/MF A03

The STX mass storage system design is intended for environments requiring high speed access to large volumes of data (terabyte and greater). Prior to commitment to a product design plan, STX conducted an exhaustive study of the commercially available off-the-shelf hardware and software. STX also conducted research into the area of emerging technologies in networks and storage media so that the design could easily accommodate new interfaces and peripherals as they came on the market. All the selected system elements were brought together in a demo suite sponsored jointly by STX and ALLIANT where the system elements were evaluated based on actual operation using a client-server mirror image configuration. Testing was conducted to assess the various component overheads and results were compared against vendor data claims. The resultant system, while adequate to meet our capacity requirements, fell short of transfer speed expectations. A product team lead by STX was assembled and chartered with solving the bottleneck issues. Optimization efforts yielded a 60 percent improvement in throughput performance. The ALLIANT computer platform provided the I/O flexibility needed to accommodate a multitude of peripheral interfaces including the following: up to twelve 25MB/s VME I/O channels; up to five HiPPI I/O full duplex channels; IPI-s, SCSI, SMD, and RAID disk array support; standard networking software support for TCP/IP, NFS, and FTP; open architecture based on standard RISC processors; and V.4/POSIX-based operating system (Concentrix). All components including the software are modular in design and can be reconfigured as needs and system uses change. Users can begin with a small system and add modules as needed in the field. Most add-ons can be accomplished seamlessly without revision, recompilation or re-linking of software. Author

OPEN SYSTEMS STORAGE PLATFORMS
Kirby Collins *In* NASA. Goddard Space Flight Center, NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, Volume 2 Sep. 1992 10 p (For primary document see N93-16320 05-82)
Avail: CASI HC A02/MF A03

The building blocks for an open storage system includes a system platform, a selection of storage devices and interfaces, system software, and storage applications CONVEX storage systems are based on the DS Series Data Server systems. These systems are a variant of the C3200 supercomputer with expanded I/O capabilities. These systems support a variety of medium and high speed interfaces to networks and peripherals. System software is provided in the form of ConvexOS, a POSIX compliant derivative of 4.3BSD UNIX. Storage applications include products such as UNITREE and EMASS. With the DS Series of storage systems, Convex has developed a set of products which provide open system solutions for storage management applications. The systems are highly modular, assembled from off the shelf components with industry standard interfaces. The C Series system architecture provides a stable base, with the performance and reliability of a general purpose platform. This combination of a proven system architecture with a variety of choices in peripherals and application software allows wide flexibility in configurations, and delivers the benefits of open systems to the mass storage world. STRATIFIED HYPERMEDIA STRUCTURES FOR INFORMATION DISCLOSURE
P. D. Bruza and T. P. vanderWeide 3 Dec. 1991 34 p Sponsored in part by Commission of the European Communities
(TR-91-27; ETN-93-92811) Avail: CASI HC A03/MF A01

The two level approach to hypertext (hypermedia) systems into stratified hypermedia structures is generalized. The overall architecture of such systems, including the fundamentals of the user interface, is described. Special emphasis is paid to the layering of the underlying information model. Two layers are featured: the hyperbase and the hyperindex. A characterization calculus is presented for the characterization of structured elements. This calculus is useful for quality assurance in hypermedia applications. In addition, this calculus forms the basis of a logic based approach in connection with the associated information processor (Disclosure Machine). Attention is also paid to spatial coherence for relevance judgements. ESA

DATA MODELLING IN COMPLEX APPLICATION DOMAINS
A. H. M. terHofstede, H. A. Proper, and T. P. vanderWeide Jan. 1992 9 p Sponsored by Software Engineering Research Centre and Netherlands Organization for Applied Scientific Research
(TR-92-01; ETN-93-92812) Avail: CASI HC A02/MF A01

A general data modeling technique is introduced. In many non trivial application domains, object types with a complex structure occur. Data modeling techniques which only allow flat structures are not suitable for representing such complex object types. A general data modeling technique, the Predicator Set Model (PSM), is introduced, which is capable of representing complex structures in a natural way. The expressiveness of the PSM is illustrated by means of a number of examples. In those examples, the PSM expressiveness is related to the expresiveness of more traditional modeling techniques. Some notational conventions are defined, which enable a more compact representation of complex structures. ESA

A REVIEW OF SELECTED ENERGY-RELATED DATA SETS
A. K. Nicholls, D. B. Elliott, M. L. Jones, J. M. Hannifan, K. J. Degroat, M. J. Eichner, and J. E. King Sep. 1992 167 p
(Contract DE-AC06-76RL-01830)
(DE93-002180; PNL-8336) Avail: CASI HC A08/MF A02

DOE's Office of Planning and Assessment (OPA) performs crosscutting technical, policy, and environmental assessments of energy technologies and markets. To support these efforts, OPA is in the process of creating a data base management system (DBMS) that will include relevant data compiled from other sources. One of the first steps is a review of selected data sets that may be considered for inclusion in the DBMS. The review covered data sets in five categories: buildings-specific data; industry-specific data; transportation-specific data; utilities-specific data; and crosscutting/general data. Reviewed data sets covered a broad array of energy efficiency, renewable, and/or benchmark technologies. Most data

sets reviewed are sponsored by Federal government entities and major industry organizations. Additional data sets reviewed are sponsored by the states of California and New York and regional entities in the Pacific Northwest. Prior to full review, candidate data sets were screened for their utility to OPA. Screening criteria included requirements that a data set be particularly applicable to OPA's data needs, documented, current, and obtainable. To fully implement its DBMS, OPA will need to expand the review to other data sources, and must carefully consider the implications of differing assumptions and methodologies when comparing data. SEMANTIC QUERY OPTIMIZATION IN DISTRIBUTED DATABASE SYSTEMS: A KNOWLEDGE-BASED APPROACH Ph.D. Thesis
Hendrikus Johannes A vanKuik 1991 200 p
(ISBN-90-9003849-3; ETN-92-92534) Copyright Avail: CASI HC A09/MF A03

An approach to semantic query optimization in distributed database systems is described. Query optimization is defined as searching for the most efficient query evaluation plan given a query expression, a database state, and the database system characteristics. This search program is recognized to be NP hard. The problem of searching the potentially large search spaces of equivalent expressions is attacked by a combination of multilevel search method and powerful heuristics. The problem of query optimization is decomposed into a number of basic transformation problems. A possible realization of the query optimizer as a knowledge system is discussed. ESA

DIRECT ACCESS AND EXTERNAL MEMORY MANAGEMENT OF MULTIMEDIA DOCUMENTS, AN OBJECT-ORIENTED APPROACH. PART 1: THE MODEL
Wolfgang R. Herzner, Erwin Hocevar, and Rainer Zoubek Dec. 1991 103 p
(OEFZS-4607-Pt-1; ETN-92-92619) Copyright Avail: CASI HC A06/MF A02

A system for direct access and external memory management which covers the needs of storing multimedia documents in multiuser and distributed environments is described. A model which comes as near as possible to the semantic structures of multimedia documents, and provides efficiency of storage and access mechanisms is required. The system should easily be handled, modified, and enlarged. Documents and their parts should be accessible through their properties. Associative methods for rapid access and encapsulation of data to minimize side effects ought to be supported. The concurrent access from multiple processes to the same document should be possible, as well as the use of multiple documents distributed over several locations, by one process. An object oriented data base approach is developed. It allows modeling of the complex reality of multimedia documents. The prototype implementation is described and demonstrates the applicability of the proposed approach. ESA

DIRECT ACCESS AND EXTERNAL MEMORY MANAGEMENT OF MULTIMEDIA DOCUMENTS, AN OBJECT-ORIENTED APPROACH. PART 2: THE PROTOTYPE
Wolfgang R. Herzner, Erwin Hocevar, and Rainer Zoubek Dec. 1991 70 p
(OEFZS-4608-Pt-2; ETN-92-92620) Copyright Avail: CASI HC A04/MF A01

The prototype implementation of compound document access and management, a direct access and external memory management model, is presented. It covers the needs for storing multimedia documents in multiuser and distributed environments. The core of the prototype is constituted by a relational database, which holds all data about classes, instances, aggregations, and so on in a set of relations. Constraints control the consistency of manipulations. Around this, an object oriented respecting semantic database is simulated by a software shell, written in C. This shell provides two application interfaces: one 'pure' object oriented and a procedural interface provides access on a 'more lower level'. A demonstration environment is developed together with the 'audio and synchronization extension' project to show the synchronization of text and graphic of a document in combination with the audio content. ECONOMIC ANALYSIS OF REDESIGN ALTERNATIVES FOR THE RESFMS INFORMATION SYSTEM M.S. Thesis
Ron M. Richardson Sep. 1992 165 p
(AD-A257475) Avail: CASI HC A08/MF A02

This study is a practical example of economic analysis of information systems and of the software cost estimation problem as applied to software development in the Department of Defense. Economic analysis methods and the difficulty of software cost estimation are demonstrated using the proposed redesign of the Reserve Financial Management System (RESFMS), an information system operated by the U.S. Naval Reserve. The mandate for economic analysis in the Department of Defense and procedures applicable to information systems are discussed. Two alternatives are analyzed: the status quo and a redesign proposed by Commander Naval Reserve Force (COMNAVRESFOR). Costs to be considered for each alternative are described. Since the major cost of the redesign will be software development, the problem of software development cost estimation is discussed. An estimate of software development cost is produced. This estimate and other identified costs are used to calculate present value of savings, savings/investment ratio, and discounted payback period for the redesign alternative as compared to the status quo. Risk analysis, using a Monte Carlo simulation, is then performed to determine the range of possible outcome values and probabilities for each. The result of the economic analysis is a recommendation that RESFMS be redesigned as proposed by COMNAVRESFOR. GRA

LOGIC AND THE FLOW OF INFORMATION
Johan vanBenthem Nov. 1991 35 p Submitted for publication
(LP-91-10; ETN-93-93102) Avail: CASI HC A03/MF A01

A general perspective on logic and the flow of information inspired by dynamic logic in computer science is presented and an attempt is made to identify some salient general logical issues emerging behind many specific systems for linguistic and general cognitive purposes published so far. Notably, a 'procedural turn' leads to a reappraisal of traditional notions like 'logical constant' and a 'valid inference', while also raising new issues of 'logical architecture'. Consideration, is given to a very general procedural logic and various possible specializations, showing that traditional methods of analysis still apply, when given an appropriate new twist. No specific system for performing the new cognitive tasks is proposed, concentration being placed on fundational issues concerning their design. ESA

VERSION AND VARIATION CONTROL OF A DESIGN DATABASE FOR A COMPUTER AIDED PROTOTYPING SYSTEM M.S. Thesis
Michael D. OLoughin 18 Jun. 1992 346 p
(AD-A257480) Avail: CASI HC A15/MF A03

The Computer Aided Prototyping System (CAPS) was created for rapidly prototyping real-time systems to determine early in the software development life cycle whether system requirements can be met. The CAPS consists of several software tools that automatically generate an executable Ada model of the proposed system. This thesis describes the development of a design database (DDB) for CAPS. The DDB is an engineering database that contains all the information related to a software prototype design. The DDB enhances the CAPS environment and the prototyping model by providing to the designer the capability to store, retrieve, view, edit, and control variation and versioning of the prototype components. This thesis describes the design, test, and implementation of a tree structure variation and version control method for supporting CAPS. GRA

SOFTWARE DEVELOPMENT WITH APPLICATION GENERATORS: THE NAVAL AVIATION LOGISTICS COMMAND MANAGEMENT INFORMATION SYSTEM CASE M.S. Thesis
Cheryl D. Blake Sep. 1992 63 p
(AD-A257624) Avail: CASI HC A04/MF A01

Information systems executives within Department of Defense (DoD) activities are being challenged to build information systems faster, and cheaper. A key step in developing information systems that will meet the future needs of DoD organizations is to explore innovative software development paradigms and exploit technological advances of application generators to produce information systems cost-effectively. This thesis examines the concepts, implementation strategies and issues relating to software development with application generators and illustrates, using a case study of the Naval Aviation Logistics Command Management Information System (NALCOMIS) prototyping development effort, the critical success factors required to implement prototyping with application generators in other areas of DoD. TECHNICAL REFERENCE MODEL FOR INFORMATION MANAGEMENT, VERSION 1.2
John Keane 15 May 1992 93 p
(AD-A253476) Avail: CASI HC A05/MF A01

The Defense Information Systems Agency (DISA) Center for Information Management is responsible for developing an overall open systems architecture that ensures probability, interoperability, flexibility, scalability and cost-effectiveness of DoD information management systems. This open systems architecture is to be based on vendor-independent standards developed through open, public-consensus forums. The Technical Reference Model for Information Management (TRM) presents a profile of standards which is mandatory for all DoD information systems. As directed by-the Director of Defense Information, all major acquisitions will use the Technical Reference Model (Version 1.1) as the guideline for selecting appropriate standards. This document is Version 1.2 of the TRM. It provides an update to the reference model and profile of standards contained in the earlier version including: the the addition of FIPS Publication 161 (EDI), a limited discussion of Ada bindings, an initial recommendation on security standards, and a requirement for standards conformance testing. A new section contains a detailed discussion on the added security services and standards that actually apply across the entire Technical Reference Model. GRA

A FRAMEWORK FOR CLASSIFYING AND RESOLVING SEMANTIC HETEROGENEITY IN OBJECT-ORIENTED DATABASES M.S. Thesis
Michael T. Bourque Sep. 1992 108 p
(AD-A257597) Avail: CASI HC A06/MF A02

During the past three decades, many organizations have seen a dramatic proliferation of a variety of information systems. Organizations soon discovered the need to access and share data across these different information systems. Under current technology, this integration is usually not possible due to the heterogeneity of information systems. One level of heterogeneity is that of semantics. The objective of this thesis is to build a framework for enumerating, classifying, and resolving the types of semantic heterogeneity that could exist in an object-oriented database model. The framework covers both schema and data content conflicts. The schema conflicts are classified broadly by the level at which they occur. The primary data conflicts covered include inconsistencies and different representations for the same data. GRA

DYNAMIC PATH CONTROLLABILITY IN ECONOMIC MODELS: FROM LINEARITY TO NONLINEARITY
W. C. A. Maas and H. Nijmeijer Apr. 1992 22 p
(MEMO-1047; ETN-92-92474) Avail: CASI HC A03/MF A01

The dynamic path controllability of discrete time nonlinear economic models in state space form is studied. An algorithmic procedure for testing this property for time varying linear systems is presented. This method is extended to general nonlinear models and it is shown that under generic conditions path controllability around a specific trajectory of the nonlinear system is equivalent to path controllability of the corresponding linearized model. The results are illustrated with two economic examples. ESA

EARTH BENEFITS FROM NASA RESEARCH AND TECHNOLOGY. LIFE SCIENCES APPLICATIONS
Oct. 1991 36 p
(NASA-TM-108043; NAS 1.15:108043) Avail: CASI HC A03/MF A01

This document provides a representative sampling of examples of Earth benefits in life-sciences-related applications, primarily in the area of medicine and health care, but also in agricultural productivity, environmental monitoring and safety, and the environment. This brochure is not intended as an exhaustive listing, but as an overview to acquaint the reader with the breadth of areas in which the space life sciences have, in one way or another, contributed a unique perspective to the solution of problems on Earth. Most of the examples cited were derived directly from space life sciences research and technology. Some examples resulted from other space technologies, but have found important life sciences applications on Earth. And, finally, we have included several areas in which Earth benefits are anticipated from biomedical and biological research conducted in support of future human exploration missions. Author

NATIONAL TECHNOLOGY INITIATIVE SUMMARY PROCEEDINGS
Oct. 1992 62 p Prepared in cooperation with Dept. of Commerce, DOE, NASA, and DOT
(DE93-001291; NTI-93001291) Avail: CASI HC A04/MF A01

The National Technology Initiative (NTI) was launched on 12 Feb. 1992, at a conference in Cambridge, Massachusetts, the first of ten regional conferences held across the country over the ensuing six months. President Bush issued a statement on that date making the NTI a presidential initiative. Five more conferences are planned for late 1992. This interim report covers the result's of the first ten conferences. The goal of the NTI is to promote U.S. technological competitiveness through a more effective industry/government partnership. The ten 'town meetings' brought together

more than 3500 representatives principally from high technology industries, federal laboratories, universities, and government to create a better understanding of how firms can commercialize new technological innovations more quickly and effectively. Each conference was designed to address specific, regionally-significant areas of technology, such as materials, electronics, environment, communications, biotechnology, and aerospace, and included a 'tech fair' with exhibits staffed by federal agencies, universities and laboratories. Principal sponsors of the NTI are the Departments of Commerce (DOC), Energy (DOE) and Transportation (DOT), and NASA. Other participating federal agencies are as follows: the Departments of Agriculture, Defense, Health and Human Services, and Interior; the Environmental Protection Agency; and the Office of Science and Technology Policy. Recognizing that the commercialization of new technology is dependent on a number of interrelated business considerations, each conference covered three principal topics which affect the cost and speed of innovation: cooperative research and development, R&D financing, and manufacturing. AN EVALUATION OF THE POTENTIAL DECONGESTIVE EFFECT OF HIGH SPEED TRAINS TO EUROPE ON HEATHROW AND GATWICK AIRPORTS (UNITED KINGDOM) M.S. Thesis

J. M. Thomas Sep. 1991 143 p

(ETN-92-92774) Copyright Avail: CASI HC A07/MF A02

A study to evaluate the potential decongestive effect of high speed train links from the United Kingdom to Paris (France), Brussels (Belgium) and Amsterdam (Netherlands) on Heathrow and Gatwick airports in 1995 and 2000 is reported. The methodology follows a simple stepped approach of air traffic growth forecasting, modal split analysis, and the assessment of the traffic diverted to rail in terms of the reduction of passengers and passenger air transport movements. The findings suggest that although the decongestive effect is significant, the diversion levels vary considerably depending upon the passenger's reasons for travel. The main determinants of modal transfer, and thus decongestive effect in Heathrow and Gatwick, will be the degree of competitiveness of high speed rail fares, as yet an unknown quantity, and the levels and standards of service offered. HUBBLE SPACE TELESCOPE: THE GO AND GTO OBSERVING PROGRAMS, VERSION 3.0

Ron Downes Jun. 1992 753 p

(NASA-CR-191290; NAS 1.26:191290) Avail: CASI HC A99/MF A06

A portion of the observing time with the Hubble Space Telescope (HST) was awarded by NASA to scientists involved in the development of the HST and its instruments. These scientists are the Guaranteed Time Observers (GTO's). Observing time was also awarded to General Observers (GO's) on the basis of the proposal reviews in 1989 and 1991. The majority of the 1989 programs have been completed during 'Cycle 1', while the 1991 programs will be completed during 'Cycle 2', nominally a 12-month period beginning July 1992. This document presents abstracts of these GO and GTO programs, and detailed listings of the specific targets and exposures contained in them. These programs and exposures are protected by NASA policy, as detailed in the HST Call for Proposals (CP), and are not to be duplicated by new programs. Author

INTERNATIONAL ULTRAVIOLET EXPLORER (IUE) Final Technical Report, 1980 - 1992

Karl-Heinz Boehm 1992 9 p

(Grant NAG5-45)

(NASA-CR-191952; NAS 1.26:191952) Avail: CASI HC A02/MF A01

The observation, data reduction, and interpretation of ultraviolet spectra (obtained with the International Ultraviolet Explorer) of Herbig-Haro objects, stellar jets, and (in a few cases) reflection nebulae in star-forming regions is discussed. Intermediate results have been reported in the required semi-annual reports. The observations for this research were obtained in 23 (US1) IUE shifts. The spectra were taken in the low resolution mode with the large aperture. The following topics were investigated: (1) detection of UV spectra of high excitation Herbig-Haro (HH) objects, identification of emission lines, and a preliminary study of the energy distribution of the ultraviolet continuum; (2) details of the continuum energy distribution of these spectra and their possible interpretation; (3) the properties of the reddening (extinction) of HH objects; (4) the possible time variation of strong emission lines in high excitation HH objects; (5) the ultraviolet emission of low excitation HH objects, especially in the fluorescent lines of the H2 molecule; (6) the ultraviolet emission in the peculiar object HH24; (7) the spatial emission distribution of different lines and different parts of the continuum in different HH objects; and (8) some properties of reflection nebula, in the environment of Herbig-Haro objects. Each topic is discussed. Author

SODIUM GUIDE STAR ADAPTIVE OPTICS SYSTEM FOR ASTRONOMICAL IMAGING IN THE VISIBLE AND NEAR-INFRARED

D. T. Gavel, J. R. Morris, and R. G. Vernon (Science Applications International Corp., Palm Beach Gardens, FL.) Aug. 1992 3 p Presented at the Nonlinear Optics: Materials, Fundamentals, and Applications, Maui, HI, 17-21 Aug. 1992

(Contract W-7405-eng-48)

(DE92-041081; UCRL-JC-109606-R1; CONF-920853-4) Avail: CASI HC A01/MF A01

We are building an adaptive-optic telescope system that is based on the use of an artificial guide star created by laser-induced fluorescence of the sodium mesospheric layer. This paper discusses the system design for mid-visible to near-infrared compensation of a one meter telescope at Livermore and near-infrared compensation of the ten meter Keck telescope at Mauna Kea. We calculate the expected Strehl ratio and resolution for a 69 channel deformable mirror system and also for a possible 24 channel system upgrade. With the 69 actuator system we expect near diffraction limited resolution, about 0.2 arcsec, with a Strehl ratio of about 0.5 at gamma = 0.8 micron on the 1 m telescope and resolution of about 0.05 arcsec with a Strehl ratio of about 0.5 at gamma = 2.0 microns on the 10 m telescope. Resolution will be limited by the performance of the tip/tilt correction loop, which uses an off-axis natural guide star as a reference. At Livermore, our design uses an existing high power (1 kW) laser source, which is expected to provide an approximately 6th magnitude artificial guide star. This strong beacon signal allows a short integration time in the wavefront sensor so that temporal changes in the atmospheric

turbulence can be tracked accurately. For Mauna Kea, we explore how the system to be built for the Livermore site would perform in the infrared, assuming a 100 W laser source. DOE

A ROSAT HIGH RESOLUTION X RAY IMAGE OF NGC 1068
J. Halpern *In its* Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga 11 Jan. 1993 4 p (For primary document see N93-17401 05-89)
Avail: CASI HC A01/MF A01

The soft x ray properties of the Seyfert 2 galaxy NGC 1068 are a crucial test of the 'hidden Seyfert 1' model. It is important to determine whether the soft x rays come from the nucleus, or from a number of other possible regions in the circumnuclear starburst disk. We present preliminary results of a ROSAT HRI observation of NGC 1068 obtained during the verification phase. The fraction of x rays that can be attributed to the nucleus is about 70 percent so the 'soft x ray problem' remains. There is also significant diffuse x ray flux on arcminute scales, which may be related to the 'diffuse ionized medium' seen in optical emission lines, and the highly ionized Fe K(alpha) emission seen by BBXRT. Author

SOFT X RAY PROPERTIES OF THE GEMINGA PULSAR
J. P. Halpern and M. Ruderman *In its* Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga 11 Jan. 1993 27 p Submitted for publication to The Astrophysical Journal (For primary document see N93-17401 05-89)
Avail: CASI HC A03/MF A01

The ROSAT soft x ray spectrum and pulse profile of the Geminga pulsar are analyzed and interpreted in terms of thermal emission from the surface of the neutron star. The x ray spectrum appears to consist of two blackbody components with T(sub 1) = (5.2 +/- 1.0) x 10 (exp 5) K and T(sub 2) approximately 3 x 10(exp 6) K, respectively. The inferred ratio of surface areas, A(sub 2)/A(sub 1), is approximately 3 x 10(exp -5). Both components are highly modulated at the pulsar rotation period, but the harder x ray pulse is narrower, and leads the main (soft) x ray pulse by about 105 deg of phase. The soft x ray component is interpreted as photospheric cooling of much of the neutron star's surface area, while the small, hot region could be part of the much smaller polar cap heated by energetic particles flowing inward from the magnetospheric accelerator which is responsible for the production of Geminga's gamma rays. Geminga's gamma ray emission is consistent with outer-magnetosphere accelerator models for highly inclined dipoles. These predict the beaming of energetic gamma rays close enough to the star to give copious e(+/-) production in the stellar magnetic field and a large circumstellar pair density from pair inflow toward the surface. These pairs may quench radio emission, and also reflect most of the hard polar cap x rays back to the stellar surface by cyclotron resonance scattering. They are then reemitted from that much larger area at the lower temperature T(sub 1). The single-peaked nature of the x ray pulse and its energy-dependent phase suggest an off-center dipole geometry for the surface magnetic field. Under the assumption that the soft x ray emission comes from the full surface of a neutron star of radius R = 10 km, a distance estimate of (150-400) pc is derived. This range is consistent with the fit interstellar column density of (1.5 +/- 0.5) x 10(exp 20) cm(exp -2). Distances less than 150 pc are probably ruled out both by the lower limit on the column density, and also by the requirement that the Rayleigh-Jeans extrapolation of the soft x ray spectrum not exceed the observed blue flux of the faint optical counterpart. This distance estimate implies that Geminga's efficiency for converting spindown power into gamma-rays is near unity, and that there may be significant beaming of the gamma rays as well. These results tend to bolster the prospect that most of the unidentified high-energy gamma ray sources in the Galactic plane are pulsars, some of which may be radio quiet. Author

A TEOM (TM) PARTICULATE MONITOR FOR COMET DUST, NEAR EARTH SPACE, AND PLANETARY ATMOSPHERES Final Report
Apr. 1988 73 p
(Contract NAS7-962)
(NASA-CR-190868; NAS 1.26:190868) Avail: CASI HC A04/MF A01

Scientific missions to comets, near earth space, and planetary atmospheres require particulate and mass accumulation instrumentation for both scientific and navigation purposes. The Rupprecht & Patashnick tapered element oscillating microbalance can accurately measure both mass flux and mass distribution of particulates over a wide range of particle sizes and loadings. Individual particles of milligram size down to a few picograms can be resolved and counted, and the accumulation of smaller particles or molecular deposition can be accurately measured using the sensors perfected and toughened under this contract. No other sensor has the dynamic range or sensitivity attained by these picogram direct mass measurement sensors. The purpose of this contract was to develop and implement reliable and repeatable manufacturing methods; build and test prototype sensors; and outline a quality control program. A dust 'thrower' was to be designed and built, and used to verify performance. Characterization and improvement of the optical motion detection system and drive feedback circuitry was to be undertaken, with emphasis on reliability, low noise, and low power consumption. All the goals of the contract were met or exceeded. An automated glass puller was built and used to make repeatable tapered elements. Materials and assembly methods were standardized, and controllers and calibrated fixtures were developed and used in all phases of preparing, coating and assembling the sensors. Quality control and reliability resulted from the use of calibrated manufacturing equipment with measurable working parameters. Thermal and vibration testing of completed prototypes showed low temperature sensitivity and high vibration tolerance. An electrostatic dust thrower was used in vacuum to throw particles from 2 x 10(exp 6) g to 7 x 10(exp -12) g in size. Using long averaging times, particles as small as 0.7 to 4 x 10(exp 11) g were weighted to resolutions in the 5 to 9 x 10(exp -13) g range. The drive circuit and optics systems were developed beyond what was anticipated in the contract, and are now virtually flight prototypes. There is already commercial interest in the developed capability of measuring picogram mass losses and gains. One area is contamination and outgassing research, both measuring picogram losses from samples and collecting products of outgassing. Author

MEASURING q(SUB 0) USING SUPERNOVAE AT z APPROXIMATELY 0.2 Ph.D. Thesis

H. J. M. Newberg Jul. 1992 112 p
(Contract DE-AC03-76SF-00098)
(DE92-041164; LBL-32634) Avail: CASI HC A06/MF A02

The measurement of q(sub 0) is extremely important for understanding the quantity of matter in our universe. The measurement of q(sub 0) using supernovae of type Ia as standard candles is appealing because it requires less modeling than other methods using galaxies. The challenge with using supernovae to measure q(sub 0) is in finding enough of them. In order to find supernovas, we have constructed a very popular f/1 camera for the 3.9m Anglo-Australian Telescope. The camera uses reducing optics that put a 17 in. times 17 in. field on a 1024 times 1024 pixel Thomson CCD. Using this system, we image to 23rd magnitude in five minutes. We have developed a software package that uses image subtraction to find supernovae that are approximately magnitude 22.4 or brighter in these images. One field can be processed every 6.6 minutes on a relatively unloaded VAX 6000-6510. We estimate that this system should find one supernova in every 105-139 images (about two nights of observation on the AAT). Throughout the two years of operation, we observed the equivalent of about four nights with seeing better than two arc seconds. Although we found many candidates, we were unable to confirm any supernovae. The next generation of this search is currently using the 2.5m Isaac Newton Telescope in the Canary Islands. We have solved many problems encountered with the AAT search by targeting distant clusters of galaxies, by operating at a site that allows higher resolution imaging, and by scheduling follow-up observations. This system, although still in its infancy, has yielded one event that could be a high redshift supernova. We estimate that it will require 36 type Ia supernovae, discovered at or before maximum, to find q(sub 0) to within 0.2, and 144 such supernovae to measure q(sub 0) within 0.1. Clearly, the program will have to be expanded to find this quantity of supernovae. DOE

INVESTIGATION OF A POSSIBLE GALACTIC CHIMNEY Final Report, 1991 - 1992
Bonnie R. Roberts 8 May 1992 77 p
(AD-A257133; USNA-TSPR-196) Avail: CASI HC A05/MF A01

Since the discovery in 1924 that we live in a separate star system, now known as the Milky Way Galaxy, astronomers have worked to understand the structure, composition and dynamics of our galaxy. A particular puzzle in recent years has been the origin and dynamics of the interstellar gas in the halo region of the galaxy high above the visible flat stellar disk. The chimney model dominates current theories of the source, support and ionization of the halo gas, yet no one has actually seen a galactic chimney. The most likely candidate for a galactic chimney in our galaxy was observed. The National Radio Astronomy Observatory telescope and NASA's International Ultraviolet Explorer satellite were used in these observations. The observations provided the data for the study. The investigation take the approach of observing a single region in great detail at many different wavelengths in order to gain understanding of the composition, ionization, and dynamics of the halo gas in the region of a possible galactic chimney. GRA

PROSPECTS FOR STUDIES OF ASTROPHYSICAL INTEREST WITH RADIOACTIVE ION BEAMS
J. D. Garrett 1992 10 p Presented at the 2d International Symposium on Nuclear Astrophysics: Nuclei in the Cosmos, Karlsruhe, Germany, 6-10 Jul. 1992
(Contract DE-AC05-84OR-21400)
(DE92-041018; CONF-9207113-2) Avail: CASI HC A02/MF A01

Realistic estimates of the new nuclei that will become accessible for study with the planned new generation of radioactive beam facilities are compared with the predicted paths of the various nucleosynthetic processes. These facilities should permit studies of essentially the complete set of nuclei associated with the rp- and p-processes, the CNL cycle, and big-bang nucleosynthesis, as well as the r-process below A congruent to 150. ELEMENT DIFFUSION IN PULSATING VARIABLES
J. A. Guzik 1992 10 p Presented at the International Astronomical Union (IAU) Colloquium 139 on New Perspectives on Stellar Pulsation and Pulsating Variable Stars, Victoria, British Columbia, 7-11 Jul. 1992
(Contract W-7405-eng-36)
(DE93-000795; LA-UR-92-2946; CONF-9207156-1) Avail: CASI HC A02/MF A01

Can pulsation studies yield information on the operation of element diffusion in stars? Can diffusion explain unusual properties of pulsating variables? Element diffusion theory and recent research relevant to these questions will be reviewed, with emphasis on the Sun and (delta) Scuti stars. High-degree solar p-modes that are sensitive to helium ionization support a reduced convection zone helium abundance consistent with that expected from diffusion. Intermediate-degree p-modes can be used to probe the structure of the convection zone base and constrain possible diffusion-produced composition gradients. Delta Scuti variables have shallow convection zones and relatively short diffusion timescales. Helium diffusion may explain unusual period ratios, influence period changes, and affect the amplitudes and light curve shapes of delta Scuti stars. DOE

INTERPRETATION OF RAPIDLY ROTATING PULSARS
F. Weber (Technische Univ. Munich, Garching, Germany) and N. K. Glendenning Aug. 1992 9 p Presented at the 2nd International Symposium on Nuclear Astrophysics: Nuclei in the Cosmos, Karlsruhe, Germany, 6-10 Jul. 1992
(Contract DE-AC03-76SF-00098)
(DE93-000576; LBL-32562; CONF-9207113-3) Avail: CASI HC A02/MF A01

The minimum possible rotational period of pulsars, which are interpreted as rotating neutron stars, is determined by applying a representative collection of realistic nuclear equations of state. It is found that none of the selected equations of state allows for neutron star rotation at periods below 0.8 to 0.9 ms. Thus, this work strongly supports the suggestion that if pulsars with shorter rotational periods were found, these are likely to be strange-quark-matter stars. The conclusion that the confined hadronic phase of nucleons and nuclei is only metastable would then be almost inescapable, and the plausible ground state in that event is the deconfined phase of (3-flavor) strange-quark-matter. We have investigated a variety of research topics on the interface of nuclear physics and astrophysics during the past year. We have continued our study of dihyperon states in dense matter and have started to make a connection between their properties in the core of neutron stars with the ongoing experimental searches at Brookhaven National Laboratory. We started to build a scenario for the origin of gamma-ray bursts using the conversion of neutron stars to strange stars close to an active galactic nucleous. We have been reconsidering the constraints due to neutron star cooling rates on the equation of state for high density matter in the light of recent findings which show that the faster direct Urca cooling process is possible for a range of nuclear compositions. We have developed a model for the formation of primordial magnetic fields due to the dynamics of the quark-hadron phase transition. Encouraged by the most recent observational developments, we have investigated the possible origin of the boron and beryllium abundances. We have greatly improved the calculations of the primordial abundances of these elements I greater than y augmenting the reaction networks and by updating the most recent experimental nuclear reaction rates. Our calculations have shown that the

primordial abundances are much higher than previously thought but that the observed abundances cannot be explained by primordial sources alone. We have also studied the origin of the boron and beryllium abundances due to cosmic ray spallation. Finally, we have continued to address the solar neutrino problem by investigating the impact of astrophysical uncertainties on the MSW solution for a full three-family treatment of MSW mixing. DOE

ARE LARGE QUASAR REDSHIFTS DUE TO LIGHT PROPAGATION IN AN INHOMOGENEOUS AND ANISOTROPIC MEDIUM?
R. Mignani (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 8 Jan. 1991 8 p
(SSCL-Preprint-776; ETN-93-92890) Avail: CASI HC A02/MF A01

A possible interpretation of the large redshifts of quasars is suggested in terms of a generalized Doppler effect. A method based on the Lie isotropic lifting of special relativity is proposed. The generalized Doppler effect obtained within Santilli's Lie isotropic relativity is reviewed. The inhomogeneity and anisotropy of the medium inside quasars is represented by a deformation of the space-time metric, which, in the simplest case, depends on a single parameter b. A generalized expression of the redshift for light propagation in such a medium is obtained. The procedure allows the numerical estimate of b for some quasars associated to galaxies. Some cosmological implications of Santilli's relativity are summarized. ESA

THE ATMOSPHERIC STRUCTURES OF THE COMPANION STARS OF ECLIPSING BINARY X RAY SOURCES Final Report
George W. Clark 16 Dec. 1992 51 p
(Grant NAG8-701)
(NASA-CR-191393; NAS 1.26:191393) Avail: CASI HC A04/MF A01

This investigation was aimed at determining structural features of the atmospheres of the massive early-type companion stars of eclipse x-ray pulsars by measurement of the attenuation of the x-ray spectrum during eclipse transitions and in deep eclipse. Several extended visits were made to ISAS in Japan by G. Clark and his graduate student, Jonathan Woo to coordinate the Ginga observations and preliminary data reduction, and to work with the Japanese host scientist, Fumiaki Nagase, in the interpretation of the data. At MIT extensive developments were made in software systems for data interpretation. In particular, a Monte Carlo code was developed for a 3-D simulation of the propagation of x-rays from the neutron star through the ionized atmosphere of the companion. With this code it was possible to determine the spectrum of Compton-scattered x-rays in deep eclipse and to subtract that component from the observed spectra, thereby isolating the software component that is attributable in large measure to x-rays that have been scattered by interstellar grains. This research has culminated in the submission of paper to the Astrophysical Journal on the determination of properties of the atmosphere of QV Nor, the BOI companion of 4U 1538-52, and the properties of interstellar dust grains along the line of sight from the source. The latter results were an unanticipated byproduct of the investigation. Data from Ginga observations of the Magellanic binaries SMC X-1 and LMC X-4 are currently under investigation as the PhD thesis project of Jonathan Woo who anticipated completion in the spring of 1993. ON THE STABILITY OF A STRINGY BLACK HOLE
A. Carlini (SISSA, Trieste, Italy), F. Fucito (Tor Vergata Univ., Rome, Italy), and M. Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 23 Apr. 1992 16 p
(Preprint-879; ETN-93-92979) Avail: CASI HC A03/MF A01

The stability under perturbations of a charged four dimensional stringy black hole arising from gauging a WZW model is studied. The results show the black hole is stable only in the extremal case Q = M. The purpose of the investigation is to analyze the behavior of a four dimensional black hole under geometrical perturbations. The thermodynamical properties are different for black holes obtained from different investigations. The study of perturbations of stringy black holes in two and four dimensions is performed. The results show that the black hole under study is stable under perturbations of the metric only in the extremal case, supporting the conjecture that extremal black holes might be stable 'quantum' ground state for the underlying theory. ON THE BLACK-HOLE CONFORMAL FIELD THEORY COUPLED TO THE POLYAKOV'S STRING THEORY. A NON PERTURBATIVE ANALYSIS
M. Martellini (Istituto Nazionale di Fisica Nucleare, Rome, Italy), M. Spreafico (Milan Univ., Italy), and K. Yoshida (Istituto Nazionale di Fisica Nucleare, Rome, Italy) 8 Jan. 1992 7 p
(Preprint-852; ETN-93-92954) Avail: CASI HC A02/MF A01

The aim of the study is to show that coupling the conformal field theory governing the Euclidean two dimensional black hole to D - 1 massless scalar freefields, described by a Polyakov's action with the central charge c (before coupled to the black hole), allows the theory to be also defined in the physical range c = D greater than 1. The original Witten's theory corresponds to the case D = 1. It is shown that the resulting planar string susceptibility is real for any D greater than or equal to zero and less than or equal to 4. New features revealed on the continuum spectra between about 2 to 30 keV as a result of Ginga LAC (Large Area proportional Counter) observations of a large sample of X-Ray bright active galaxies, mainly Seyferts, are discussed. In particular, an emission line (or line complex) near 6.4 keV and a spectral 'hump' above about 10 keV are common properties of the sample, while a number of sources also show evidence for a 'warm' iron K absorption edge. The most likely interpretation of the emission line and hump is by reprocessing of the primary X-ray power law in near neutral (or cold) matter, within the active nucleus and probably associated with the primary accretion process. The depth of the K absorption edge indicates a substantial column density of highly ionized matter in the line of sight to several active galactic nuclei, including some with otherwise 'bare' Seyfert 1 nuclei. Repeated Ginga observations of two 'typical' X-ray bright Seyferts, MCG-6-30-15 and NGC 5548, allowed the variability of the above spectral features to be studied for the first time, providing a direct measure of the geometry and scale of the X-ray reprocessing matter in these objects. Rosat observations are beginning to yield improved definition of the discrete spectral component ('soft excess') often dominant below about 1 keV. ESA

OBSERVATIONAL CONSTRAINTS ON AGN MODELS **c89**
A. C. Fabian *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 22-35 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A03/MF A04

The observational constraints placed on the structure and mechanism of the central engine in AGN (Active Galactic Nuclei) are discussed. Particular attention is paid to the results obtained from the X-ray spectra and variability, since they probably originate from innermost regions. Many objects have an efficiency higher than that of nuclear fusion. Together with the lack of soft X-ray absorption in many sources, stellar processes such as massive stars and supernovae can be ruled out. The most plausible model is the accreting black hole. However, definitive evidence for the model is lacking. ESA

X RAY SPECTRAL STRUCTURE OF SEYFERT GALAXIES
I. A. Bond, M. Matsuoka, and M. Yamauchi *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 36-41 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

Results of detailed analyses of good statistical data based on Ginga observations (the energy range: 1.5 to 37 keV) are presented. From these results it was established that the overall X-ray spectra of Seyfert galaxies generally rule out a model consisting of a simple power law with uniform absorption plus an iron emission line. Spectra of some Seyfert galaxies (IC4329A, NGC7469, MCG-6-30-15 etc.) are well fitted to the recently favored reflection model, but those of some other Seyfert galaxies (NGC4151, NGC6814, NGC5506 etc.) rule out this model. The spectra of NGC4151 and NGC6814 are well fitted to a partial covering model. On the other hand softness variability of NGC5506 can be modeled either by partial covering of the hard X-ray source or as thermal bremstrahlung emission. The spectrum of this source also shows the signatures of cold thick matter near the central engine characteristic by an iron fluorescence line at 6.4 keV and a hard tail attributed to Compton reflection of X-ray source by the cold matter. This composite feature would be a general model for X-ray spectra of Seyfert galaxies. ESA

RECENT RESULTS ON 3C 273
R. Staubert *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 42-49 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

Recent results on 3C 273, one of the nearest and brightest quasars at high photon energies from observations with Rosat, Ginga, (Japanese X-ray satellite), High Energy X-ray Experiment (HEXE), Gamma Ray Observatory (GRO) and ground based instruments are discussed. Two Rosat observations clearly establish a time variable 'soft excess' spectral component, the second observation being simultaneous with Ginga allows construction of a combined spectrum from 0.1 keV to 20 keV; a combined HEXE/Ginga spectrum (1.5 to 150 keV) constrains 'pairs and reflection'; multifrequency observations in Jun./Jul. 1991, including data from GRO, will provide a 'snapshot' spectrum from radio frequencies to high energy gamma rays. CHAOTIC BEHAVIOUR OF X RAY LIGHTCURVES OF AGN?
B. Czerny, H. Lehto (Southampton Univ., England), and I. McHardy (Southampton Univ., England) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 54-57 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

The correlation integral method was used to analyze eight Exosat long X-ray light curves of seven Active Galactic Nuclei (AGN) and to put some constraints on the theoretical model in a model independent way. The character of variability was studied by comparing the shapes of light curve fragments created by d succeeding observational points. The computations proceed for d = 1, 2, 3 ... until the result saturates and the increase of the length of sequences does not include any new information; this means that the system has got no more degrees of freedom. The analysis of NGC 4051 (LE) indicated that deterministic chaos is responsible for variability of this source. It does not necessarily mean that this AGN has a different structure than other studied sources as it is a factor 100 fainter and the sampling frequency in Exosat data may be adequate only for NGC 4051. OBSERVING AGN AND DXRB WITH XSPECT/SODART **c89**
Niels Joergen Westergaard and Hans Ulrik Noergaard-Nielsen *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 62-65 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

Properties of the Xspect high and low energy proportional counters and the Silicon X-Ray Array (SIXA) solid state pixel detector, part of the Xspect/Sodart experiment on Spectrum X-Gamma mission to be launched late in 1994 are considered. Typical Xspect Active Galactic Nuclei (AGN) observations were simulated. The capabilities of the Xspect telescopes for

obtaining detailed spectra of faint sources as expressed by detection in an energy interval of 1 keV at 2 and 8 keV respectively are discussed. Xspect is compared with Jet-X, the other main telescope on Spectrum X-Gamma. It is seen that Xspect runs into confusion problems long before Jet-X at low energies, whereas confusion is not a problem at high energies even for an observing time of 1 day. The comparison is made for various broader energy intervals. Again confusion is only a problem for Xspect at the lowest energies. The capacity of Xspect for obtaining the spectrum of DXRB is demonstrated. It was found that good spectra can be obtained for AGN at 25 percent of the Einstein deep survey limit and that the spectrum of the Diffuse X-Ray Background (DXRB) can be measured up to about 9 keV. ESA

GINGA RESULTS OF TYPE 2 AGN'S AND THEIR CONTRIBUTIONS TO THE COSMIC X RAY BACKGROUND c93

Katsuji Koyama *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 74-80 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

X-ray emission from type 2 Active Galactic Nuclei (AGN) are studied with the Ginga satellite. Many of the sample of optically selected Seyfert 2s show low energy cutoffs, while some of them show reflected components. Some narrow line radio galaxies are found to have obscured nuclei. Thus, so called unified model of the active galactic nuclei is supported by the analysis of the X-ray spectrum. However the Infrared Astronomical Satellite (IRAS) selected Seyfert 2 galaxies show different phenomena. An origin of the cosmic X-ray background is discussed based on the unified picture of the AGN. Copyright Avail: CASI HC A01/MF A04

Although there are large numbers of Quasi Stellar Objects (QSO's) now observed in X rays, extensive X-ray observations of uniformly selected, 'complete' QSO samples are more rare. The Large Bright QSO Survey (LBQS) consists of about 1000 objects with well understood properties, most brighter than B = 18.8 and thus amenable to X-ray detections in relatively brief exposures. The sample is thought to be highly complete in the range 0.2 less than z less than 3.3, a significantly broader interval than many other surveys. The Einstein IPC observed 150 of these objects, mostly serendipitously, during its lifetime. We report the results of an analysis of these IPC data, considering not only the 20 percent of the objects we find to have positive X-ray detections, but also the ensemble X-ray properties derived by 'image stacking'. MULTIFREQUENCY OBSERVATIONS OF RAPIDLY VARIABLE BLAZARS c89

Stefan J. Wagner *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 97-102 Sponsored by Sonderforschungsbereich 328 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

Campaigns, carried out simultaneously in several frequency bands aimed at a densely sampled monitoring of the variability pattern of the BL Lac object 0716+714, are reported. The variations are closely correlated both in simultaneous radio optical as well as optical X-ray observations. The time lag between variations at different wavelengths is difficult to assess due to the quasi periodic nature of the variations but is likely to be smaller than a few days. The time lags and the statistically asymmetric light curves argue against the variations being caused by the microlensing effect. It is speculated that the emission process of the rapidly variable component is different from the classical SSC model, possibly due to coherent radiation mechanisms as caused by anisotropic electron distributions. ESA

AN INTRODUCTION TO THE PAIR-REFLECTION MODEL OF X-RAY SPECTRA IN AGN'S

Roland Svensson *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 103-116 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A03/MF A04

The pair reflection model of Zdziarski, Ghisellini, George, Svensson, Fabian, and Done (1990), in which most features of the extreme ultraviolet gamma ray spectra of Active Galactic Nuclei (AGN) are accounted for is considered. Details of the conception of the model are given and the

model itself is explained. In the pair reflection model a pair cloud located above a cold slab generates a self consistently computed nonthermal spectrum that irradiates and is reflected by the slab. Some of these features are discussed using simplest possible arguments. The robustness of the pair reflection model as well as possible variability patterns are also discussed. ESA

THE SPECTRA OF ACCRETION DISCS IN ACTIVE GALACTIC NUCLEI
R. R. Ross (College of the Holy Cross, Worcester, MA.), A. C. Fabian, and S. Mineshige (Ibaraki Univ., Mito, Japan) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 117-122 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

Fully self consistent calculations of the spectra emitted by active galactic nuclei accretion disks are presented. The inner, radiation dominated regions of standard, alpha disks are treated. Incoherent Compton scattering and emission/absorption of radiation by hydrogen and helium are included in computing the vertical temperature structure within the disk and the emergent spectrum. At high accretion rates (L approximately L (sub edd)) comptonization modifies the extreme ultraviolet/soft X-ray continuum and the He2 spectral features. In particular, an important fraction of the emergent flux appears in the form of a steep soft X-ray spectrum. ESA

Two new elements, the Hybrid Accretion Disk (HAD) model and the Rosat survey of resolved X-ray sources and diffuse background, are combined in an attempt to resolve the long standing problem of the cosmic X-Ray Background (XRB), explaining the diffuse XRB as the integrated radiation of unresolved early quasars and Active Galactic Nuclei (AGN). It is suggested that a large fraction of the soft and hard XRB is produced by early AGN with intrinsic spectra different from low redshift AGN. When redshifted from z = 3 to 5 the HAD spectrum yields the two major features of the XRB: the flat bremsstrahlung spectrum at a few tens keV, and the soft X-ray power law discovered by Rosat. It is demonstrated that emission from HAD's in AGN can explain the XRB spectrum over the entire range from soft X-rays to gamma rays. ESA

UV TO X RAY AGN ACCRETION DISC SPECTRA: MODEL FITTING OF IUE AND ROSAT ALL SKY SURVEY DATA
Thomas Doerrer, Peter Friedrich, Hermann Brunner, Ruediger Staubert, Volker Pussel, Harald Riffert, and Hanns Ruder *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 130-133 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

Big blue bump accretion disk spectra are presented for a sample of radio loud and radio quiet quasars, comprising IUE (International Ultraviolet Explorer) and Rosat All Sky Survey (RASS) data. These data are fitted to geometrically thin alpha accretion disk spectra, attempting to restrict the permitted range of the model parameters: central mass, accretion rate, alpha viscosity parameter and inclination angle of the accretion disk. The accretion disk structure is calculated. The local accretion disk continua are determined. The integrated accretion disk spectra are corrected for Doppler shifting due to the rotation of the accretion disk and gravitational red shift and light deflection due to gravitational field of the central black hole. Mass accretion rates are found in the range form 0.2 to 1.2 times M(sub Edd). Only in some of the sources the accretion disk component is hard enough to produce a measurable soft X-ray flux. The fits require a steep (alpha(sub energy) approximately 1 to 1.5) underlying power law component consistent with the optical to X-ray broad band power law index alpha(sub ox) and the X-ray power law indexes as measured by the Rosat Position Sensitive Proportional Counter (PSPC). X AND GAMMA RAY FLARING OF 3C279 AND THE BARYONIC COMPONENT OF NONTHERMAL PARTICLE DISTRIBUTIONS IN RADIOJETS
Karl Mannheim and Peter L. Biermann *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 134-137 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

A conservative explanation of the superluminal flat spectrum radio source 3C279, for which flare like activity has been reported from the radio to the gamma ray regime, is presented. The explanation is based upon the theory of diffusive shock acceleration of electronics and protons and analytic treatment of the coupled transport equations for proton secondary particles (photons, electrons, positrons). The salient feature of the resulting physical picture of the emission during outbursts is that the electrons produce synchrotron continuum emission below and the protons initiate an electromagnetic cascade dominating X and gamma ray emission. Rosat observations are thus important and reasons for this are addressed. ESA

THE NONTHERMAL MODEL OF DISC ACCRETION ONTO A MAGNETOSPHERE
N. R. Ikhsanov (Central Astronomical Observatory, Saint Petersburg, Russia) and L. A. Pustilnik *In* MPI fuer Extraterrestrische Physik, X-Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 138-142 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

The whole process of disk accretion onto a magnetosphere is considered and a model to illustrate this is presented. An illustrative model of the high conductive accretion disc drawing the lines of force of the outer magnetosphere and flowing around the inner magnetosphere by force is presented. A further diagram illustrates the polar cone with central magnetic tube. The plasma vortex is a source of thermal X-rays and d layer is a source of ultra high energy particles and nonthermal radiation. It is concluded that the compact object gravitational energy is converted to the energy of toroidal magnetic field of the diffusion layer. The amount of nonthermal processes to the total energy is, in this case, determined by the efficiency of tearing mode. Using the analogy with solar flares and plasma experiments it can be expected that current layers of the polar vortex are the powerful source of accelerated particles and nonthermal radiation comparable (or exceeding) in efficiency with radiation losses of thermal plasma in alpha cone. ROSAT OBSERVATIONS OF AGN **c89**
Wolfgang Brinkmann *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 143-154 Sponsored by BMFT (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A03/MF A04

New aspects for the study of Active Galactic Nuclei (AGN) opened up as a result of the Rosat mission are reviewed: the soft energy range of the X-Ray Telescope (XRT) combined with the good energy resolution of the Position Sensitive Proportional Counter (PSPC) detector allows an investigation of the spectral properties of the sources in this energetically vital band. The unprecedented high sensitivity of the instrument in the all sky survey yielded an enormous number of previously unknown X-ray AGN for the statistical and morphological exploration of these objects. The AGN observed with Rosat can be grouped quite naturally into three classes, where the number of objects increases by roughly a factor of ten in each class. The first class consists mainly of previously well known, bright 'classical' AGN extensively studied at medium X-ray energies and at other wavelengths. The second class of objects was already known as AGN from optical work but without previous X-ray detections, and in the last class are objects detected for the first time through their X-ray emission. A certain fraction of them has been cataloged previously for example in radio surveys, but their nature remains uncertain. Results from all three of these classes, as they are available at the time of writing with about 90percent of the survey data processed, are discussed. ESA

Bonnell et al *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 155-162 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

To optimize the activity of the RIASS collaboration was established between IUE and Rosat projects. Some of the results obtained are given and the importance of such coordinated observations for the Spectral Energy Distribution (SED) definition of Active Galactic Nuclei is illustrated. All the participants in the AGN part of the RIASS program are listed. The RIASS observations allow for a comprehensive study of the overall spectral energy distribution of AGN's. For the first time, data from different instruments can be used to determine the SED, since the observations were simultaneous. A preliminary analysis shows that the energies radiated in the UV and the soft X-rays domains are closely related. The spectra of individual objects as well as the correlation found between the intensity of CIV lambda 1550 emission line and the soft X-rays luminosity, suggest that the excess detected in this band is the high energy tail of the big UV bump. A status report and first results on multifrequency radio continuum observations with the Effelsberg 100 m telescope of radio sources which have counterparts in the Rosat all sky survey are given. Up to now more than 200 sources have been observed at 21, 11, 6 and 2.8 cm wavelength in the flux density range above 20 mJy. From these observations the spectrum, size, linear polarization and improved positions of these sources were determined. A comparison of the more precise radio positions with the Rosat positions indicates a systematic difference of about 20 inches. The statistical properties of the Rosat selected radio sources are given and compared with results from unbiased source surveys so far available. In general the differences are small. A weak excess of flat spectrum sources and a higher fraction of unresolved sources is found. Cumulative counts of the radio sources, however, show an increasing deficit of weak sources. At 11 cm wavelength there are about three times less sources at 100 mJy than expected and this deficit increases to more than a factor of 10 at a level of 30 mJy. The cumulative counts of the X-ray sources from the Rosat survey indicate a deficit of sources below 10 to the minus 12th power erg/sq cm.s. No global correlation between radio flux densities and X-ray flux densities was found. The sample of sources is at present not large enough to establish any possible correlation for distinct groups of radio sources with common properties. ESA

Copyright Avail: CASI HC A02/MF A04

Observations of the nearby intrinsically bright quasar 1821 + 643 situated at 86 deg. ecliptic latitude, for 37 days by the X-ray Telescope/Position Sensitive Proportional Counter (XRT/PSPC) during the Rosat all sky survey and with IUE on 7 days almost evenly spaced during Rosat visibility period are reported. Both the X-ray and the UV flux remained constant within the measurement errors during that period. The spectrum obtained by adding all the photons can be well fitted with a model comprising a power law with Gamma approximately -1.80, N(sub H) fixed to the galactic value of 4.09 times 10 to the 20th power/sq cm and a soft excess component. From a statistical viewpoint the fits of the soft excess by a black body, by a thermal bremsstrahlung or by a step power law are equally acceptable. ESA

Results of X-ray observations, ultraviolet observations with the IUE camera, and optical photometry observations carried out with a 70 cm telescope, of Kaz 102, a close by radio quiet quasar, are presented. Optical and UV observations indicated that during the X-ray monitoring the source exhibited variability of 10 percent. Comments on the X-ray variability were not made due to systematic errors. It was hoped to be able to correlate the UV and optical photometry when all the optical data of the collaboration would be analyzed, the perspective of a cross correlation with X-rays are not good, because optical data indicated a modest variability. If the X-ray variability is similar, it is doubted that systematic errors could be reduced in such a way that the variability can show up. The X-ray spectrum indicates some soft excess, which is not unexpected in the PSPC (Position Sensitive Proportional Counter) energy range. Results are compared with the Einstein 1979 data. ESA

Morbidelli (Consiglio Nazionale delle Ricerche, Florence, Italy) et al *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 181-186 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

Multiwavelength monitoring of the BL Lacertae object 3C 371 centered on the extended X-ray observation during the Rosat all sky survey in Aug. and Sep. 1990 is reported. Significant variations in the X-ray, UV, and optical fluxes were detected, the amplitude and rapidity of which decreased at longer wavelengths. The X-rays flared on Aug. 28 for about a day and showed a gradual rise in flux towards the end of the observation. This flux increase was also found in the UV. The steep X-ray spectrum is well described by a power law model with galactic low energy absorption modified by an absorption line below 1 keV. The photon index was determined to be Gamma = 2.66 +/- 0.09. Compared with a previously measured overall energy distribution of 3C 371, the optical to X-ray spectrum was found to

be fainter and steeper with diminishing declines at increasing wavelengths. The radio to infrared spectrum, however, remained unchanged for more than 9 years. ESA

A DEEP ROSAT OBSERVATION OF THE HIGHLY VARIABLE AGN 1E1403+5439 OR ROSAT NON-DETECTION OF THE WEAK AGN 1E1403+5439 **c89**
T. Belloni and S. L. Snowden (Wisconsin Univ., Madison.) *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 187-190 (For primary document see N93-17094 05-90)
(Grant NAG5-1438)
Copyright Avail: CASI HC A01/MF A04

A long (33600 s) Rosat Position Sensitive Proportional Counter observation of the galaxy M101 was performed. The field includes the serendipitous Einstein source 1E1403 + 5439, which was previously observed to vary by a factor 5.5 in 160 days. Despite the higher sensitivity of the Rosat PSPC and the high exposure time, the source could not be detected down to a much lower flux limit than the lowest Einstein detection. The unusually high variability and the proximity (18 feet) to M101 make this source a good candidate for gravitational microlensing. ESA

A COMPARATIVE STUDY OF SOFT X RAY QSO SPECTRA **c89**
N. Schartel, H. Fink, W. Brinkmann, and J. Truemper *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 195-197 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

A method developed to estimate spectral parameters from hardness ratios and thus to be used to study the spectral properties of a large sample of Quasi-Stellar Objects (QSO) detected in the Rosat all sky survey, is presented. The slopes of quasar spectra with low intrinsic absorption were considered as a function of the quasar redshifts. A flattening of the spectral index with increasing redshift was found and interpreted as steepening of the intrinsic spectra towards the soft X-ray region. ESA

The X-ray and broadband spectrum properties of a flux limited sample of radio loud quasars observed in the Rosat All Sky Survey (RASS) were investigated. Mean X-ray spectral indexes of alpha(sub energy) approximately 1.1 were found in the flat radio spectrum subsample and approximately 1.3 in the steep radio spectrum subsample. This is harder than the mean X-ray spectra for radio quiet quasars (alpha (sub energy) approximately 1.5) observed in the RASS but considerably steeper than the mean X-ray spectral index observed for radio loud quasars in the Einstein Image Proportional Counter (IPC). There is a strong correlation between the X-ray power law index observed in the RASS and the optical to X-ray broad band power law index alpha(sub ox), consistent with the two being identical in the flat radio spectrum sample. This was interpreted as evidence for a power law component extending all the way from the optical to the soft X-ray range which was not seen in former X-ray missions. A hardening was also found of the X-ray spectra with redshift and/or X-ray luminosity in the flat radio spectrum sample, possibly due to fact that the steep spectral component observed at low redshifts out of the Rosat energy range. ESA

ROSAT X RAY SPECTRA OF QUASARS WITH A RANGE OF CONTINUUM PROPERTIES AND REDSHIFT **c89**
Belinda J. Wilkes, Martin S. Elvis, Harvey Tananbaum, Jonathan C. McDowell, and Andrew Lawrence (London Univ., England) *In* MPI fuer Extraterristrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 210-215 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A02/MF A04

Soft x-ray spectral observations of three targeted and two serendipitous quasars with the Rosat Position Sensitive Proportional Counter (PSPC) are reported. These quasars were observed as part of a program to observe objects covering the full range of the quasar population to study the range and evolution of their x-ray spectra and eventually their full wavelength distributions. The inital sample included three radio loud, all with z greater than 0.5 and two low redshift, radio quiet quasars, one with a known excess from Einstein observations. The highest redshift object (PKS0438-43, z = 2.85) is the first high luminosity quasar to show a significant absorbing column in excess of the Galactic value and calls into question the inverse

absorption/luminosity correlation found at low redshift. Only two of the three radio loud quasars follow the Einstein observed correlation between x-ray slope and core dominance parameter. ESA

PRELIMINARY RESULTS ON THE PROPERTIES OF THE EMSS AGN'S AS DERIVED FROM THE ROSAT ALL SKY SURVEY **c89**
S. Molendi (Milan Univ., Italy), W. Brinkmann, and T. Maccacaro (Osservatorio Astronomico, Brera, Milan, Italy) *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 216-219 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

Results on Einstein Medium Sensitivity Survey (EMS) Active Galactic Nuclei (AGN) for the first approximately 90 percent of the Rosat All Sky Survey (RASS) are presented. Of the 427 AGN's in the EMSS, approximately 31 percent were detected in the RASS, for another approximately 36 percent upper limits are available, while, so far, no useful information is available for the remaining 33 percent. The average photon index of the EMSS AGN's in the position sensitive proportional counter band (01.1 to 2.4 keV), as determined from the hardness ratios, is significantly steeper than the one determined from Image Proportional Counter (IPC) data on the (0.3 to 3.5 keV) band for the same set of sources. The comparison of Rosat fluxes computed from count rates in the B band (0.4 to 2.4 keV) to fluxes in the EMSS band (0.3 to 3.5 keV) together with the spectral indices analysis indicates that sources tend to be steeper when they are brighter. ESA

Thirty five x-ray sources were detected in a 6.4 ksec Rosat Position Sensitive Proportional Counter (PSPC) exposure pointed at the quasar PKS 0135-247. The field lies at high galactic latitude with galactic N(sub H) of 1.4 times 10 to the 20th power/sq cm. Twenty six serendipitous sources were detected with a significance greater than 5 sigma. An attempt was made to identify these sources with entries of optical, radio, and x-ray catalog and to search for optical counterparts in the ESO R and SRC J plates. X-ray spectral slopes and f(sub x)/f(sub opt) values were calculated from detected count rates and hardness ratios. Spectral fits of the five brightness sources could be obtained. ESA

PRELIMINARY RESULTS FROM THE ROSAT WFC ALL SKY SURVEY: A SAMPLE OF LOW GALACTIC COLUMN DENSITY AGN'S **c89**
Monika Balucinska-Church and P. Gondhalekar (Rutherford Appleton Lab., Chilton, England) *In* MPI fuer Extraterristrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 224-226 (For primary document see N93-17094 05-90)
Copyright Avail: CASI HC A01/MF A04

Rosat Wide Field Camera (WFC) observations of five Active Galactic Nuclei (AGN), with very low column densities, were analyzed. These observations were made during the Rosat all sky survey. Positive detections were made only for 3C 273 and NGC 5548 and in both cases the results are consistent with the existence of a soft excess. The analysis of the WFC images was carried out using a point source searching program. Images were obtained for each of the five sources with the known position of the source at the center of the image. This allowed optimum subtraction of the background. These images were searched for significant peaks within 1 arc min of the source position and during the search procedure the background subtraction was finely tuned. Positions of the detected peaks were boresight corrected. The results of the analysis are shown. The following parameters are listed: the significance of the detection, the WFC count rate, and its 1 sigma error. ESA

Preliminary results from a deep (70 ksec) Rosat survey of the high galactic latitude selected area Lynx.3A are presented. Lynx.3A sensitivity was previously studied in both the optical radio, with deep Westerbork surveys and deep multicolor Charge Couple Device (CCD) images form the Palomar 200 inch Four-Shooter. About 70 x-ray sources were detected within the central 40 foot diameter region of the Position Sensitive Proportional Counter (PSPC), observed surface densities of approximately 200 x-ray sources/sq deg are suggested, and these x-ray sources alone account for approximately 30 percent of the cosmic x-ray background (0.9 to 2.2 keV). An initial look at the observed x-ray logN - logS curve is presented, but a detailed assessment requires further study. The 4 sigma limit of about 7 times 10 to the minus 15th power erg/s.sq cm (0.5 to 2.0 keV) is considerably deeper then the Einstein deep surveys, and of comparable sensitivity to the deepest current Rosat surveys. Cross correlation with our Four Shooter optical catalogs yields at least one likely optical candidate for nearly all of the Rosat x-ray sources; a number of the likely optical identifications have colors of quasi-stellar objects (and stellar PSF), but in other cases galaxies/groups are also viable candidates. A sample of 14708 extragalactic IRAS sources selected from the IRAS point source catalog via statistical classification were cross correlated with the Rosat All Sky Survey. An unexpected result is the discovery of several spiral galaxies with luminosities up to 10 to 43rd power erg/s well above those found with the Einstein satellite. This suggests as one possible explanation that the x-ray luminous spirals are starbursts which are characterized by steep spectra and thus are more easily detected by Rosat. ESA

Since galaxies with warm IRAS have been found to be good active galactic nuclei candidates, a selection of warm IRAS sources was studied in the Rosat All Sky Survey. Preliminary results on the type 1 and type 2 Seyferts in this sample are presented. An interesting result is the detection of 12 Seyfert type 2 IRAS galaxies, a considerably larger number of these objects than seen before at x-rays. ESA

With the aim of deriving the properties of the mechanisms powering emission line galaxies, the x-ray, optical, far infrared (FIR), and radio emission were analyzed in a sample of 103 galaxies, including 44 'normal' star forming galaxies, mostly spirals and irregulars, and 59 Active Galactic Nuclei (AGN) of different classes (quasi stellar objects, Seyfert 1 and Seyfert 2 galaxies). The objects were selected by having been detected both by Einstein and by IRAS (Infrared Astronomy Satellite) at 60 and/or 100 micrometers, discarding the targets for which only upper limits were available. Only those AGN with enough counts to perform spectral fits in the x-ray range were taken. The FIR luminosities were integrated over the 40 to 120 micrometers band by taking the IRAS fluxes at 60 to 100 micrometers. The x-ray luminosities correspond to the Einstein Image Proportional Counter (IPC) bands (generally between 0.5 and 4.0 keV) and were corrected from interstellar absorption. Both FIR and x-ray luminosities were transformed to zero resdshift. ESA

Preliminary results from a program to study the coincidence of faint radio sources with extragalactic x-ray sources detected in Rosat images are reported. The x-ray data consist of a number of Rosat pointings in a region of very low galactic N(sub H) (i.e. one of the 'Lockman Hole' regions). In a complementary program, deep radio maps of the Rosat fields were obtained with the Very Large Array (VLA) at a wavelength of 20 cm to a limiting flux density of 0.7 mJy. It was found that there is roughly a 10 percent overlap between the x-ray and radio source samples. A brief comparison is made with similar studies based on the Einstein x-ray surveys. ESA

N93-17137# Toronto Univ. (Ontario).

THE 10-YEAR MONITORING OF THE COMPACT RADIO SOURCES IN THE NUCLEAR REGIONS OF M82 **c89**

Philipp P. Kronberg and Richard A. Sramek (National Radio Astronomy Observatory, Tucson, AZ.) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 247-254 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

Results of repeated VLA (Very Large Array) observations of the inner 600 pc 'starburst' region of M82 at 5 and 15 GHz at 0.3 inch resolution are presented. A histogram of the fractional flux changes of the brightest ten sources over a ten and a half year period is presented which shows that the degree of variability is very different among the brightest sources. A histogram showing the distribution of the spectral index between 5 and 15 GHz is also presented. A map of the compact nuclear sources in M82 at 15 GHz, with combined A and B array data, is given. THE CENTRAL ENGINE OF AGN'S AND ITS COSMOLOGICAL EVOLUTION

Martin J. Rees *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 255-270 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A03/MF A04

The continuum emission from the inner regions of Active Galactic Nuclei (AGN) is discussed. It is emphasized that a thermal UV component is a generic feature of accretion powered sources, and does not necessarily require a 'standard' disc; in particular, a model in which primary nonthermal radiation is reprocessed by small magnetically confined sheets or filaments with a small volume filling factor is discussed. The radio emission from compact sources is discussed. The possibility that stars may be captured in very tight orbits around massive black holes and that such stars could in principle cause periodic variations with periods as short as about 1 hour is discussed. The cosmogonic implications of the z dependence of the AGN populations (and particularly the problems posed by objects with z approximately equal to 5), and the nature and detectability of the AGN remants in the centers of quiescent nearby galaxies are considered. ESA

HI IN GALAXY OUTSKIRTS AND THE EXTRAGALACTIC IONIZING FLUX **c93**

Edvige Corbelli and Edwin E. Salpeter (Cornell Univ., Ithaca, NY.) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 271-274 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A01/MF A04

The lack of starforming regions makes the ionizing background radiation extremely important for the physical conditions of the gas in the outskirts of spiral galaxies. Combining HI observations with models of the interaction between the ionizing radiation and the gas in these regions, the spectrum of the extragalactic background radiation below 0.2 keV can be constrained. The 21 cm absorption in the spectra of 60 background radio sources which lie close to the optical disk of spiral galaxies in the plane of the sky were sought. Measurements were made for high velocity clouds in the direction of 63 bright continuum sources. Results can be summarized as follows: the spin temperature is never so low as to be comparable with the microwave background radiation temperature. This implies that the brightness temperature is directly proportional to the column density and that there is no appreciable HI hidden in emission by extreme subthermal effects; absorption is never observed for column densities N(sub HI) less than or equal to 2 times 10 to the 19th power/sq cm. For N(sub HI) greater than 2 times 10 to the 19th power/sq cm absorption is sometimes seen but only over a narrow velocity range; there is a transitional column density N(sub I) such that appreciable emission is seen for N(sub HI) greater than N(sub I) but very little is seen for N(sub HI) less then N(sub I). Attempts made to resolve the sources of the X-Ray Background (XRB) since the discovery of its existence in 1962 are reviewed. Two main points of view have guided this work: the point source hypothesis and the diffuse hypothesis. The two hypothesis led to the design of very different sets of experiments with their own internal logic and progression; both sets are considered. Given the rich phenomenology revealed to date, it is clear that the properties of individual sources which contributed to the XRB at fainter and fainter fluxes will continue to be studied. The relative contribution of active nuclei and clusters of galaxies is considered. ESA

The cosmological evolution and the Luminosity Function (LF) of x-ray selected Active Galactic Nuclei (AGN) are discussed. The sample used is extracted from the Einstein Observatory Extended Medium Sensitivity Survey (EMSS) and consists of more than 420 objects. Preliminary results from

the Rosat all sky survey data confirm the correctness of the optical identification of the EMSS sources, thus giving confidence to the results obtained from the analysis of the AGN sample. The XLF observed at different redshifts gives direct evidence of cosmological evolution. Data were analyzed within the framework of luminosity evolution models and the two most common evolutionary forms were considered. Luminosity dependent evolution is required if the evolution function has the exponential form, whereas the simpler pure luminosity evolution model is still acceptable if the evolution function has the power law form. Using the whole sample of objects the number counts and the devolved XLF were derived. A comparison of the EMSS Data with preliminary Rosat results indicates an overall agreement. ESA

THE HARD X RAY LUMINOSITY FUNCTION AND EVOLUTION OF AGN

Herman L. Marshall *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 297-302 (For primary document see N93-17094 05-90)

(Contract NAS5-30180)

Copyright Avail: CASI HC A02/MF A04

A large number of active galactic nuclei and quasars detected by the HEAO A1 x-ray survey and recently identified using results from the HEAO A3 experiments are described and preliminary results are presented. The sample shows some incompleteness and is not completely identified, so these effects are taken out in the analysis by correcting the effective coverage of the survey. Preliminary analysis indicates that significant evolution can be detected in this data and that the evolution rate appears stronger than that inferred from a sample selected at lower energies. ESA

ENERGY SPECTRUM OF THE COSMIC X RAY BACKGROUND: SOME CONSIDERATIONS BASED ON THE GINGA RESULTS c93

Y. Tanaka *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 303-314 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A03/MF A04

What was known of the Cosmic X-Ray Background (CXRB) before Ginga and what was discovered because of Ginga are discussed. CXRB is now believed to be composed, for the most part, of discrete extragalactic sources. However, so far obtained spectra of the known classes of extragalactic sources do not account for the distinct shape of the CXRB spectrum with a break around 20 keV: 'spectral paradox'. Ginga observations yielded new results in the active galactic nuclei spectra and the logN - logS relation over a wide energy band above 2 keV at much lower flux levels than previously available. As a result, the spectral paradox has become even more serious. Based on the Ginga results, some possibilities for the spectra of fainter Active Galactic Nuclei than the Ginga limit which could explain the spectral break are discussed. ESA

In the continuing quest for an understanding of the cosmic x-ray background, the most difficult technical barrier remains the mismatch between the wavelength band in which the discrete source populations are best characterized (0.1 to 3.5 keV), and the band in which the spectrum of the background is well determined and the bulk of the energy density resides (3.5 to 50 keV). A progress report in an attempt to resolve this conundrum using the Einstein Imaging Proportional Counter (IPC) database and analysis system is presented. The IPC data base is described and how it can be used to search both for missing clusters of galaxies and highly obscured active galactic nuclei is addressed. All 4083 imaging proportional counter observations were examined after flat fielding and editing to optimize sensitivity for diffuse emission on various size scales ranging up to 10 feet. A '2 sigma source' catalog which, when filtered by matching with source catalogs from other wavelength regimes, is shown to reveal new source classes which may be significant contributors to the cosmic x-ray background is being constructed. Optimization techniques are described and the source catalogs which result are presented. Limits on the contributions both classes of sources make to resolving the discrepancy with the higher energy observations are set. ESA

ROSAT DEEP SURVEYS c89

G. Hasinger *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 321-331 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A03/MF A04

A series of 20 deep pointed observations with the Rosat Position Sensitive Proportional Counter (PSPC) is discussed. 530 x-ray sources with 0.5 to 2 keV fluxes down to 3 times 10 to the -15th power erg/sq cm.s were discovered in 5.9 sq deg. The N (greater than S) relation of the sources selected in the 0.5 to 2 keV band shows a density in excess of 200 sq deg at the faintest fluxes and a flattening below 2 times 10 to the -14th power erg/sq cm.s. The average spectrum of these sources is a power law with energy index 1.2 +/- 0.1. The absorption column densities are consistent with the galactic HI columns. More than 50 percent of the 1 to 2 keV background was resolved into discrete sources in the deepest field. The total background spectrum shows an emission line feature around 0.65 keV, most probably due to OVII to OVIII from a 2,000,000K plasma. Above about 1 keV, the background is dominated by a power law spectrum with a normalization of 13.4 +/- 0.2 keV/sq cm s sr keV and a slope 1.2 +/- 0.1, that is, considerably steeper then the extrapolation from higher energies. An angular correlation function in the 0.9 to 2 keV band was constructed, averaged over 14 fields. The 1 sigma upper limits for structure in the background on scales of 2 to 10 arcmin are 10 to 5 percent. ESA

N93-17146# Institute of Physical and Chemical Research, Saitama (Japan).

ORIGIN OF THE COSMIC X RAY BACKGROUND RADIATION c93

Nobuo Terasawa *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 332-337 Sponsored in part by Inoue Foundation for Science (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

The spectrum of the Cosmic X-ray Background (CXB) is characterized by the break around 20 keV. It is shown that the CXB spectrum is well reproduced by the superposition of Active Galactic Nuclei (AGN) spectra and no peculiar sources are needed to account for the CXB. Non-power-law components such as reflection component and a partial covering component in the AGN spectra are essential to reproduce the x-ray background spectrum. It is shown that the ultraviolet radiation from AGN can ionize intergalactic medium to be consistent with the Gunn-Peterson effect in the spectra of high redshift Quasi Stellar Objects (QSO's). It is shown that CXB is essentially explained by the superposition of x-ray radiation from AGN. Fairly low luminosity AGN have a dominant contribution to CXB. Reflection components and uniform absorbers are important for the spectra of AGN contributing to CXB. Partial absorber, which is found fairly in general in AGN spectra, can improve the predicted low energy spectra of CXB and this may suggest the contribution of Seyfert 2 galaxies. ESA

ON THE SUITABILITY OF STARBURST GALAXIES AS A CONTRIBUTOR TO THE CXRB c93

E. J. A. Meurs and T. Boller (Academy of Sciences, Potsdam, German D.R.) *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 338-340 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

In view of recent claims that starburst galaxies may account for a substantial fraction of the Cosmic X-Ray Background (CXRB), the possible contribution of the x-ray luminous spiral galaxies to the background is discussed. These spiral galaxies were revealed through Rosat all sky survey detections of IRAS galaxies, and are thought likely to be starburst galaxies

because of their high infrared luminosities and explicit optical classification. The latter objects, with spectral shapes dependent on the relative strengths of various, x-ray emitting stellar subpopulations, may however have too soft x-spectra to play a signifigant role in this respect. ESA

N93-17148# Max-Planck-Inst. fuer Extraterrestrische Physik, Garching (Germany).

CONTRIBUTION OF CLUSTERS OF GALAXIES TO THE XRB **c93**

Marguerite Pierre *In its* X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 341-344 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A01/MF A04

The contribution of clusters of galaxies to the diffuse cosmic X-Ray Background (XRB), as recently measured by Rosat deep pointings was investigated. The cluster population was modeled according to the local luminosity and temperature distributions, and cluster evolution assuming preheating of the intergalactic medium. The simulations suggest that the fraction of the XRB due to clusters should not exceed a few percent. ESA

ON THE ORIGIN OF THE X RAY BACKGROUND **c93**

X. Barcons *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 345-357 Sponsored in part by DGICYT (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A03/MF A04

A few issues concerning the origin of the X-Ray Background (XRB) are discussed. The contribution of hot gas (both diffuse and clumped) to the background intensity is found to be generally negligible. Since the Rosat deep surveys have already resolved a high fraction of the soft XRB, some properties (average spectrum, clustering, source counts) of the sources of the 'residual' intensity are studied. It is speculated that the role of low luminosity Seyfert galaxies might be relevant in the origin of the soft XRB. ESA

N93-17150# Universidad de Santander (Spain). Departimento de Fisica Moderna.

CLUSTERING PROPERTIES OF X RAY SOURCES FROM THE ANALYSIS OF THE GINGA P(D) DISTRIBUTION **c93**

L. Toffolatti (Osservatorio Astronomico, Padova, Italy) and X. Barcons *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 358-361 (For primary document see N93-17094 05-90)

THE GINGA SATELLITE AND THE LARGE-SCALE STRUCTURE OF THE UNIVERSE

F. J. Carrera and X. Barcons *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 362-367 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

The isotropy of the x-ray sky (4 to 12 keV) was tested on scales of 2 to 13 degrees, leading to an upper limit of about 0.00013 (95 percent) for the autocorrelation function at 2 degrees. This limit constrains clustering of active galactic nuclei and clusters of galaxies. To achieve this result, a set of pointed exposures of the Ginga LAC (Large Area proportional Counter) detector were used. A second set of scan data, also from Ginga, were analyzed, showing no significative signal at any scale below 2 degrees. ESA

N93-17152# Leicester Univ. (England). X Ray Astronomy Group.

THE ROSAT AUTOCORRELATION FUNCTION OF THE X RAY BACKGROUND **c93**

I. Georgantopoulos, G. Stewart, R. Griffiths (Space Telescope Science Inst., Baltimore, MD.), T. Shanks (Durham Univ., England), and B. Boyle (Cambridge Univ., England) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 368-372 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A01/MF A04

The Autocorrelation Function (ACF) of the x-ray background on arcminute angular scales using about 30 ksec Rosat exposures were derived. No significant signal was detected with the ACF being consistent with zero at all angular scales. The constraints that the upper limit on the ACF places on the contribution of active galactic nuclei and starbursts on the 0.5 to 2 keV background are discussed. ESA

N93-17153*# Seattle Univ., WA. Dept. of Astronomy.

QSO'S TO B LESS THAN 22 AND THE COSMIC X RAY BACKGROUND RADIATION: A FLUCTUATIONS CORRELATION APPROACH **c93**

S. F. Anderson and X. Wu *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 373-376 (For primary document see N93-17094 05-90)

(Grants NAG5-1254; NAG8-590; NAG5-1253)

Copyright Avail: CASI HC A01/MF A04

The contribution of faint Quasi Stellar Objects (QSO's) and other discrete sources to the cosmic X-Ray Background (XRB) is estimated using an optically selected QSO sample in SA 68.2 in conjunction with archived x-ray images from the Einstein Image Proportional Counter (IPC). A new generalization of the 'x-ray image stacking' technique is employed; this new approach tests for a positional 'correlation' between positive x-ray fluctuations in the IPC images, and the locations of the optically selected QSO's. Correlation with thirty SA 68.2 QSO's permits a highly sensitive measurement of the ensemble mean x-ray flux for QSO's with 19 less than B(sub J) less than 22. Although the IPC images are of modest depth, a limiting sensitivity 1.2 times 10 to the minus 14th power erg/sec/sq cm (0.3 to 3.5 keV) is effectively archieved comparable to that of the Rosat medium deep surveys. ESA

An identification process which provides positions and their errors for x-ray sources is outlined. 2500 sources have been examined from the Rosat all sky survey on objective prism plates which were taken in the course of the Hamburg Quasar Survey (HQS). Among other object classes more than 700 Active Galactic Nuclei (AGN) candidates were identified. In a first follow up observing run in May 1991, 43 AGN candidates were spectroscopically observed of which 41 were confirmed, that is a success of rate of 90 percent. The redshift and the log(f(sub x)/f(sub v)) distribution of the 41 AGN are, within the statistical uncertainties, similar to the distributions from the Einstein medium sensitivity survey. Six of the 43 AGN candidates are members of pairs or small groups of galaxies. Three of them have only narrow emission lines, one certainly being a narrow lined Seyfert 1 galaxy. The nature of the high x-ray luminosities of the other two sources is uncertain at present. Details of the compilation of a database in which all objects found in the Schmidt plates within the error circle of each examined Rosat detection are collected, and where an identification of the most likely candidate is given is described. SPECTROSCOPIC IDENTIFICATION OF X RAY SOFT AGN FOUND BY ROSAT **c89**

C.-C. Thomas, K. Beuermann (Technische Univ., Berlin, Germany), W. Brinkmann (Max-Planck-Inst. fuer Extraterrestrische Physik, Garching,

Germany), H. H. Fink (Max-Planck-Inst. fuer Extraterrestrische Physik, Garching, Germany), and W. Voges (Max-Planck-Inst. fuer Extraterrestrische Physik, Garching, Germany) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 383-386 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A01/MF A04

First results from a program to spectroscopically identify x-ray sources such as soft Active Galactic Nuclei (AGN) found with Rosat in the all sky survey using the X-Ray Telescope (XRT) are presented. For this program, a flux limited sample of sources was extracted from the survey data. A subsample was created which contained only soft sources. Correlations to Simbad and several other catalogs served to remove known sources. In a first observing campaign in Sep. 1991, spectra were obtained for 28 sources, 14 of them showing emission lines at various redshift. The characteristics of these spectra (fluxes, redshifts, and line fluxes) are discussed together with x-ray spectra obtained for the three brightest sources in this sample. ESA

The optical variability of a quasar sample complete to B(sub J) = 22.0 was investigated in a 2 year time base and in three photometric bands (UJF). The percentage of variable quasars is high and it reaches about 50 percent of the sample. The results also indicate that 80 to 90 percent of the selected variable objects out of the total 3000 objects of the whole field, are confirmed quasars or objects with strong ultraviolet excesses. It was concluded that optical variability can be successfully used as an efficient and independent (or auxiliary) selection method in quasar surveys in order to obtain faint and complete samples useful to place strong constraints to the x-ray cosmic background. ESA

Copyright Avail: CASI HC A02/MF A04

Results obtained from a spectroscopically complete sample of 52 faint optically selected active galactic nuclei (quasars and Seyfert galaxies) with J less than or equal to 22.0 are presented and discussed. From a comparison of the quasars selected with three different selection, criteria (colors and variability) applied on the same field, the maximum level of incompleteness expected on the sample is estimated. Results for the counts of quasars as a function of magnitude in different redshift and luminosity ranges are presented and compared with those obtained from the analysis of a large composite sample resulting from the combination of ten different surveys. Results of a wide field multicolor photographic survey for bright high redshift (z greater than 4) quasars are presented. No decline in the space density of these luminous high resdshift quasars compared to z = 2 quasars is apparent. Preliminary analysis of the emission line properties of this new sample of approximately 20 z greater than 4 quasars reveal a much wider dispersion in observed line strengths and profiles than is apparent in other samples of z greater than 4 quasars. Sensitive VLA (Very Large Array) radio observations of 29 optically selected quasars with redshifts in the range 3.5 less than z less than 4.7, in which 4 have been detected at 5 Ghz with S greater than 1 mJy were performed. Two of the radio loud quasars have redshifts greater than 4, with redshifts of 4.09 and 4.25, respectively. One of the other radio loud quasars may exhibit extended radio structure. A comparison with similar studies of quasars at lower redshift indicates that the radio properties of optically selected quasars were similar at z about 2 whereas at z less than 1 more quasars were radio loud. ESA

THE BALDWIN EFFECT IN COMPLETE OPTICALLY SELECTED SAMPLES OF QUASARS c89

Bruno Marano, Giovanni Zamorani (Consiglio Nazionale delle Ricerche, Bologna, Italy), Valentina Zitelli (Bologna Univ., Italy), Marco Mignoli (Bologna Univ., Italy), and Brian J. Boyle (Cambridge Univ., England) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 408-413 Sponsored in part by Italian Space Agency (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

From an analysis of the Baldwin effect in five complete optically selected samples of quasars, it was found that the slope of the correlation between equivalent width and absolute luminosity is very shallow. In particular, it was found that EW(sub CIV) is proportional to L(sub 1550)(exp -0.13), significantly different from the previous 'canonical' slope of the Baldwin effect in quasars: EW(sub CIV) proportional to L(sub 1550)(exp(0.3 to 0.4)). While the data set is composed of optically selected quasars, the latter result was mainly based on the analysis of flat spectrum, radio loud quasars. It is likely that the enhanced optical variability of radio loud quasars may be the fundamental factor in producing the observed difference between the two correlations. Considering also the relatively large dispersion of the data, it was concluded that the equivalent width of the CIV line can not be used as a reliable luminosity indicator in quasars. ESA

AGN AND THE X RAY BACKGROUND: CONCLUDING REMARKS c93

G. Setti (European Southern Observatory, Garching, Germany) *In* MPI fuer Extraterrestrische Physik, X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background Mar. 1992 p 414-420 (For primary document see N93-17094 05-90)

Copyright Avail: CASI HC A02/MF A04

Attention is focused on two specific issues, the first one dealing with the Active Galactic Nuclei (AGN) source counts and the soft X-Ray Background (XRB) and the second one with the AGN source models for the hard XRB where the dominant part of the XRB intensity is concentrated. The achronic AGN is used to include both the Sy nuclei of type 1, or low luminosity nuclei with an absolute magnitude M(sub B) greater than -23, and the quasars, or nuclei M(sub B) less than -23(q(sub 0) = 0; H(sub 0) = 50). Whenever necessary, specific reference to these two classes of objects is made. ESA

PROCEEDINGS OF THE FIFTH WORKSHOP ON ELEMENTARY-PARTICLE PICTURE OF THE UNIVERSE

Masataka Fukugita, ed. (Kyoto Univ., Japan) and Atsuto Suzuki, ed. 1991 371 p Presented at the 5th Workshop on Elementary Particle Picture of the Universe, Minami-Izu (Japan), 19-21 Nov. 1990 (DE92-538746; KEK-PROC-91-13; CONF-9011298) Avail: CASI HC A16/MF A03

The Fifth Workshop on the Elementary-Particle of the Universe was held at Minami-Izu, from 19-21, November, 1990. The 80 participants included high-energy physicists, nuclear physicists, cosmic-ray physicists, and astrophysicists, both from the theoretic and experimental fields. In this workshop, most of the time was given to reviews of the present status and prospects of the subjects of the present project as well as some others, in order to find future directions. A detector symposium was held to explore the applicability of new technologies. This publication collects the presented papers and transparencies. DOE

CONVECTION IN RR LYRAE STARS
R. F. Stellingwerf and G. Bono (Trieste Univ., Italy) 1992 10 p Presented at the International Astronomical Union Colloquium 139 on New Perspectives on Stellar Pulsation and Pulsating Variable Stars, Victoria, Ontario, 7-11 Jul. 1992
(Contract W-7405-eng-36)
(DE93-000851; LA-UR-92-3144; CONF-9207156-2) Avail: CASI HC A02/MF A01

Convection undoubtedly plays a strong role in defining the RR Lyrae instability strip, but its effects on amplitude, mode of pulsation, and light curve have always been problematical. One reason is simply that convective models are difficult to compute, and their accuracy is difficult to ascertain. We present results of a new convective survey of RR Lyrae stars that constitute the best models available at this time, with better boundary conditions, physics, zoning, and length of computational run than previous results. THE DEPENDENCE OF PULSATING AURORAL EVENTS ON ENERGETIC ELECTRONS AND COLD PLASMA NEAR THE EQUATORIAL PLANE
R. J. Nemzek, R. D. Belian, D. J. McComas, M. F. Thomsen, R. Nakamura, and D. N. Baker 1992 7 p Presented at the 19th Annual European Meeting on Atmospheric Studies by Optical Methods, Kiruna (Sweden), 10-14 Aug. 1992
(Contract W-7405-eng-36)
(DE93-000856; LA-UR-92-3079; CONF-9208162-1) Avail: CASI HC A02/MF A01

Pulsating auroras are a substorm recovery phase phenomenon, occurring shortly after an auroral breakup. The current theory of the pulsating aurora involves a 'relaxation oscillator' mechanism requiring a population of high-energy (10's of keV) electrons and a low-energy plasma number density on the order of a few particles per cu cm. We investigated this relationship by comparing energetic electron and plasma data from a geosynchronous satellite to pulsating auroras recorded by an all-sky video camera which contained the satellite's ionospheric conjugate point in its field of view. Pulsating auroral events were generally closely connected to substorm injections on the satellite, but there was no clear correlation with changes in plasma density. During all of the events the density was in an acceptable range for the relaxation oscillator mechanism to function. The relationship to substorm injections implies that the pulsating aurora can be used to map the substorm injection region down to the ionosphere. An unusual diminishing of the pulsating aurora during the growth phase of a subsequent substorm was also discovered. DOE

A THEORETICAL ANALYSIS OF THERMAL RADIATION FROM NEUTRON STARS Annual Status Report, 1 Apr. 1992 - 31 Mar. 1993
James H. Applegate 12 Jan. 1993 19 p
(Grant NAGw-3075)
(NASA-CR-191906; NAS 1.26:191906; CAL-2045) Avail: CASI HC A03/MF A01

As soon as it was realized that the direct URCA process is allowed by many modern nuclear equation of state, an analysis of its effect on the cooling of neutron stars was undertaken. A primary study showed that the occurrence of the direct URCA process makes the surface temperature of a neutron star suddenly drop by almost an order of magnitude when the cold wave from the core reaches the surface when the star is a few years old. The results of this study are published in Page and Applegate. As a work in progress, we are presently extending the above work. Improved expressions for the effect of nucleon pairing on the neutrino emissivity and specific heat are now available, and we have incorporated them in a recalculation of rate of the direct URCA process. For individual title, see N93-17411.

THE GEMINGA NEUTRON STAR: EVIDENCE FOR NUCLEON SUPERFLUIDITY AT VERY HIGH DENSITY
Dany Page *In its* A Theoretical Analysis of Thermal Radiation from Neutron Stars 12 Jan. 1993 12 p (For primary document see N93-17410 05-90)
(Grant NAGw-3075)
Avail: CASI HC A03/MF A01

A comparison of the recent age and temperature estimates of the Geminga neutron star with cooling models is presented. This star is already in the photon cooling era and it is shown that its temperature can be understood within both the slow and fast neutrino emission scenarios and consequently will not allow discrimination between these two scenarios. However in both cases agreement of the theoretical cooling curves with the observed temperature depends crucially on the presence of nucleon pairing in most, if not all, of the core. Author

MANIFESTATIONS OF ELECTRIC CURRENTS IN INTERSTELLAR MOLECULAR CLOUDS
P. Carlqvist and G. F. Gahm (Stockholm Observatory, Sweden) Dec. 1991 21 p
(TRITA-EPP-91-05; ETN-92-92626) Avail: CASI HC A03/MF A01

Filamentary structures in molecular clouds and the existence of subfilaments of sinusoidal shape and also of helixlike structures are investigated. For two dark clouds, the Lynds 204 complex and the Sandqvist 187-188 complex, such shapes and the possible existence of helices wound around the main filaments are studied. All these features suggest the existence of electric currents and magnetic fields in these clouds. On the basis of a generalization of the Bennett pinch model, the magnitudes of the currents expected to flow in the filaments are derived. Values of column densities, magnetic field strengths, and direction of the fields are derived from observations. Magnetic fields with both toroidal and axial components are considered. The study shows that axial currents of the order of a few times 10 to the 13th power A are necessary for the clouds to be in equilibrium. The mean electron velocities are of the order of 0.01 to 0.00001 m/s, much lower than the thermal velocities in the clouds. It is suggested that helical structures may evolve as a result of various instabilities in the pinched clouds. Attention is given to the kink instability in connection with the sinusoidal shapes. The existence of electromagnetically controlled features in the interstellar clouds can be tested by further observations. ESA

PHYSICS OF THE AURORA
Carl-Gunne Faelthammar 1991 23 p Presented at 2nd Latin American Conference on Space Geophysics, Cuernavaca, Mexico, 8-11 Jul. 1991 Submitted for publication
(TRITA-EPP-91-06; ETN-92-92627) Avail: CASI HC A03/MF A01

The following observations of the aurora and related phenomena are discussed: auroral emissions, auroral ovals, connection to the magnetosphere, auroral current system, acceleration processes, magnetic field aligned electric fields, auroral waves, auroral electrodynamics, and chemical separation. The observations show that the behavior of the space plasma is dominated by plasma physical processes that were previously in some cases disregarded, in other cases altogether unknown. Most of these processes are involved in the physics of the aurora. Plasma processes

must be expected to be similarly important in the cosmical environments, as these are without exception in the plasma state. What was learned, and what remains to be learned in the study of the aurora provides a better understanding of our plasma universe and how it evolved to the present state. ESA

SPACE RESOURCES. VOLUME 4: SOCIAL CONCERNS

Mary Fae McKay, ed., David S. McKay, ed., and Michael B. Duke, ed. 1992 315 p Original contains color illustrations

(NASA-SP-509-Vol-4; S-689-Vol-4; NAS 1.21:509-Vol-4; ISBN-0-16-038062-6; LC-92-4468) Avail: CASI HC A14/MF A03; SOD HC; 4 functional color pages

Space resources must be used to support life on the Moon and exploration of Mars. This volume, Social Concerns, covers some of the most important issues which must be addressed in any major program for the human exploration of space. The volume begins with a consideration of the economics and management of large scale space activities. Then the legal aspects of these activities are discussed, particularly the interpretation of treaty law with respect to the Moon and asteroids. The social and cultural issues of moving people into space are considered in detail, and the eventual emergence of a space culture different from the existing culture is envisioned. The environmental issues raised by the development of space settlements are faced. Some innovative approaches are proposed to space communities and habitats and self-sufficiency is considered along with human safety at a lunar base or outpost. For individual titles, see N93-16858 through N93-16868.

Avail: CASI HC A06/MF A03; SOD HC; 4 functional color pages

Notions of greatness are discussed that have guided NASA in the past, values are presented that might be delivered by NASA in the future, and the the skills required for NASA to execute a vision of greatness are examined. Three possible patterns of space development by NASA are reviewed: (1) a mission to protect the ecology of the Earth; (2) the engineering of the technologies critical to space transportation and a healthy, productive life in space; and (3) the management of a major nonterrestrial resource project. Potential sources of funds are discussed along with opportunities for sustainable collaboration, and the life cycle of NASA's funding responsibility for its space development program. Author

THE FUTURE OF MANAGEMENT: THE NASA PARADIGM **c81**

Philip R. Harris *In* NASA. Johnson Space Center, Space Resources. Volume 4: Social Concerns 1992 p 120-142 (For primary document see N93-16857 05-91)

Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

Prototypes of 21st century management, especially for large scale enterprises, may well be found within the aerospace industry. The space era inaugurated a number of projects of such scope and magnitude that another type of management had to be created to ensure successful achievement. The challenges will be not just in terms of technology and its management, but also human and cultural in dimension. Futurists, students of management, and those concerned with technological administration would do well to review the literature of emerging space management for its wider implications. NASA offers a paradigm, or demonstrated model, of future trends in the field of management at large. More research is needed on issues of leadership for Earth based project in space and space based programs with managers there. It is needed to realize that large scale technical enterprises, such as are undertaken in space, require a new form of management. NASA and other responsible agencies are urged to study excellence in space macromanagement, including the necessary multidisciplinary skills. Two recommended targets are the application of general living systems theory and macromanagement concepts for space stations in the 1990s. E.R.

Space industrialization is confronting space law with problems that are changing old and shaping new legal principles. The return to the Moon, the next logical step beyond the space station, will establish a permanent human presence there. Science and engineering, manufacturing and mining will involve the astronauts in the settlement of the solar system. These pioneers, from many nations, will need a legal, political, and social framework to structure their lives and interactions. International and even domestic space law are only the beginning of this framework. Dispute resolution and simple experience will be needed in order to develop, over time, a new social system for the new regime of space. Author

FUTURE SPACE DEVELOPMENT SCENARIOS: ENVIRONMENTAL CONSIDERATIONS **c12**
Richard Tangum *In* NASA. Johnson Space Center, Space Resources. Volume 4: Social Concerns 1992 p 220-230 (For primary document see N93-16857 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The formation of positive attitudes and values concerning the environment of space, as the basis for assuming a wise stewardship role, is becoming increasingly important as many nations begin their journeys into space. A strong emphasis should be placed on fostering an international space environmental ethics. The object of environmental assessment and management in space should be to define what interplanetary regulatory procedures are needed to avoid unnecessary environmental damage and to monitor the effectiveness of such avoidance. The first requirement for research is to narrow the field of concern to areas where there could be an increased scale of development in space in the immediate future. Research needs to be focused on methodologies for defining the environmental systems involved (e.g., the lunar surface) and then recognizing key variables in the system that are fragile and need to be respected. Criteria for environmental quality should emerge which identify, in the case of lunar surface, how much mining activity can be safely undertaken and what quantity of exhaust gases can be released over a given period of time. Only then will humans be most able to evaluate the likely consequences of ventures into space. Author

APPLICATIONS OF LIVING SYSTEMS THEORY TO LIFE IN SPACE **c54**
James Grier Miller *In* NASA. Johnson Space Center, Space Resources. Volume 4: Social Concerns 1992 p 231-259 Presented at the NASA-NSF Conference on the Human Experience in Antarctica: Applications to Life in Space, Sunnyvale, CA, 17 Aug. 1987 (For primary document see N93-16857 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The conceptual system and methodology of living systems theory appear to be of value to research on life in isolated environments. A space station, which must provide suitable conditions for human life in a stressful environment that meets none of the basic needs of life, is an extreme example of such isolation. A space station would include living systems at levels of individual human beings, groups of people engaged in a variety of activities, and the entire space crew as an organization. It could also carry living systems of other species, such as other animals and plants. Using the subsystem analysis of living systems theory, planners of a station, either in space or on a celestial body, would make sure that all the requirements for survival at all these levels had been considered. Attention would be given not only to the necessary matter and energy, but also the essential information flows that integrate and control living systems. Many variables for each subsystem could be monitored and kept in steady states. Use of living systems process analysis of the five flows of matter energy and information would assure that all members of the crew received what they needed. Author

The development of a controlled ecological life support system (CELSS) is necessary to enable the extended presence of humans in space, as on the Moon or on another planetary body. Over a long period, the provision of oxygen, water, and food, and protection from such inimical agents as radiation and temperature extremes, while maintaining the psychological health of the subjects, becomes prohibitively expensive if all supplies must be brought from Earth. Thus, some kind of a regenerative life support system within an enclosure or habitat must be established, thereby cutting the umbilicus to Mother Earth, but not irreversibly. This protective enclosure will enable the survival and growth of an assemblage of terrestrial species of microorganisms, plants, and animals. It is envisioned that the nonterrestrial ecosystem will evolve through the sequential introduction of terrestrial and local materials, together with the appropriate living forms. Author

Any attempt to establish a continuously staffed base or permanent settlement on the Moon must safely meet the challenges posed by the Moon's surface environment. This environment is drastically different from the Earth's, and radiation and meteoroids are significant hazards to human safety. These dangers may be mitigated through the use of underground habitats, the piling up of lunar materials as shielding, and the use of teleoperated devices for surface operations. The lunar environment is detailed along with concepts for survival. E.R.

Now that the National Commission on Space has set out bold goals and strategies for the American space program in the nest 50 years, how these visions can be turned into reality is examined. Since the Challenger tragedy and other space failures have brought about a crisis of confidence at NASA, innovations are necessary to rebuild public consensus and support. Initiatives by the private sector must promote the peaceful use of space by its exploration and industrialization. The faculty fellows from the 1984 summer study propose three possibilities for action by NASA and supporters of the space program. They are: A national lottery for space enterprises; A White House conference on space enterprise; and Reorganization of NASA. These ideas are briefly explored. and exploitation of space resources, such as on the asteroids and on Mars. Author

SPACE RESOURCES. OVERVIEW
Mary Fae McKay, ed., David S. McKay, ed., and Michael B. Duke, ed.

1992 42 p Original contains color illustrations
(NASA-SP-509; S-689; NAS 1.21:509; ISBN-0-16-038062-6; LC-92-4468)
Avail: CASI HC A03/MF A01; SOD HC: 7 functional color pages

Space resources must be used to support life on the Moon and in the exploration of Mars. Just as the pioneers applied the tools they brought with them to resources they found along the way rather than trying to haul all their needs over a long supply line, so too must space travelers apply their high technology tools to local resources. This overview describes the findings of a study on the use of space resources in the development of future space activities and defines the necessary research and development that must precede the practical utilization of these resources. Space resources considered included lunar soil, oxygen derived from lunar soil, material retrieved from near-Earth asteroids, abundant sunlight, low gravity, and high vacuum. The study participants analyzed the direct use of these resources, the potential demand for products from them, the techniques for retrieving and processing space resources, the necessary infrastructure, and the economic tradeoffs. BASELINE PROGRAM
Barney B. Roberts and Jesco vonPuttkamer (National Aeronautics and Space Administration, Washington, DC.) *In its* Space Resources. Volume 1: Scenarios 1992 p 3-7 (For primary document see N93-16870 05-91)
Avail: CASI HC A01/MF A01; SOD HC; 4 functional color pages

This assumed program was developed from several sources of information and is extrapolated over future decades using a set of reasonable assumptions based on incremental growth. The assumptions for the NASA baseline program are as follows: balanced emphasis in four domains; a constant level of activity; low to moderate real budget growth; maximum use of commonality; and realistic and practical technology development. The first domain is low Earth Orbit (LEO). Activities there are concentrated on the space station but extend on one side to Earth-pointing sensors for unmanned platforms and on the other to the launch and staging of unmanned solar system exploration missions. The second domain is geosynchronous Earth orbit (GEO) and cislunar space. Activities here include all GEO missions and operations, both unmanned and manned, and all transport of materials and crews between LEO and the vicinity of the Moon. The third domain is the Moon itself. Lunar activities are to include both orbiting and landing missions; the landings may be either unmanned or manned. The last domain is Mars. Missions to Mars will initially be unmanned but they will eventually be manned. Program elements and descriptions are discussed as are critiques of the NASA baseline. Author

SPACE RESOURCES. VOLUME 3: MATERIALS
Mary Fae McKay, ed., David S. McKay, ed., and Michael B. Duke, ed. 1992 331 p Original contains color illustrations
(NASA-SP-509-Vol-3; S-689-Vol-3; NAS 1.21:509-Vol-3; ISBN-0-16-038062-6; LC-92-4468) Avail: CASI HC A15/MF A03; SOD HC; 4 functional color pages

Space Resources addresses the issues of using space resources to support life on the Moon and for exploration of Mars. This volume - Materials - covers a number of technical and policy issues regarding the materials in space (mainly lunar and asteroidal) which can be used to support space operations. In part 1, nature and location of these materials, exploration strategy, evaluation criteria, and the technical means to collect or mine these materials is discussed. A baseline lunar mine and the basics of asteroid mining are presented and critiqued. In part 2, the beneficiation of ores and the extraction of such materials as oxygen, metals, and the makings of concrete are discussed. In part 3, the manufacturing and fabrication of nonterrestrial products are discussed. The economic tradeoffs between bringing needed products from Earth and making these products on location in space is considered. For individual titles, see N93-16876 through N93-16904.

TO BUILD A MINE: PROSPECT TO PRODUCT
Richard E. Gertsch *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 4-14 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The terrestrial definition of ore is a quantity of earth materials containing a mineral that can be extracted at a profit. While a space-based resource-gathering operation may well be driven by other motives, such an operation should have the most favorable cost-benefit ratio possible. To this end, principles and procedures already tested by the stringent requirements of the profit motive should guide the selection, design, construction, and operation of a space-based mine. Proceeding from project initiation to a fully operational mine requires several interacting and overlapping steps, which are designed to facilitate the decision process and insure economic viability. The steps to achieve a fully operational mine are outlined. Presuming that the approach to developing nonterrestrial resources will parallel that for developing mineral resources on Earth, we can speculate on some of the problems associated with developing lunar

and asteroidal resources. The baseline for our study group was a small lunar mine and oxygen extraction facility. The development of this facility is described in accordance with the steps outlined. Author

LUNAR EXPLORATION FOR RESOURCE UTILIZATION
Michael B. Duke *In its* Space Resources. Volume 3: Materials 1992 p 15-18 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

The strategy for developing resources on the Moon depends on the stage of space industrialization. A case is made for first developing the resources needed to provide simple materials required in large quantities for space operations. Propellants, shielding, and structural materials fall into this category. As the enterprise grows, it will be feasible to develop additional sources - those more difficult to obtain or required in smaller quantities. Thus, the first materials processing on the Moon will probably take the abundant lunar regolith, extract from it major mineral or glass species, and do relatively simple chemical processing. We need to conduct a lunar remote sensing mission to determine the global distribution of features, geophysical properties, and composition of the Moon, information which will serve as the basis for detailed models of and engineering decisions about a lunar mine. Author

LUNAR MATERIAL RESOURCES: AN OVERVIEW
James L. Carter *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 19-49 (For primary document see N93-16875 05-91)
(Grant NAG9-99)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The analysis of returned lunar samples and a comparison of the physical and chemical processes operating on the Moon and on the Earth provide a basis for predicting both the possible types of material resources (especially minerals and rocks) and the physical characteristics of ore deposits potentially available on the Moon. The lack of free water on the Moon eliminates the classes of ore deposits that are most exploitable on Earth; namely, (1) hydrothermal, (2) secondary mobilization and enrichment, (3) precipitation from a body of water, and (4) placer. The types of lunar materials available for exploitation are whole rocks and their contained minerals, regolith, fumarolic and vapor deposits, and nonlunar materials, including solar wind implantations. Early exploitation of lunar material resources will be primarily the use of regolith materials for bulk shielding; the extraction from regolith fines of igneous minerals such as plagioclase feldspars and ilmenite for the production of oxygen, structural metals, and water; and possibly the separation from regolith fines of solar-wind-implanted volatiles. The only element, compound, or mineral, that by itself has been identified as having the economic potential for mining, processing, and return to Earth is helium-3. Author

GROUND-BASED OBSERVATION OF NEAR-EARTH ASTEROIDS c89
Michael J. Gaffey *In* NASA. John Space Center, Space Resources. Volume 3: Materials 1992 p 50-58 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

An increased ground-based observation program is an essential component of any serious attempt to assess the resource potential of near-Earth asteroids. A vigorous search and characterization program could lead to the discovery and description of about 400 to 500 near-Earth asteroids in the next 20 years. This program, in conjunction with meteorite studies, would provide the data base to ensure that the results of a small number of asteroid-rendezvous and sample-return missions could be extrapolated with confidence into a geological base map of the Aten, Apollo, and Amor asteroids. Ground-based spectral studies of nearly 30 members of the Aten/Apollo/Amor population provide good evidence that this class includes bodies composed of silicates, metal-silicates, and carbonaceous assemblages similar to those found in meteorites. The instruments that are being used or could be used to search for near-Earth asteroids are listed. Techniques useful in characterizing asteroids and the types of information obtainable using these techniques are listed. Author

ASTEROID RESOURCES
John S. Lewis *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 59-78 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

There are three types of possible asteroidal materials that appear to be attractive for exploitation: (1) volatiles, (2) free metals, and (3) bulk dirt. Because some of the near-Earth asteroids are energetically more accessible than the Moon (require a round-trip total change in velocity less than 9 km/sec, though the trip time would be measured in years not days), such an asteroid might be chosen as the source of any useful material, even if that material was also available on the Moon. Provided that the asteroid was minable, it might therefore be chosen as the source of bulk dirt needed for shielding in low Earth orbit (LEO) or elsewhere in near-Earth space. And the near-Earth asteroids may offer materials that are rare or absent on the surface of the Moon. The relationship between asteroids and meteorites is discussed. A brief overview of the entire range of meteorite compositions, with emphasis on the occurrence of interesting resources is presented. Focus is on materials useful in space, especially volatiles, metals, and raw dirt. Those few materials that may have sufficiently high market value to be worth returning to Earth will be mentioned. Author

LUNAR RESOURCE EVALUATION AND MINE SITE SELECTION
A. Edward Bence *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 79-84 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

Two scenarios in this evaluation of lunar mineral resources and the selection of possible mining and processing sites are considered. The first scenario assumes that no new surface or near-surface data will be available before site selection (presumably one of the Apollo sites). The second scenario assumes that additional surface geology data will have been obtained by a lunar orbiter mission, an unmanned sample return mission (or missions), and followup manned missions. Regardless of the scenario, once a potentially favorable mine site has been identified, a minimum amount of fundamental data is needed to assess the resources at that site and to evaluate its suitability for mining and downstream processing. Since much of the required data depends on the target mineral(s), information on the resource, its beneficiation, and the refining, smelting, and fabricating processes must be factored into the evaluation. The annual capacity and producing lifetime of the mine and its associated processing plant must be estimated before the resource reserves can be assessed. The available market for the product largely determines the capacity and lifetime of the mine. The Apollo 17 site is described as a possible mining site. The use of new sites is briefly addressed. Author

LUNAR SITE CHARACTERIZATION AND MINING
Charles E. Glass *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 85-94 Original contains color illustrations (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

Lunar mining requirements do not appear to be excessively demanding in terms of volume of material processed. It seems clear, however, that the labor-intensive practices that characterize terrestrial mining will not suffice at the low-gravity, hard-vacuum, and inaccessible sites on the Moon. New research efforts are needed in three important areas: (1) to develop high-speed, high-resolution through-rock vision systems that will permit more detailed and efficient mine site investigation and characterization; (2) to investigate the impact of lunar conditions on our ability to convert conventional mining and exploration equipment to lunar prototypes; and (3) to develop telerobotic or fully robotic mining systems for operations on the Moon and other bodies in the inner solar system. Other aspects of lunar site characterization and mining are discussed. Author

N93-16883*# Colorado School of Mines, Golden.
A BASELINE LUNAR MINE
Richard E. Gertsch *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 95-110 (For primary document see

N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

A models lunar mining method is proposed that illustrates the problems to be expected in lunar mining and how they might be solved. While the method is quite feasible, it is, more importantly, a useful baseline system against which to test other, possible better, methods. Our study group proposed the slusher to stimulate discussion of how a lunar mining operation might be successfully accomplished. Critics of the slusher system were invited to propose better methods. The group noted that while nonterrestrial mining has been a vital part of past space manufacturing proposals, no one has proposed a lunar mining system in any real detail. The group considered it essential that the design of actual, workable, and specific lunar mining methods begin immediately. Based on an earlier proposal, the method is a three-drum slusher, also known as a cable-operated drag scraper. Its terrestrial application is quite limited, as it is relatively inefficient and inflexible. The method usually finds use in underwater mining from the shore and in moving small amounts of ore underground. When lunar mining scales up, the lunarized slusher will be replaced by more efficient, high-volume methods. Other aspects of lunar mining are discussed.

ASTEROID MINING
Richard E. Gertsch *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 111-120 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

The earliest studies of asteroid mining proposed retrieving a main belt asteroid. Because of the very long travel times to the main asteroid belt, attention has shifted to the asteroids whose orbits bring them fairly close to the Earth. In these schemes, the asteroids would be bagged and then processed during the return trip, with the asteroid itself providing the reaction mass to propel the mission homeward. A mission to one of these near-Earth asteroids would be shorter, involve less weight, and require a somewhat lower change in velocity. Since these asteroids apparently contain a wide range of potentially useful materials, our study group considered only them. The topics covered include asteroid materials and properties, asteroid mission selection, manned versus automated missions, mining in zero gravity, and a conceptual mining method.

MINING NONTERRESTRIAL RESOURCES: INFORMATION NEEDS AND RESEARCH TOPICS
Jaak J. K. Daemen *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 121-145 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

An outline of topics we need to understand better in order to apply mining technology to a nonterrestrial environment is presented. The proposed list is not intended to be complete. It aims to identify representative topics that suggest productive research. Such research will reduce the uncertainties associated with extrapolating from conventional earthbound practice to nonterrestrial applications. One objective is to propose projects that should put future discussions of nonterrestrial mining on a firmer, less speculative basis.

BENEFICIATION AND EXTRACTION OF NONTERESTRIAL MATERIALS, PART 2
William N. Agosto *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 146-152 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

A review of options for processing extraterrestrial materials was dominated by industrial materials scientist who tried to identify which processes utilizing space materials could be implemented in the near term. The most practical process seem to us to be the extraction of lunar oxygen and the extraction of metals and ceramics from the residues of the reduction process. The growth of space activity will be accompanied by increased demand for liquid oxygen for each round trip to the Moon. The oxygen and the intermediary product water will be needed for the life support at the base. The reduced metals and ceramics may be considered byproducts or may develop into primary products. Some of the same processes would be directly applicable to recovery of products from asteroids. We also discussed other processes for directly utilizing asteroid metals. Some of the topics covered include beneficiation and oxygen extraction methods, metallurgy, and extraterrestrial cement.

LUNAR BENEFICIATION
William N. Agosto *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 153-161 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

Natural concentrations of industrially valuable minerals are far less likely to be found on the Moon than on the Earth. But that is all the more reason for devising beneficiation processes to concentrate and extract the useful mineral components in lunar rocks and soils. As an example of a useful mineral that can be beneficiated, it has been estimated that ilmenite abundance accounts for 15 and 20 percent of the volume of the Apollo 11 and 17 basalts and 2 and 5 percent by volume in the Apollo 11 and 17 soils. Reduction of lunar ilmenite with hydrogen imported from Earth appears to one of the more practical schemes for obtaining lunar oxygen. While the reported concentrations are significant, a more highly concentrated ilmenite extract would improve the efficiency of the reduction process. The topics covered include electrostatic concentration, magnetic concentration, lunar soil sizing, and electrical sizing.

THE ONSITE MANUFACTURE OF PROPELLANT OXYGEN FROM LUNAR RESOURCES
Sanders D. Rosenberg, Robert L. Beegle, Jr., Gerald A. Guter, Frederick E. Miller, and Michael Rothenberg *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 162-185 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The Aerojet carbothermal process for the manufacture of oxygen from lunar materials has three essential steps: the reduction of silicate with methane to form carbon monoxide and hydrogen; the reduction of carbon monoxide with hydrogen to form methane and water; and the electrolysis of water to form hydrogen and oxygen. The reactions and the overall process are shown. It is shown with laboratory experimentation that the carbothermal process is feasible. Natural silicates can be reduced with carbon or methane. The important products are carbon monoxide, metal, and slag. The carbon monoxide can be completely reduced to form methane and water. The water can be electrolyzed to produce hydrogen and oxygen. A preliminary engineering study shows that the operation of plants using this process for the manufacture of propellant oxygen has a large economic advantage when the cost of the plant and its operation is compared to the cost of delivering oxygen from Earth.

PROCESSING LUNAR SOILS FOR OXYGEN AND OTHER MATERIALS
Christian W. Knudsen and Michael A. Gibson *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 186-194 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

Two types of lunar materials are excellent candidates for lunar oxygen production: ilmenite and silicates such as anorthite. Both are lunar surface minable, occurring in soils, breccias, and basalts. Because silicates are considerably more abundant than ilmenite, they may be preferred as source materials. Depending on the processing method chosen for oxygen production and the feedstock material, various useful metals and bulk materials can be produced as byproducts. Available processing techniques include hydrogen reduction of ilmenite and electrochemical and chemical reductions of silicates. Processes in these categories are generally in preliminary development stages and need significant research and development support to carry them to practical deployment, particularly as a lunar-based operation. The goal of beginning lunar processing operations by 2010 requires that planning and research and development emphasize the simplest processing schemes. However, more complex schemes that now appear to present difficult technical challenges may offer more valuable metal byproducts later. While they require more time and effort to perfect, the more complex or difficult schemes may provide important processing

and product improvements with which to extend and elaborate the initial lunar processing facilities. A balanced R&D program should take this into account. The following topics are discussed: (1) ilmenite--semi-continuous process; (2) ilmenite--continuous fluid-bed reduction; (3) utilization of spent ilmenite to produce bulk materials; (4) silicates--electrochemical reduction; and (5) silicates--chemical reduction. Author

OXYGEN FROM THE LUNAR SOIL BY MOLTEN SILICATE ELECTROLYSIS
Russell O. Colson and Larry A. Haskin *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 195-209 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

Accepting that oxygen, rather than gigantic gems or gold, is likely to make the Moon's Klondike, the extraction of oxygen from the lunar soil by molten silicate electrolysis has chosen to be investigated. Process theory and proposed lunar factory are addressed. I.I.C.

N93-16891*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
VAPOR PHASE PYROLYSIS **c25**
Wolfgang Steurer *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 210-213 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

The vapor phase pyrolysis process is designed exclusively for the lunar production of oxygen. In this concept, granulated raw material (soil) that consists almost entirely of metal oxides is vaporized and the vapor is raised to a temperature where it dissociates into suboxides and free oxygen. Rapid cooling of the dissociated vapor to a discrete temperature causes condensation of the suboxides, while the oxygen remains essentially intact and can be collected downstream. The gas flow path and flow rate are maintained at an optimum level by control of the pressure differential between the vaporization region and the oxygen collection system with the aid of the environmental vacuum. I.I.C.

N93-16892*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
PLASMA SEPARATION **c75**
Wolfgang Steurer *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 214-217 p 214-217 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

This process employs a thermal plasma for the separation and production of oxygen and metals. It is a continuous process that requires no consumables and relies entirely on space resources. The almost complete absence of waste renders it relatively clean. It can be turned on or off without any undesirable side effects or residues. The prime disadvantage is its high power consumption. I.I.C.

BIOPROCESSING OF ORES: APPLICATION TO SPACE RESOURCES
Karl R. Johansson *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 222-241 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

The role of microorganisms in the oxidation and leaching of various ores (especially those of copper, iron, and uranium) is well known. This role is increasingly being applied by the mining, metallurgy, and sewage industries in the bioconcentration of metal ions from natural receiving waters and from waste waters. It is concluded that bioprocessing using bacteria in closed reactors may be a variable option for the recovery of metals from the lunar regolith. Obviously, considerable research must be done to define the process, specify the appropriate bacteria, determine the necessary conditions and limitations, and evaluate the overall feasibility. PROCESSING OF METAL AND OXYGEN FROM LUNAR DEPOSITS
Constance F. Acton *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 242-258 (For primary document see N93-16875 05-91)
Avail: CASI HC A03/MF A03; SOD HC; 4 functional color pages

On the moon, some whole rocks may be ores for abundant elements, such as oxygen, but beneficiation will be important if metallic elements are sought from raw lunar dirt. In the extraction process, a beneficiated metallic ore, such as an oxide, sulfide, carbonate, or silicate mineral, is converted to reduced metal. A variety of plausible processing technologies, which includes recovery of meteoritic iron, and processing of lunar ilmenite, are described in this report. I.I.C.

CONCRETE: POTENTIAL MATERIAL FOR SPACE STATION **c18**
T. D. Lin *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 259-266 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

To build a permanent orbiting space station in the next decade is NASA's most challenging and exciting undertaking. The space station will serve as a center for a vast number of scientific products. As a potential material for the space station, reinforced concrete was studied, which has many material and structural merits for the proposed space station. Its cost-effectiveness depends on the availability of lunar materials. With such materials, only 1 percent or less of the mass of a concrete space structure would have to be transported from earth. I.I.C.

LUNAR CEMENT
William N. Agosto *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 267-269 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

With the exception of water, the major oxide constituents of terrestrial cements are present at all nine lunar sites from which samples have been returned. However, with the exception of relatively rare cristobalite, the lunar oxides are not present as individual phases but are combined in silicates and in mixed oxides. Lime (CaO) is most abundant on the Moon in the plagioclase ($CaAl_2Si_2O_8$) of highland anorthosites. It may be possible to enrich the lime content of anorthite to levels like those of Portland cement by pyrolyzing it with lunar-derived phosphate. The phosphate consumed in such a reaction can be regenerated by reacting the phosphorus product with lunar augite pyroxenes at elevated temperatures. Other possible sources of lunar phosphate and other oxides are discussed. Author

IRON AND ALLOYS OF IRON
Sankar Sastri *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 281-290 (For primary document see

N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

All lunar soil contains iron in the metallic form, mostly as an iron-nickel alloy in concentrations of a few tenths of 1 percent. Some of this free iron can be easily separated by magnetic means. It is estimated that the magnetic separation of 100,000 tons of lunar soil would yield 150-200 tons of iron. Agglutinates contain metallic iron which could be extracted by melting and made into powder metallurgy products. The characteristics and potential uses of the pure-iron and iron-alloy lunar products are discussed. Processes for working iron that might be used in a nonterrestrial facility are also addressed. Author

GLASS AND CERAMICS
Larry A. Haskin *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 291-294 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

A variety of glasses and ceramics can be produced from bulk lunar materials or from separated components. Glassy products include sintered regolith, quenched molten basalt, and transparent glass formed from fused plagioclase. No research has been carried out on lunar material or close simulants, so properties are not known in detail; however, common glass technologies such as molding and spinning seem feasible. Possible methods for producing glass and ceramic materials are discussed along with some potential uses of the resulting products. Author

APPLICATION OF MANUFACTURED PRODUCTS
Sankar Sastri (New York City Technical Coll., Brooklyn, NY.) and Michael B. Duke *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 298-306 (For primary document see N93-16875 05-91)
Avail: CASI HC A02/MF A03; SOD HC; 4 functional color pages

A wide range of products can be manufactured from the following materials: (1) lunar regolith or basalt; (2) regolith or rock beneficiated to concentrate plagioclase or other minerals; (3) iron, extracted from lunar soil or rocks by various means; (4) naturally occurring or easily obtained materials that have cementitious properties; and (5) byproducts of the above materials. Among the products that can be produced from these materials are the following: beams; plates and sheets; transparent plates (windows); bricks and blocks; pipes and tubes; low-density materials (foams); fiber, wire, and cables; foils and reflective coatings; hermetic seals (coatings); and formed objects. In addition to oxygen, which can be obtained by several processes, either from unbeneficiated regolith or by reduction of concentrated ilmenite, these materials make the simplest requirements of the lunar resource extraction system. A thorough analysis of the impact of these simplest products on the economics of space operations is not possible at this point. Research is necessary both to define optimum techniques and adapt them to space and to determine the probable market for the products so that the priority of various processes can be assessed. Discussions of the following products are presented: aerobraking heat shields; pressurized habitats; lunar photovoltaic farms; and agricultural systems. Author

MICROWAVE HEATING OF LUNAR MATERIALS. APPENDIX A
Thomas T. Meek *In* NASA. Johnson Space Center, Space Resources. Volume 3: Materials 1992 p 307-311 (For primary document see N93-16875 05-91)
Avail: CASI HC A01/MF A03; SOD HC; 4 functional color pages

Microwave heating of nonmetallic inorganic material has been of interest for many years. Von Hippel in the late 1940's and early 1950's investigated how microwave radiation up to 10 GHz couples to various insulator materials. Perhaps the most work has been done by Wayne Tinga at the University of Edmonton. Most of the work to date has been done at the two frequency bands allowed in industrial use (0.915 GHz and 2.45 GHz). However some work has recently been carried out at 28 GHz and 60 GHz. Work done in this area at Los Alamos National Laboratory is discussed. Author

SPACE RESOURCES. VOLUME 2: ENERGY, POWER, AND TRANSPORT
Mary Fae McKay, ed., David S. McKay, ed., and Michael B. Duke, ed. 1992 184 p Original contains color illustrations
(NASA-SP-509-Vol-2; S-689-Vol-2; NAS 1.21:509-Vol-2; ISBN-0-16-038062-6; LC-92-4468) Avail: CASI HC A09/MF A02; SOD HC; 4 functional color pages

This volume of the Space Resources report covers a number of technical and policy issues concerning the energy and power to carry out advanced space missions and the means of transportation to get to the sites of those missions. Discussed in the first half of this volume are the technologies which might be used to provide power and a variety of ways to convert power from one form to another, store it, move it wherever it is needed, and use it. In the second half of this volume, various kinds of transportation, including both interplanetary and surface systems, are discussed. For individual titles, see N93-16906 through N93-16917.

UTILIZATION OF SPACE RESOURCES IN THE SPACE TRANSPORTATION SYSTEM

Michael C. Simon *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 97-108 (For primary document see N93-16905 05-91)

Avail: CASI HC A03/MF A02; SOD HC; 4 functional color pages

Utilization of space resources (i.e., raw materials obtained from nonterrestrial sources) has often been cited as a prerequisite for large-scale industrialization and habitation of space. While transportation of extremely large quantities of material from Earth would be costly and potentially destructive to our environment, vast quantities of usable resources might be derived from the Moon, the asteroids, and other celestial objects in a cost-effective and environmentally benign manner. The primary purpose of the parametric cost model developed as part of this study is to identify the factors that have the greatest influence on the economics of space resource utilization. In the near term, this information can be used to devise strategies for technology development so that capabilities developed will produce cost-effective results. Author

ALUMINUM-FUELED ROCKETS FOR THE SPACE TRANSPORTATION SYSTEM **c20**

Andrew Hall Cutler *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 109-116 (For primary document see N93-16905 05-91)

Avail: CASI HC A02/MF A02; SOD HC; 4 functional color pages

Aluminum-fueled engines, used to propel orbital transfer vehicles (OTV's), offer benefits to the Space Transportation System (STS) if scrap aluminum can be scavenged at a reasonable cost. Aluminum scavenged from Space Shuttle external tanks could replace propellants hauled from Earth, thus allowing more payloads to be sent to their final destinations at the same Shuttle launch rate. To allow OTV use of aluminum fuel, two new items would be required: a facility to reprocess aluminum from external tanks and an engine for the OTV which could burn aluminum. Design of the orbital transfer vehicle would have to differ substantially from current concepts for it to carry and use the aluminum fuel. The aluminum reprocessing facility would probably have a mass of under 15 metric tons and would probably cost less that $200,000,000. Development of an aluminum-burning engine would no doubt be extremely expensive (1 to 2 billion dollars), but this amount would be adequately repaid by increased STS throughput. Engine production cost is difficult to estimate, but even an extremely high cost (e.g., $250,000,000 per engine) would not significantly increase orbit-raising expenses. Author

ELECTROMAGNETIC LAUNCH OF LUNAR MATERIAL

William R. Snow and Henry H. Kolm *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 117-135 (For primary document see N93-16905 05-91)

Avail: CASI HC A03/MF A02; SOD HC; 4 functional color pages

Lunar soil can become a source of relatively inexpensive oxygen propellant for vehicles going from low Earth orbit (LEO) to geosynchronous Earth orbit (GEO) and beyond. This lunar oxygen could replace the oxygen propellant that, in current plans for these missions, is launched from the Earth's surface and amounts to approximately 75 percent of the total mass. The reason for considering the use of oxygen produced on the Moon is that the cost for the energy needed to transport things from the lunar surface to LEO is approximately 5 percent the cost from the surface of the Earth to LEO. Electromagnetic launchers, in particular the superconducting quenchgun, provide a method of getting this lunar oxygen off the lunar surface at minimal cost. This cost savings comes from the fact that the superconducting quenchgun gets its launch energy from locally supplied, solar- or nuclear-generated electrical power. We present a preliminary design to show the main features and components of a lunar-based superconducting quenchgun for use in launching 1-ton containers of liquid oxygen, one every 2 hours. At this rate, nearly 4400 tons of liquid oxygen would be launched into low lunar orbit in a year. Author

N93-16915*# California Univ., San Diego, La Jolla. California Space Inst.

TETHERS **c18**

Andrew Hall Cutler and Joseph A. Carroll *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 136-150 (For primary document see N93-16905 05-91)

Avail: CASI HC A03/MF A02; SOD HC; 4 functional color pages

A tether of sufficient strength, capable of being lengthened or shortened and having appropriate apparatuses for capturing and releasing bodies at its ends, may be useful in propulsion applications. For example, a tether could allow rendezvous between spacecraft in substantially different orbits without using propellant. A tether could also allow co-orbiting spacecraft to exchange momentum and separate. Thus, a reentering spacecraft (such as the Shuttle) could give its momentum to one remaining on orbit (such as the space station). Similarly, a tether facility could gain momentum from a high I(sub sp)/low thrust mechanism (which could be an electrodynamics tether) and transfer than momentum by means of a tether to payloads headed for many different orbits. Such a facility would, in effect, combine high I(sub sp) with high thrust, although only briefly. An electrodynamic tether could propel a satellite from its launch inclination to a higher or lower inclination. Tethers could also allow samples to be taken from bodies such as the Moon. Three types of tether operations are illustrated. The

following topics are discussed: (1) tether characteristics; (2) tether propulsion methods--basics, via momentum transfer, and electrodynamic tether propulsion; and (3) their use in planetary exploration. Author

N93-16916*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
ELECTRIC PROPULSION **c20**
Philip W. Garrison *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 151-159 (For primary document see N93-16905 05-91)
Avail: CASI HC A02/MF A02; SOD HC; 4 functional color pages

Electric propulsion (EP) is an attractive option for unmanned orbital transfer vehicles (OTV's). Vehicles with solar electric propulsion (SEP) could be used routinely to transport cargo between nodes in Earth, lunar, and Mars orbit. Electric propulsion systems are low-thrust, high-specific-impulse systems with fuel efficiencies 2 to 10 times the efficiencies of systems using chemical propellants. The payoff for this performance can be high, since a principal cost for a space transportation system is that of launching to low Earth orbit (LEO) the propellant required for operations between LEO and other nodes. Several aspects of electric propulsion, including candidate systems and the impact of using nonterrestrial materials, are discussed. Author

BEAMED ENERGY PROPULSION **c20**
James M. Shoji *In* NASA. Johnson Space Center, Space Resources. Volume 2: Energy, Power, and Transport 1992 p 160-171 (For primary document see N93-16905 05-91)
Avail: CASI HC A03/MF A02; SOD HC; 4 functional color pages

Beamed energy concepts offer an alternative for an advanced propulsion system. The use of a remote power source reduces the weight of the propulsion system in flight and this, combined with the high performance, provides significant payload gains. Within the context of this study's baseline scenario, two beamed energy propulsion concepts are potentially attractive: solar thermal propulsion and laser thermal propulsion. The conceived beamed energy propulsion devices generally provide low thrust (tens of pounds to hundreds of pounds); therefore, they are typically suggested for cargo transportation. For the baseline scenario, these propulsion system can provide propulsion between the following nodes: (1) low Earth orbit to geosynchronous Earth orbit; (2) low Earth orbit to low lunar orbit; (3) low lunar orbit to low Mars orbit--only solar thermal; and (4) lunar surface to low lunar orbit--only laser thermal. THE PROSPECTOR MISSION
B. Edwards, C. Pieters (Brown Univ., Providence, RI.), M. Ulmer (Northwestern Univ., Evanston, IL.), and C. Henrikson (Ball Aerospace Systems Div., Boulder, CO.) Sep. 1992 12 p Presented at the Discovery Program Workshop, San Jaua Capistrano, CA, 16 Nov. 1992
(Contract W-7405-eng-36)
(DE93-000656; LA-UR-92-3049; CONF-9211107-1) Avail: CASI HC A03/MF A01

The Prospector mission combines high resolution visual/near-infrared imaging spectroscopy with moderately high resolution K- and L-line x-ray fluorescence mapping. These combined capabilities can be used to map the composition of virtually all solar-system objects, ranging from those that lack atmospheres (Mercury, the Moon, asteroids, and martian satellites) to the upper atmosphere of Venus. For the purpose of mission definition and development, we have focused on a mapping mission to the moons of Mars, specifically Phobos, which is an easily accessible small body of the solar system and has long been an object of intense speculation. Phobos is variously interpreted as a captured asteroid, a captured but disrupted basaltic achondrite body with anomalously low density, a comet nucleus, a body of reassembled Mars material ejected into orbit during a large impact event, a body of unknown origin but covered by an accumulation of cosmic dust and/or material ejected from Deimos, or none of the above. Multispectral observations of Phobos by instruments on the Phobos 2 Spacecraft indicate that the surface of the moon is spectrally heterogeneous, with at least four units based on extended visible color. Distribution of color ratio units are most likely caused by compositional heterogeneity and surficial processes. The composition and structure of Phobos remains a stimulating scientific question, but Phobos is much more than a cipher among planetary phenomena. The low delta(V) requirements for missions to Phobos make it readily accessible-much more so than the martian surface. The low orbital height of Phobos makes it an attractive platform for staging Mars observation and exploration. Furthermore, the possible chondritic nature of Phobos may provide a valuable reservoir of extractable H, C, N, O, and S. DOE

APPLICATION OF NUCLEAR WELL LOGGING TECHNIQUES TO LUNAR RESOURCE ASSESSMENT Abstract Only
P. Albats, J. Groves, J. Schweitzer (California Inst. of Tech., Pasadena.), and T. Tombrello *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 9-10 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The use of neutron and gamma ray measurements for the analysis of material composition has become well established in the last 40 years. Schlumberger has pioneered the use of this technology for logging wells drilled to produce oil and gas, and for this purpose has developed neutron generators that allow measurements to be made in deep (5000 m) boreholes under adverse conditions. We also make ruggedized neutron and gamma ray detector packages that can be used to make reliable measurements on the drill collar of a rotating drill string while the well is being drilled, where the conditions are severe. Modern nuclear methods used in logging measure rock formation parameters like bulk density and porosity, fluid composition, and element abundances by weight including hydrogen concentration. The measurements are made with high precision and accuracy. These devices (well logging sondes) share many of the design criteria required for remote sensing in space; they must be small, light, rugged, and able to perform reliably under adverse conditions. We see a role for the adaptation of this technology to lunar or planetary resource assessment missions. Author

GEOPHYSICAL METHODS: AN OVERVIEW Abstract Only
A. Becker, N. E. Goldstein, K. H. Lee, E. L. Majer, H. F. Morrison, and L. Myer *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 10-11 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Geophysics is expected to have a major role in lunar resource assessment when manned systems return to the Moon. Geophysical measurements made from a lunar rover will contribute to a number of key studies: estimating regolith thickness, detection of possible large-diameter lava tubes within maria basalts, detection of possible subsurface ice in polar regions, detection of conductive minerals that formed directly from a melt (orthomagmatic sulfides of Cu, Ni, Co), and mapping lunar geology beneath the regolith. The techniques that can be used are dictated both by objectives and by our abilities to adapt current technology to lunar conditions. Instrument size, weight, power requirements, and freedom from orientation errors are factors we have considered. Among the geophysical methods we believe to be appropriate for a lunar resource assessment are magnetics, including gradiometry, time-domain magnetic induction, ground-penetrating radar, seismic reflection, and gravimetry. DRILLING AND DIGGING TECHNIQUES FOR THE EARLY LUNAR OUTPOST Abstract Only
Walter W. Boles *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 12-14 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The theme of this workshop is lunar resource assessment. Topics include identification, quantification, and location of useful elements on and below the lunar surface. The objective of this paper is to look at another side of the issue--how to remove soil from the stiff lunar-soil matrix once useful deposits are located. The goal of this paper is to cause those who think that digging or excavating on the Moon is a trivial problem to rethink the reasons for their opinions. Another goal is to encourage them to view total reliance upon terrestrial heuristics with suspicion. This paper will focus primarily upon digging. Author

SHOCK-TREATED LUNAR SOIL SIMULANT: PRELIMINARY ASSESSMENT AS A CONSTRUCTION MATERIAL Abstract Only
Mark B. Boslough, Leonhard E. Bernold (North Carolina State Univ., Raleigh.), and Yasuyuki Horie (North Carolina State Univ., Raleigh.) *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 14-15 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

In an effort to examine the feasibility of applying dynamic compaction techniques to fabricate construction materials from lunar regolith, preliminary explosive shock-loading experiments on lunar soil simulants were carried out. Analysis of our shock-treated samples suggests that binding additives, such as metallic aluminum powder, may provide the necessary characteristics to fabricate a strong and durable building material (lunar adobe) that takes advantage of a cheap base material available in abundance: lunar regolith. A LUNAR PENETRATOR TO DETERMINE SOLAR-WIND-IMPLANTED RESOURCES AT DEPTH IN THE LUNAR REGOLITH
W. Boynton, W. Feldman (Los Alamos National Lab., NM.), and T. Swindle *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 15-16 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Several volatiles implanted into the lunar regolith by the solar wind are potentially important lunar resources. He-3 might be mined as a fuel for lunar nuclear fusion reactors. Even if the mining of He-3 turns out not to be feasible, several other elements commonly implanted by the solar wind (H,C, and N) could be important for life support and for propellant or fuel production for lunar bases. A simple penetrator-borne instrument package to measure the abundance of H at depth is proposed. Since solar-wind-implanted volatiles tend to correlate with one another, this can be used to estimate global inventories and to design extraction strategies for all of these species. Author

ESTIMATING LUNAR PYROCLASTIC DEPOSIT DEPTH FROM IMAGING RADAR DATA: APPLICATIONS TO LUNAR RESOURCE ASSESSMENT Abstract Only
B. A. Campbell (Hawaii Univ., Honolulu.), N. J. Stacy (Cornell Univ., Ithaca, NY.), D. B. Campbell (Cornell Univ., Ithaca, NY.), S. H. Zisk (Hawaii Univ., Honolulu.), T. W. Thompson, and B. R. Hawke (Hawaii Univ., Honolulu.) *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 16-17 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Lunar pyroclastic deposits represent one of the primary anticipated sources of raw materials for future human settlements. These deposits are fine-grained volcanic debris layers produced by explosive volcanism contemporaneous with the early stage of mare infilling. There are several large regional pyroclastic units on the Moon (for example, the Aristarchus Plateau, Rima Bode, and Sulpicius Gallus formations), and numerous localized examples, which often occur as dark-halo deposits around endogenic craters (such as in the floor of Alphonsus Crater). Several regional pyroclastic deposits were studied with spectral reflectance techniques: the Aristarchus Plateau materials were found to be a relatively homogeneous blanket of iron-rich glasses. One such deposit was sampled at the Apollo 17 landing site, and was found to have ferrous oxide and titanium dioxide contents of 12 percent and 5 percent, respectively. While the areal extent of these deposits is relatively well defined from orbital photographs, their depths have been constrained only by a few studies of partially filled impact craters and by imaging radar data. A model for radar backscatter from mantled units applicable to both 70-cm and 12.6-cm wavelength radar data is presented. Depth estimates from such radar observations may be useful in planning future utilization of lunar pyroclastic deposits. Author

A GROUND-BASED SEARCH FOR LUNAR RESOURCES USING HIGH-RESOLUTION IMAGING IN THE INFRARED Abstract Only
C. R. Coombs and T. S. McKechnie *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 17-19 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

When humans return to the Moon, lunar resources will play an important role in the successful deployment and maintenance of the lunar base. Previous studies have illustrated the abundance of resource materials available on the surface of the Moon, as well as their ready accessibility. Particularly worth considering are the lunar regional (2,000-30,000 sq km) pyroclastic deposits scattered about the lunar nearside. These 30-50-m-thick deposits are composed of fine-grained unconsolidated titanium- and iron-rich mafic glasses and may be used as bulk feedstock for the beneficiation of oxygen, iron, titanium, sulfur, and other solar wind gases, or simply used as is for construction and shielding purposes. A groundbased observing survey of the resource-rich regions on the lunar nearside using a new imaging technique designed to obtain much higher resolution images, and more precise compositional analyses than previously obtainable is proposed. A REMOTE LASER MASS SPECTROMETER FOR LUNAR RESOURCE ASSESSMENT Abstract Only
R. J. DeYoung and M. D. Williams *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 19-20 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The use of lasers as a source of excitation for surface mass spectroscopy has been investigated for some time. Since the laser can be focused to a small spot with intensity, it can vaporize and accelerate atoms of material. Using this phenomenon with a time-of-flight mass spectrometer allows a surface elemental mass analysis of a small region with each laser pulse.

While the technique has been well developed for Earth applications, space applications are less developed. NASA Langley recently began a research program to investigate the use of a laser to create ions from the lunar surface and to analyze the ions at an orbiting spacecraft. A multijoule, Q-switched Nd:YAG laser would be focused to a small spot on the lunar surface, creating a dense plasma. This plasma would eject high-energy ions, as well as neutrals, electrons, and photons. An experiment is being set up to determine the characteristics of such a laser mass spectrometer at long flight distances. This experiment will determine the character of a future flight instrument for lunar resource assessment. Author

AN ALPHA-p-x ANALYTICAL INSTRUMENT FOR LUNAR RESOURCE INVESTIGATIONS Abstract Only
T. E. Economou and A. L. Turkevich *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 20-22 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

An instrument using alpha backscattering, alpha-proton nuclear reactions, and x-ray production by alpha particles and other auxiliary sources can be used on lunar landers to provide detailed analytical information concerning the lunar surface material. This information is important scientifically and can be the basis for utilizing efficiently lunar resources to build lunar colonies in the future. This alpha particle instrument uses radioactive isotopes, silicon detectors for the alpha and proton modes, and mercuric iodide detectors operating at room temperature for the x-ray mode. The alpha and proton modes of the instrument can provide an analysis for all elements (except hydrogen) present in amounts greater than about 1 percent by atom. These modes have excellent sensitivity and accuracy for the lighter elements, in particular, directly determining the amount of oxygen in the lunar soil. This is an element of paramount significance for the lunar resource mission. The x-ray mode makes possible a determination of Ti, Fe, and other important metals with even greater accuracy. In general, the x-ray mode provides increased sensitivity for heavier elements, in many cases achieving a sensitivity of several hundred ppm. Author

LUNAR AND ASTEROID COMPOSITION USING A REMOTE SECONDARY ION MASS SPECTROMETER Abstract Only
R. C. Elphic, H. O. Funsten, B. L. Barraclough, D. J. McComas, and J. E. Nordholt *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 22-24 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Laboratory experiments simulating solar wind sputtering of lunar surface materials have shown that solar wind protons sputter secondary ions in sufficient numbers to be measured from low-altitude lunar orbit. Secondary ions of Na, Mg, Al, Si, K, Ca, Mn, Ti, and Fe have been observed sputtered from sample simulants of mare and highland soils. While solar wind ions are hundreds of times less efficient than those used in standard secondary ion mass spectrometry, secondary ion fluxes expected at the Moon under normal solar wind conditions range from approximately 10 to greater than 10(exp 4) ions cm(sup -2)s(sup -1), depending on species. These secondary ion fluxes depend both on concentration in the soil and on probability of ionization; yields of easily ionized elements such as K and Na are relatively much greater than those for the more electronegative elements and compounds. Once these ions leave the surface, they are subject to acceleration by local electric and magnetic fields. For typical solar wind conditions, secondary ions can be accelerated to an orbital observing location. The same is true for atmospheric atoms and molecules that are photoionized by solar EUV. The instrument to detect, identify, and map secondary ions sputtered from the lunar surface and photoions arising from the tenuous atmosphere is discussed. Author

LUNAR RESOURCE ASSESSMENT: AN INDUSTRY PERSPECTIVE Abstract Only
S. C. Feldman, B. H. Altenberg, and H. A. Franklin *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 24-25 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The goals of the U.S. space program are to return to the Moon, establish a base, and continue onward to Mars. To accomplish this in a relatively short time frame and to avoid the high costs of transporting materials from the Earth, resources on the Moon will need to be mined. Oxygen will be one of the most important resources, to be used as a rocket propellant and for life support. Ilmenite and lunar regolith have both been considered as ores for the production of oxygen. Resource production on the Moon will be a very important part of the U.S. space program. To produce resources we must explore to identify the location of ore or feedback and calculate the surface and underground reserves. Preliminary resource production tests will provide the information that can be used in final plant design. Bechtel Corporation's experience in terrestrial engineering and construction has led to an interest in lunar resource assessment leading to the construction of production facilities on the Moon. There is an intimate link between adequate resource assessment to define feedstock quantity and quality, material processing requirements, and the successful production of lunar oxygen. Although lunar resource assessment is often viewed as a research process, the engineering and production aspects are very important to consider. Resource production often requires the acquisition of different types, scales, or resolutions of data than that needed for research, and it is needed early in the exploration process. An adequate assessment of the grade, areal extent, and depth distribution of the resources is a prerequisite to mining. The need for a satisfactory resource exploration program using remote sensing techniques, field sampling, and chemical and physical analysis is emphasized. These data can be used to define the ore for oxygen production and the mining, processing facilities, and equipment required. Author

LUNAR RESOURCES USING MODERATE SPECTRAL RESOLUTION VISIBLE AND NEAR-INFRARED SPECTROSCOPY: Al/Si AND SOIL MATURITY Abstract Only
Erich M. Fischer, Carle M. Pieters, and James W. Head *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 25-28 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Modern visible and near-infrared detectors are critically important for the accurate identification and relative abundance measurement of lunar minerals; however, even a very small number of well-placed visible and near-infrared bandpass channels provide a significant amount of general information about crucial lunar resources. The Galileo Solid State Imaging system (SSI) multispectral data are an important example of this. Al/Si and soil maturity will be discussed as examples of significant general lunar resource information that can be gleaned from moderate spectral resolution visible and near-infrared data with relative ease. Because quantitative-albedo data are necessary for these kinds of analyses, data such as those obtained by Galileo SSI are critical. SSI obtained synoptic digital multispectral image data for both the nearside and farside of the Moon during the first Galileo Earth-Moon encounter in December 1990. The data consist of images through seven filters with bandpasses ranging from 0.40 microns in the ultraviolet to 0.99 microns in the near-infrared. Although these data are of moderate spectral resolution, they still provide information for the following lunar resources: (1) titanium content of mature mare soils based upon the 0.40/0.56-micron (UV/VIS) ratio; (2) mafic mineral abundance based upon

the 0.76/0.99-micron ratio; and (3) the maturity or exposure age of the soils based upon the 0.56-0.76-micron continuum and the 0.76/0.99-micron ratio. Within constraints, these moderate spectral resolution visible and near-infrared reflectance data can also provide elemental information such as Al/Si for mature highland soils. Author

RADON AS A TRACER FOR LUNAR VOLATILES Abstract Only
Larry Jay Friesen *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 28-29 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Radon and its decay product polonium can be used as tracers to search for lunar volatiles. One effective technique to look for them would be by using alpha-particle spectrometers from lunar orbit. Alpha spectrometers were flown in the Apollo Service Modules during the Apollo 15 and 16 missions, and did observe Rn-222 and its decay product Po-210 on the lunar surface from orbit. This demonstrates that radon and polonium can be observed from orbit; what must next be shown is that such observations can reveal something about the locations of volatiles on the Moon. Author

Avail: CASI HC A01/MF A01

Supporting any but the smallest lunar facility will require indigenous resources due to the extremely high cost of bringing material from Earth. The Moon has also attracted interest as a resource base to help support near-Earth space activities, because of the potential lower cost once the necessary infrastructure has been amortized. Obviously, initial lunar products will be high-volume, bulk commodities, as they are the only ones for which the economics of lunar production are conceivably attractive. Certain rarer elements, such as the halogens, C, and H, would also be extremely useful (for propellant, life support, and/or reagents), and indeed local sources of such elements would vastly improve the economics of lunar resource extraction. The economic geology of the Moon is discussed. Author

THE TARGET: H2O ON THE MOON Abstract Only
J. Green, J. Negusde Wys (California Univ., Berkeley.), and A. Zuppero (California Univ., Berkeley.) *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 30-31 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The importance of H2O on the lunar surface has long been identified as a high priority for the existence of a human colony for mining activities and, more recently, for space fuel. Using the Earth as an analog, volcanic activity would suggest the generation of water during lunar history. Evidence of volcanism is found not only in present lunar morphology, but in over 400 locations of lunar transient events cataloged by Middlehurst and Kuiper in the 1960's. These events consisted of sightings since early history of vapor emissions and bright spots or flares. Later infrared scanning by Saari and Shorthill showed 'hot spots', many of which coincided with transient event sites. Many of the locations of Middlehurst and Kuiper were the sites of repeat events, leading to the conclusion that these were possibly volcanic in nature. The detection and use of H2O from the lunar surface is discussed. Author

LUNAR MAGNETIC FIELDS: IMPLICATIONS FOR RESOURCE UTILIZATION Abstract Only
L. L. Hood *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 31-32 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

It is well known that solar-wind-implanted hydrogen and helium-3 in lunar soils are potentially usable resources for future manned activities. For economical mining of these implanted gases, it is desirable that relative concentrations exceed that of typical soils. It has previously been noted that the monthly variation of solar wind flux on the surface due to lunar immersion in the geomagnetic tail may have measurable consequences for resource utilization. It is pointed out that, for a constant external flux, locally strong lunar crustal magnetic fields will exert the dominant influence on solar wind volatile implantation rates. In particular, the strongest lunar crustal magnetic fields will both deflect and focus incident ions in local regions leading to local enhancements of the incident ion flux. Thus, the most economical sites for extraction of solar-wind-implanted volatiles may be within or adjacent to strong crustal magnetic fields. In addition, solar wind ion deflection by crustal magnetic fields must be considered in evaluating the issue of whether remnant cometary ice or water-bearing minerals have survived in permanently shadowed regions near the lunar poles. This is because sputter erosion of water ice by solar wind ions has been suggested to be an important ice loss mechanism within permanently shadowed regions. Thus, permanently shadowed regions that are also shielded from the solar wind by locally strong crustal fields could be the most promising locations for the survival of cometary ice. Additional numerical simulations are employed to show that solar wind ion deflection by strong lunar magnetic anomalies can produce local increases in the implantation rate of solar wind gases such as hydrogen. Avail: CASI HC A01/MF A01

Recent ROSAT images reported by Schmitt et el. show that the sunlit part of the Moon is a significant source of very soft x rays. Stimulated by these observations, Edwards et al. have made an analysis of the response of the Moon to the solar soft x ray and EUV spectrum. They argue that much of the observed emission is in the form of discrete fluorescence lines in the energy range 25 to 100 eV, and that these lines are generally much stronger than the adjacent directly scattered solar background. On this basis they suggest that soft x ray fluorescence can be used to remotely obtain high-precision elemental maps of the lunar surface. Edwards et al. have continued to develop this idea and have suggested a system using soft x ray telescopes in lunar orbit, which could also obtain very good spatial resolution. This combination could be extremely valuable in furthering our understanding of lunar chemistry and potential resource distributions. High spatial resolution combined with the thin surface layer from which these soft x rays arise suggests the exciting possibility that x ray telescopes could map lunar volcanic volatiles from orbit. AN IN SITU TECHNIQUE FOR ELEMENTAL ANALYSIS OF LUNAR SURFACES Abstract Only
K. Y. Kane and D. A. Cremers *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 34-35 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

An in situ analytical technique that can remotely determine the elemental constituents of solids has been demonstrated. Laser-Induced Breakdown

Spectroscopy (LIBS) is a form of atomic emission spectroscopy in which a powerful laser pulse is focused on a solid to generate a laser spark, or microplasma. Material in the plasma is vaporized, and the resulting atoms are excited to emit light. The light is spectrally resolved to identify the emitting species. LIBS is a simple technique that can be automated for inclusion aboard a remotely operated vehicle. Since only optical access to a sample is required, areas inaccessible to a rover can be analyzed remotely. A single laser spark both vaporizes and excites the sample so that near real-time analysis (a few minutes) is possible. This technique provides simultaneous multielement detection and has good sensitivity for many elements. LIBS also eliminates the need for sample retrieval and preparation preventing possible sample contamination. These qualities make the LIBS technique uniquely suited for use in the lunar environment. ROBOTIC LUNAR ROVER TECHNOLOGIES AND SEI SUPPORTING TECHNOLOGIES AT SANDIA NATIONAL LABORATORIES Abstract Only
Paul R. Klarer *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 35 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Existing robotic rover technologies at Sandia National Laboratories (SNL) can be applied toward the realization of a robotic lunar rover mission in the near term. Recent activities at the SNL-RVR have demonstrated the utility of existing rover technologies for performing remote field geology tasks similar to those envisioned on a robotic lunar rover mission. Specific technologies demonstrated include low-data-rate teleoperation, multivehicle control, remote site and sample inspection, standard bandwidth stereo vision, and autonomous path following based on both internal dead reckoning and an external position location update system. These activities serve to support the use of robotic rovers for an early return to the lunar surface by demonstrating capabilities that are attainable with off-the-shelf technology and existing control techniques. The breadth of technical activities at SNL provides many supporting technology areas for robotic rover development. These range from core competency areas and microsensor fabrication facilities, to actual space qualification of flight components that are designed and fabricated in-house. Author

LUNAR PROSPECTOR: A PRELIMINARY SURFACE REMOTE SENSING RESOURCE ASSESSMENT FOR THE MOON Abstract Only
A. A. Mardon *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 35-37 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The potential existence of lunar volatiles is a scientific discovery that could distinctly change the direction of pathways of inner solar system human expansion. With a dedicated germanium gamma ray spectrometer launched in the early 1990's, surface water concentrations of 0.7 percent could be detected immediately upon full lunar polar orbit operations. The expense of lunar base construction and operation would be dramatically reduced over a scenario with no lunar volatile resources. Global surface mineral distribution could be mapped out and integrated into a GIS database for lunar base site selection. Extensive surface lunar mapping would also result in the utilization of archived Apollo images. A variety of remote sensing systems and their parameters have been proposed for use in the detection of these lunar ice masses. The detection or nondetection of subsurface and surface ice masses in lunar polar crater floors could dramatically direct the development pathways that the human race might follow in its radiation from the Earth to habitable locales in the inner terran solar system. Potential sources of lunar volatiles are described. The use of remote sensing to detect lunar volatiles is addressed. Author

UTILIZATION OF GEOGRAPHIC INFORMATION SYSTEM IN LUNAR MAPPING Abstract Only
A. A. Mardon *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 37-39 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Substantial digital remote sensing, lunar orbital photography, Earth-based remote sensing, and mapping of a variety of surficial lunar phenomena have occurred since the advent of the Space Age. This has led to a bewildering and quite disparate collection of archival sources insofar as this digital data and its cartographic representation can be found within many countries of the world. The importance of this mapping program in support of human expansion onto our nearest planetary neighbor has been recognized. A series of small scale maps of the Moon at 1 km to 1 cm, done with the support of Geographic Information System (GIS), would serve decision makers well in the process of accessing the development of manned occupance of the Moon. Maps and the data that they are derived from are the primary way in which people explore new environments and use previously discovered data to increase the bounties of any exploration. The inherent advantage of GIS is that it would allow immediate online access on the Moon of topographically represented data with analysis either on site or from Earth. Author

MOESSBAUER SPECTROSCOPY FOR LUNAR RESOURCE ASSESSMENT: MEASUREMENT OF MINERALOGY AND SOIL MATURITY Abstract Only
R. V. Morris, D. G. Agresti (Alabama Univ., Birmingham.), T. D. Shelfer (Alabama Univ., Birmingham.), M. M. Pimperl (Alabama Univ., Birmingham.), M.-H. Shen (Alabama Univ., Birmingham.), M. A. Gibson (Carbotek, Inc., Houston, TX.), and E. L. Wills *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 39-40 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

First-order assessment of lunar soil as a resource includes measurement of its mineralogy and maturity. Soils in which the mineral ilmenite is present in high concentrations are desirable feedstock for the production of oxygen at a lunar base. The maturity of lunar soils is a measure of their relative residence time in the upper 1 mm of the lunar surface. Increasing maturity implies increasing load of solar wind species (e.g., N, H, and He-3), decreasing mean grain size, and increasing glass content. All these physicochemical properties that vary in a regular way with maturity are important parameters for assessing lunar soil as a resource. For example, He-3 can be extracted and potentially used for nuclear fusion. A commonly used index for lunar soil maturity is I(sub s)/FeO, which is the concentration of fine-grained metal determined by ferromagnetic resonance (I(sub s)) normalized to the total iron content (as FeO). I(sub s)/FeO has been measured for virtually every soil returned by the Apollo and Luna missions to the Moon. Because the technique is sensitive to both oxidation state and mineralogy, iron Moessbauer spectroscopy (FeMS) is a viable technique for in situ lunar resource assessment. Its utility for mineralogy is apparent from examination of published FeMS data for lunar samples. From the data published, it can be inferred that FeMS data can also be used to determine soil maturity. The use of FeMS to determine mineralogy and maturity and progress on development of a FeMS instrument for lunar surface use are discussed. Author

MAGNETIC SUSCEPTIBILITY MEASUREMENTS FOR IN SITU CHARACTERIZATION OF LUNAR SOIL Abstract Only
R. R. Oder *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 41-42 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Magnetic separation is a viable method for concentration of components of lunar soils and rocks for use as feedstocks for manufacture of metals, oxygen, and for recovery of volatiles such as He-3. Work with lunar materials indicates that immature soils are the best candidates for magnetic beneficiation. The magnetic susceptibility at which selected soil components such as anorthite, ilmenite, or metallic iron are separated is not affected by soil maturity, but the recovery of the concentrated components is. Increasing soil maturity lowers recovery. Mature soils contain significant amounts of glass-encased metallic iron. Magnetic susceptibility, which is sensitive to metallic iron content, can be used to measure soil maturity. The relationship between the ratio of magnetic susceptibility and iron oxide and the conventional maturity parameter, I(sub s)/FeO, ferromagnetic resonant intensity divided by iron oxide content is given. The magnetic susceptibilities were determined using apparatus designed for magnetic separation of the lunar soils. Author

THE QUICKEST, LOWEST-COST LUNAR RESOURCE ASSESSMENT PROGRAM: INTEGRATED HIGH-TECH EARTH-BASED ASTRONOMY Abstract Only
Carle M. Pieters *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 42-44 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Science and technology applications for the Moon have not fully kept pace with technical advancements in sensor development and analytical information extraction capabilities. Appropriate unanswered questions for the Moon abound, but until recently there has been little motivation to link sophisticated technical capabilities with specific measurement and analysis projects. Over the last decade enormous technical progress has been made in the development of (1) CCD photometric array detectors; (2) visible to near-infrared imaging spectrometers; (3)infrared spectroscopy; (4) high-resolution dual-polarization radar imaging at 3.5, 12, and 70 cm; and equally important (5) data analysis and information extraction techniques using compact powerful computers. Parts of each of these have been tested separately, but there has been no programmatic effort to develop and optimize instruments to meet lunar science and resource assessment needs (e.g., specific wavelength range, resolution, etc.) nor to coordinate activities so that the symbiotic relation between different kinds of data can be fully realized. No single type of remotely acquired data completely characterizes the lunar environment, but there has been little opportunity for integration of diverse advanced sensor data for the Moon. Two examples of technology concepts for lunar measurements are given. Using VIS/near-IR spectroscopy, the mineral composition of surface material can be derived from visible and near-infrared radiation reflected from the surface. The surface and subsurface scattering properties of the Moon can be analyzed using radar backscattering imaging. Author

LUNAR SURFACE ROVERS Abstract Only
J. B. Plescia, A. L. Lane, and D. Miller *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 44-45 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Many questions of lunar science remain unanswered because of a lack of specific data. With the potential for returning humans to the Moon and establishing a long-term presence there, a new realm of exploration is possible. Numerous plans have been outlined for orbital and surface missions. The capabilities and objectives of a small class of rovers to be deployed on the lunar surface are described. The objective of these small rovers is to collect detailed in situ information about the composition and distribution of materials on the lunar surface. Those data, in turn, would be applied to a variety of lunar geoscience questions and form a basis for planning human activities on the lunar surface. Author

COMBINED GAMMA RAY/NEUTRON SPECTROSCOPY FOR MAPPING LUNAR RESOURCES Abstract Only
R. C. Reedy, R. C. Byrd, D. M. Drake, W. C. Feldman, J. Masarik, and C. E. Moss *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 45-46 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Some elements in the Moon can be resources, such as hydrogen and oxygen. Other elements, like Ti or the minerals in which they occur, such as ilmenite, could be used in processing lunar materials. Certain elements can also be used as tracers for other elements or lunar processes, such as hydrogen for mature regoliths with other solar-wind-implanted elements like helium, carbon, and nitrogen. A complete knowledge of the elemental composition of a lunar region is desirable both in identifying lunar resources and in lunar geochemical studies, which also helps in identifying and using lunar resources. The use of gamma ray and neutron spectroscopy together to determine abundances of many elements in the top few tens of centimeters of the lunar surface is discussed. To date, very few discussions of elemental mapping of planetary surfaces considered measurements of both gamma rays and the full range of neutron energies. The theories for gamma ray and neutron spectroscopy of the Moon and calculations of leakage fluxes are presented here with emphasis on why combined gamma ray/neutron spectroscopy is much more powerful than measuring either radiation alone. COMPAS: COMPOSITIONAL MINERALOGY WITH A PHOTOACOUSTIC SPECTROMETER Abstract Only
W. Hayden Smith *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 46-47 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

There is an important need for an in situ method of mineral and rock identification and quantification that provides true absorption spectra for a wide spectral range for lunar lander/rover missions. Many common minerals such as feldspars, magnetite, ilmenite, and amorphous fine solids or glasses, can exhibit flat spectral reflectances in the 400-2500 nm spectral region that render inaccurate or difficult their spectral detection and quantitative analysis. Ideal rock and mineral spectra are, of course, pure absorption spectra that are independent of the spectral effects of scattering, particle size, and distribution that can result in a suppression or distortion of their spectral features. This ideal seldom pertains to real samples. Since sample preparation is difficult and may fundamentally alter the observed diffuse spectral reflectance, an in situ spectral measurement method for rocks and minerals on the Moon, insensitive to the sample morphology, would be invaluable. Photoacoustic spectroscopy is a well-established technique appropriate for this task that has been widely applied in condensed-phase spectral studies of complex, highly light scattering, unprepared samples of everything from coal to whole blood, including rock and mineral characterization. A Compositional Mineralogy Photoacoustic Spectrometer, or COMPAS, can enable in situ spectral measurement of rocks and minerals, bypassing the major limitations of diffuse reflectance spectroscopy. COMPAS spectral capabilities for rock and mineral samples will be incorporated into an instrument prototype specifically for lunar measurements, compatible with rover capabilities. Author

LUNAR UV-VISIBLE-IR MAPPING INTERFEROMETRIC SPECTROMETER Abstract Only
W. Hayden Smith, L. Haskin, R. Korotev, R. Arvidson, W. McKinnon, B. Hapke (Pittsburgh Univ., PA.), S. Larson (Arizona Univ., Tucson.), and P. Lucey (Hawaii Univ., Honolulu.) *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 47 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Ultraviolet-visible-infrared mapping digital array scanned interferometers for lunar compositional surveys was developed. The research has defined a no-moving-parts, low-weight and low-power, high-throughput, and electronically adaptable digital array scanned interferometer that achieves measurement objectives encompassing and improving upon all the requirements defined by the LEXSWIG for lunar mineralogical investigation.

In addition, LUMIS provides a new, important, ultraviolet spectral mapping, high-spatial-resolution line scan camera, and multispectral camera capabilities. An instrument configuration optimized for spectral mapping and imaging of the lunar surface and provide spectral results in support of the instrument design are described. Author

LUNAR RESOURCE ASSESSMENT: STRATEGIES FOR SURFACE EXPLORATION Abstract Only
Paul D. Spudis *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 47-48 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Use of the indigenous resources of space to support long-term human presence is an essential element of the settlement of other planetary bodies. We are in a very early stage of understanding exactly how and under what circumstances space resources will become important. The materials and processes to recover them that we now think are critical may not ultimately be the raison d'etre for a resource utilization program. However, the need for strategic thinking proceeds in parallel with efforts to implement such plans and it is not too soon to begin thinking how we could and should use the abundant resources of materials and energy available from the Moon. The following commodities from the Moon are discussed: (1) bulk regolith, for shielding and construction on the lunar surface (ultimately for export to human-tended stations in Earth-Moon space), and (2) oxygen and hydrogen, for propellant and life support. Author

HIGH-RESOLUTION EARTH-BASED LUNAR RADAR STUDIES: APPLICATIONS TO LUNAR RESOURCE ASSESSMENT Abstract Only
N. J. S. Stacy and D. B. Campbell *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 48-49 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

The lunar regolith will most likely be a primary raw material for lunar base construction and resource extraction. High-resolution radar observations of the Moon provide maps of radar backscatter that have intensity variations generally controlled by the local slope, material, and structural properties of the regolith. The properties that can be measured by the radar system include the dielectric constant, density, loss tangent, and wavelength scale roughness. The radar systems currently in operation at several astronomical observatories provide the ability to image the lunar surface at spatial resolutions approaching 30 m at 3.8 cm and 12.6 cm wavelengths and approximately 500 m at 70 cm wavelength. The radar signal penetrates the lunar regolith to a depth of 10-20 wavelengths so the measured backscatter contains contributions from the vacuum-regolith interface and from wavelength-scale heterogeneities in the electrical properties of the subsurface material. The three wavelengths, which are sensitive to different scale structures and scattering volumes, provide complementary information on the regolith properties. Aims of the previous and future observations include (1) analysis of the scattering properties associated with fresh impact craters, impact crater rays, and mantled deposits; (2) analysis of high-incidence-angle observations of the lunar mare to investigate measurement of the regolith dielectric constant and hence porosity; (3) investigation of interferometric techniques using two time-delayed observations of the same site, observations that require a difference in viewing geometry less than 0.05 deg and, hence, fortuitous alignment of the Earth-Moon system when visible from Arecibo Observatory. Author

REMOTE ASSESSMENT OF LUNAR RESOURCE POTENTIAL Abstract Only
G. Jeffrey Taylor *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 49-50 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Assessing the resource potential of the lunar surface requires a well-planned program to determine the chemical and mineralogical composition of the Moon's surface at a range of scales. The exploration program must include remote sensing measurements (from both Earth's surface and lunar orbit), robotic in situ analysis of specific places, and eventually, human field work by trained geologists. Remote sensing data is discussed. Resource assessment requires some idea of what resources will be needed. Studies thus far have concentrated on oxygen and hydrogen production for propellant and life support, He-3 for export as fuel for nuclear fusion reactors, and use of bulk regolith for shielding and construction materials. The measurement requirements for assessing these resources are given and discussed briefly. Author

A COMBINED XRD/XRF INSTRUMENT FOR LUNAR RESOURCE ASSESSMENT Abstract Only
D. T. Vaniman, D. L. Bish, S. J. Chipera, and J. D. Blacic *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 50-51 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Robotic surface missions to the Moon should be capable of measuring mineral as well as chemical abundances in regolith samples. Although much is already known about the lunar regolith, our data are far from comprehensive. Most of the regolith samples returned to Earth for analysis had lost the upper surface, or it was intermixed with deeper regolith. This upper surface is the part of the regolith most recently exposed to the solar wind; as such it will be important to resource assessment. In addition, it may be far easier to mine and process the uppermost few centimeters of regolith over a broad area than to engage in deep excavation of a smaller area. The most direct means of analyzing the regolith surface will be by studies in situ. In addition, the analysis of the impact-origin regolith surfaces, the Fe-rich glasses of mare pyroclastic deposits, are of resource interest, but are inadequately known; none of the extensive surface-exposed pyroclastic deposits of the Moon have been systematically sampled, although we know something about such deposits from the Apollo 17 site. Because of the potential importance of pyroclastic deposits, methods to quantify glass as well as mineral abundances will be important to resource evaluation. Combined x ray diffraction (XRD) and x ray fluorescence (XRF) analysis will address many resource characterization problems on the Moon. XRF methods are valuable for obtaining full major-element abundances with high precision. Such data, collected in parallel with quantitative mineralogy, permit unambiguous determination of both mineral and chemical abundances where concentrations are high enough to be of resource grade. Collection of both XRD and XRF data from a single sample provides simultaneous chemical and mineralogic information. These data can be used to correlate quantitative chemistry and mineralogy as a set of simultaneous linear equations, the solution of which can lead to full characterization of the sample. The use of Rietveld methods for XRD data analysis can provide a powerful tool for quantitative mineralogy and for obtaining crystallographic data on complex minerals. Author

LUNAR LAVA TUBE SENSING Abstract Only
Cheryl Lynn York, Bryce Walden, Thomas L. Billings, and P. Douglas Reeder *In* Lunar and Planetary Inst., Joint Workshop on New Technologies for Lunar Resource Assessment 1992 p 51-52 (For primary document see N93-17233 05-91)
Avail: CASI HC A01/MF A01

Large (greater than 300 m diameter) lava tube caverns appear to exist on the Moon and could provide substantial safety and cost benefits for lunar bases. Over 40 m of basalt and regolith constitute the lava tube roof and would protect both construction and operations. Constant temperatures of -20 C reduce thermal stress on structures and machines. Base designs need not incorporate heavy shielding, so lightweight materials can be used and construction can be expedited. Identification and characterization of lava tube caverns can be incorporated into current precursor lunar mission plans. Some searches can even be done from Earth. Specific recommendations for lunar lava tube search and exploration are (1) an Earth-based radar interferometer, (2) an Earth-penetrating radar (EPR) orbiter, (3) kinetic penetrators for lunar lava tube confirmation, (4) a 'Moon Bat' hovering rocket vehicle, and (5) the use of other proposed landers and orbiters to help find lunar lava tubes. These papers comprise a peer-review selection of presentations by authors from NASA, LPI industry, and academia at the Second Conference (April 1988) on Lunar Bases and Space Activities of the 21st Century, sponsored by the NASA Office of Exploration and the Lunar Planetary Institute. These papers go into more technical depth than did those published from the first NASA-sponsored symposium on the topic, held in 1984. Session topics covered by this volume include (1) design and operation of transportation systems to, in orbit around, and on the Moon, (2) lunar base site selection, (3) design, architecture, construction, and operation of lunar bases and human habitats, and (4) lunar-based scientific research and experimentation in astronomy, exobiology, and lunar geology. For individual titles, see N93-17415 through N93-17458.

Avail: CASI HC A03/MF A03

Important to the planning for a lunar base is the development of transportation requirements for the establishment and maintenance of that base. This was accomplished as part of a lunar base systems assessment study conducted by the NASA Langley Research Center in conjunction with the NASA Johnson Space Center. Lunar base parameters are presented using a baseline lunar facility concept and timeline of developmental phases. Masses for habitation and scientific modules, power systems, life support systems, and thermal control systems were generated, assuming space station technology as a starting point. The masses were manifested by grouping various systems into cargo missions and interspersing manned flights consistent with construction and base maintenance timelines. A computer program that sizes the orbital transfer vehicles (OTV's), lunar landers, lunar ascenders, and the manned capsules was developed. This program consists of an interative technique to solve the rocket equation successively for each velocity correction (delta V) in a mission. The delta V values reflect integrated trajectory values and include gravity losses. As the program computed fuel masses, it matched structural masses from General Dynamics' modular space-based OTV design. Variables in the study included the operation mode (i.e., expendable vs. reusable and single-stage vs. two-stage OTV's), cryogenic specific impulse, reflecting different levels of engine technology, and aerobraking vs. all-propulsive return to Earth orbit. The use of lunar-derived oxygen was also examined for its general impact. For each combination of factors, the low-Earth orbit (LEO) stack masses and Earth-to-orbit (ETO) lift requirements are summarized by individual mission and totaled for the developmental phase. In addition to these discrete data, trends in the variation of study parameters are presented. Author

LUNAR BASE MISSION TECHNOLOGY ISSUES AND ORBITAL DEMONSTRATION REQUIREMENTS ON SPACE STATION

Charles P. Llewellyn (Analytical Mechanics Associates, Inc., Hampton, VA.) and Deene J. Weidman *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 17-23 (For primary document see N93-17414 05-91)

Avail: CASI HC A02/MF A03

The International Space Station has been the object of considerable design, redesign, and alteration since it was originally proposed in early 1984. In the intervening years the station has slowly evolved to a specific design that was thoroughly reviewed by a large agency-wide Critical Evaluation Task Force (CETF). As space station designs continue to evolve, studies must be conducted to determine the suitability of the current design for some of the primary purposes for which the station will be used. This paper concentrates on the technology requirements and issues, the on-orbit demonstration and verification program, and the space station focused support required prior to the establishment of a permanently manned lunar base as identified in the National Commission on Space report. Technology issues associated with the on-orbit assembly and processing of the lunar vehicle flight elements are also discussed. Author

OPERATIONAL CONSIDERATIONS FOR LUNAR TRANSPORTATION

Andrew J. Petro *In its* The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 31-34 (For primary document see N93-17414 05-91)

Avail: CASI HC A01/MF A03

Transportation of people and cargo between low Earth orbit and the surface of the Moon will be one of the most important elements in a lunar base program. This paper identifies some of the important lessons from the space shuttle program and discusses their application in future lunar vehicle operations. Also, some unique challenges in flight planning, training, vehicle servicing, payload integration, and flight control for lunar transportation are outlined. This paper relies heavily on recent studies of space shuttle development and operations with the goal of applying shuttle experience in the design of a practical and efficient lunar transportation system. ELECTRIC PROPULSION FOR LUNAR EXPLORATION AND LUNAR BASE DEVELOPMENT

Bryan Palaszewski (National Aeronautics and Space Administration. Lewis Research Center, Cleveland, OH.) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 35-45 (For primary document see N93-17414 05-91)

Avail: CASI HC A03/MF A03

Using electric propulsion to deliver materials to lunar orbit for the development and construction of a lunar base was investigated. Because the mass of the base and its life-cycle resupply mass are large, high specific impulse propulsion systems may significantly reduce the transportation system mass and cost. Three electric propulsion technologies (arcjet, ion, and magnetoplasmadynamic (MPD) propulsion) were compared with oxygen/hydrogen propulsion for a lunar base development scenario. Detailed estimates of the orbital transfer vehicles' (OTV's) masses and their propellant masses are presented. The fleet sizes for the chemical and electric propulsion systems are estimated. Ion and MPD propulsion systems enable significant launch mass savings over O2/H2 propulsion.

Because of the longer trip time required for the low-thrust OTV's, more of them are required to perform the mission model. By offloading the lunar cargo from the manned O2/H2 OTV missions onto the electric propulsion OTV's, a significant reduction of the low Earth orbit (LEO) launch mass is possible over the 19-year base development period. ADVANCED PROPULSION FOR LEO-MOON TRANSPORT. 1: A METHOD FOR EVALUATING ADVANCED PROPULSION PERFORMANCE
Martin O. Stern *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 47-54 (For primary document see N93-17414 05-91)
(Grant NAG9-186)
Avail: CASI HC A02/MF A03

This report describes a study to evaluate the benefits of advanced propulsion technologies for transporting materials between low Earth orbit and the Moon. A relatively conventional reference transportation system, and several other systems, each of which includes one advanced technology component, are compared in terms of how well they perform a chosen mission objective. The evaluation method is based on a pairwise life-cycle cost comparison of each of the advanced systems with the reference system. Somewhat novel and economically important features of the procedure are the inclusion not only of mass payback ratios based on Earth launch costs, but also of repair and capital acquisition costs, and of adjustments in the latter to reflect the technological maturity of the advanced technologies. The required input information is developed by panels of experts. The overall scope and approach of the study are presented in the introduction. The bulk of the paper describes the evaluation method; the reference system and an advanced transportation system, including a spinning tether in an eccentric Earth orbit, are used to illustrate it. Author

ADVANCED PROPULSION FOR LEO-MOON TRANSPORT. 2: TETHER CONFIGURATIONS IN THE LEO-MOON SYSTEM
J. R. Arnold and W. B. Thompson *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 55-59 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

This brief work discusses a possible application of a tether as a dynamical element in a low Earth orbit (LEO)-Moon transport system, and is a part of the Cal Space study of that transport system. To be specific, that study concentrated on the downward transport of O2 from the Moon to LEO, where it is stored for use as a rocket propellant, thus reducing Earth liftoff mass requirements by a factor of about 8. Moreover, in order to display clearly the role of advanced technology, only one novel technology was introduced at a single node in the transport system, the rest being 'conventional' rocket transport. Tethers were found useful in several different roles: hanging from platforms in lunar orbits, as supports for elevators, spinning in LEO, or spinning in a tether transport orbit, an elliptical orbit with perigee at approximately 600 km. This last use is considered here. Presented are the usefulness of the tether, nature of the tether system, the apparatus needed to support, deploy, and control it, and a discussion of needed developments. Author

ADVANCED PROPULSION FOR LEO-MOON TRANSPORT. 3: TRANSPORTATION MODEL M.S. Thesis - California Univ.
Mark W. Henley *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 61-68 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

A simplified computational model of low Earth orbit-Moon transportation system has been developed to provide insight into the benefits of new transportation technologies. A reference transportation infrastructure, based upon near-term technology developments, is used as a departure point for assessing other, more advanced alternatives. Comparison of the benefits of technology application, measured in terms of a mass payback ratio, suggests that several of the advanced technology alternatives could substantially improve the efficiency of low Earth orbit-Moon transportation. ENABLING LUNAR AND SPACE MISSIONS BY LASER POWER TRANSMISSION
R. J. DeYoung, J. E. Nealy, D. H. Humes, and W. E. Meador *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 69-73 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Applications are proposed for laser power transmission on the Moon. A solar-pumped laser in lunar orbit would beam power to the lunar surface for conversion into either electricity or propulsion needs. For example, lunar rovers could be much more flexible and lighter than rovers using other primary power sources. Also, laser power could be absorbed by lunar soil to create a hard glassy surface for dust-free roadways and launch pads. Laser power could also be used to power small lunar rockets or orbital transfer vehicles, and finally, photovoltaic laser converters could power remote excavation vehicles and human habitats. Laser power transmission is shown to be a highly flexible, enabling primary power source for lunar missions. Author

LUNAR He-3, FUSION PROPULSION, AND SPACE DEVELOPMENT
John F. Santarius *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 75-81 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The recent identification of a substantial lunar resource of the fusion energy fuel He-3 may provide the first terrestrial market for a lunar commodity and, therefore, a major impetus to lunar development. The impact of this resource-when burned in D-He-3 fusion reactors for space power and propulsion-may be even more significant as an enabling technology for safe, efficient exploration and development of space. One possible reactor configuration among several options, the tandem mirror, illustrates the potential advantages of fusion propulsion. The most important advantage is the ability to provide either fast, piloted vessels or high-payload-fraction cargo vessels due to a range of specific impulses from 50 sec to 1,000,000 sec at thrust-to-weight ratios from 0.1 to 5x10(exp -5). Fusion power research has made steady, impressive progress. It is plausible, and even probable, that fusion rockets similar to the designs presented here will be available in the early part of the twenty-first century, enabling a major expansion of human presence into the solar system. THE TRANSPORTATION DEPOT: AN ORBITING VEHICLE SUPPORT FACILITY
Martin J. Kaszubowski and J. Kirk Ayers *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 83-93 (For primary document see N93-17414 05-91)
(Contract NAS1-18000)
Avail: CASI HC A03/MF A03

This paper describes the details of an effort to produce conceptual designs for an orbiting platform, called a transportation depot, to handle assembly and processing of lunar, Martian, and related vehicles. High-level requirements for such a facility were established, and several concepts were developed to meet those requirements. By showing that the critical rigid-body momentum characteristics of each concept are similar to those of the dual-keel space station, some insight was gained about the controllability and utility of this type of facility. Finally, several general observations were made that highlight the advantages and disadvantages of particular design features. Author

DEVELOPING A SAFE ON-ORBIT CRYOGENIC DEPOT
Nicholas J. Bahr *In* NASA. Johnson Space Center, The Second Conference

on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 95-100 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

New U.S. space initiatives will require technology to realize planned programs such as piloted lunar and Mars missions. Key to the optimal execution of such missions are high performance orbit transfer vehicles and propellant storage facilities. Large amounts of liquid hydrogen and oxygen demand a uniquely designed on-orbit cryogenic propellant depot. Because of the inherent dangers in propellant storage and handling, a comprehensive system safety program must be established. This paper shows how the myriad and complex hazards demonstrate the need for an integrated safety effort to be applied from program conception through operational use. Even though the cryogenic depot is still in the conceptual stage, many of the hazards have been identified, including fatigue due to heavy thermal loading from environmental and operating temperature extremes, micrometeoroid and/or depot ancillary equipment impact (this is an important problem due to the large surface area needed to house the large quantities of propellant), docking and maintenance hazards, and hazards associated with extended extravehicular activity. Various safety analysis techniques were presented for each program phase. Specific system safety implementation steps were also listed. Enhanced risk assessment was demonstrated through the incorporation of these methods. Author

LUNAR LANDER STAGE REQUIREMENTS BASED ON THE CIVIL NEEDS DATA BASE
John A. Mulqueen *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 101-117 (For primary document see N93-17414 05-91)
Avail: CASI HC A03/MF A03

This paper examines the lunar lander stages that will be necessary for the future exploration and development of the Moon. Lunar lander stage sizing is discussed based on the projected lunar payloads listed in the Civil Needs Data Base. Factors that will influence the lander stage design are identified and discussed. Some of these factors are (1) lunar orbiting and lunar surface lander bases; (2) implications of direct landing trajectories and landing from a parking orbit; (3) implications of landing site and parking orbit; (4) implications of landing site and parking orbit selection; (5) the use of expendable and reusable lander stages; and (6) the descent/ascent trajectories. Data relating the lunar lander stage design requirements to each of the above factors and others are presented in parametric form. These data will provide useful design data that will be applicable to future mission model modifications and design studies. Author

This paper is a first look at the problems of building a lunar lander to support a small lunar surface base. A series of trade studies was performed to define the lander. The initial trades concerned choosing number of stages, payload mass, parking orbit altitude, and propellant type. Other important trades and issues included plane change capability, propellant loading and maintenance location, and reusability considerations. Given a rough baseline, the systems were then reviewed. A conceptual design was then produced. The process was carried through only one iteration. Many more iterations are needed. A transportation system using reusable, aerobraked orbital transfer vehicles (OTV's) is assumed. These OTV's are assumed to be based and maintained at a low Earth orbit (LEO) space station, optimized for transportation functions. Single- and two-stage OTV stacks are considered. The OTV's make the translunar injection (TLI), lunar orbit insertion (LOI), and trans-Earth injection (TEI) burns, as well as midcourse and perigee raise maneuvers. Author

The purpose of this study was to perform a first look at the requirements for launch and landing facilities for early lunar bases and to prepared conceptual designs for some of these facilities. The emphasis of the study is on the facilities needed from the first manned landing until permanent occupancy, the Phase 2 lunar base. Factors including surface characteristics, navigation system, engine blast effects, and expected surface operations are used to develop landing pad designs, and definitions fo various other elements of the launch and landing facilities. Finally, the dependence of the use of these elements and the evolution of the facilities are established. Author

THE CHOICE OF THE LOCATION OF THE LUNAR BASE
V. V. Schevchenko *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 155-161 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The development of modern methods of remote sensing of the lunar surface and data from lunar studies by space vehicles make it possible to assess scientifically the expediency of the location of the lunar base in a definite region on the Moon. The preliminary choice of the site is important for tackling a range of problems associated with ensuring the activity of a manned lunar base and with fulfilling the research program. Based on astronomical data, we suggest the Moon's western hemisphere, specifically the western part of Oceanus Procellarum, where natural, scientifically interesting objects have been identified, as have surface rocks with enhanced contents of ilmenite, a possible source of oxygen. A comprehensive evaluation of the region shows that, as far as natural features are concerned, it is a key one for solving the main problems of the Moon's origin and evolution. Author

GEOLOGICAL AND GEOPHYSICAL FIELD INVESTIGATIONS FROM A LUNAR BASE AT MARE SMYTHII
Paul D. Spudis and Lon L. Hood (Arizona Univ., Tucson.) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 163-174 (For primary document see N93-17414 05-91)
Avail: CASI HC A03/MF A03

Mare Smythii, located on the equator and east limb of the Moon, has a great variety of scientific and economic uses as the site for a permanent lunar base. Here a complex could be established that would combine the advantages of a nearside base (for ease of communications with Earth and normal operations) with those of a farside base (for shielding a radio

astronomical observatory from the electromagnetic noise of Earth). The Mare Smythii region displays virtually the entire known range of geological processes and materials found on the Moon; from this site, a series of field traverses and investigations could be conducted that would provide data on and answers to fundamental questions in lunar geoscience. This endowment of geological materials also makes the Smythii region attractive for the mining of resources for use both on the Moon and in Earth-Moon space. We suggest that the main base complex be located at 0, 90 deg E, within the mare basalts of the Smythii basin; two additional outposts would be required, one at 0, 81 deg E to maintain constant communications with Earth, and and the other, at 0, 101 deg E on the lunar farside, to serve as a radio astronomical observatory. The bulk of lunar surface activities could be conducted by robotic teleoperations under the direct control of the human inhabitants of the base. Author

A LUNAR POLAR EXPEDITION
Richard Dowling, Robert L. Staehle, and Tomas Svitek *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 175-182 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

Advanced exploration and development in harsh environments require mastery of basic human survival skill. Expeditions into the lethal climates of Earth's polar regions offer useful lessons for tommorrow's lunar pioneers. In Arctic and Antarctic exploration, 'wintering over' was a crucial milestone. The ability to establish a supply base and survive months of polar cold and darkness made extensive travel and exploration possible. Because of the possibility of near-constant solar illumination, the lunar polar regions, unlike Earth's may offer the most hospitable site for habitation. The World Space Foundation is examining a scenario for establishing a five-person expeditionary team on the lunar north pole for one year. This paper is a status report on a point design addressing site selection, transportation, power, and life support requirements. Author

ASTRONOMY ON THE MOON: GEOLOGICAL CONSIDERATIONS c89
G. Jeffrey Taylor *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 183-187 (For primary document see N93-17414 05-91)
(SOEST-Contrib-2399; PGD-Contrib-630) Avail: CASI HC A01/MF A03

The Moon is an excellent site for astronomical observations. This paper describes two geological aspects related to astronomy from the Moon. First it evaluates the sources of gases near a lunar base as input to calculations reported in a separate paper on the growth of an artificial lunar atmosphere. The results suggest that mining for He-3 could produce the most gas (1 kg/sec), but rocket exhaust (0.1 kg/sec) and habitat venting (0.5 kg/sec) are also important. Second, the paper discusses criteria that need to be considered when determining the site of a lunar astronomical facility. These are longitude and latitude (equatorial sites are favored), topography (important to be relatively flat for ease of installation), distance from a lunar base (to be free of seismic noise, dust, and gases), the site's value to lunar geoscience (other factors being equal, a geologically diverse site is better), and its value as a materials resource (mining and observatories are incompatible). HELIUM MINING ON THE MOON: SITE SELECTION AND EVALUATION
Eugene N. Cameron *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 189-197 Previously announced as N89-14850 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The feasibility of recovering helium (He) from the Moon as a source of fusion energy on Earth is currently being studied at the University of Wisconsin. Part of this study is selection and evaluation of potential sites for lunar He mining. Selection and evaluation of potential mining sites are based on four salient findings by various investigators of lunar samples: (1) Regoliths from areas underlain by highland materials contain less than 20 wppm He; (2) Certain maria regoliths contain less than 20 wppm He, but other contain 25 to 49 wppm; (3) The He content of a mare regolith is a function of its composition; regoliths rich in Ti are relatively rich in He; and (4) He is concentrated in the less than 100-micron size fractions of regoliths. The first three findings suggest that maria are the most promising mining sites, specifically, those that have high-Ti regoliths. Information on the regional distribution and extent of high-Ti regoliths comes mainly from two sources: direct sampling by various Apollo and Luna missions, and remote sensing by gamma-ray spectroscopy and Earth-based measurements of lunar spectral reflectance. Sampling provides essential control on calibration and interpretation of data from remote sensing. These data indicate that Mare Tranquillitatis is the principal area of high-Ti regolith of the eastern nearside, but large areas of high-Ti regolith are indicated in the Imbrium and Procellarum regions. Recovery of significant amounts of He-3 will require mining billions of tonnes of regolith. Large individual areas suitable for mining must therefore be delineated. The concentration of He in the finer size fractions and considerations of ease of mining mean that mining areas must be as free as possible of sizable craters and blocks of rock. Pending additional lunar missions, information regarding these features must be obtained from lunar photographs, photogeologic maps, and radar surveys. The present study is decidedly preliminary; available information is much to limited to permit even a close approach to final evaluations. As a prelude to recovery of He from the Moon, systematic exploration and sampling of high-Ti regoliths should therefore have a high priority in future lunar missions. Author

THE LUNAR ORBITAL PROSPECTOR
Frank J. Redd, James N. Cantrell, and Greg McCurdy *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 199-207 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The establishment of lunar bases will not end the need for remote sensing of the lunar surface by orbiting platforms. Human and robotic surface exploration will necessarily be limited to some proximate distance from the support base. Near real-time, high-resolution, global characterization of the lunar surface by orbiting sensing systems will continue to be essential to the understanding of the Moon's geophysical structure and the location of exploitable minerals and deposits of raw materials. The Lunar Orbital Prospector (LOP) is an orbiting sensing platform capable of supporting a variety of modular sensing packages. Serviced by a lunar-based shuttle, the LOP will permit the exchange of instrument packages to meet evolving mission needs. The ability to recover, modify, and rotate sensing packages allows their reuse in varying combinations. Combining this flexibility with robust orbit modification capabilities and near real-time telemetry links provides considerable system responsiveness. Maintenance and modification of the LOP orbit are accomplished through use of an onboard propulsion system that burns lunar-supplied oxygen and aluminum. The relatively low performance of such a system is more than compensated for by the elimination of the need for Earth-supplied propellants. The LOP concept envisions a continuous expansion of capability through the incorporation of new instrument technologies and the addition of platforms. Author

LUNAR OBSERVER LASER ALTIMETER OBSERVATIONS FOR LUNAR BASE SITE SELECTION
James B. Garvin and Jack L. Bufton *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 209-217 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

One of the critical datasets for optimal selection of future lunar landing sites is local- to regional-scale topography. Lunar base site selection will require such data for both engineering and scientific operations purposes. The Lunar Geoscience Orbiter or Lunar Observer is the ideal precursory science mission from which to obtain this required information. We suggest that a simple laser altimeter instrument could be employed to measure local-scale slopes, heights, and depths of lunar surface features important to lunar base planning and design. For this reason, we have designed and are currently constructing a breadboard of a Lunar Observer Laser Altimeter (LOLA) instrument capable of acquiring contiguous-footprint topographic profiles with both 30-m and 300-m along-track resolution. This instrument

meets all the severe weight, power, size, and data rate limitations imposed by Observer-class spacecraft. In addition, LOLA would be capable of measuring the within-footprint vertical roughness of the lunar surface, and the 1.06-micron relative surface reflectivity at normal incidence. We have used airborne laser altimeter data for a few representative lunar analog landforms to simulate and analyze LOLA performance in a 100-km lunar orbit. We demonstrate that this system in its highest resolution mode (30-m diameter footprints) would quantify the topography of all but the very smallest lunar landforms. At its global mapping resolution (300-m diameter footprints), LOLA would establish the topographic context for lunar landing site selection by providing the basis for constructing a 1-2 km spatial resolution global, geodetic topographic grid that would contain a high density of observations (e.g., approximately 1000 observations per each 1 deg by 1 deg cell at the lunar equator). The high spatial and vertical resolution measurements made with a LOLA-class instrument on a precursory Lunar Observer would be highly synergistic with high-resolution imaging datasets, and will allow for direct quantification of critical slopes, heights, and depths of features visible in images of potential lunar base sites. (PGD-Publ-541; HIG-Contrib-2165) Avail: CASI HC A03/MF A03

We have surveyed lunar sinuous rilles and other volcanic features in an effort to locate intact lava tubes that could be used to house an advanced lunar base. Criteria were established for identifying intact tube segments. Sixty-seven tube candidates within 20 rilles were identified on the lunar nearside. The rilles, located in four mare regions, varied in size and sinuosity. We identified four rilles that exhibited particularly strong evidence for the existence of intact lava tube segments. These are located in the following areas: (1) south of Gruithuisen K, (2) in the Marius Hills region, (3) in the southeastern Mare Serenitatis, and (4) in the eastern Mare Serenitatis. We rated each of the 67 probable tube segments for lunar base suitability based on its dimensions, stability, location, and access to lunar resources. Nine tube segments associated with three separate rilles are considered prime candidates for use as part of an advanced lunar base. Author

(Contrib-769) Avail: CASI HC A01/MF A03

Shallow moonquakes, which were discovered during observations following the Apollo lunar landing missions, may pose a threat to lunar surface operations. The nature of these moonquakes is similar to that of intraplate earthquakes, which include infrequent but destructive events. Therefore, there is a need for detailed study to assess the possible seismic risk before establishing a lunar base. Author

Human civilization and architecture have defined each other for over 5000 years on Earth. Even in the novel environment of space, persistent issues of human urbanism will eclipse, within a historically short time, the technical challenges of space settlement that dominate our current view. By adding modern topics in space engineering, planetology, life support, human factors, material invention, and conservation to their already renaissance array of expertise, urban designers can responsibly apply ancient, proven standards to the exciting new opportunities afforded by space. Inescapable facts about the Moon set real boundaries within which tenable lunar urbanism and its component architecture must eventually develop. Author

EARTH-BASED ANALOGS OF LUNAR AND PLANETARY FACILITIES
Larry Bell and Guillermo Trotti *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 243-247 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Antarctica contains areas where the environment and terrain are more similar to regions on the Moon and Mars than any other place on Earth. These features offer opportunities for simulations to determine performance capabilities of people and machines in harsh, isolated locales. The Sasakawa International Center for Space Architecture (SICSA) plans to create a facility on Antarctica for research, planning, and demonstrations in support of planetary exploration. The Antarctic Planetary Testbed (APT) will be financed and utilized by public and private organizations throughout the world. Established on a continent owned by no country, it can serve as a model for cooperation between spacefaring nations. APT science and technology programs will expand knowledge about the nature and origin of our solar system, and will support preparations for human settlements beyond Earth that may occur within the first quarter of the next century. The initial APT facility, conceived to be operational by the year 1992, will be constructed during the summer months by a crew of approximately 12. Six to eight of these people will remain through the winter. As in space, structures and equipment systems will be modular to facilitate efficient transport to the site, assembly, and evolutionary expansion. State-of-the-art waste recovery/recycling systems are also emphasized due to their importance in space. Author

INFLATABLE HABITATION FOR THE LUNAR BASE **c54**
M. Roberts *In its* The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 249-253 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Inflatable structures have a number of advantages over rigid modules in providing habitation at a lunar base. Some of these advantages are packaging efficiency, convenience of expansion, flexibility, and psychological benefit to the inhabitants. The relatively small, rigid cylinders fitted to the payload compartment of a launch vehicle are not as efficient volumetrically as a collapsible structure that fits into the same space when packaged, but when deployed is much larger. Pressurized volume is a valuable resource. By providing that resource efficiently, in large units, labor intensive external expansion (such as adding additional modules to the existing base) can be minimized. The expansive interior in an inflatable would facilitate rearrangement of the interior to suite the evolving needs of the base. This large, continuous volume would also relieve claustrophobia, enhancing habitability and improving morale. The purpose of this paper is to explore some of the aspects of inflatable habitat design, including structural, architectural, and environmental considerations. As a specific case, the conceptual design of an inflatable lunar habitat, developed for the Lunar Base Systems Study at the Johnson Space Center, is described. Author

PREFABRICATED FOLDABLE LUNAR BASE MODULAR SYSTEMS FOR HABITATS, OFFICES, AND LABORATORIES **c54**
Yousef Hijazi *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 261-266 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The first habitat and work station on the lunar surface undoubtedly has to be prefabricated, self-erecting, and self-contained. The building structure should be folded and compacted to the minimum size and made of materials of minimum weight. It must also be designed to provide maximum possible habitable and usable space on the Moon. For this purpose the concept of multistory, foldable structures was further developed. The idea is to contain foldable structural units in a cylinder or in a capsule adapted for launching. Upon landing on the lunar surface, the cylinder of the first proposal in this paper will open in two hinge-connected halves while the capsule of the second proposal will expand horizontally and vertically in all directions. In both proposals, the foldable structural units will self-erect providing a multistory building with several room enclosures. The solar radiation protection is maintained through regolith-filled pneumatic structures as in the first proposal, or two regolith-filled expandable capsule shells as in the second one, which provide the shielding while being supported by the erected internal skeletal structure. Johnson Space Center, Prestressed Concrete Inst., Chicago Univ., and Lockheed EMSCO (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

This paper presents results of structural analyses and a preliminary design of a precast, prestressed concrete lunar base subjected to 1-atm internal pressure. The proposed infrastructure measures 120 ft in diameter and 72 ft in height, providing 33,000 sq ft of work area for scientific and industrial operations. Three loading conditions were considered in the design (1) during construction, (2) under pressurization, and (3) during an air-leak scenario. A floating foundation, capable of rigid body rotation and translation as the lunar soil beneath it yields, was developed to support the infrastructure and to ensure the airtightness of the system. Results reveal that it is feasible to use precast, prestressed concrete for construction of large lunar bases on the Moon. Author

VERTICAL REGOLITH SHIELD WALL CONSTRUCTION FOR LUNAR BASE APPLICATIONS **c54**
Jan Kaplicky, David Nixon, and Jane Wernick (Arup, Ove and Partners, Los Angeles, CA) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 275-279 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Lunar bases located on the lunar surface will require permanent protection from radiation and launch ejecta. This paper outlines a method of providing physical protection using lunar regolith that is constructed in situ as a modular vertical wall using specially devised methods of containment and construction. Deployable compartments, reinforced with corner struts, are elevated and filled by a moving gantry. The compartments interlock to form a stable wall. Different wall heights, thicknesses, and plan configurations are achieved by varying the geometry of the individual compartments, which are made from woven carbon fibers. Conventional terrestrial structural engineering techniques can be modified and used to establish the structural integrity and performance of the wall assembly. Author

EVOLVING CONCEPTS OF LUNAR ARCHITECTURE: THE POTENTIAL OF SUBSELENE DEVELOPMENT **c54**
Andrew W. Daga, Meryl A. Daga, and Wendel R. Wendel (Starnet Structures, Inc., West Babylon, NY.) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 281-291 (For primary document see N93-17414 05-91)
Avail: CASI HC A03/MF A03

In view of the superior environmental and operational conditions that are thought to exist in lava tubes, popular visions of permanent settlements built upon the lunar surface may prove to be entirely romantic. The factors that will ultimately come together to determine the design of a lunar base are complex and interrelated, and they call for a radical architectural solution. Whether lunar surface-deployed superstructures can answer these issues is called into question. One particularly troublesome concern in any lunar base design is the need for vast amounts of space, and the ability of man-made structures to provide such volumes in a reliable pressurized habitat is doubtful. An examination of several key environmental design issues suggests that the alternative mode of subselene development may offer the best opportunity for an enduring and humane settlement. Author

LUNAR SUBSURFACE ARCHITECTURE ENHANCED BY ARTIFICIAL BIOSPHERE CONCEPTS **c54**
Jason D. Klassi, Carlos J. Rocha, and Charles A. Carr *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 293-298 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The integration of artificial biosphere technology with subselene architecture can create a life-enhancing, productive habitat that is safe from solar radiation and extreme temperature fluctuations while maximizing resources brought from Earth and derived from lunar regolith. In the short term, the resulting biotectural (biosphere and architectural) designs will not only make the structures more habitable, productive, and manageable, but will ultimately provide the self-sufficiency factors necessary for the mature lunar settlement. From a long-term perspective, this biotecture approach to astronautics and extraterrestrial development (1) helps reduce mass lift requirements, (2) contributes to habitat self-sufficiency, and (3) actualizes at least one philosophy of solar system exploration, which is to exploit nonterrestrial resources in an effort to conserve our natural resources on this planet. EXTRATERRESTRIAL APPLICATIONS OF SOLAR OPTICS FOR INTERIOR ILLUMINATION **c74**
David A. Eijadi and Kyle D. Williams *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 299-303 Previously announced in IAA as A89-45749 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Solar optics is a terrestrial technology that has potential extraterrestrial applications. Active solar optics (ASO) and passive solar optics (PSO) are two approaches to the transmission of sunlight to remote interior spaces. Active solar optics is most appropriate for task illumination, while PSO is most appropriate for general illumination. Research into solar optics, motivated by energy conservation, has produced lightweight and low-cost materials, products that have applications to NASA's Controlled Ecological Life Support System (CELSS) program and its lunar base studies. Specifically, prism light guides have great potential in these contexts. Several applications of solar optics to lunar base concepts are illustrated. Author

THE ROLES OF HUMANS AND ROBOTS AS FIELD GEOLOGISTS ON THE MOON
Paul D. Spudis and G. Jeffrey Taylor (New Mexico Univ., Albuquerque.) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 307-313 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The geologic exploration of the Moon will be one of the primary

scientific functions of any lunar base program. Geologic reconnaissance, the broad-scale characterization of processes and regions, is an ongoing effort that has already started and will continue after base establishment. Such reconnaissance is best done by remote sensing from lunar orbit and simple, automated, sample return missions of the Soviet Luna class. Field study, in contrast, requires intensive work capabilities and the guiding influence of human intelligence. We suggest that the most effective way to accomplish the goals of geologic field study on the Moon is through the use of teleoperated robots, under the direct control of a human geologists who remains at the lunar base, or possibly on Earth. These robots would have a global traverse range, could possess sensory abilities optimized for geologic field work, and would accomplish surface exploration goals without the safety and life support concerns attendance with the use of human geologists on the Moon. By developing the capability to explore any point on the Moon immediately after base establishment, the use of such teleoperated, robotic field geologists makes the single-site lunar base into a 'global' base from the viewpoint of geologic exploration. SOME ASTRONOMICAL CHALLENGES FOR THE TWENTY-FIRST CENTURY **c89**
Jack O. Burns *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 315-319 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

This paper addresses some of the scientific puzzles that astronomers may face in the next century. Four areas in astronomy are discussed in detail. These include cosmology and galaxy formation, active galaxies and quasars, supernovae and stellar remnants, and the formation of stars and planets. A variety of observatories on the Moon are proposed to attack these astronomical challenges. Author

An array of three radio telescopes on the Moon, separated by 100-1000 km, could measure the positions of compact radio sources 50-100 times more accurately than can be done on Earth. These measurements would form an all-sky reference frame of extreme precision (5-10 micro-arcsec) and stability, with applications to the dynamics of the solar system, our galaxy, and nearby galaxies. Each of the major new observatories proposed to take advantage of the characteristics of the lunar environment requires appropriate advances in technology. These technologies are in the areas of contamination/interference control, test and evaluation, manufacturing, construction, autonomous operations and maintenance, power and heating/cooling, stable precision structures, optics, parabolic antennas, and communications/control. Telescopes for the lunar surface need to be engineered to operate for long periods with minimal intervention by humans or robots. What is essential for lunar observatory operation is enforcement of a systems engineering approach that makes compatible all lunar operations associated with habitation, resource development, and science. The Moon offers a stable platform with excellent seeing conditions for astronomical observations. Some troublesome aspects of the lunar environment will need to be overcome to realize the full potential of the Moon as an observatory site. Mitigation of negative effects of vacuum, thermal radiation, dust, and micrometeorite impact is feasible with careful engineering and operational planning. Shields against impact, dust, and solar radiation need to be developed. Means of restoring degraded surfaces are probably essential for optical and thermal control surfaces deployed in long-lifetime lunar facilities. Precursor missions should be planned to validate and enhance the understanding of the lunar environment (e.g., dust behavior without and with human presence) and to determine environmental effects on surfaces and components. Precursor missions should generate data useful in establishing keepout zones around observatory facilities where rocket launches and landings, mining, and vehicular traffic could be detrimental to observatory operation. LUNAR BASE ACTIVITIES AND THE LUNAR ENVIRONMENT
Richard R. Vondrak *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 337-345 (For primary document see N93-17414 05-91)
Avail: CASI HC A02/MF A03

The Moon is an attractive site for astronomical observatories and other facilities because of the absence of a substantial lunar atmosphere and the stability of the lunar surface. The present lunar atmosphere is sufficiently transparent that there is no significant image distortion due to absorption or refraction. This thin atmosphere results from a combination of small sources and prompt losses. The major source that has been identified is the solar wind, whose total mass input into the lunar atmosphere is approximately 50 gm/sec. The major components of the solar wind are light elements (H and He) that promptly escape from the lunar surface by exospheric evaporation (Jeans' escape). The principal atmospheric loss mechanism for heavier gases is photoionization within a period of weeks to months, followed by immediate loss to the solar wind. Lunar base activities will modify the lunar atmosphere if gas is released at a larger rate than that now occurring naturally. Possible gas sources are rocket exhaust, processing of lunar materials, venting of pressurized volumes, and astronaut life support systems. For even modest lunar base activity, such sources will substantially exceed natural sources, although effects are expected to be localized and transient. The Apollo database serves as a useful reference for both measurements of the natural lunar environment and its modification by lunar base activities. Author

AN ARTIFICIALLY GENERATED ATMOSPHERE NEAR A LUNAR BASE
Jack O. Burns, Ilias Fernini (New Mexico Univ., Albuquerque.), Martin Sulkanen (New Mexico Univ., Albuquerque.), Nebojsa Duric (New Mexico Univ., Albuquerque.), G. Jeffrey Taylor (New Mexico Univ., Albuquerque.), and Stewart W. Johnson (BDM International, Inc., Albuquerque, NM.) *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 347-350 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

We discuss the formation of an artificial atmosphere generated by vigorous lunar base activity in this paper. We developed an analytical, steady-state model for a lunar atmosphere based upon previous investigations of the Moon's atmosphere from Apollo. Constant gas-injection rates, ballistic trajectories, and a Maxwellian particle distribution for an oxygen-like gas are assumed. Even for the extreme case of continuous He-3 mining of the lunar regolith, we find that the lunar atmosphere would not significantly degrade astronomical observations beyond about 10 km from the mining operation. Avail: CASI HC A01/MF A03

Establishment of an exobiology laboratory on the Moon would provide a unique opportunity for exploration of extraterrestrial materials on a long-term, ongoing basis, for elucidation of exobiological processes and chemical evolution. A major function of the lunar exobiology laboratory would be to examine samples collected from other planets (e.g., Mars) for the presence of extant or extinct life. By establishing a laboratory on the Moon, preliminary analyses could be conducted away from Earth, thus establishing that extraterrestrial materials are benign before their return to Earth for more extensive investigations. The Moon-based exobiology laboratory would have three major components for study of samples returned from other planets: (1) the search for extant life - this component would focus on the detection and identification of life forms using biological, physical, and chemical methods; (2) the search for extinct life - this component would concentrate on identification of extinct life using micropaleontological physical and chemical means; and (3) the search and evidence of chemical evolution - this component would be devoted to the detection and identification of molecules revealing prebiotic chemical evolution. POSSIBLE BIOMEDICAL APPLICATIONS AND LIMITATIONS OF A VARIABLE-FORCE CENTRIFUGE ON THE LUNAR SURFACE: A RESEARCH TOOL AND AN ENABLING RESOURCE **c51**
Keith L. Cowing *In* NASA. Johnson Space Center, The Second Conference on Lunar Bases and Space Activities of the 21st Century, Volume 1 Sep. 1992 p 353-357 (For primary document see N93-17414 05-91)
Avail: CASI HC A01/MF A03

Centrifuges will continue to serve as a valuable research tool in gaining an understanding of the biological significance of the inertial acceleration due to gravity. Space- and possibly lunar-based centrifuges will play a significant and enabling role with regard to the human component of future lunar and martian exploration, both as a means of accessing potential health and performance risks and as a means of alleviating these risks. Lunar-based centrifuges could be particularly useful as part of a program of physiologic countermeasures designed to alleviate the physical deconditioning that may result from prolonged exposure to a 1/6-g environment. Centrifuges on the lunar surface could also be used as part of a high-fidelity simulation of a trip to Mars. Other uses could include crew readaptation to 1 g, waste separation, materials processing, optical mirror production in situ on the Moon, and laboratory specimen separation. Author

(NASA-CR-191418; NAS 1.26:191418) Avail: CASI HC A03/MF A01

Highly stressed and nonpotential magnetic fields in solar active region are believed to be the site and source of M or X class flares which release as much as 10(exp 32) ergs in a periods of 10 to 1000 s with intense emission detected over most of the electromagnetic spectrum. Such M or X class flares are the most likely gamma-ray emission candidates since sheared magnetic field is the means of energy storage for flare events. We have studied the correlation between 'nonpotentiality' parameters such as 'shear angle' and maximum magnetic field strength with the occurrences gamma-ray events. Also the angle of deviation of the magnetic field from the line of sight was studied since the bremsstrahlung gamma-ray beam produced by relativistic ions and electrons is highly directional in the forward direction and required non-vertical field-lines for the detection of the disk-center events. A COMPARISON OF DATA FROM SOLMET/ERSATZ AND THE NATIONAL SOLAR RADIATION DATA BASE
W. Marion and D. Myers Nov. 1992 34 p
(Contract DE-AC02-83CH-10093)
(DE93-000018; NREL/TP-463-5118) Avail: CASI HC A03/MF A01

This report compares data from the new National Solar Radiation Data Base (NSRDB) with data from the earlier SOLMET/ERSATZ data base. It compares the two data bases, station-by-station, with respect to their long-term average daily values of global horizontal and direct normal solar radiation. We conclude that on an annual basis, NSRDB values for global horizontal radiation are within plus/minus 5 percent of SOLMET/ERSATZ values for 60 percent of the stations, more than 5 percent greater than the SOLMET/ERSATZ values for 30 percent of the stations, and more than 5 percent less than the SOLMET/ERSATZ values for 10 percent of the stations. On an annual basis for direct nominal radiation, the NSRDB values are with plus/minus 5 percent of the SOLMET/ERSATZ data for only 40 percent of the stations, more than 5 percent greater than the SOLMET/ERSATZ values for 45 percent of the stations, and more than 5 percent less than the SOLMET/ERSATZ values for 15 percent of the stations. In general, the NSRDB shows higher values of solar radiation for the eastern United States, particularly the Northeast, and lower values for some of the western states (Arizona, Colorado, Idaho, Nevada, New Mexico, Utah, and Wyoming). However, because some of the stations within a state show higher values of solar radiation while others show lower values, this generalization may be misleading when concerned with a particular station. Consequently, the appendices provide tables showing a station-by-station comparison of the NSRDB and SOLMET/ERSATZ data. In addition to comparing annual values, the tables compare the two data bases for the months of August and December. This comparison shows larger differences between the two data bases for December. LONG-TERM VARIATIONS IN THE GEOMAGNETIC ACTIVITY LEVEL. 1: A CONNECTION WITH SOLAR-WIND SOURCES
O. BorelloFilisetti (Politecnico di Torino, Italy), V. Mussino (Politecnico di Torino, Italy), M. Parisi, and M. Storini (Consiglio Nazionale delle Ricerche, Rome, Italy) 11 Apr. 1991 36 p Sponsored in part by Italian Ministry of University Research and Scientific Research and CNR
(Nota-Interna-978; ETN-92-92606) Avail: CASI HC A03/MF A01

The long term features in solar-terrestrial relations from 1868 to 1988 were studied by means of correlative analyses between monthly values of the aa index and Rz numbers. The role of each type of solar wind sources is underlined in connection with the different sunspot cycle phases. It is suggested that in general the solar transient activity dominates the ascending phases, while coronal hole features dominate the descending ones. The geomagnetic response to transient and corotating interplanetary disturbances seems to be the origin of such behavior, provided that the considered aa set be used as proxy data for solar wind features in the near Earth environment. An interplay between sunspot heliographic positions and polar coronal hole extensions towards the equator exists, as it comes out from the analysis of the sunspot cycle N.19. ESA

MEASUREMENTS AND CALCULATIONS OF THE CHARACTERISTICS FOR A SPACE-BASED NEUTRON SENSOR
A. Garnett, ed. Oct. 1992 28 p
(Contract W-7405-eng-36)
(DE93-001429; LA-12340-MS) Avail: CASI (US Sales Only)

Preliminary estimates of the impact of changes in the mission for

space-based verification sensors can be obtained by using computer simulations. This paper describes calculations and measurements to evaluate the performance of representative designs for neutron sensors. The calculations use programs recently developed at Los Alamos National Laboratory to combine physics models for the production of neutrons at high energies with conventional codes for neutron transport at lower energies. Included are discussions of the physics assumptions, comparisons between calculations and laboratory calibrations, energy-dependent detector response functions, investigations of spacecraft background, and several studies of alternative sensor designs. The results provide a basis for future evaluations of detailed proposals for possible sensors. DOE

Preliminary results are presented from cosmic ray tests of the SDC muon detector prototype module. The module consists of 30 drift cells. Each drift cell is a 9 m long, 73 mm inner diameter aluminum tube with simple field shaping electrodes. The anode wire is gold plated tungsten. The construction of the module makes use of the drift tubes as structural elements. The resolution and efficiency are approximately 200 microns and 99 percent, respectively. DOE

MEASUREMENTS OF THE COSMIC MICROWAVE BACKGROUND TEMPERATURE AT 1.47 GHz Ph.D. Thesis
M. J. Bensadoun Nov. 1991 135 p
(Contract DE-AC03-76SF-00098)
(DE93-000587; LBL-32436) Avail: CASI HC A07/MF A02

A radiofrequency-gain total power radiometer measured the intensity of the cosmic microwave background (CMB) at a frequency of 1.47 GHz (20.4 cm wavelength) from White Mountain, California, in September 1988 and from the South Pole, Antarctica, in December 1989. The CMB thermodynamic temperature, TCMB, is 2.27 +/- 0.25 K (68 percent C.L.) measured from White Mountain and 2.26 +/- 0.21 K from the South Pole site. The combined result is 2.27 +/- 0.19 K. The correction for galactic emission has been derived from scaled low-frequency maps and constitutes the main source of error. The atmospheric signal is found by extrapolation from zenith scan measurements at higher frequencies. The result is consistent with previous low-frequency measurements, including a measurement at 1.41 GHz (Levin et al. 1988) made with an earlier version of this instrument. The result is approximately 2.5 sigma (approximately 1 percent probability) from the 2.74 +/- 0.02 K global average CMB temperature. DOE

MILAGRO: A LOW ENERGY THRESHOLD EXTENSIVE AIR SHOWER ARRAY
G. Sinnis 1992 13 p Presented at the Towards a Major Atmospheric Cherenkov Detector for TeV Astro/Particle Physics, Palaiseau (France), 11-12 Jun. 1992
(Contract W-7405-eng-36)
(DE93-000852; LA-UR-92-3132; CONF-9206293-1) Avail: CASI HC A03/MF A01

Milagro is a proposed extensive air shower (EAS) array with a large water Cerenkov detector at its center. It will have a low energy threshold, approximately 500 GeV, and good angular resolution, approximately 0.4 degrees. With the large aperture and duty factor of an EAS array, and the energy threshold of an atmospheric Cerenkov telescope, it will be ideally poised to discover new, steady sources of very high energy gamma radiation similar to the Crab nebula, and transient phenomena analogous to the gamma ray bursts seen at lower energies. Here we describe the Milagro detector and give results of tests performed at the CYGNUS array that demonstrate the capabilities of the water Cerenkov technique in detecting and reconstructing extensive air showers. DOE

IMPROVED RESPONSE FUNCTIONS FOR GAMMA-RAY SKYSHINE ANALYSES
J. K. Shultis, R. E. Faw, and X. Deng (Kansas State Univ., Manhattan.) Sep. 1992 113 p
(Contract DE-AC04-76DP-00789)
(DE93-003230; SAND-92-7296) Avail: CASI HC A06/MF A02

A computationally simple method, based on line-beam response functions, is refined for estimating gamma skyshine dose rates. Critical to this method is the availability of an accurate approximation for the line-beam response function (LBRF). In this study, the LBRF is evaluated accurately with the point-kernel technique using recent photon interaction data. Various approximations to the LBRF are considered, and a three parameter formula is selected as the most practical approximation. By fitting the approximating formula to point-kernel results, a set of parameters is obtained that allows the LBRF to be quickly and accurately evaluated for energies between 0.01 and 15 MeV, for source-to-detector distances from 1 to 3000 m, and for beam angles from 0 to 180 degrees. This re-evaluation of the approximate LBRF gives better accuracy, especially at low energies, over a greater source-to-detector range than do previous LBRF approximations. A conical beam response function is also introduced for application to skyshine sources that are azimuthally symmetric about a vertical axis. The new response functions are then applied to three simple skyshine geometries (an open silo geometry, an infinite wall, and a rectangular four-wall building) and the results are compared to previous calculations and benchmark data. DOE

Villoresi (Consiglio Nazionale delle Ricerche, Rome, Italy), and N. L. Zangrilli (Consiglio Nazionale delle Ricerche, Rome, Italy) 26 Feb. 1991 68 p
(Nota-Interna-972; ETN-92-92600) Avail: CASI HC A04/MF A01

Pressure corrected data from the Rome (Italy) neutron monitor and barometric pressure data are given in tabular form for the year 1989, together with the graphs of the corrected intensity. The atmospheric pressure was measured by two digital barometers: one based on a high resolution force balance pressure transducer; the other based on a high accuracy capacitance sensor. The five minute rates of the monitor sections are recorded with the barometric value. The stability of the monitor is controlled by means of the section ratios. Periodical checks of the electronic equipment and multichannel tests of the counters are made. The pulse height distributions of the amplifier output pulses together with the discriminator input-output coincidence pulses, allow us to follow the stability of the gas pressure in the counter, high and low voltage power supplies, amplifier, and discriminator. ESA

NORTH-SOUTH ANISOTROPY DURING THE QUASI-STATIONARY MODULATION OF GALACTIC COSMIC RAYS

M. Storini (Consiglio Nazionale delle Ricerche, Rome, Italy), N. Iucci, and S. Pase 18 Mar. 1991 28 p Sponsored in part by Italian Space Agency
(Nota-Interna-975; ETN-92-92603) Avail: CASI HC A03/MF A01

High speed solar wind streams coming from coronal holes produce, in the interplanetary space, a quasi stationary modulation of galactic cosmic rays. This modulation was analyzed taking into account the charged particle isotropic intensity and the north-south anisotropy, derived from ground based measurements. The obtained results for the period Oct. 1964 to Dec. 1987 are summarized. Data from Bartels solar rotation n. 2034 (23 May to 18 Jun. 1982) are used to illustrate the north-south anisotropy phenomenology. The data analysis lead to the conclusion that the average north-south anisotropy behavior observed is related to the corresponding temporal variations detected and/or inferred in the interplanetary magnetic field and the solar wind bulk speed parameters. ESA

99 GENERAL

N93-15964# Office of Naval Research European Office, FPO New York, NY.
EUROPEAN SCIENCE NOTES INFORMATION BULLETIN: REPORTS ON CURRENT EUROPEAN AND MIDDLE EASTERN SCIENCE
1992 84 p
(AD-A257228; ONREUR-ESNIB-92-04) Avail: CASI HC A05/MF A01
European Science Notes Information Bulletin describes research being conducted and ideas being developed in Europe and the Middle East as reported by scientists assigned to the Office of Naval Research European Office and guest authors. It is published 6-8 times per year, on an irregular basis. GRA

N93-16113# Phillips Lab., Kirtland AFB, NM.
PATENT WRITE-UPS: PATENTS AVAILABLE FOR LICENSING Interim Report
Yolanda B. Allen 26 Jun. 1992 34 p
(AF Proj. 9991; AF Proj. 6106)
(AD-A256694; AD-E201163; PL-TR-92-2166; SR-271) Avail: CASI HC A03/MF A01
These patent write-ups were put together as a Phillips Laboratory technology transfer initiative. The write-ups are one page explanations of all the Phillips Laboratory, Geophysics Directorate, patents and patent pending inventions. Each write-up describes what the invention is, explains the background of the technology behind the invention, and lists the special features and performance characteristics of the invention. The hope for these write-ups is that they will get the word out about the patents that are available for licensing from the Geophysics Directorate of Phillips Laboratory. GRA

LANCHESTER: THE MAN
J. A. D. Ackroyd 1991 67 p Presented at the Lanchester Lecture for Royal Aeronautical Society Coventry Branch, England, 18 Sep. 1991
(Aero-Rept-9111; ETN-92-92776) Avail: CASI HC A04/MF A01
A lecture given at the Royal Aeronautical Society to celebrate the memory of Frederick William Lanchester is presented. A biographical sketch is given, and Lanchester's work on the following is discussed: motorcar engineering, aerodynamics, boundary layer theory, lift and drag wing theory. In the appendix the following are addressed: the vortex theory of lift, the vortex, the sine alpha incidence relation. ESA

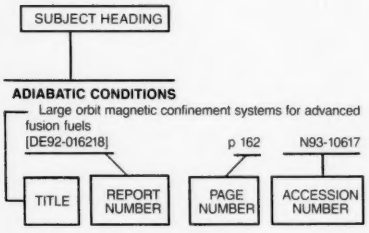
N93-16652*# National Aeronautics and Space Administration. Ames Research Center, Moffett Field, CA.
1991 RESEARCH AND TECHNOLOGY Technical Memorandum, Fiscal Year 1991
Oct. 1992 349 p LIMITED REPRODUCIBILITY: More than 20% of this document may be affected by color photographs Original contains color illustrations
(NASA-TM-103924; A-92063; NAS 1.15:103924) Avail: CASI HC A15/MF A03; 30 functional color pages
Selected research and technology activities at Ames Research Center, including the Moffett Field site and the Dryden Flight Research Facility, are summarized. These activities exemplify the Center's varied and productive research efforts for 1991. Author

N93-16749# Indian Inst. of Geomagnetism, Bombay. Dept. of Science and Technology.
ANNUAL REPORT, 1990 - 1991
1991 41 p
Avail: CASI HC A03/MF A01
The annual report describes in detail all the scientific activities of the Institute as well as some other events. Research work carried out by the Scientists of the Institute have been reported in 30 papers published or accepted for publication during 1990-91 in Indian and International journals. Institute's scientists also contributed 19 papers in National and International Symposia/Seminars/Workshops. Author

N93-16948# National Science Foundation, Washington, DC.
NATIONAL SCIENCE FOUNDATION ANNUAL REPORT, 1991
1991 62 p Original contains color illustrations
(NSF-92-1) Avail: CASI HC A04/MF A01
This annual report is both a retrospective look at the past year and an opportunity to reflect upon the future. The chapters covered include a directors overview, research reports, education and outreach, international news, instrumentation and facilities, and awards and organizational news. Author

N93-17760# Illinois Univ., Urbana. Materials Research Lab.
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN, MATERIALS RESEARCH LABORATORY PROGRESS REPORT, FY 1992
Jul. 1992 189 p
(Contract DE-FG02-91ER-45439)
(DE93-002655; DOE/ER-45439/132) Avail: CASI HC A09/MF A02
This interdisciplinary laboratory in the College of Engineering supports research in areas of condensed matter physics, solid state chemistry, and materials science. These research programs are developed with the assistance of faculty, students, and research associates in the departments of Physics, Materials Science and Engineering, Chemistry, Chemical Engineering, Electrical Engineering, Mechanical Engineering, and Nuclear Engineering. DOE

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

A

ABERRATION
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458

ABLATIVE MATERIALS
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027
SEP high performance composite materials: More than a job... a vocation
[DS-2134] p 1099 N93-17747

ABRASION RESISTANCE
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858

ABSORPTION COOLING
Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087

ABSORPTION CROSS SECTIONS
Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms
[DE93-001642] p 1292 N93-17345

ABSORPTION SPECTRA
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
X ray spectra of bright BL Lacertae objects observed with ROSAT p 1361 N93-17126
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264

ABSORPTIVITY
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143

ABSTRACTS
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932

ACCELEROMETERS
Study of precision accelerometers and fractal aggregates in microgravity, phase 2
[CTN-93-60616] p 1130 N93-16426
Study of precision accelerometers and fractal aggregates in microgravity
[CTN-93-60622] p 1168 N93-16935
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077

ACCESS CONTROL
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601

ACCRETION DISKS
The spectra of accretion discs in active galactic nuclei p 1368 N93-17111
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background p 1368 N93-17112
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data p 1368 N93-17113
The nonthermal model of disc accretion onto a magnetosphere p 1368 N93-17115

ACCUMULATIONS
The many disguises of accumulation
[TR-91-26] p 1237 N93-16369

ACCUMULATORS
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981

ACCURACY
Accurate and efficient layout extraction
[ISBN-90-9004806-5] p 1147 N93-16499
Precision and resolution in spectroscopic model fitting
[ISBN-90-6275-756-6] p 1104 N93-16582
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406

ACETALDEHYDE
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
Spectroscopic investigation of the vibrational quasi-continuum arising from internal rotation of a methyl group
[DE92-040509] p 1104 N93-16586
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854

ACETIC ACID
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134

ACETYLENE
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071

ACID BASE EQUILIBRIUM
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358

ACOUSTIC ATTENUATION
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
Consecutive plate acoustic suppressor apparatus and methods
[NASA-CASE-LEW-15430-1] p 1282 N93-17051

ACOUSTIC COUPLING
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications p 1085 N93-15780

ACOUSTIC EMISSION
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

ACOUSTIC EXCITATION
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813

ACOUSTIC FREQUENCIES
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems p 1165 N93-16786

ACOUSTIC IMAGING
Method of acoustic processing for acoustic image classification
[AD-D015454] p 1282 N93-16460

ACOUSTIC IMPEDANCE
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061

ACOUSTIC MEASUREMENT
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Method and apparatus for acoustically measuring rainfall
[AD-D015450] p 1213 N93-16457
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

ACOUSTIC PROPERTIES
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715

ACOUSTIC SCATTERING
Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121

ACOUSTICS
Acoustic tests structural predictions p 1081 N93-15750
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1169 N93-17041
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734

ACOUSTO-OPTICS
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
ACRYLATES
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984
ACRYLONITRILES
Surface epoxidation of elastomers
[AD-D015457] p 1123 N93-16436
ACTIVE CONTROL
Active control of foundation transmissibility using magnetostrictive actuators
[AD-A257135] p 1145 N93-16078
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
ACTIVE GALACTIC NUCLEI
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
Observational constraints on AGN models p 1360 N93-17097
Hard x ray observations of active galactic nuclei with SIGMA p 1360 N93-17100
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
First results from the Compton Observatory p 1366 N93-17102
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
Ginga results of type 2 AGN's and their contributions to the cosmic x ray background p 1367 N93-17105
An introduction to the pair-reflection model of X-ray spectra in AGN's p 1367 N93-17110
The spectra of accretion discs in active galactic nuclei p 1368 N93-17111
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background p 1368 N93-17112
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data p 1368 N93-17113
ROSAT observations of AGN p 1361 N93-17116
A deep ROSAT observation of the highly variable AGN 1E1403+5439 or ROSAT non-detection of the weak AGN 1E1403+5439 p 1361 N93-17122
Time variability of extragalactic sources in the ecliptic pole regions p 1370 N93-17123
Preliminary results on the properties of the EMSS AGN's as derived from the ROSAT all sky survey p 1362 N93-17129
Preliminary results from the ROSAT WFC all sky survey: A sample of low galactic column density AGN's p 1362 N93-17131
The central engine of AGN's and its cosmological evolution p 1372 N93-17138
The evolution of AGN's at x ray wavelengths p 1372 N93-17141
The hard x ray luminosity function and evolution of AGN p 1373 N93-17142
Energy spectrum of the cosmic x ray background: Some considerations based on the Ginga results p 1373 N93-17143
Origin of the cosmic x ray background radiation p 1373 N93-17146
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155
AGN and the x ray background: Concluding remarks p 1375 N93-17160
ACTIVE GALAXIES
ROSAT-IUE All Sky Survey (RIASS): First results on active galaxies p 1369 N93-17117
ACTIVITY (BIOLOGY)
Bright light delivery system

[AD-A257743] p 1252 N93-17669
ADAPTATION
Adaptation to transient postural perturbations
[NASA-CR-190959] p 1227 N93-16699
ADAPTIVE CONTROL
Nonlinear adaptive control using backpropagating neural networks
[AD-A256828] p 1257 N93-15687
Adaptive structures for precision controlled large space systems p 1078 N93-15730
Ground test validation for precision structures p 1085 N93-15785
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
Weld pool oscillation during gas tungsten arc welding
[ETN-92-92796] p 1177 N93-16568
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
ADAPTIVE FILTERS
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Fast training of a high-speed voice and data modem receiver
[ACTA-POLYTEC-SCAND-EL-67] p 1140 N93-17632
ADAPTIVE OPTICS
Adaptive optics for laser power beaming p 1305 N93-17307
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
ADENINES
Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network
[AD-A256789] p 1142 N93-15703
ADHESION
Adhesion in atomic scale metal contacts
[AD-A257137] p 1121 N93-16142
ADHESIVE BONDING
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073
ADHESIVES
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
ADIABATIC CONDITIONS
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
ADJOINTS
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
ADRENERGICS
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
ADSORPTION
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
Theory of field adsorption of hydrogen
[AD-A257139] p 1102 N93-15996
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158
Adsorption of a binary gas mixture which laterally interacts on a random heterogeneous surface
[DE93-000706] p 1103 N93-16227
Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175
Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373
ADVANCED VERY HIGH RESOLUTION RADIOMETER
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755
ADVECTION
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892
AERIAL PHOTOGRAPHY
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
AERIAL RECONNAISSANCE
A new ground test for determining the resolution of pushbroom sensors
[AD-A257193] p 1189 N93-16002
AEROACOUSTICS
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715
AEROASSIST
Robust approximate optimal guidance strategies for aeroassisted orbital transfer missions p 1074 N93-16518
AERODYNAMIC CHARACTERISTICS
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
Modeling and control study of the NASA 0.3-meter transonic cryogenic tunnel for use with sulfur hexafluoride medium
[NASA-CR-189737] p 1157 N93-16379
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756
AERODYNAMIC COEFFICIENTS
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
AERODYNAMIC CONFIGURATIONS
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931

An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567

AERODYNAMIC DRAG
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

AERODYNAMIC FORCES
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797

AERODYNAMIC LOADS
Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660

AERODYNAMIC STABILITY
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670

AERODYNAMIC STALLING
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157

AERODYNAMICS
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
The Goldstein Aeronautical Engineering Research Laboratory
[AERO-REPT-9109] p 1053 N93-16465
1991 research and technology
[NASA-TM-103924] p 1402 N93-16652
National Aeronautics and Space Administration p 1358 N93-17091
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740
Hypersonic reconnaissance aircraft
[NASA-CR-192049] p 1064 N93-17804

AEROELASTICITY
Aeroelastic stability and response of rotating structures
[NASA-CR-191803] p 1068 N93-16560
Developing a control system for ARES 2 p 1069 N93-16769

AERONAUTICAL ENGINEERING
Review of aeronautical fatigue investigation activities developed in Alenia-GAT during the period May 1990 - March 1991
[ETN-92-92884] p 1061 N93-16287
The Goldstein Aeronautical Engineering Research Laboratory
[AERO-REPT-9109] p 1053 N93-16465
Aeronautical Engineering Group publications: 1950 - present
[AERO-REPT-9108] p 1355 N93-16563
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325

AEROSOLS
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
Aerosol transport and global models
[DE93-001618] p 1209 N93-16969
Generation of aerosolized particulate contamination by the wear of stainless steels
[DE93-000742] p 1115 N93-17047
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

AEROSPACE ENGINEERING
Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
1991 research and technology
[NASA-TM-103924] p 1402 N93-16652
The F-18 systems research aircraft facility
[NASA-TM-4433] p 1072 N93-16753
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
National Aeronautics and Space Administration p 1358 N93-17091
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

AEROSPACE ENVIRONMENTS
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
Study of high energy particles and protective layers for materials
[CTN-93-60613] p 1124 N93-16545
Study of an orbital accelerator for ion implantation and of protective coatings for materials
[CTN-93-60614] p 1298 N93-16546
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Space environmental effects on polymers and composites p 1128 N93-17302

AEROSPACE INDUSTRY
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
The future of management: The NASA paradigm p 1350 N93-16859

AEROSPACE MEDICINE
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 1224 N93-15824
Adaptation to transient postural perturbations
[NASA-CR-190959] p 1227 N93-16699
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

AEROSPACE PLANES
National Aeronautics and Space Administration p 1358 N93-17091

AEROSPACE SAFETY
Human safety in the lunar environment p 1229 N93-16867

AEROSPACE SCIENCES
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
1991 research and technology
[NASA-TM-103924] p 1402 N93-16652
Implementation of educational broadcasting in space, phase 1
[CTN-93-60623] p 1332 N93-16735

AEROSPACE SYSTEMS
Technical needs and research opportunities provided by projected aeronautical and space systems
[NASA-CR-192124] p 1073 N93-16629
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756

AEROSPACE TECHNOLOGY TRANSFER
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

AEROSPACE VEHICLES
Multidisciplinary design optimization using response surface analysis p 1065 N93-16796

AEROTHERMOCHEMISTRY
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470

AEROTHERMODYNAMICS
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543
Smaller expendable turbojets p 1067 N93-17621

AGGLOMERATION
Study of precision accelerometers and fractal aggregates in microgravity, phase 2
[CTN-93-60616] p 1130 N93-16426
Study of precision accelerometers and fractal aggregates in microgravity
[CTN-93-60622] p 1168 N93-16935

AGING (MATERIALS)
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766

AGING (METALLURGY)
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479

AGRICULTURE
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271

AIR BREATHING ENGINES
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Development testing of throttleable ducted rockets p 1092 N93-17610
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618

AIR CONDITIONING
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042

AIR CONDITIONING EQUIPMENT
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042

AIR DEFENSE
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

AIR FLOW
Generation of aerosolized particulate contamination by the wear of stainless steels
[DE93-000742] p 1115 N93-17047
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation
[DE93-001554] p 1203 N93-17050
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390
Indoor ozone concentrations: Ventilation rate impacts and mechanisms of outdoor concentration attenuation
[DE93-000633] p 1205 N93-17576

AIR LAND INTERACTIONS
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

AIR POLLUTION
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092

Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999
Generation of aerosolized particulate contamination by the wear of stainless steels
[DE93-000742] p 1115 N93-17047
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation
[DE93-001554] p 1203 N93-17050
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

AIR QUALITY
A low emission vehicle procurement approach for Washington state
[DE92-040561] p 1176 N93-16406
S/EV 92 (Solar and Electric Vehicles): Proceedings, volume 1
[DE93-001501] p 1180 N93-17577

AIR TO AIR MISSILES
Potential missile flight performance gains from improvements to the propulsion system
p 1092 N93-17609

AIR TO SURFACE MISSILES
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067
Comparison of performances of different circular intakes p 1067 N93-17616

AIR TRAFFIC
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577
Results of DATAS investigation of illegal mode S ID's at JFK Airport
[DOT/FAA/CT-92/26] p 1059 N93-16841
Proceedings of the AIAA/FAA Joint Symposium on General Aviation Systems
[AD-A257780] p 1053 N93-17732

AIR TRAFFIC CONTROL
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
Terminal area traffic management
[LR-684] p 1058 N93-16213
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
Proceedings of the AIAA/FAA Joint Symposium on General Aviation Systems
[AD-A257780] p 1053 N93-17732

AIR TRANSPORTATION
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577

AIR WATER INTERACTIONS
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

AIRBORNE EQUIPMENT
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
Example of statistical techniques applied to analysis of measurements of the landing airborne manoeuvre. (Multiple linear regression with two independent variables and one dependent variable.)
[ESDU-92022] p 1062 N93-16636

AIRCRAFT ACCIDENTS
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834

AIRCRAFT CARRIERS
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

AIRCRAFT CONFIGURATIONS
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697
The design of a long range megatransport aircraft
[NASA-CR-192077] p 1064 N93-17711

AIRCRAFT CONSTRUCTION MATERIALS
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704

AIRCRAFT CONTROL
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670

AIRCRAFT DESIGN
Pitch control margin at high angle of attack-quantitative requirements (flight test correlation with simulation predictions)
[AD-A257418] p 1068 N93-16009
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567
1991 research and technology
[NASA-TM-103924] p 1402 N93-16652
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693
The F-18 systems research aircraft facility
[NASA-TM-4433] p 1072 N93-16753
The NASA High-Speed Research Program
p 1064 N93-16761
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
A domain-specific design architecture for composite material design and aircraft part redesign
p 1250 N93-17522
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
The design of a long range megatransport aircraft
[NASA-CR-192077] p 1064 N93-17711
Exodus: Prime Mover
[NASA-CR-192051] p 1064 N93-17803
Hypersonic reconnaissance aircraft
[NASA-CR-192049] p 1064 N93-17804

AIRCRAFT ENGINES
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746

AIRCRAFT EQUIPMENT
Test and integration concept for complex helicopter avionic systems
[MBB-UD-0605-91-PUB] p 1065 N93-17547

AIRCRAFT HAZARDS
Aircraft wing compartment liner concept to reduce fuel spillage
[DOT/FAA/CT-TN92/34] p 1062 N93-17219

AIRCRAFT INSTRUMENTS
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

AIRCRAFT LANDING
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343

AIRCRAFT MAINTENANCE
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
Usage monitoring in the RNLN Fleet Air Arm (Marine Luchtvaardienst)
[NLR-TP-91070-U] p 1062 N93-17394
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines
[AD-A257754] p 1067 N93-17695
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740

AIRCRAFT MANEUVERS
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660

AIRCRAFT MODELS
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396

AIRCRAFT NOISE
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715

AIRCRAFT PERFORMANCE
Example of statistical techniques applied to analysis of measurements of the landing airborne manoeuvre. (Multiple linear regression with two independent variables and one dependent variable.)
[ESDU-92022] p 1062 N93-16636
The role of under-determined approximations in engineering and science application
p 1274 N93-16763
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694

AIRCRAFT PILOTS
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

AIRCRAFT SAFETY
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686

AIRCRAFT STABILITY
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694

AIRCRAFT STRUCTURES
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403

Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660

AIRFOIL PROFILES
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920

AIRFOILS
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
Wind tunnel seeding particles for laser velocimeter p 1057 N93-16770
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704

AIRFRAME MATERIALS
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540

AIRGLOW
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137

AIRLINE OPERATIONS
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189

AIRPORTS
Development of a unified airport pavement analysis and design system p 1071 N93-16317
Unified airport pavement design procedure p 1071 N93-16318
Three-dimensional stress analysis of multilayered airport pavements: Integral transform approach p 1072 N93-16319
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577
Results of DATAS investigation of illegal mode S ID's at JFK Airport
[DOT/FAA/CT-92/26] p 1059 N93-16841
Estimating the regional economic significance of airports
[AD-A257658] p 1073 N93-17793

ALCOHOLS
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

ALGAE
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459

ALGEBRA
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
Normal forms in real time process algebra
[CWI-CS-R9149] p 1265 N93-16367
Implementing higher-order algebraic specifications
[CWI-CS-R9150] p 1265 N93-16368
Symmetry of wavefunctions in quantum algebras and supersymmetry
[DE92-041129] p 1265 N93-16551
A short proof of the decidability of bisimulation for normal BPA processed
[CWI-CS-R9151] p 1267 N93-16731
Datatype laws without signatures
[CWI-CS-R9133] p 1268 N93-16851
The state operator in real time process algebra
[CWI-CS-R9140] p 1269 N93-16852
An algebraic foundation for FORTRAN 90 communication intrinsics
[DE92-040393] p 1269 N93-16990
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
Fine-grain incremental implementation of algebraic specifications
[CWI-CS-R9159] p 1270 N93-17489
Proceedings of the 2nd International Conference on Algebraic Methodology and Software Technology
[AD-A257487] p 1272 N93-17664
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781

ALGORITHMS
Micrometer FX/DLX: A pedagogic compiler
[AD-A256821] p 1232 N93-15684
Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
Development of an interactive code for updating dynamic finite element models p 1078 N93-15732
Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations p 1154 N93-15802
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Time stability of Monte Carlo device simulation
[DE92-019375] p 1275 N93-15884
A timing analysis of level-clocked circuitry
[AD-A256796] p 1143 N93-15888
Automatic differentiation bibliography
[DE92-040599] p 1263 N93-15944
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
On increasing the effective blocking factor of a matrix for a given cache organization
[AD-A257342] p 1351 N93-15995
Low sensitivity interpolation using feed-forward neural networks with one hidden layer
[AD-A257306] p 1258 N93-16006
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Hermite interpolation algorithm for 2D fracture mechanics
[DE92-041266] p 1184 N93-16097
Implementation of a parallel stochastic solving method for linearly constrained concave global optimization problems using parallel computing
[AD-A257112] p 1255 N93-16119
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Enhancement of multiple target track simulation
[AD-A257224] p 1278 N93-16236
Studies in estimation theory, applications, and implementation
[AD-A256964] p 1275 N93-16250
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860
[DE93-000460] p 1255 N93-16272
The binary collision approximation: Background and introduction
[DE92-040887] p 1285 N93-16276
Equivalent flexibility modelling for the recursive simulation of robot manipulator dynamics
[NLR-TP-89076-U] p 1259 N93-16291
Enhancement of video imagery by modified intensity-dependent spatial summation
[AD-A255689] p 1139 N93-16300
Experiments with an incremental closure algorithm
[MEMO-INF-92-33] p 1236 N93-16336
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Advanced parallel systems
[AD-A256958] p 1255 N93-16434
TOPICS: A contribution to analog design automation
[ISBN-90-9004786-7] p 1238 N93-16471
Uniform convergence estimates for multigrid V-cycle algorithms with less than full elliptic regularity
[DE92-041275] p 1238 N93-16532
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Scalable problems and memory bounded speedup
[NASA-CR-189726] p 1230 N93-16554
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Digital simulation and discrete modelling of a chaotic system
[RR-447] p 1279 N93-16561
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723
Open problems in rewriting
[CWI-CS-R9114] p 1267 N93-16727
Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity
[ITN-93-85180] p 1208 N93-16744
The role of under-determined approximations in engineering and science application p 1274 N93-16763
Antenna analysis using neural networks p 1142 N93-16790
A linear time algorithm for recognizing interval orders
[MEMO-1046] p 1242 N93-16846
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939
Exploratory designs for computational experiments
[DE93-002354] p 1243 N93-17040
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
An algorithm to quantify the performance of the JOVE program p 1254 N93-17306
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
CAD/CAM for assembly planning
[ISBN-90-370-0057-6] p 1246 N93-17490
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507
Automating the design of scientific computing software p 1249 N93-17516
A rewrite approach to polynomial ideal theory
[CWI-CS-R9160] p 1271 N93-17536
On solving the Diophantine equation (x cubed) + (y cubed) + (z cubed) = k on a vector computer
[CWI-NM-R9121] p 1271 N93-17556
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585
A contribution to the theory and practice of multivariate splines
[ISBN-90-9004534-1] p 1272 N93-17591
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595
Implementation of the one bit spectral correlation algorithm
[AD-A257748] p 1141 N93-17671
Scan-based switching tests
[AD-A257712] p 1151 N93-17685
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730

A generalized asymptoticity problem in max algebra; the two-dimensional case
[REPT-92-29] p 1273 N93-17735
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

ALIGNMENT
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402

ALKANES
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585

ALKYL COMPOUNDS
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
Substituted 1,1,1-triaryl 2,2,2-trifluoroethanes and processes for their synthesis
[NASA-CASE-LEW-14345-7] p 1095 N93-17412

ALL SKY PHOTOGRAPHY
Preliminary results from the ROSAT WFC all sky survey: A sample of low galactic column density AGN's
p 1362 N93-17131
Optically selected quasars with Z greater than 4
p 1363 N93-17158

ALLOYS
Testing and characterisation of metallic materials for structural analysis of high temperature components
p 1082 N93-15757
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753

ALPHA PARTICLES
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655

ALTERNATING CURRENT
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086

ALTERNATIVES
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042

ALUMINATES
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908

ALUMINIDES
The titanium-aluminum phase diagram: A review of the near Ti-50 at. pct. Al phase fields
[AD-A255685] p 1112 N93-16299
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184

ALUMINUM
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
A study of the Lute Metering Structure
p 1189 N93-17294
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

ALUMINUM ALLOYS
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
The evolution of electronic structure in Al(n)Co(m)
[DE92-040737] p 1314 N93-15833
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132
Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148
The titanium-aluminum phase diagram: A review of the near Ti-50 at. pct. Al phase fields
[AD-A255685] p 1112 N93-16299
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641
Fatigue damage study in aluminum-2024 T3 alloys
p 1118 N93-16767
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562

ALUMINUM ARSENIDES
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

ALUMINUM CHLORIDES
The AlCl absorption feature in solid rocket plume radiation
[AD-A256645] p 1089 N93-15700
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015

ALUMINUM GALLIUM ARSENIDES
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A257419] p 1171 N93-15864
Optoelectronic materials center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A257136] p 1301 N93-16079
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261

ALUMINUM NITRIDES
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252

ALUMINUM OXIDES
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

ALUMINUM SILICATES
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372

AMAZON REGION (SOUTH AMERICA)
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748

AMBIENT TEMPERATURE
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278

AMBIPOLAR DIFFUSION
Multi-ion ambipolar diffusion
[AD-A256568] p 1283 N93-15659

AMINES
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166

AMMUNITION
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966

AMORPHOUS MATERIALS
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652

AMORPHOUS SEMICONDUCTORS
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641
Enhanced polarization-dependent coupling between an optical waveguide and laterally coupled photodetector
[MBB-Z-0338-90-PUB] p 1305 N93-17642

AMPLIFICATION
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

AMPLIFIERS
The unofficial AMPLEX owner's manual
[DE93-001437] p 1148 N93-16651
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682

AMPLITUDE DISTRIBUTION ANALYSIS
Mechanism of the mode selection in bifurcations
p 1162 N93-16825

ANALOG CIRCUITS
TOPICS: A contribution to analog design automation
[ISBN-90-9004786-7] p 1238 N93-16471
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076

ANALOG COMPUTERS
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077

ANALOG TO DIGITAL CONVERTERS
Evaluation of fast ADC's
[DE92-040582] p 1145 N93-16013

Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle
p 1057 N93-16784
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076

ANALOGS
Earth-based analogs of lunar and planetary facilities
p 1396 N93-17441

ANALYSIS (MATHEMATICS)
IERS standards for 1992
[AD-A257973] p 1192 N93-17739
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

ANALYTIC FUNCTIONS
On Gupta-Bleuler quantization of systems with second-class constants
[NIKHEF-H/92-05] p 1264 N93-16342

ANALYTICAL CHEMISTRY
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348

ANEMOMETERS
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
[IMFL-91-31] p 1056 N93-17542

ANGLE OF ATTACK
Effect of a rotating propeller on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638

ANGLES (GEOMETRY)
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1169 N93-17041

ANGULAR CORRELATION
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371

ANGULAR DISTRIBUTION
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696

ANGULAR RESOLUTION
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371

ANGULAR VELOCITY
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402

ANHYDRIDES
Substituted 1,1,1-triaryl 2,2,2-trifluoroethanes and processes for their synthesis
[NASA-CASE-LEW-14345-7] p 1095 N93-17412

ANIONS
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358

ANISOTROPIC MEDIA
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386

ANISOTROPY
NDE for thick section composites
[AD-A257292] p 1181 N93-15837
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449
North-south anisotropy during the quasi-stationary modulation of galactic cosmic rays
[NOTA-INTERNA-975] p 1400 N93-17647

ANNEALING
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Dependence of buried CoSi2 resistivity on ion implantation and annealing conditions
[DE92-010080] p 1322 N93-16930
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365

ANNIHILATION REACTIONS
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016
Evidence for the dominance of an I(sup G)J(sup PC) = 0(+)0(++) resonance in p(bar)n decay to 2 pi(+)
[PREPRINT-885] p 1290 N93-17021
Evidence of an I(sup G)J(sup PC) = O(+)O(++) resonance at 1.39 GeV/sq c and confutation of the zeta(1480) in a reanalysis of the p(bar)n decay to 2 pi(+)-3 pi(-) annihilation at rest
[PREPRINT-826] p 1291 N93-17222

ANNULAR FLOW
Smaller expendable turbojets p 1067 N93-17621

ANODES
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278

ANODIZING
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667

ANTARCTIC REGIONS
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Epidemiologic research in Antarctica
p 1221 N93-16800
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801
NASA/NSF Antarctic Science Working Group
p 1222 N93-16802
NASA/NSF Workshop on Antarctic Research
p 1222 N93-16803
Immunology presentation at the 1990 NASA/NSF Antarctica Biomedical Science Working Group
p 1222 N93-16806
Earth-based analogs of lunar and planetary facilities
p 1396 N93-17441
Multifractal cloud properties data assessment
[DE93-002638] p 1218 N93-17785

ANTENNA ARRAYS
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Orbital manoeuvre effects on large flexible antennae
p 1078 N93-15729
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Broadband quadrifilar phased array helix
[AD-D015506] p 1139 N93-16519
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616

ANTENNA DESIGN
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
A systematic approach for the DRSS IOL APM design
p 1081 N93-15753
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
TELECOM 2 deployable reflectors
p 1082 N93-15761
Dynamic of large reflectors p 1084 N93-15773
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Broadband quadrifilar phased array helix
[AD-D015506] p 1139 N93-16519
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191807] p 1230 N93-16709

ANTENNA FEEDS
A systematic approach for the DRSS IOL APM design
p 1081 N93-15753
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207

ANTENNA RADIATION PATTERNS
Optimal linear array heading in a directional noise field
[AD-A257336] p 1137 N93-15991
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207

ANTHROPOLOGY
Space migrations: Anthropology and the humanization of space p 1229 N93-16862

ANTHROPOMETRY
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619

ANTIBODIES
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037

ANTIFERROMAGNETISM
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278
Phase diagram by frustrated vortices in Potts models
[ROM1F-92-860] p 1281 N93-17217
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375

ANTIFRICTION BEARINGS
Radial spline assembly for antifriction bearings
[NASA-CASE-MFS-28629-1] p 1179 N93-17084

ANTIGENS
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037

ANTIMISSILE DEFENSE
Strategic defense initiative: Estimates of brilliant pebbles' effectiveness are based on many unproven assumptions
[AD-A256810] p 1277 N93-15679
Strategic defense initiative: 15-year funding requirements
[AD-A256738] p 1277 N93-16070
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355

ANTIMONY ALLOYS
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132

ANTIPROTONS
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
Evidence for the dominance of an I(sup G)J(sup PC) = 0(+)0(++) resonance in p(bar)n decay to 2 pi(+)
[PREPRINT-885] p 1290 N93-17021
Evidence of an I(sup G)J(sup PC) = O(+)O(++) resonance at 1.39 GeV/sq c and confutation of the zeta(1480) in a reanalysis of the p(bar)n decay to 2 pi(+)-3 pi(-) annihilation at rest
[PREPRINT-826] p 1291 N93-17222
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231

ANTIRADIATION MISSILES
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059

ANTIREFLECTION COATINGS
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643

ANTISUBMARINE WARFARE AIRCRAFT
Usage monitoring in the RNLN Fleet Air Arm (Marine Luchtvaarldienst)
[NLR-TP-91070-U] p 1062 N93-17394

APERTURES
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter
[AD-A257694] p 1141 N93-17689

APPLICATION SPECIFIC INTEGRATED CIRCUITS
Spacecraft optical disk recorder memory buffer control
p 1170 N93-16773

APPLICATIONS PROGRAMS (COMPUTERS)
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695

Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Lewis online travel system: Preparer's/traveler's manual, release 1.0
[NASA-CR-190776] p 1254 N93-15789
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674
SAFSIM input manual: A computer program for the engineering simulation of flow systems
[DE93-002738] p 1163 N93-16922
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations
[NASA-TP-3315] p 1066 N93-16941
Software Engineering Laboratory Ada performance study: Results and implications p 1245 N93-17172
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
SEDS1 mission software verification using a signal simulator p 1254 N93-17321
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
Domain specific software architectures: Command and control p 1247 N93-17503
Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Automating FEA programming p 1251 N93-17524
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666
Microcomputer simulation of a fourier approach to optical wave propagation
[AD-A257598] p 1305 N93-17796

APPROACH
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715

APPROACH CONTROL
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498

APPROPRIATIONS
Strategic defense initiative: 15-year funding requirements
[AD-A256738] p 1277 N93-16070
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089
National Aeronautics and Space Administration p 1358 N93-17091

APPROXIMATION
Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda $(1 + z/d)^{sup\ d)}$
[W-9205] p 1264 N93-16354
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
The role of under-determined approximations in engineering and science application p 1274 N93-16763
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690
IR materials producibility
[AD-A257695] p 1305 N93-17691

AQUEOUS SOLUTIONS
Thermal diffusion processes in aqueous sodium chloride solutions
[DE93-002596] p 1105 N93-16656
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358

ARC MELTING
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932

ARC SPRAYING
Diagnostic behavior of the Wire Arc Plasma spray process
[DE93-000717] p 1308 N93-16229
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229

ARCHAEBACTERIA
New class of lubricants derived from archaebacterial lipids
[AD-D015481] p 1124 N93-16487

ARCHITECTURE
Lunar architecture and urbanism p 1396 N93-17440
Preliminary design study of lunar housing configurations p 1229 N93-17443
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447

ARCHITECTURE (COMPUTERS)
Micrometer FX/DLX: A pedagogic compiler
[AD-A256821] p 1232 N93-15684
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863
The Sandia Airborne Computer (SANDAC)
[DE92-014046] p 1231 N93-15878
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
A pipelined, high-precision FFT architecture
[AD-A257235] p 1263 N93-15969
Spacecraft command and control using AI planning techniques. The O-Plan2 project
[AD-A257395] p 1258 N93-16008
Proceedings of the MIT Student Workshop on VLSI and Parallel Systems
[AD-A256795] p 1145 N93-16054
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Fault tolerant real-time systems
[AD-A257352] p 1235 N93-16174
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems p 1353 N93-16322
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
Open systems storage platforms p 1355 N93-16333
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Parallel processing for linear programming
[ISBN-90-3275-754-5] p 1256 N93-16565
TMN: Introduction and interpretation
[MEMO-INF-92-40] p 1140 N93-16592
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723
Exploratory designs for computational experiments
[DE93-002354] p 1243 N93-17040
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
Neural network architectures to analyze OPAD data p 1262 N93-17336
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
Domain specific software architectures: Command and control p 1247 N93-17503
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797

ARCTIC OCEAN
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843

ARCTIC REGIONS
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801

ARGON
Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652

ARGON LASERS
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

ARIANE LAUNCH VEHICLE
Experimental approach on the pyrotechnical shock reduction of Ariane-5 upper stage p 1075 N93-15764
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
Nonlinear analysis of Ariane 5 engine frame
[LR-678] p 1074 N93-16284

ARID LANDS
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382

ARM (ANATOMY)
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087

ARMED FORCES (UNITED STATES)
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797

ARMOR
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
Impact on ceramic faced armour
[ETN-92-92797] p 1124 N93-16569

AROMATIC COMPOUNDS
Understanding crystallinity in aromatic polyimides p 1128 N93-16764

ARSENIC
Conduction in ion implanted single crystal diamond
[DE92-040861] p 1317 N93-16164

ARTERIOSCLEROSIS
Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine
[DE92-040338] p 1172 N93-16098

ARTIFICIAL INTELLIGENCE
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876

Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
Project proposal active vision
[AD-A256490] p 1258 N93-15934
Spacecraft command and control using AI planning techniques. The O-Plan2 project
[AD-A257395] p 1258 N93-16008
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
Increasingly automated procedure acquisition in dynamic systems
[NASA-TM-108112] p 1241 N93-16684
Utilizing semantic networks to database and retrieve generalized stochastic colored Petri nets
[NASA-CR-191853] p 1355 N93-16707
Tradeoffs in the utility of learned knowledge
[NASA-TM-108111] p 1242 N93-16750
An intelligent decomposition approach for efficient design of non-hierarchic systems p 1254 N93-16762
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Automating software design system DESTA
p 1250 N93-17519
Domain-specific functional software testing: A progress report p 1250 N93-17521
A domain-specific design architecture for composite material design and aircraft part redesign
p 1250 N93-17522
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665

ARTILLERY
Ramjet propulsion for advanced projectiles
p 1067 N93-17615

ASCENT TRAJECTORIES
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540

ASIA
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964

ASPECT RATIO
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Stability of elliptical vortices
[ITN-93-85181] p 1159 N93-16733

ASPHALT
Thermoviscoelastic analysis of pavements
p 1070 N93-16313
State of the art review of rutting and cracking inpavements p 1071 N93-16316
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708

ASPHERICITY
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104

ASSAYING
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049

ASSEMBLING
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663

ASSEMBLY
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622

ASTEROID MISSIONS
Ground-based observation of near-Earth asteroids
p 1360 N93-16879
Asteroid resources p 1380 N93-16880
Asteroid mining p 1381 N93-16884

ASTEROIDS
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Issues for further study p 1379 N93-16874
Ground-based observation of near-Earth asteroids
p 1360 N93-16879
Asteroid resources p 1380 N93-16880
Asteroid mining p 1381 N93-16884
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Utilization of space resources in the space transportation system p 1384 N93-16912

ASTROMETRY
Radio astrometry from the Moon
p 1363 N93-17452

ASTRONAUTS
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805

ASTRONOMICAL CATALOGS
Hubble space telescope: The GO and GTO observing programs, version 3.0
[NASA-CR-191290] p 1359 N93-16949
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155

ASTRONOMICAL MODELS
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225

ASTRONOMICAL OBSERVATORIES
A second generation expert system for checking and diagnosing AXAF's electric power system
p 1152 N93-17287
Astronomy on the Moon: Geological considerations
[SOEST-CONTRIB-2399] p 1363 N93-17434
Some astronomical challenges for the twenty-first century p 1363 N93-17451
Required technologies for lunar astronomical observatories p 1363 N93-17453
Environmental effects on lunar astronomical observatories p 1363 N93-17454
Lunar base activities and the lunar environment
p 1398 N93-17455

ASTRONOMICAL PHOTOMETRY
Hubble space telescope: The GO and GTO observing programs, version 3.0
[NASA-CR-191290] p 1359 N93-16949
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120
Selection of faint quasars based on variability
p 1363 N93-17156

ASTRONOMICAL SATELLITES
Ginga results of type 2 AGN's and their contributions to the cosmic x ray background p 1367 N93-17105
Energy spectrum of the cosmic x ray background: Some considerations based on the Ginga results
p 1373 N93-17143

ASTRONOMICAL SPECTROSCOPY
The Prospector mission
[DE93-000656] p 1385 N93-17194

ASTRONOMY
Some astronomical challenges for the twenty-first century p 1363 N93-17451

ASTROPHYSICS
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
Some astronomical challenges for the twenty-first century p 1363 N93-17451
Research in particle physics
[DE92-041135] p 1293 N93-17475
Research in elementary particle physics
[DE93-003153] p 1294 N93-17488

ASYMMETRY
Effect of sonic boom asymmetry on subjective loudness
[NASA-TM-107708] p 1282 N93-16755
A Boltzmann-equation approach to the magnetoresistance of ferromagnetic-normal metallic multilayers
[DE92-041213] p 1270 N93-17361

ASYMPTOTIC METHODS
Domain decomposition as a mechanism for using asymptotic methods
[DE92-040759] p 1263 N93-16201
A generalized asymptoticity problem in max algebra; the two-dimensional case
[REPT-92-29] p 1273 N93-17735
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

ASYMPTOTIC PROPERTIES
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231
A generalized asymptoticity problem in max algebra; the two-dimensional case
[REPT-92-29] p 1273 N93-17735
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736

ATLANTIC OCEAN
Meridional circulation in the tropical North Atlantic
[AD-A256906] p 1219 N93-16024

ATMOSPHERIC BOUNDARY LAYER
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480

ATMOSPHERIC CHEMISTRY
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781
Aerosol transport and global models
[DE93-001618] p 1209 N93-16969
Effects of the Mount Pinatubo eruption on the chemistry, radiative, and transport processes in the stratosphere
[DE93-001508] p 1203 N93-17211

ATMOSPHERIC CIRCULATION
Natural and anthropogenic climate change
[DE93-000898] p 1200 N93-16162
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies
p 1214 N93-16507
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation
[DE93-001554] p 1203 N93-17050
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
Modeling the uncertain impacts of climate change
[DE92-041339] p 1204 N93-17370
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

ATMOSPHERIC COMPOSITION
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781

Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344
An artificially generated atmosphere near a lunar base p 1398 N93-17456
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

ATMOSPHERIC CORRECTION
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514

ATMOSPHERIC DENSITY
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171

ATMOSPHERIC EFFECTS
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737

ATMOSPHERIC ELECTRICITY
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170

ATMOSPHERIC GENERAL CIRCULATION MODELS
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Modeling the uncertain impacts of climate change
[DE92-041339] p 1204 N93-17370
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

ATMOSPHERIC IONIZATION
Experimenter's data package for the descending layers rocket
[NASA-TM-108591] p 1207 N93-16461

ATMOSPHERIC LASERS
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702

ATMOSPHERIC MODELS
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies p 1214 N93-16507
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
Aerosol transport and global models
[DE93-001618] p 1209 N93-16969
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744

ATMOSPHERIC MOISTURE
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153

ATMOSPHERIC PHYSICS
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683
Annual report, 1990 - 1991 p 1402 N93-16749

ATMOSPHERIC PRESSURE
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626
Cosmic ray NM-64 neutron monitor data-18
[NOTA-INTERNA-972] p 1400 N93-17627

ATMOSPHERIC RADIATION
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

ATMOSPHERIC SOUNDING
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

ATMOSPHERIC TEMPERATURE
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496

ATMOSPHERIC TURBULENCE
Turbulence research: Where should we go? p 1160 N93-16812
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480

ATOMIC BEAMS
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

ATOMIC CLOCKS
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844

ATOMIC COLLISIONS
Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885
The binary collision approximation: Background and introduction
[DE92-040887] p 1285 N93-16276
Atomic collision physics: A summary and some projections
[DE92-040638] p 1287 N93-16407

ATOMIC ENERGY LEVELS
Spectroscopic and magnetic studies of tetravalent Pa and trivalent Th compounds
[DE92-041214] p 1100 N93-15676

ATOMIC EXCITATIONS
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
Relativistic calculations of excitation and ionization of highly charged ions by electron impact
[DE93-002129] p 1296 N93-17783

ATOMIC INTERACTIONS
Adhesion in atomic scale metal contacts
[AD-A257137] p 1121 N93-16142

ATOMIC PHYSICS
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476

ATOMIC STRUCTURE
Spectroscopic and magnetic studies of tetravalent Pa and trivalent Th compounds
[DE92-041214] p 1100 N93-15676
The evolution of electronic structure in Al(n)Co(m)
[DE92-040737] p 1314 N93-15833
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Electronic structure and phase separation in superconducting cuprates
[PREPRINT-889] p 1323 N93-17025
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184

Apical oxygen ions and the electronic structure of the high T(sub c) cuprates
[PREPRINT-828] p 1324 N93-17223
Strongly interacting fermion systems
[DE93-002839] p 1295 N93-17656
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753
Relativistic calculations of excitation and ionization of highly charged ions by electron impact
[DE93-002129] p 1296 N93-17783

ATOMIZERS
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494

ATOMIZING
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686

ATROPHY
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807

ATTITUDE CONTROL
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719

ATTITUDE GYROS
ROSAT in-orbit attitude measurement recovery
[MBB-UK-0168-92-PUB] p 1088 N93-17629

AUDITORY DEFECTS
Measurement and evaluation of blast overpressure during F-15A crew station vulnerability assessment test
[AD-A257152] p 1227 N93-16033

AURORAL ARCS
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536

AURORAL IONIZATION
Physics of the aurora
[TRITA-EPP-91-06] p 1376 N93-17639

AURORAL IRRADIATION
Physics of the aurora
[TRITA-EPP-91-06] p 1376 N93-17639

AURORAL ZONES
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173

AURORAS
The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane
[DE93-000856] p 1376 N93-17384
Physics of the aurora
[TRITA-EPP-91-06] p 1376 N93-17639

AUSTENITIC STAINLESS STEELS
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341

AUSTRALIA
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938

AUTOCORRELATION
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152

AUTOMATA THEORY
Lazy scanner generation for modular regular grammars
[CWI-CS-R9158-REV] p 1251 N93-17533

AUTOMATIC CONTROL
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
Project proposal active vision
[AD-A256490] p 1258 N93-15934
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780

AUTOMATIC TEST EQUIPMENT
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595

AUTOMATIC WEATHER STATIONS
Automated Weather Observing System (AWOS) Data Acquisition System (ADAS) Operational Test and Evaluation (OT/E) integration and OT/E operational test plan
[DOT/FAA/CT-TN90/65] p 1214 N93-16631

AUTOMATION
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
A tool for automated validation of network protocols
[AD-A256726] p 1255 N93-16066
Towards automation of user interface design p 1248 N93-17510
Description of research interests and current work related to automating software design p 1249 N93-17515

AUTOMOBILES
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042
A low emission vehicle procurement approach for Washington state
[DE92-040561] p 1176 N93-16406
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464

AUTONOMIC NERVOUS SYSTEM
New techniques for positron emission tomography in the study of human neurological disorders
[DE93-002098] p 1224 N93-15900
Non-invasive evaluation of the cardiac autonomic nervous system by PET
[DE92-041077] p 1225 N93-16441

AUTONOMY
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806

AUTOREGRESSIVE PROCESSES
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606

AVALANCHE DIODES
Wafer scale union
[AD-A258001] p 1152 N93-17749

AVIONICS
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems p 1254 N93-17305
Test and integration concept for complex helicopter avionic systems
[MBB-UD-0605-91-PUB] p 1065 N93-17547
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571

AXIAL FLOW TURBINES
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620
Smaller expendable turbojets p 1067 N93-17621

AXIAL LOADS
A semi-analytical formulation for the elastoplastic analysis of imperfect cylindrical shells
[LR-674] p 1185 N93-16282
Multiaxial fatigue analysis of metals p 1113 N93-16509

AXIAL STRAIN
Some aspects for the application of a hierarchic family of Herrmann mixed compressible and incompressible finite elements p 1077 N93-15723

AXIAL STRESS
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270

AXIOMS
Hereditarily-finite sets and complete metric spaces
[CWI-CS-R9148] p 1265 N93-16366

AXISYMMETRIC BODIES
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690

AXISYMMETRIC FLOW
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
CP-violation in K(sup +/-) to 3 pi decays and lattice QCD B-factors
[PREPRINT-848] p 1323 N93-17068
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Response of a viscous liquid column with anchored edges to axial excitations
[LRT-WE-9-FB-7-1991] p 1164 N93-17550
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551

AZIDES (INORGANIC)
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708

AZIDES (ORGANIC)
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708

B

BABOONS
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166

BACKGROUND NOISE
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438

BACKGROUND RADIATION
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
Ginga results of type 2 AGN's and their contributions to the cosmic x ray background p 1367 N93-17105
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background p 1368 N93-17112
HI in galaxy outskirts and the extragalactic ionizing flux p 1372 N93-17139
The x ray background: Past, present, and future p 1372 N93-17140
Energy spectrum of the cosmic x ray background: Some considerations based on the Ginga results p 1373 N93-17143
Where have all the sources gone? p 1373 N93-17144
ROSAT deep surveys p 1362 N93-17145
Origin of the cosmic x ray background radiation p 1373 N93-17146
On the suitability of starburst galaxies as a contributor to the CXRB p 1373 N93-17147
Contribution of clusters of galaxies to the XRB p 1374 N93-17148
On the origin of the x ray background p 1374 N93-17149
Clustering properties of x ray sources from the analysis of the Ginga P(D) distribution p 1374 N93-17150
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
Selection of faint quasars based on variability p 1363 N93-17156
AGN and the x ray background: Concluding remarks p 1375 N93-17160

Measurements of the cosmic microwave background temperature at 1.47 GHz
[DE93-000587] p 1400 N93-17379

BACKSCATTERING
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment p 1386 N93-17240
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy p 1390 N93-17261
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment p 1391 N93-17267

BACKUPS
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984

BACKWARD DIFFERENCING
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534

BACKWARD FACING STEPS
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596

BACTERIA
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189

BAFFLES
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809

BALLISTIC MISSILES
Strategic defense initiative: Estimates of brilliant pebbles' effectiveness are based on many unproven assumptions
[AD-A256810] p 1277 N93-15679
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355

BALLOON-BORNE INSTRUMENTS
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
Results of the 1992 NASA/JPL Balloon Flight Solar Cell Calibration Program
[NASA-CR-191630] p 1197 N93-16698

BAND STRUCTURE OF SOLIDS
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753

BANDPASS FILTERS
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693

BANDWIDTH
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1245 N93-17491
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800

BARIUM
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963

BARIUM FLUORIDES
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

BARIUM OXIDES
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393

BARIUM TITANATES
Photorefractive properties of doped BaTiO 3 and SBN
[AD-A257989] p 1305 N93-17748

BARRIERS
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409

BARYONS
Studies in theoretical particle physics
[DE93-000648] p 1284 N93-16161
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399

BASALT
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617
Application of manufactured products p 1383 N93-16902

BASES
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672

BAYES THEOREM
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
Quantifying parameters for Bayesian prior assumptions when estimating the probability of failure of software p 1254 N93-16777

BCS THEORY
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699

BEAM INJECTION
The evolution of electronic structure in Al(n)Co(m)
[DE92-040737] p 1314 N93-15833
Beam loading compensation with variable group velocity
[DE93-001810] p 1297 N93-16199
Enhancement of D3-D neutral beam system for higher performance
[DE93-000878] p 1309 N93-16307
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985

BEAM INTERACTIONS
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
An investigation of coherent quadrupole beam--beam effects
[DE92-041191] p 1297 N93-16527
Common analysis of the Relativistic Klystron and the Standing-Wave Free-Electron Laser two-beam accelerator
[DE92-041205] p 1173 N93-16529
First-principles studies of phase stability and the structural and dynamical properties of metal hydrides
[DE92-040855] p 1104 N93-16589
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

BEAM NEUTRALIZATION
Above-surface neutralization of highly charged ions: The formation of hollow atoms
[DE93-001371] p 1288 N93-16603

BEAM RIDER GUIDANCE
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067

BEAM SPLITTERS
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105

BEAMFORMING
Studies in beamforming tracking neural networks mathematics
[AD-A255574] p 1258 N93-16039
Conditioner for a helically transported electron beam
[DE92-041169] p 1297 N93-16526

BEAMS (RADIATION)
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110
Beam loading compensation with variable group velocity
[DE93-001810] p 1297 N93-16199
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837

BEAMS (SUPPORTS)
Power flow finite element analysis for beams and plates p 1083 N93-15765
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
Beam, plate, and shell finite elements for CSI design code p 1189 N93-16782

BEAT FREQUENCIES
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923

BEND TESTS
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 1: Experimental determination of mechanical properties for a carbon-carbon composite
[AD-A257459] p 1090 N93-16010

BENDING
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537

BENDING MOMENTS
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609

BENDING THEORY
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569

BENEFICIATION
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Lunar beneficiation p 1381 N93-16887
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260

BENZENE
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

BESSEL FUNCTIONS
The Hahn-Exton q-Bessel function
[ISBN-90-9004649-6] p 1271 N93-17587

BETA PARTICLES
D decays, B-physics, and CP-violation from lattice QCD
[PREPRINT-799] p 1287 N93-16419
High beta and second stability region transport and stability analysis
[DE93-000886] p 1310 N93-16534

BIAS
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758
On the nature of bias and defects in the software specification process p 1244 N93-17166

BIBLIOGRAPHIES
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Automatic differentiation bibliography
[DE92-040599] p 1263 N93-15944
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
Bibliography of technical reports, 1991 from Woods Hole Institution
[AD-A257304] p 1220 N93-16083
Software engineering laboratory series: Annotated bibliography of software engineering laboratory literature
[NASA-TM-108100] p 1237 N93-16380
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
The Goldstein Aeronautical Engineering Research Laboratory
[AERO-REPT-9109] p 1053 N93-16465
Aeronautical Engineering Group publications: 1950 - present
[AERO-REPT-9108] p 1355 N93-16563

BICRYSTALS
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
BIDIRECTIONAL REFLECTANCE
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542
BIMETALS
Organometallic chemistry of bimetallic compounds
[DE93-002773] p 1115 N93-17201
BINARY ALLOYS
Development of equipment and technique to study solidification in microgravity, phase 1
[CTN-93-60608] p 1132 N93-16729
First-principles approach to alloy phase stability
[DE93-001323] p 1115 N93-17031
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
BINARY MIXTURES
Adsorption of a binary gas mixture which laterally interacts on a random heterogeneous surface
[DE93-000706] p 1103 N93-16227
BINARY STARS
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829
BINDERS (MATERIALS)
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
BIOASTRONAUTICS
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
BIOCHEMISTRY
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
BIOCONVERSION
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
BIODEGRADATION
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
BIOLOGICAL EFFECTS
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596
BIOLOGICAL EVOLUTION
The influence of culture on space developments
p 1378 N93-16863
BIOLOGICAL MODELS (MATHEMATICS)
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
BIOLUMINESCENCE
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
BIOMASS
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
BIOPROCESSING
Bioprocessing of ores: Application to space resources
p 1382 N93-16894
BIOREACTORS
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
BIOSPHERE
Lunar subsurface architecture enhanced by artificial biosphere concepts p 1230 N93-17448
BIOSYNTHESIS
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
BIOTECHNOLOGY
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
BIPOLAR TRANSISTORS
Minority carrier transport in heavily doped silicon
[ETN-92-92527] p 1327 N93-17563
BIREFRINGENCE
Optical system for linearizing non-linear electro-optic
[AD-D015496] p 1303 N93-16495
BIREFRINGENT FILTERS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
BISMUTH ALLOYS
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
BISMUTH OXIDES
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
Electrochemical and electrode properties of stabilized bismuth oxide ceramics
[ISBN-90-9003981-3] p 1125 N93-16570
BL LACERTAE OBJECTS
Multifrequency observations of rapidly variable blazars
p 1361 N93-17109
ROSAT and multi-wavelength observations of 3C 371
p 1361 N93-17121
X ray spectra of bright BL Lacertae objects observed with ROSAT p 1361 N93-17126
BLACK BODY RADIATION
Classical fluids of negative heat capacity
[DE92-040507] p 1329 N93-15943
BLACK HOLES (ASTRONOMY)
On the stability of a stringy black hole
[PREPRINT-879] p 1365 N93-16983
On the black-hole conformal field theory coupled to the Polyakov's string theory. A non perturbative analysis
[PREPRINT-852] p 1365 N93-17072
Problems in particle theory
[DE93-003687] p 1293 N93-17469
BLADE-VORTEX INTERACTION
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942
BLANKETS (FUSION REACTORS)
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103
BLAZARS
Preliminary results on ROSAT observations of the Blazar PKS 0537-441 p 1362 N93-17127
BLOOD
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166
BLOWING
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157
BLUFF BODIES
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614
BO-105 HELICOPTER
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515
BOEING 720 AIRCRAFT
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800
BOLOMETERS
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
BOLTED JOINTS
Slip joint connector
[NASA-CASE-MFS-28659-1] p 1178 N93-17080
BOLTS
Saddle clamp assembly
[NASA-CASE-MFS-28701-1] p 1178 N93-17057
Slip joint connector
[NASA-CASE-MFS-28659-1] p 1178 N93-17080
Problems involving combined loading
p 1189 N93-17314
BOLTZMANN TRANSPORT EQUATION
A Boltzmann-equation approach to the magnetoresistance of ferromagnetic-normal metallic multilayers
[DE92-041213] p 1270 N93-17361
Methods development for electron transport
[AD-A257986] p 1295 N93-17698
BOMBS (ORDNANCE)
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
BONDING
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734
BOOLEAN ALGEBRA
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Proceedings of the 2nd International Conference on Algebraic Methodology and Software Technology
[AD-A257487] p 1272 N93-17664
A note on the diagonalizable algebras of PA and ZF
[ML-91-09] p 1274 N93-17792
Sahlqvist's theorem for boolean algebras with operators
[ML-91-10] p 1274 N93-17794
BOOLEAN FUNCTIONS
Fixed points in spectral complexity
[AD-A256729] p 1263 N93-16068
BOOSTER ROCKET ENGINES
Power beaming providing a space power infrastructure
[DE93-000850] p 1092 N93-17363
BORANES
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657
BOREHOLES
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491
BOREL SETS
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
BORIDES
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657
BORON
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
BORON CARBIDES
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
BORON COMPOUNDS
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657

BORON OXIDES
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
BOSE GEOMETRY
Bose realisation of a noncanonical Heisenberg algebra
[PREPRINT-844] p 1269 N93-16958
BOSONS
Theory of the electroweak interactions
[SSCL-PREPRINT-775] p 1286 N93-16385
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017
Maximal CP violation via Higgs-boson exchange
[DE93-002417] p 1290 N93-17044
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
A two body relativistic equation for interacting nucleons
[NOTA-INTERNA-976] p 1295 N93-17630
BOUNDARY CONDITIONS
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium
[PREPRINT-875] p 1187 N93-16979
Thermostructural responses of carbon phenolics in a restrained thermal growth test p 1128 N93-17333
BOUNDARY ELEMENT METHOD
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
BOUNDARY INTEGRAL METHOD
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
BOUNDARY LAYER CONTROL
Bypass transition in compressible boundary layers p 1154 N93-15801
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle p 1057 N93-16784
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Boundary-layer control on a freely falling sphere p 1161 N93-16819
BOUNDARY LAYER FLOW
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787
Consideration on boundary-layer receptivity p 1160 N93-16814
Boundary layer transition in Coriolis force field p 1160 N93-16815
BOUNDARY LAYER SEPARATION
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
BOUNDARY LAYER STABILITY
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transitiion
[NAL-SP-15] p 1160 N93-16809
Instability of spatially periodic flows p 1160 N93-16810
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811
Turbulence research: Where should we go? p 1160 N93-16812
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
Consideration on boundary-layer receptivity p 1160 N93-16814
Boundary layer transition in Coriolis force field p 1160 N93-16815
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816
Three dimensional boundary-layer transition on a swept cylinder p 1161 N93-16817
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Boundary-layer control on a freely falling sphere p 1161 N93-16819
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom p 1161 N93-16820
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
Development of wall turbulence structure p 1162 N93-16824
Mechanism of the mode selection in bifurcations p 1162 N93-16825
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
A new parameter for predicting crossflow instability p 1162 N93-16828
Experiments on swept-wing boundary-layer transition p 1162 N93-16829
Global flow characteristics on a curved channel. Goertler instability point
[DS-2141] p 1165 N93-17742
BOUNDARY LAYER TRANSITION
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transitiion
[NAL-SP-15] p 1160 N93-16809
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811
Turbulence research: Where should we go? p 1160 N93-16812
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
Boundary layer transition in Coriolis force field p 1160 N93-16815
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816
Three dimensional boundary-layer transition on a swept cylinder p 1161 N93-16817
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Boundary-layer control on a freely falling sphere p 1161 N93-16819
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom p 1161 N93-16820
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
Development oi wall turbulence structure p 1162 N93-16824
Mechanism of the mode selection in bifurcations p 1162 N93-16825
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
A new parameter for predicting crossflow instability p 1162 N93-16828
Experiments on swept-wing boundary-layer transition p 1162 N93-16829
BOUNDARY LAYERS
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536
Studies of the charging of a thin dust layer in a plasma p 1313 N93-17320
BOUNDARY VALUE PROBLEMS
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Domain decomposition: A blowup problem and the Ginzburg-Landu equations
[DE92-040736] p 1266 N93-16587
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
Parallel step-by-step methods
[CWI-NM-R9116] p 1256 N93-17545
Parallel-iterated Runge-Kutta methods for stiff ordinary differential equations
[CWI-NM-R9117] p 1257 N93-17549
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690
BRAIN
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
BRANCHING (MATHEMATICS)
Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Polling systems and multiple branching processes
[CWI-BS-R9128] p 1267 N93-16726
BRANCHING (PHYSICS)
Measurement of the branching ratio for D(+) yields (bar-K)*(892)(sup 0)mu(+)nu
[DE93-002414] p 1295 N93-17624
BRAZIL
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
BREADBOARD MODELS
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771
BRIGHTNESS TEMPERATURE
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
BRILLOUIN EFFECT
A laser spectroscopy technique for evaluating in-situ degradation of composite materials
[AD-A256983] p 1097 N93-16255
BRINES
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
BRITTLENESS
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
BROADBAND
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Broadband quadrifilar phased array helix
[AD-D015506] p 1139 N93-16519
BROADCASTING
Implementation of educational broadcasting in space, phase 1
[CTN-93-60623] p 1332 N93-16735
BROKEN SYMMETRY
The Cabibbo-Kobayashi-Maskawa mixing matrix
[DE93-001255] p 1283 N93-15976
Studies in theoretical particle physics
[DE93-000648] p 1284 N93-16161
Electromagnetic potential vectors and the Lagrangian of a charged particle
[NASA-TM-107703] p 1280 N93-16555
Global continuous symmetry and the 17keV neutrino
[PREPRINT-868] p 1288 N93-16966

CP violation in B(sub C) decays
[PREPRINT-871] p 1288 N93-16977
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
Regularization of chiral gauge theories
[PREPRINT-888] p 1330 N93-17024
Maximal CP violation via Higgs-boson exchange
[DE93-002417] p 1290 N93-17044
CP violation in the decays B(sup 0) yields (psi)K(sub s) and B(sup 0) yields (pi)(+)(pi)(-): A probe for new physics
[DE93-002413] p 1331 N93-17364

BROWNIAN MOVEMENTS
Brownian motion
[PREPRINT-797] p 1280 N93-16418

BRUSHES
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981

BUBBLES
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 1
[CTN-93-60610] p 1157 N93-16425
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838

BUCKLING
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986
Buckling problems of sandwich shells
[LR-690] p 1185 N93-16286
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791

BUFFER STORAGE
Spacecraft optical disk recorder memory buffer control p 1170 N93-16773

BUILDINGS
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810

BUNCHING
Beam loading compensation with variable group velocity
[DE93-001810] p 1297 N93-16199
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970

BUOYANCY
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838

BURNERS
Annular vortex combustor
[AD-D015462] p 1103 N93-16462

BURNING RATE
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795

BUTTONS
Gloved operator performance study
[AD-A256894] p 1227 N93-16048

BY-PRODUCTS
Processing lunar soils for oxygen and other materials p 1381 N93-16889
Application of manufactured products p 1383 N93-16902

C

C (PROGRAMMING LANGUAGE)
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674

C++ (PROGRAMMING LANGUAGE)
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869

CABIN ATMOSPHERES
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230

CABLES (ROPES)
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857

CADMIUM SULFIDES
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650

CADMIUM TELLURIDES
High efficiency cadmium telluride and zinc telluride based thin-film solar cells
[DE92-016403] p 1195 N93-16448
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
IR materials producibility
[AD-A257695] p 1305 N93-17691

CALCIUM FLUORIDES
Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492

CALCIUM ISOTOPES
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

CALCIUM OXIDES
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533

CALCIUM PHOSPHATES
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271

CALCULUS
Strong sequentiality of left-linear overlapping rewriting systems
[CWI-CS-R9146] p 1267 N93-16721
Open problems in rewriting
[CWI-CS-R9114] p 1267 N93-16727
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526

CALCULUS OF VARIATIONS
A variational method for finite element stress recovery: Applications in one-dimension p 1189 N93-16785

CALIBRATING
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
Results of the 1992 NASA/JPL Balloon Flight Solar Cell Calibration Program
[NASA-CR-191630] p 1197 N93-16698
Calibration of phoswich detectors
[KVI-891] p 1169 N93-17404
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

CALORIMETERS
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
First results from the SLD silicon calorimeters
[DE93-001805] p 1167 N93-16219

CAMERAS
Millisecond readout CCD camera
[DE93-000694] p 1167 N93-16359
Advanced imaging system
[NASA-CR-191800] p 1303 N93-16712
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273

CANARD CONFIGURATIONS
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756

CANCER
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596

CANONICAL FORMS
Proof elimination in type theory
[CS-9202] p 1278 N93-16351
Open problems in rewriting
[CWI-CS-R9114] p 1267 N93-16727
Bose realisation of a noncanonical Heisenberg algebra
[PREPRINT-844] p 1269 N93-16958

CANOPIES (VEGETATION)
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382

CAPACITORS
High energy and high power density ultracapacitors and supercapacitors
[NASA-CASE-NPO-18568-1-CU] p 1149 N93-17274
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277

CAPILLARY FLOW
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348

CAPILLARY TUBES
Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473

CARBON
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381

CARBON COMPOUNDS
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092

The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927

CARBON CYCLE
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

CARBON DIOXIDE
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075
Natural and anthropogenic climate change
[DE93-000898] p 1200 N93-16162
Measurements of carbon dioxide in the Southern Ocean along the WOCE S-4 section
[DE92-040334] p 1220 N93-16294
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

CARBON DIOXIDE CONCENTRATION
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

CARBON DIOXIDE LASERS
High power picosecond CO2 laser system for ATF electron accelerator project
[DE92-040497] p 1171 N93-15832
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654

CARBON FIBER REINFORCED PLASTICS
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
CFRP integral end fitting for high stability truss structures p 1084 N93-15774
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
Experiences with large CFRP-radiotelescope reflectors p 1084 N93-15777
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
A literature survey on the fatigue behaviour of hybrid composites
[NLR-TP-91345-U] p 1099 N93-17541
Manufacturing and inspection of artificial delaminations in composite materials
[NLR-TP-91085-U] p 1099 N93-17582

CARBON FIBERS
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
Recent developments of carbon fiber in Japan
[MTL-TR-92-48] p 1098 N93-16591
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802

CARBON MONOXIDE
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912

CARBON 13
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta*-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454

CARBON 14
New techniques for positron emission tomography in the study of human neurological disorders
[DE93-002098] p 1224 N93-15900

CARBON-CARBON COMPOSITES
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 2: Reliability and failure analyses of 2-D carbon-carbon structural components
[AD-A257460] p 1089 N93-15838
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 1: Experimental determination of mechanical properties for a carbon-carbon composite
[AD-A257459] p 1090 N93-16010
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
SEP high performance composite materials: More than a job... a vocation
[DS-2134] p 1099 N93-17747

CARBONIC ANHYDRASE
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854

CARBORANE
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705

CARBOXYLATES
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467

CARBOXYLIC ACIDS
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467

CARDIOVASCULAR SYSTEM
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187

CARGO
Beamed energy propulsion p 1095 N93-16917

CARNOT CYCLE
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896

CARRIER MOBILITY
Minority carrier transport in heavily doped silicon
[ETN-92-92527] p 1327 N93-17563

CARRIER WAVES
Carrier wave signals interfering with Loran-C
[ETN-92-92528] p 1059 N93-17584

CARTESIAN COORDINATES
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617

CARTRIDGES
Network accessible multi-terabyte archive p 1354 N93-16326

CASCADE FLOW
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543

CASE HISTORIES
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810

CASES (CONTAINERS)
Sample container technology p 1078 N93-15728

CASTINGS
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620

CATALOGS
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065

CATALOGS (PUBLICATIONS)
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510

CATALYSIS
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
Homogeneous-heterogeneous combustion: Thermal and chemical coupling
[DE93-002881] p 1100 N93-15840
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623

CATALYSTS
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623

CATALYTIC ACTIVITY
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

CATHODES
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253

CATHODIC COATINGS
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963

CATIONS
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762

CAUCHY PROBLEM
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071

CAVES
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447

CAVITATION FLOW
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
CAVITIES
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Endoscopic measurements using a panoramic annular lens
[NASA-CR-191727] p 1167 N93-16453
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380
CAVITY RESONATORS
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
Transient x ray laser schemes at 1 millimicron and at 2 millimicron
[DE92-040670] p 1171 N93-15948
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380
CD-ROM
CD-ROM applications in Professional Military Education (PME)
[AD-A256662] p 1231 N93-15914
CELESTIAL MECHANICS
On the stability of a stringy black hole
[PREPRINT-879] p 1365 N93-16983
CELL DIVISION
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
CELLULOSE
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
CEMENTS
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Lunar cement p 1382 N93-16897
Cement and concrete p 1383 N93-16901
CENSUS
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
CENTER OF GRAVITY
Problems involving combined loading p 1189 N93-17314
CENTIMETER WAVES
Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875
CENTRIFUGAL FORCE
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
CENTRIFUGES
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458
CERAMIC BONDING
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
CERAMIC COATINGS
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Impact on ceramic faced armour
[ETN-92-92797] p 1124 N93-16569
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676
CERAMIC FIBERS
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
CERAMIC MATRIX COMPOSITES
Modeling of forced flow/thermal gradient chemical vapor infiltration
[DE93-001615] p 1125 N93-17032
SEP high performance composite materials: More than a job... a vocation
[DS-2134] p 1099 N93-17747
CERAMICS
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Microwave processing of ceramics: Guidelines used at the Oak Ridge National Laboratory
[DE92-040862] p 1123 N93-16297
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475
The hydrothermal synthesis of ceramic powders
[ETN-92-92785] p 1125 N93-16607
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Glass and ceramics --- lunar resources p 1383 N93-16900
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
CEREBRAL CORTEX
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
CEREBRUM
New techniques for positron emission tomography in the study of human neurological disorders
[DE93-002098] p 1224 N93-15900
CERENKOV COUNTERS
Milagro: A low energy threshold extensive air shower array
[DE93-000852] p 1400 N93-17383
CERIUM OXIDES
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
CERMETS
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
CERTIFICATION
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
CHALCOGENIDES
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505
CHANNEL FLOW
Self-actuating slide valve system
[AD-D015456] p 1177 N93-16435
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
CHAOS
Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Instability of spatially periodic flows p 1160 N93-16810
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
Quantum chaos without classical counterpart
[PREPRINT-830] p 1331 N93-17215
CHARACTERIZATION
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755
Fatigue characterization of Ni-base alloys p 1081 N93-15756
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264
CHARGE CARRIERS
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
CHARGE COUPLED DEVICES
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
Millisecond readout CCD camera
[DE93-000694] p 1167 N93-16359
Advanced imaging system
[NASA-CR-191800] p 1303 N93-16712
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076
CHARGE DISTRIBUTION
A continuum string model for D greater than 1
[PREPRINT-853] p 1329 N93-16960
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381
CHARGE EXCHANGE
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017
CHARGE TRANSFER
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753
CHARGED PARTICLES
Transverse phase-space evolution in non-stationary charged particle beams
[DE93-000618] p 1296 N93-15673
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
Electromagnetic potential vectors and the Lagrangian of a charged particle
[NASA-TM-107703] p 1280 N93-16555
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483
CHARGING
Studies of the charging of a thin dust layer in a plasma p 1313 N93-17320
CHARM (PARTICLE PHYSICS)
Duke University high energy physics
[DE92-040340] p 1296 N93-16180
CHARTS
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968

CHECKOUT
Structural development of flight systems p 1078 N93-15727
Aspect: A formal specification language for detecting bugs
[AD-A256797] p 1234 N93-16056

CHEMICAL ANALYSIS
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Fingerprinting of Materials
[NASA-CR-184482] p 1199 N93-15916
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry
[DE92-040602] p 1308 N93-16145
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269
The 4th International Symposium on Analysis and Detection of Explosives: Programs and abstracts
[AD-A258029] p 1129 N93-17751

CHEMICAL BONDS
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158
Growth on the reconstructed diamond (100) surface
[AD-A256954] p 1319 N93-16301
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta"-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454
Understanding crystallinity in aromatic polyimides p 1128 N93-16764
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641
IR materials producibility
[AD-A257695] p 1305 N93-17691

CHEMICAL COMPOSITION
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169
Measurements of carbon dioxide in the Southern Ocean along the WOCE S-4 section
[DE92-040334] p 1220 N93-16294
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263
Remote assessment of lunar resource potential p 1391 N93-17268

CHEMICAL ENGINEERING
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135

CHEMICAL EQUILIBRIUM
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683

CHEMICAL EXPLOSIONS
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Static-stress analysis of dual-axis safety vessel
[DE93-001860] p 1187 N93-17366
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497

CHEMICAL PROPERTIES
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816

CHEMICAL PROPULSION
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932

CHEMICAL REACTIONS
Center for Modeling of Turbulence and Transition (CMOTT): Research Briefs, 1992
[NASA-TM-105834] p 1152 N93-15792
Physics and chemistry in high electric fields
[AD-A257138] p 1280 N93-15854
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
[NASA-TM-105851] p 1104 N93-16614
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358
Computed Potential Energy Surfaces for Chemical Reactions
[NASA-CR-191804] p 1107 N93-17407
Theoretical characterization of the reaction CH3 +OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels p 1107 N93-17408
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409
Substituted 1,1,1-triaryl 2,2,2-trifluoroethanes and processes for their synthesis
[NASA-CASE-LEW-14345-7] p 1095 N93-17412
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction
[DE93-001565] p 1107 N93-17461
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

CHEMICAL REACTORS
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

CHEMICAL VAPOR INFILTRATION
Modeling of forced flow/thermal gradient chemical vapor infiltration
[DE93-001615] p 1125 N93-17032

CHEMILUMINESCENCE
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144

CHEMISORPTION
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467

CHEMISTRY
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760

CHIMNEYS
Investigation of a possible galactic chimney
[AD-A257133] p 1364 N93-16077

CHINA
Cloud amount and sunshine duration in the People's Republic of China, 1954-1988
[DE92-041023] p 1214 N93-16601

CHIPS (ELECTRONICS)
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990

CHIPS (MEMORY DEVICES)
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

CHIRAL DYNAMICS
Studies in theoretical particle physics
[DE93-000648] p 1284 N93-16161
On lattice chiral gauge theories
[PREPRINT-794] p 1278 N93-16415
Low energy effects of heavy chiral fermions
[PREPRINT-872] p 1289 N93-16978
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes
[PREPRINT-849] p 1290 N93-17069
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487

CHLORIDES
Passivity and stress corrosion cracking of AISI 316 stainless steel in chloride-containing solutions
[ETN-92-92783] p 1113 N93-16580
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612

CHLORINE COMPOUNDS
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919

CHLOROBENZENES
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

CHLOROCARBONS
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

CHLOROFLUOROCARBONS
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Energy and global warming impacts of CFC alternative technologies for foam building insulations
[DE92-019477] p 1200 N93-16085
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265

CHLOROPHYLLS
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356

CHONDRITES
The Prospector mission
[DE93-000656] p 1385 N93-17194

CHORDS (GEOMETRY)
Experiments on swept-wing boundary-layer transition p 1162 N93-16829

CHROMATOGRAPHY
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842
Fingerprinting of materials: Technical supplement p 1199 N93-15917

CHROMIUM
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090

CHROMIUM ALLOYS
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
First-principles approach to alloy phase stability
[DE93-001323] p 1115 N93-17031

CHROMIUM CARBIDES
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

CHROMIUM COMPOUNDS
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033

Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375

CHROMIUM STEELS
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341

CIRCADIAN RHYTHMS
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058

CIRCLES (GEOMETRY)
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726

CIRCUIT BOARDS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353

CIRCUITS
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717

CIRCULAR CYLINDERS
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Three dimensional boundary-layer transition on a swept cylinder p 1161 N93-16817
A new parameter for predicting crossflow instability p 1162 N93-16828

CIRCULAR POLARIZATION
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170

CIRCULAR TUBES
CFRP integral end fitting for high stability truss structures p 1084 N93-15774

CIRCULAR WAVEGUIDES
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter
[AD-A257694] p 1141 N93-17689

CIRCULATORY SYSTEM
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823

CIVIL AVIATION
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
Unified Airport Design and Analysis Concepts Workshop
[DOT/FAA/RD-92/17] p 1069 N93-16309
State of the art of airport pavement analysis and design p 1070 N93-16310
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455
The NASA High-Speed Research Program p 1064 N93-16761
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999

CL-84 AIRCRAFT
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694

CLADDING
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924

CLAMPS
Saddle clamp assembly
[NASA-CASE-MFS-28701-1] p 1178 N93-17057

CLASSICAL MECHANICS
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958

CLASSIFICATIONS
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
Tilted cranking classification of multiband spectra
[DE92-041187] p 1283 N93-15959
An improved classification tree analysis of high cost modules based upon an axiomatic definition of complexity p 1244 N93-17167
Providing an empirical basis for optimizing the verification and testing phases of software development p 1244 N93-17168
A classification procedure for the effective management of changes during the maintenance process p 1245 N93-17169
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida p 1219 N93-17285

CLAYS
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082

CLEAR AIR TURBULENCE
ExperCAT case studies
[AD-A256177] p 1211 N93-15871

CLIMATE
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

CLIMATE CHANGE
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
Energy analysis program
[DE93-001570] p 1199 N93-16045
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
Natural and anthropogenic climate change
[DE93-000898] p 1200 N93-16162
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
Climate change and related activities
[DE93-000477] p 1201 N93-16191
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344
Modeling the uncertain impacts of climate change
[DE92-041339] p 1204 N93-17370
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

CLIMATOLOGY
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
Observation of the Earth-atmosphere system by NOAA satellite (acquisition, production, application, and use of NOAA data)
[BCRS-92-02] p 1207 N93-16221
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Radiation fluxes at the FIFE site
[NASA-CR-191717] p 1208 N93-16718
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678

CLOCKS
Scan-based switching tests
[AD-A257712] p 1151 N93-17685

CLOSED ECOLOGICAL SYSTEMS
Annual report
[NASA-CR-191389] p 1228 N93-16840
Life support and self-sufficiency in space communities p 1229 N93-16866
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780

CLOSING
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672

CLOSURE LAW
Experiments with an incremental closure algorithm
[MEMO-INF-92-33] p 1236 N93-16336

CLOSURES
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485

CLOUD CHAMBERS
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139

CLOUD COVER
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Cloud amount and sunshine duration in the People's Republic of China, 1954-1988
[DE92-041023] p 1214 N93-16601
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
Multifractal cloud properties data assessment
[DE93-002638] p 1218 N93-17785

CLOUD PHYSICS
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
Multifractal cloud properties data assessment
[DE93-002638] p 1218 N93-17785

CLOUDS
Aerosol transport and global models
[DE93-001618] p 1209 N93-16969
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054

CLOUDS (METEOROLOGY)
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development
[DE93-000915] p 1202 N93-16535
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074
Electromagnetic scattering in clouds p 1142 N93-17327
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678

CLUSTER ANALYSIS
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
A metric for line segments
[CWI-BS-R9126] p 1268 N93-16832

CLUSTERS
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398

Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175

CLUTTER
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

CMOS
A pipelined, high-precision FFT architecture
[AD-A257235] p 1263 N93-15969
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970

COAL
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
Annular vortex combustor
[AD-D015462] p 1103 N93-16462
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
Magnetohydrodynamic projects at the CDIF
[DE93-001854] p 1311 N93-17035

COAL GASIFICATION
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186

COASTS
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

COATING
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472

COATINGS
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
ICI optical data storage tape p 1354 N93-16327
Device for applying powder coatings
[AD-A256917] p 1124 N93-16501
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984

COBALT
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449

COBALT ALLOYS
The evolution of electronic structure in Al(n)Co(m)
[DE92-040737] p 1314 N93-15833
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059

COBALT COMPOUNDS
Dependence of buried CoSi2 resistivity on ion implantation and annealing conditions
[DE92-010080] p 1322 N93-16930

COCKPITS
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693

CODE DIVISION MULTIPLE ACCESS
National Defense Science and Engineering Graduate Fellowship Program in electrical engineering
[AD-A256975] p 1146 N93-16254

CODERS
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722

CODING
Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722

COGNITION
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801
Logic and the flow of information
[LP-91-10] p 1357 N93-17714

COHERENCE COEFFICIENT
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837

COHERENT RADAR
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

COHERENT RADIATION
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102

COHESION
IR materials producibility
[AD-A257695] p 1305 N93-17691

COLD NEUTRONS
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361

COLD PLASMAS
The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane
[DE93-000856] p 1376 N93-17384

COLLIMATION
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371

COLLIMATORS
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371

COLLISION AVOIDANCE
Project proposal active vision
[AD-A256490] p 1258 N93-15934
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Results of DATAS investigation of illegal mode S ID's at JFK Airport
[DOT/FAA/CT-92/26] p 1059 N93-16841

COLLISION PARAMETERS
QCD corrections to Z pair hadronic production
[PREPRINT-832] p 1288 N93-16954
Investigation of neutrino properties in the process e(+)e(-) decay to nu-nu(bar)-gamma
[PREPRINT-887] p 1290 N93-17023
Probing the WWZ vertex at 500 GeV e(+)e(-) collider
[PREPRINT-831] p 1299 N93-17216
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

COLLOIDS
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197

COLOR CENTERS
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432

COLOR PHOTOGRAPHY
Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739
Optically selected quasars with Z greater than 4 p 1363 N93-17158

COMBAT
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

COMBINATIONS (MATHEMATICS)
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961

COMBINATORIAL ANALYSIS
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781

COMBUSTIBLE FLOW
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939

COMBUSTION
Preliminary definition of experiments and procedures for terrestrial and space examination of flame structure
[APRL-X13-8] p 1105 N93-16728
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics
[DE93-002758] p 1106 N93-17212
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746

COMBUSTION CHAMBERS
MHD Integrated Topping Cycle Project
[DE92-041285] p 1306 N93-15666
MHD Integrated Topping Cycle Project
[DE92-041284] p 1306 N93-15678
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686
Annular vortex combustor
[AD-D015462] p 1103 N93-16462
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 1092 N93-17611
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

COMBUSTION CHEMISTRY
Homogeneous-heterogeneous combustion: Thermal and chemical coupling
[DE93-002881] p 1100 N93-15840
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
[NASA-TM-105851] p 1104 N93-16614
Computerized reduction of elementary reaction sets for CFD combustion modeling p 1108 N93-17337

COMBUSTION CONTROL
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757

COMBUSTION EFFICIENCY
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686

COMBUSTION PHYSICS
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

COMBUSTION PRODUCTS
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645

COMBUSTION STABILITY
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622

COMMAND AND CONTROL
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
Spacecraft command and control using AI planning techniques. The O-Plan2 project
[AD-A257395] p 1258 N93-16008
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
Domain specific software architectures: Command and control p 1247 N93-17503
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808

COMMAND GUIDANCE
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515

COMMANDS
ROMPS critical design review. Volume 3: Furnace module design documentation
[NASA-CR-191615] p 1237 N93-16440

COMMERCE
Federal research: Small business innovation research shows success but can be strengthened
[AD-A256811] p 1350 N93-15680
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325

COMMERCIAL AIRCRAFT
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
The NASA High-Speed Research Program p 1064 N93-16761

COMMUNICATING
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733

COMMUNICATION
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

COMMUNICATION NETWORKS
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
Meteor burst communication system
[AD-D015470] p 1139 N93-16466
TMN: Introduction and interpretation
[MEMO-INF-92-40] p 1140 N93-16592
NCC Simulation Model: Simulating the operations of the network control center, phase 2
[NASA-CR-191616] p 1140 N93-16716
MODIS algorithm development and data visualization using ACTS
[NASA-CR-191940] p 1191 N93-16759
Toward domain-specific design environments: Some representation ideas from the telecommunications domain p 1249 N93-17511
RT-Syn: A real-time software system generator p 1250 N93-17523

COMMUNICATION SATELLITES
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite p 1078 N93-15731
Vibration characterisation for low level disturbances induced in telecommunications spacecraft p 1078 N93-15733
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
Applications of the Petite Amateur Navy Satellite (PANSAT)
[AD-A258015] p 1089 N93-17769

COMMUNICATION THEORY
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352

COMPACTING
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930
Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475

COMPANION STARS
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752

COMPARISON
Comparison of tests, and local families
[MEMO-1034] p 1266 N93-16594

COMPARTMENTS
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779

COMPATIBILITY
Compatibility of refrigerants and lubricants with engineering plastics
[DE93-000541] p 1128 N93-17807

COMPENSATORS
Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695

COMPILERS
Micrometer FX/DLX: A pedagogic compiler
[AD-A256821] p 1232 N93-15684
Compiling Prolog to standard ML: Some optimizations
[AD-A256193] p 1232 N93-15841
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
Dynamic parsers, evolving grammars and incremental languages
[PREPRINT-863] p 1243 N93-16998
Lazy scanner generation for modular regular grammars
[CWI-CS-R9158-REV] p 1251 N93-17533

COMPLETENESS
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742

COMPLEX COMPOUNDS
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358

COMPLEX SYSTEMS
An intelligent decomposition approach for efficient design of non-hierarchic systems p 1254 N93-16762
RT-Syn: A real-time software system generator p 1250 N93-17523
Generation of integrated circuit tests based on functional models
[ETN-92-92674] p 1151 N93-17628
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764

COMPLEXITY
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347

COMPOSITE MATERIALS
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
Composite material damage and fracture models for numerical simulations in support of fracture control p 1080 N93-15743
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
Concrete: Potential material for Space Station p 1089 N93-16896
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
A domain-specific design architecture for composite material design and aircraft part redesign p 1250 N93-17522
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

COMPOSITE STRUCTURES
Experiences with large CFRP-radiotelescope reflectors p 1084 N93-15777
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 2: Reliability and failure analyses of 2-D carbon-carbon structural components
[AD-A257460] p 1089 N93-15838
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215
Armored fiber optic cables statement of government interest
[AD-D015459] p 1302 N93-16437
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
Mode interaction in stiffened composite shells under combined mechanical and thermal loadings p 1189 N93-16793
The use of cross-section warping functions in composite rotor blade analysis
[NASA-CR-191772] p 1186 N93-16946
A domain-specific design architecture for composite material design and aircraft part redesign p 1250 N93-17522
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569

COMPRESSIBLE BOUNDARY LAYER
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Bypass transition in compressible boundary layers p 1154 N93-15801

COMPRESSIBLE FLOW
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940

COMPRESSING
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334
Method of making Tl-Sr-Ca-Cu-Oxide superconductors comprising heating at elevated pressures in sealed container
[AD-D015482] p 1321 N93-16489

COMPRESSION LOADS
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986
A semi-analytical formulation for the elastoplastic analysis of imperfect cylindrical shells
[LR-674] p 1185 N93-16282
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412

COMPRESSION TESTS
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
Shock-treated lunar soil simulant: Preliminary assessment as a construction material p 1386 N93-17238

COMPRESSION WAVES
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679

COMPRESSIVE STRENGTH
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
Properties and uses of concrete, appendix B p 1128 N93-16904
Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

COMPRESSOR ROTORS
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620

COMPRESSORS
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620

COMPTON EFFECT
QCD on the light cone
[DE93-001822] p 1330 N93-17183

COMPUTATION
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Strong sequentiality of left-linear overlapping rewriting systems
[CWI-CS-R9146] p 1267 N93-16721
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740

COMPUTATIONAL ASTROPHYSICS
A Theoretical Analysis of Thermal Radiation from Neutron Stars
[NASA-CR-191906] p 1376 N93-17410

COMPUTATIONAL CHEMISTRY
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations
[NASA-TP-3315] p 1066 N93-16941
Computed Potential Energy Surfaces for Chemical Reactions
[NASA-CR-191804] p 1107 N93-17407
Theoretical characterization of the reaction CH3 + OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels p 1107 N93-17408
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409

COMPUTATIONAL FLUID DYNAMICS
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670
Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
Vibration dissociation coupling in nonequilibrium flows
[NASA-CR-191775] p 1157 N93-16439
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620
Streamwise computation of a circular-to-rectangular transition duct potential flow field
[NIAR-92-17] p 1159 N93-16628
Critical assessment of Reynolds stress turbulence models using homogeneous flows
[NASA-TM-105954] p 1159 N93-16703
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transitiion
[NAL-SP-15] p 1160 N93-16809
Turbulence research: Where should we go? p 1160 N93-16812
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939
Acceleration of FDNS flow simulations using initial flowfields generated with a parabolized Navier-Stokes method p 1165 N93-17329
Computerized reduction of elementary reaction sets for CFD combustion modeling p 1108 N93-17337
Analysis of film cooling in rocket nozzles p 1095 N93-17339
Numerical solutions of the Euler equations for steady flow problems
[MBB-FE-202-S-PUB-473-A] p 1164 N93-17546
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789

COMPUTATIONAL GEOMETRY
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738

COMPUTATIONAL GRIDS
CAD to FEM tool p 1079 N93-15737
Radial basis functions: A class of grid-free, scattered data approximations
[DE92-012675] p 1263 N93-15921
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
Multigrid for semiconductor device simulation: Cell-centered or vertex-centered multigrid?
[CWI-NM-R9118] p 1271 N93-17553
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557

COMPUTER AIDED DESIGN
CAD to FEM tool p 1079 N93-15737
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738
Integration of CAD tools in space vehicle design p 1079 N93-15739
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863
Extracting viewpoints from multifunctional knowledge bases
[AD-A256008] p 1351 N93-15886
Information engineering and the information engineering facility versus rapid application development and focus
[AD-A257297] p 1350 N93-15895
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
Functional requirements of an advanced instructional design advisor. Volume 1: Epitomizing functions
[AD-A256752] p 1234 N93-16049
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
Geometric constraint satisfaction
[CWI-CS-R9141] p 1236 N93-16339
TOPICS: A contribution to analog design automation
[ISBN-90-9004786-7] p 1238 N93-16471
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567
Computer aided analysis of nonlinear systems
[RR-446] p 1239 N93-16576
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
TokenPasser: A petri net specification tool
[NASA-CR-191816] p 1241 N93-16725
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Numerical methods for the analysis of sampled-data systems and for the computation of system zeros p 1274 N93-17300
CAD/CAM for assembly planning
[ISBN-90-370-0057-6] p 1246 N93-17490
The KASE approach to domain-specific software systems p 1247 N93-17502
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
Computer-generated gratings
[ISBN-951-22-0785-0] p 1252 N93-17599
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763

COMPUTER AIDED MANUFACTURING
CAD/CAM for assembly planning
[ISBN-90-370-0057-6] p 1246 N93-17490

COMPUTER AIDED MAPPING
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206

COMPUTER AIDED TOMOGRAPHY
New techniques for positron emission tomography in the study of human neurological disorders
[DE93-002098] p 1224 N93-15900
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Non-invasive evaluation of the cardiac autonomic nervous system by PET
[DE92-041077] p 1225 N93-16441
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765

COMPUTER ASSISTED INSTRUCTION
Functional requirements of an advanced instructional design advisor. Volume 1: Epitomizing functions
[AD-A256752] p 1234 N93-16049
Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
COMPUTER DESIGN
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
COMPUTER GRAPHICS
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
High speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory
[DE92-017412] p 1254 N93-15880
CMOR: A configurable monitor
[DE92-040208] p 1233 N93-15902
NPSGDL: An object oriented graphics description language for virtual world application support
[AD-A257337] p 1234 N93-15992
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Towards automation of user interface design
p 1248 N93-17510
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
COMPUTER INFORMATION SECURITY
Risk assessment of LAN communications
[AD-A257327] p 1137 N93-15987
NADIR: A prototype system for detecting network and file system abuse
[DE93-000861] p 1256 N93-17385
COMPUTER NETWORKS
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
High speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory
[DE92-017412] p 1254 N93-15880
Proceedings of the Eleventh Annual ACM Symposium on Principles of Distributed Computing
[AD-A257294] p 1233 N93-15893
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
A tool for automated validation of network protocols
[AD-A256726] p 1255 N93-16066
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems
p 1353 N93-16322
Network accessible multi-terabyte archive
p 1354 N93-16326
Data storage and retrieval system abstract
p 1170 N93-16332
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
Parallel processing for linear programming
[ISBN-90-6275-754-5] p 1256 N93-16565
MODIS algorithm development and data visualization using ACTS
[NASA-CR-191940] p 1191 N93-16759
Updating and expanding the library of materials on NASA Spacelink electronic information system
p 1340 N93-17282
NADIR: A prototype system for detecting network and file system abuse
[DE93-000861] p 1256 N93-17385
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797
COMPUTER PROGRAMMING
Micrometer FX/DLX: A pedagogic compiler
[AD-A256821] p 1232 N93-15684
Report on Workshop on Research in Experimental Computer Science
[AD-A256874] p 1230 N93-15707
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
Compiling Prolog to standard ML: Some optimizations
[AD-A256193] p 1232 N93-15841
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
Software measures and the capability maturity model
[AD-A257238] p 1234 N93-15962
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
Aspect: A formal specification language for detecting bugs
[AD-A256797] p 1234 N93-16056
Report on the FX-91 programming language
[AD-A256798] p 1234 N93-16057
A module system for a programming language based on the LF logical framework
[AD-A256731] p 1235 N93-16069
The many disguises of accumulation
[TR-91-26] p 1237 N93-16369
Advanced parallel systems
[AD-A256958] p 1255 N93-16434
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
TokenPasser: A petri net specification tool
[NASA-CR-191816] p 1241 N93-16725
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742
Collected Software Engineering Papers, Volume 10
[NASA-TM-108581] p 1243 N93-17161
The Software Engineering Laboratory: An operational software experience factory p 1243 N93-17162
Automated support for experience-based software management p 1244 N93-17164
On the nature of bias and defects in the software specification process p 1244 N93-17166
Providing an empirical basis for optimizing the verification and testing phases of software development p 1244 N93-17168
A classification procedure for the effective management of changes during the maintenance process p 1245 N93-17169
Toward full life cycle control: Adding maintenance measurement to the SEL p 1245 N93-17170
Guide to object-oriented analysis and design p 1254 N93-17296
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Developing satellite ground control software through graphical models p 1246 N93-17500
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
The KASE approach to domain-specific software systems p 1247 N93-17502
GATOR: Requirements capturing of telephony features p 1247 N93-17505

Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Interactive specification acquisition via scenarios: A proposal p 1249 N93-17512
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518
Domain-specific functional software testing: A progress report p 1250 N93-17521
Knowledge modeling for software design p 1251 N93-17525
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528
Parallel-iterated Runge-Kutta methods for stiff ordinary differential equations
[CWI-NM-R9117] p 1257 N93-17549
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
Proceedings of the 2nd International Conference on Algebraic Methodology and Software Technology
[AD-A257487] p 1272 N93-17664
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672
Integrating domain-specific reuse for system/software engineers course description
[AD-A257637] p 1252 N93-17723
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
Software development with application generators: The Naval Aviation Logistics Command Management Information System Case
[AD-A257624] p 1357 N93-17768
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808
COMPUTER PROGRAMS
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
Equations of motion of multibody systems in the ESA-MIDAS software p 1084 N93-15772
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
Models of high velocity impact phenomena
[DE92-017452] p 1183 N93-15881
Impact modeling with smooth particle hydrodynamics
[DE92-017506] p 1155 N93-15882
CMOR: A configurable monitor
[DE92-040208] p 1233 N93-15902
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
Software measures and the capability maturity model
[AD-A257238] p 1234 N93-15962
Optimal linear array heading in a directional noise field
[AD-A257336] p 1137 N93-15991
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
CAPS ReReader simulation model user's manual version 1.0
[AD-A257180] p 1234 N93-16000
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Multiple-site-damage in 2024-T3 alloy sheet
[LR-660] p 1112 N93-16279
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
Data storage and retrieval system abstract
p 1170 N93-16332

Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412
Advanced Communications Technology Satellite high burst rate link evaluation terminal experiment control and monitor software maintenance manual, version 1.0
[NASA-CR-189161] p 1237 N93-16429
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
ADIFOR: A FORTRAN system for portable automatic differentiation
[DE92-040743] p 1239 N93-16588
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
[NASA-TM-105851] p 1104 N93-16614
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
An expert system shell for inferring vegetation characteristics: Implementation of additional techniques (task E)
[NASA-CR-190999] p 1191 N93-16685
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
[NASA-CR-191000] p 1191 N93-16687
An expert system shell for inferring vegetation characteristics
[NASA-CR-191207] p 1191 N93-16691
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710
Quantifying parameters for Bayesian prior assumptions when estimating the probability of failure of software
p 1254 N93-16777
Theoretical studies of a molecular beam generator
[NASA-CR-191716] p 1288 N93-16945
Verification of the computer programs SLAAP and DATA
[DE93-002597] p 1243 N93-16987
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Constitutive and equation of state models using object-oriented programming methods
[DE93-000740] p 1243 N93-17063
Collected Software Engineering Papers, Volume 10
[NASA-TM-108581] p 1243 N93-17161
Towards automated support for extraction of reusable components p 1244 N93-17163
Automated support for experience-based software management p 1244 N93-17164
On the nature of bias and defects in the software specification process p 1244 N93-17166
Object-oriented programming with mixins in Ada
p 1245 N93-17171
Requirements for the implementation of schedule repair technology in the Experiment Scheduling Program
p 1278 N93-17286
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems
p 1254 N93-17305
Simulation of cryogenic turbopump annular seals
p 1181 N93-17318
Analysis of film cooling in rocket nozzles
p 1095 N93-17339
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Developing satellite ground control software through graphical models p 1246 N93-17500
Modeling software systems by domains
p 1248 N93-17506
Model-based software design p 1249 N93-17514
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528
On the borderline between grammars and programs
[TR-91-17] p 1252 N93-17594
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter
[AD-A257694] p 1141 N93-17689
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
Integrating domain-specific reuse for system/software engineers course description
[AD-A257637] p 1252 N93-17723
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765

COMPUTER STORAGE DEVICES
Stewardship of very large digital data archives
p 1353 N93-16321
Open systems storage platforms
p 1355 N93-16333
A preliminary examination of Y 1 (a proprietary thin-film ferroelectric produced by Symetrix Corporation)
[AD-A255692] p 1146 N93-16395
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077

COMPUTER SYSTEMS DESIGN
An investigation of requirements traceability to support systems development
[AD-A257444] p 1351 N93-15868
The Sandia Airborne Computer (SANDAC)
[DE92-014046] p 1231 N93-15878
Proceedings of the Eleventh Annual ACM Symposium on Principles of Distributed Computing
[AD-A257294] p 1233 N93-15893
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
An initial model of requirements traceability: An empirical study
[AD-A256720] p 1275 N93-15978
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Proceedings of the MIT Student Workshop on VLSI and Parallel Systems
[AD-A256795] p 1145 N93-16054
Fault tolerant real-time systems
[AD-A257352] p 1235 N93-16174
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
Creating an open environment software infrastructure
p 1254 N93-16774
NADIR: A prototype system for detecting network and file system abuse
[DE93-000861] p 1256 N93-17385
Modeling software systems by domains
p 1248 N93-17506
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661

COMPUTER SYSTEMS PERFORMANCE
Report on Workshop on Research in Experimental Computer Science
[AD-A256874] p 1230 N93-15707
The Sandia Airborne Computer (SANDAC)
[DE92-014046] p 1231 N93-15878
A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860
[DE93-000460] p 1255 N93-16272
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
ADIFOR: A FORTRAN system for portable automatic differentiation
[DE92-040743] p 1239 N93-16588
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
Study of an adaptive maintenance strategy for logic systems
[ETN-92-92673] p 1252 N93-17640
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738

COMPUTER SYSTEMS PROGRAMS
Transparently interposing user code at the system interface
[AD-A256636] p 1233 N93-15907
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
An overview of MANIFOLD and its implementation
[CWI-CS-R9142] p 1236 N93-16365
Toward domain-specific design environments: Some representation ideas from the telecommunications domain p 1249 N93-17511
Domain-specific functional software testing: A progress report p 1250 N93-17521

COMPUTER SYSTEMS SIMULATION
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
A tool for automated validation of network protocols
[AD-A256726] p 1255 N93-16066

COMPUTER TECHNIQUES
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797

COMPUTER VISION
Project proposal active vision
[AD-A256490] p 1258 N93-15934
Adaptive machine vision
[AD-A257363] p 1301 N93-16007
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659
Investigation and modification of a commercially available tactile sensor suited for robotic applications
[NASA-CR-191833] p 1178 N93-16665
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678
Development of techniques required for the application of a laser to three dimensional visual sensing
[NASA-CR-191855] p 1174 N93-16706
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406

COMPUTERIZED SIMULATION
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
Strategic defense initiative: Estimates of brilliant pebbles' effectiveness are based on many unproven assumptions
[AD-A256810] p 1277 N93-15679
Sensitivity studies of a standing-wave free-electron laser
[DE93-000575] p 1170 N93-15696
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
Radial basis functions: A class of grid-free, scattered data approximations
[DE92-012675] p 1263 N93-15921
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
Correction of inertial measurements using GPS updates for underwater navigation
[AD-A257329] p 1058 N93-15988
CAPS ReReader simulation model user's manual version 1.0
[AD-A257180] p 1234 N93-16000

Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
Trade-offs in mass and effectiveness in satellite shielding: A design approach
[AD-A256693] p 1087 N93-16112
Directory of design support methods
[AD-A256987] p 1227 N93-16258
The binary collision approximation: Background and introduction
[DE92-040887] p 1285 N93-16276
Numerical solution of dynamical systems with state-space constraints
[NLR-TP-89419-U] p 1264 N93-16293
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
A study of improvement in lattice QCD
[SSCL-PREPRINT-766] p 1286 N93-16348
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
An investigation of coherent quadrupole beam--beam effects
[DE92-041191] p 1297 N93-16527
System model development for nuclear thermal propulsion
[NASA-TM-108157] p 1298 N93-16531
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542
Digital simulation and discrete modelling of a chaotic system
[RR-447] p 1279 N93-16561
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Multidisciplinary design optimization using response surface analysis p 1065 N93-16796
SAFSIM input manual: A computer program for the engineering simulation of flow systems
[DE93-002738] p 1163 N93-16922
Monte Carlo shower counter studies
[NASA-CR-191364] p 1243 N93-16933
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934
Theoretical studies of a molecular beam generator
[NASA-CR-191716] p 1288 N93-16945
Exploratory designs for computational experiments
[DE93-002354] p 1243 N93-17040
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
Object-oriented simulation for the Superconducting Super Collider
[DE92-015962] p 1299 N93-17205
Simulation of cryogenic turbopump annular seals p 1181 N93-17318
SEDS1 mission software verification using a signal simulator p 1254 N93-17321
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355
Modeling the uncertain impacts of climate change
[DE92-041339] p 1204 N93-17370
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526
Mission oriented investigation of handling qualities through simulation
[MBB-UD-0600-91-PUB] p 1063 N93-17567
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573
Predesign of a simulator for inverse robot kinematics
[NLR-TP-91098-U] p 1180 N93-17583
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694
Methods development for electron transport
[AD-A257986] p 1295 N93-17698
Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764
Microcomputer simulation of a fourier approach to optical wave propagation
[AD-A257598] p 1305 N93-17796
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

COMPUTERS
Report on Workshop on Research in Experimental Computer Science
[AD-A256874] p 1230 N93-15707

CONCAVITY
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823

CONCENTRATION (COMPOSITION)
Measurements of carbon dioxide in the Southern Ocean along the WOCE S-4 section
[DE92-040334] p 1220 N93-16294
Indoor ozone concentrations: Ventilation rate impacts and mechanisms of outdoor concentration attenuation
[DE93-000633] p 1205 N93-17576

CONCENTRATORS
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468

CONCRETE STRUCTURES
State of the art of airport pavement analysis and design p 1070 N93-16310
Concrete lunar base investigation p 1230 N93-17445

CONCRETES
State of the art review of rutting and cracking inpavements p 1071 N93-16316
Concrete: Potential material for Space Station p 1089 N93-16896
Cement and concrete p 1383 N93-16901
Properties and uses of concrete, appendix B p 1128 N93-16904
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708

CONCURRENT PROCESSING
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863

CONDENSATION NUCLEI
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139

CONDENSED MATTER PHYSICS
University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760

CONDENSERS
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124

CONDITIONS
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741

CONDUCTING POLYMERS
Application of scanning tunneling microscopy to electrochemistry
[AD-A255680] p 1101 N93-15955
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249

CONDUCTION ELECTRONS
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334

CONDUCTIVE HEAT TRANSFER
Optimization of an internally finned rotating heat pipe
[AD-A256725] p 1329 N93-15980

CONDUCTORS
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608

CONES
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961

CONFERENCES
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
Special publication of National Aerospace Laboratory
[DE93-716195] p 1053 N93-15949
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
Energy analysis program
[DE93-001570] p 1199 N93-16045
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1
[NASA-CP-3166-VOL-1] p 1391 N93-17414
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618
International Conference on Defects in Insulating Materials
[AD-A258004] p 1127 N93-17700
The 4th International Symposium on Analysis and Detection of Explosives: Programs and abstracts
[AD-A258029] p 1129 N93-17751
The 16th International Conference on Defects in Semiconductors
[AD-A258035] p 1328 N93-17754

CONFIDENCE LIMITS
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764

CONFIGURATION MANAGEMENT
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275

CONFINEMENT
Physics of the L-mode to H-mode transition in tokamaks
[DE92-040697] p 1306 N93-15827

Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
Static-stress analysis of dual-axis confinement vessel [DE93-000499] p 1135 N93-17497

CONGESTION
US maglev: Status and opportunities [DE92-041132] p 1176 N93-15954

CONGRESSIONAL REPORTS
Strategic defense initiative: 15-year funding requirements [AD-A256738] p 1277 N93-16070
National Science Foundation annual report, 1991 [NSF-92-1] p 1402 N93-16948
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1 [S-HRG-102-716-PT-1] p 1358 N93-17089
National Aeronautics and Space Administration p 1358 N93-17090
National Aeronautics and Space Administration p 1358 N93-17091

CONICAL SHELLS
Laminated conical shells: Considerations for the variations of the stiffness coefficients [LR-671] p 1097 N93-16281
Buckling problems of sandwich shells [LR-690] p 1185 N93-16286

CONIFERS
Polarimetric measurements of natural surfaces at 95 GHz [AD-A256981] p 1138 N93-16130

CONNECTORS
High-strength in-line fiber optic connector [AD-D015446] p 1303 N93-16456
Slip joint connector [NASA-CASE-MFS-28659-1] p 1178 N93-17060

CONSERVATION EQUATIONS
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations [NASA-TP-3315] p 1066 N93-16941

CONSERVATION LAWS
Conservation laws for elastic systems with dissipation [AD-A257168] p 1280 N93-15999
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations [NASA-CR-191647] p 1158 N93-16558
Improved shock-capturing of Jameson's scheme for the Navier-Stokes equations [MEMO-1041] p 1163 N93-16842

CONSOLIDATION
Interaction in polysilazane/SiC powder systems [DE92-041178] p 1119 N93-15957
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines [AD-A257754] p 1067 N93-17695

CONSTELLATIONS
Applications of the Petite Amateur Navy Satellite (PANSAT) [AD-A258015] p 1089 N93-17769

CONSTITUTIVE EQUATIONS
Constitutive and equation of state models using object-oriented programming methods [DE93-000740] p 1243 N93-17063

CONSTRAINTS
Modelling dynamical systems with equality state-space constraints [NLR-TP-89418-U] p 1259 N93-16275
Numerical solution of dynamical systems with state-space constraints [NLR-TP-89419-U] p 1264 N93-16293
Geometric constraint satisfaction [CWI-CS-R9141] p 1236 N93-16339
On Gupta-Bleuler quantization of systems with second-class constants [NIKHEF-H/92-05] p 1264 N93-16342
Constraints on learning in dynamic synapses [PREPRINT-890] p 1226 N93-17026
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507

CONSTRUCTION
Formed platelet combustor liner construction feasibility, phase A [NASA-CR-184506] p 1091 N93-16697
Properties and uses of concrete, appendix B p 1128 N93-16904
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space p 1181 N93-17284
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446
Estimating the regional economic significance of airports [AD-A257658] p 1073 N93-17793
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft [NASA-CR-192040] p 1064 N93-17802

CONSTRUCTION MATERIALS
Properties and uses of concrete, appendix B p 1128 N93-16904

CONTACT LENSES
Operational use of contact lenses by military aircrew [AGARD-AG-334] p 1224 N93-15824

CONTACT LOADS
Force override rate controller for remote actuation [AD-A257631] p 1180 N93-17718

CONTAINMENT
An analytical and experimental study on the design and verification of containment subjected to impact loading p 1078 N93-15726
Aircraft wing compartment liner concept to reduce fuel spillage [DOT/FAA/CT-TN92/34] p 1062 N93-17219
Static-stress analysis of dual-axis confinement vessel [DE93-000499] p 1135 N93-17497

CONTAMINANTS
Fluid separator [NASA-CASE-MFS-28658-1] p 1163 N93-17039

CONTAMINATION
B4C solid target boronization of the MST reversed-field pinch [DE93-002736] p 1310 N93-16921
Materials surface contamination analysis [NASA-CR-191417] p 1105 N93-17000
Generation of aerosolized particulate contamination by the wear of stainless steels [DE93-000742] p 1115 N93-17047

CONTEXT
Generalized LR parsing for general context-free grammars [CWI-CS-R9153] p 1242 N93-16853

CONTEXT FREE LANGUAGES
Neural-network acceptors [MEMO-INF-92-36] p 1260 N93-16666
An algorithm for the construction of dependency trees [MEMO-INF-92-39] p 1240 N93-16668
A short proof of the decidability of bisimulation for normal BPA processed [CWI-CS-R9151] p 1267 N93-16731
Software design as a problem in learning theory (a research overview) p 1248 N93-17509

CONTINENTAL SHELVES
A numerical model of the northwest European continental shelf on the Cray Y-MP2E [CWI-NM-R9119] p 1252 N93-17554

CONTINUITY (MATHEMATICS)
Global continuous symmetry and the 17keV neutrino [PREPRINT-868] p 1288 N93-16966

CONTINUITY EQUATION
Multi-ion ambipolar diffusion [AD-A256568] p 1283 N93-15659
Impact modeling with smooth particle hydrodynamics [DE92-017506] p 1155 N93-15882

CONTINUOUS WAVE LASERS
Picosecond optical mixing in photorefractive materials [AD-A256824] p 1170 N93-15685
The 1.083 micron tunable CW semiconductor laser [NASA-CR-191338] p 1174 N93-16689

CONTINUUM MODELING
The prediction of the overall behavior of viscous composites [ITN-93-85184] p 1098 N93-16855

CONTOURS
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation [AD-A257634] p 1141 N93-17721

CONTRACT MANAGEMENT
DOE Headquarters MHD/fuel cell support contract [DE92-040257] p 1194 N93-15935

CONTRAROTATING PROPELLERS
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor [NASA-TM-105979] p 1066 N93-16715

CONTROL BOARDS
Gloved operator performance study [AD-A256894] p 1227 N93-16048

CONTROL EQUIPMENT
Silicon device performance measurements to support temperature range enhancement [NASA-CR-191780] p 1168 N93-17001

CONTROL SIMULATION
Integrating neural network and expert reasoning: An example [AD-A257215] p 1257 N93-15815
Approaches to control of the large angle magnetic suspension test fixture [NASA-CR-191890] p 1072 N93-16695

CONTROL STABILITY
Performance and stability robustness for uncertain linear systems: A quadratic approach [LAAS-92199] p 1271 N93-17494

CONTROL SURFACES
Articulated control surface [AD-D015464] p 1068 N93-16463

CONTROL SYSTEMS DESIGN
Nonlinear adaptive control using backpropagating neural networks [AD-A256828] p 1257 N93-15687
Adaptive feedforward control of structural intensity in a beam [AD-A256780] p 1183 N93-15915
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1 [AD-A253388] p 1068 N93-16036
Helicopter installations: From motor to rotor [LR-675] p 1061 N93-16345
Theoretical constraints in the design of multivariable control systems [NASA-CR-191943] p 1237 N93-16383
Telerobotic control of a mobile coordinated robotic server [NASA-CR-191650] p 1259 N93-16387
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions [DLR-FB-92-05] p 1260 N93-16515
An optimization-based integrated controls-structures design methodology for flexible space structures [NASA-TP-3283] p 1087 N93-16615
A telerobotic digital controller system [NASA-CR-191799] p 1260 N93-16658
ROMPS critical design review. Volume 1: Hardware [NASA-CR-191613] p 1240 N93-16673
Approaches to control of the large angle magnetic suspension test fixture [NASA-CR-191890] p 1072 N93-16695
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators [NASA-CR-191852] p 1261 N93-16708
TokenPasser: A petri net specification tool [NASA-CR-191816] p 1241 N93-16725
Electrical actuation technology bridging, volume 1 [NASA-CR-191705] p 1148 N93-16756
Electrical actuation technology bridging, volume 2 [NASA-CR-191706] p 1148 N93-16757
Developing a control system for ARES 2 p 1069 N93-16769
Beam, plate, and shell finite elements for CSI design code p 1189 N93-16782
Measurand transient signal suppressor [NASA-CASE-MSC-22027-1] p 1261 N93-17056
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations [NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Modeling for health monitoring and control with applications to the Space Transportation Main Engine p 1095 N93-17298
Numerical methods for the analysis of sampled-data systems and for the computation of system zeros p 1274 N93-17300
Control law synthesis for large flexible spacecraft [NLR-TP-91155-U] p 1088 N93-17539
Design of robust suboptimal controllers for a generalized quadratic criterion [AD-A257746] p 1069 N93-17670
An industrial sewing machine variable speed controller [NASA-CR-192066] p 1180 N93-17772
Dust control for Enabler [NASA-CR-192065] p 1180 N93-17774
Low bandwidth robust controllers for flight [NASA-CR-191774] p 1069 N93-17800

CONTROL THEORY
Modelling dynamical systems with equality state-space constraints [NLR-TP-89418-U] p 1259 N93-16275
Redheffer's lemma and H(infinity)-control or infinite-dimensional systems [W-9206] p 1259 N93-16355
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions [DLR-FB-92-05] p 1260 N93-16515
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
Nonlinear control problems and systems approximations: A geometric approach [MEMO-1039] p 1261 N93-16951
Controllability distributions and systems approximations: A geometric approach [MEMO-1040] p 1269 N93-16952
Control law synthesis for large flexible spacecraft [NLR-TP-91155-U] p 1088 N93-17539
The design of an adaptive attitude control system [AD-A257632] p 1088 N93-17719

CONTROL VALVES
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
CONTROLLABILITY
Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
CONTROLLED ATMOSPHERES
Microwave processing of ceramics: Guidelines used at the Oak Ridge National Laboratory
[DE92-040862] p 1123 N93-16297
An artificially generated atmosphere near a lunar base p 1398 N93-17456
CONTROLLED FUSION
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
CONTROLLERS
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191943] p 1237 N93-16383
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators
[NASA-CR-191852] p 1261 N93-16708
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772
CONVECTION
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612
Development of equipment and technique to study solidification in microgravity, phase 1
[CTN-93-60608] p 1132 N93-16729
Effects of convection electric field on upwelling and escape of ionospheric O(+)
[NASA-CR-191669] p 1208 N93-16839
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida p 1219 N93-17285
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
CONVECTION CURRENTS
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680
CONVECTIVE FLOW
Acceleration of FDNS flow simulations using initial flowfields generated with a parabolized Navier-Stokes method p 1165 N93-17329
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736
CONVECTIVE HEAT TRANSFER
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990
Natural convection from a horizontal heater in response to steady and pulsatile input powers
[AD-A257101] p 1156 N93-16126
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
CONVENTIONS
Energy analysis program
[DE93-001570] p 1199 N93-16045
CONVERGENCE
Radial basis functions: A class of grid-free, scattered data approximations
[DE92-012675] p 1263 N93-15921
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Random quadratic forms and the bootstrap for U-statistics
[W-9207] p 1275 N93-16356
Uniform convergence estimates for multigrid V-cycle algorithms with less than full elliptic regularity
[DE92-041275] p 1238 N93-16532
Open problems in rewriting
[CWI-CS-R9114] p 1267 N93-16727
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833
CONVERSATION
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108
CONVEXITY
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677
CONVOLUTION INTEGRALS
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
COOLANTS
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
COOLING
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007
A Theoretical Analysis of Thermal Radiation from Neutron Stars
[NASA-CR-191906] p 1376 N93-17410
The Geminga neutron star: Evidence for nucleon superfluidity at very high density p 1376 N93-17411
COOLING SYSTEMS
MHD Integrated Topping Cycle Project
[DE92-041285] p 1306 N93-15666
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
COORDINATES
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
COORDINATION
The study of multi-institutional collaborations in high-energy physics
[DE93-002337] p 1300 N93-17580
COPOLYMERIZATION
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
COPPER
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers
[DE93-000508] p 1318 N93-16243
Energetics and structural properties of twist grain boundaries in Cu p 1118 N93-17304
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651
COPPER ALLOYS
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
Spin density waves in dilute CuMn alloys
[DE93-001628] p 1117 N93-17578
COPPER COMPOUNDS
Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
COPPER OXIDES
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
Method of making Tl-Sr-Ca-Cu-Oxide superconductors comprising heating at elevated pressures in sealed container
[AD-D015482] p 1321 N93-16489
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
Electronic structure and phase separation in superconducting cuprates
[PREPRINT-889] p 1323 N93-17025
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
Apical oxygen ions and the electronic structure of the high T(sub c) cuprates
[PREPRINT-828] p 1324 N93-17223
COPPER SELENIDES
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650
CORES
Vortex breakdown incipience: Theoretical considerations
[NASA-CR-189734] p 1055 N93-16627
CORIOLIS EFFECT
PDF turbulence modeling and DNS p 1153 N93-15794
Boundary layer transition in Coriolis force field p 1160 N93-16815
CORONAS
VLF/LF corona investigation
[AD-A258052] p 1141 N93-17709
CORRELATION
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017
Problems with the Euclidean formulation of heavy quark effective theories
[PREPRINT-884] p 1290 N93-17020
Gribov copies and smeared correlation functions in lattice QCD
[PREPRINT-892] p 1330 N93-17027
A new look at radio/x ray correlations p 1362 N93-17136

The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
CORRELATION COEFFICIENTS
Lattice calculations of f(D) and f(B)
[SSCL-PREPRINT-798] p 1286 N93-16394
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test)
[ESDU-92021] p 1061 N93-16635
CORRELATORS
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
CORROSION
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
Stability of metal particle and metal particulate media p 1170 N93-16329
Corrosion and arc erosion in MHD channels
[DE93-001721] p 1313 N93-17782
CORROSION PREVENTION
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
Field demonstration of aviation turbine fuel MIL-T-83133C, grade JP-8 (NATO code F-34), at Fort Bliss, TX
[AD-A256945] p 1129 N93-16431
CORROSION RESISTANCE
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122
Polyurethane self-priming topcoats
[AD-D015477] p 1124 N93-16484
UPT scenarios: Implications for system reliability p 1182 N93-17332
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498
COSMIC DUST
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
COSMIC NOISE
Measurements of the cosmic microwave background temperature at 1.47 GHz
[DE93-000587] p 1400 N93-17379
COSMIC RAY SHOWERS
Monte Carlo shower counter studies
[NASA-CR-191364] p 1243 N93-16933
COSMIC RAYS
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182
Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
Research in particle physics
[DE92-041135] p 1293 N93-17475
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596
COSMIC X RAYS
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
Correlated hard x ray and UV variability in NGC 5548 p 1361 N93-17104
Ginga results of type 2 AGN's and their contributions to the cosmic x ray background p 1367 N93-17105
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background p 1368 N93-17112
The x ray properties of warm IRAS galaxies p 1371 N93-17134
Soft x ray segregation of Seyfert galaxies p 1362 N93-17135
The x ray background: Past, present, and future p 1372 N93-17140
The evolution of AGN's at x ray wavelengths p 1372 N93-17141
The hard x ray luminosity function and evolution of AGN p 1373 N93-17142
Energy spectrum of the cosmic x ray background: Some considerations based on the Ginga results p 1373 N93-17143
Where have all the sources gone? p 1373 N93-17144
ROSAT deep surveys p 1362 N93-17145
Origin of the cosmic x ray background radiation p 1373 N93-17146
On the suitability of starburst galaxies as a contributor to the CXRB p 1373 N93-17147
Contribution of clusters of galaxies to the XRB p 1374 N93-17148
On the origin of the x ray background p 1374 N93-17149
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
Selection of faint quasars based on variability p 1363 N93-17156
AGN and the x ray background: Concluding remarks p 1375 N93-17160
COSMOCHEMISTRY
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225
COSMOLOGY
Measuring q(sub 0) using supernovae at z approximately 0.2
[DE92-041164] p 1363 N93-15918
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225
On the black-hole conformal field theory coupled to the Polyakov's string theory. A non perturbative analysis
[PREPRINT-852] p 1365 N93-17072
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
Research in elementary particle physics
[DE93-003153] p 1294 N93-17488
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787
COST ANALYSIS
Utilization of space resources in the space transportation system p 1384 N93-16912
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines
[AD-A257754] p 1067 N93-17695
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745
COST EFFECTIVENESS
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
Space transfer vehicle concepts and requirements study, phase 2
[NASA-CR-191425] p 1075 N93-16660
Concrete: Potential material for Space Station p 1089 N93-16896
Utilization of space resources in the space transportation system p 1384 N93-16912
Towards automated support for extraction of reusable components p 1244 N93-17163
Future directions: Integrated resource planning
[DE92-040867] p 1197 N93-17208
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325
Exodus: Prime Mover
[NASA-CR-192051] p 1064 N93-17803
COST ESTIMATES
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
Utilization of space resources in the space transportation system p 1384 N93-16912
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
COST REDUCTION
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325
RT-Syn: A real-time software system generator p 1250 N93-17523
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
COSTS
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745
COUETTE FLOW
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
COULOMB POTENTIAL
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
COUNTER ROTATION
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715
COUPLERS
Polarization independent narrow channel wavelength division multiplexing fiber coupler and method for producing same
[AD-D015473] p 1303 N93-16480
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380
COUPLING
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278
Lattice calculations of f(D) and f(B)
[SSCL-PREPRINT-798] p 1286 N93-16394
COUPLINGS
High torque capable, self locking, vibration isolating flexible shaft coupling statement of government interest
[AD-D015501] p 1178 N93-16583
COVARIANCE
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463
CRACK GEOMETRY
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures p 1080 N93-15744
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445
CRACK INITIATION
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures p 1080 N93-15744
Prediction of thermal cycling induced matrix cracking p 1100 N93-16780
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495
CRACK OPENING DISPLACEMENT
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433
CRACK PROPAGATION
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
Fatigue characterization of Ni-base alloys p 1081 N93-15756

Residual stresses in welds and effect on crack growth prediction p 1082 N93-15758
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
Hermite interpolation algorithm for 2D fracture mechanics
[DE92-041266] p 1184 N93-16097
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone
[AD-A256991] p 1185 N93-16260
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270
Multiple-site-damage in 2024-T3 alloy sheet
[LR-660] p 1112 N93-16279
Multiaxial fatigue analysis of metals p 1113 N93-16509
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641
Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
Microstructure/mechanical-property relationships and R-curve behavior in Si3N4/Si3N4(w) composites
[DE92-041096] p 1098 N93-17004
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606

CRACK TIPS
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188

CRACKING (FRACTURING)
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
State of the art review of rutting and cracking inpavements p 1071 N93-16316
Unified airport pavement design procedure p 1071 N93-16318
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562

CRACKS
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates p 1080 N93-15742
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708

CRASHWORTHINESS
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455

CRAY COMPUTERS
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554

CREEP ANALYSIS
Testing and characterisation of metallic materials for structural analysis of high temperature components p 1082 N93-15757

CREEP PROPERTIES
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
Testing and characterisation of metallic materials for structural analysis of high temperature components p 1082 N93-15757
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649

CREEP RUPTURE STRENGTH
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479

CREEP STRENGTH
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788

CREW PROCEDURES (INFLIGHT)
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262

CREW PROCEDURES (PREFLIGHT)
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262

CREWS
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807

CRITERIA
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670

CRITICAL LOADING
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986
Mode interaction in stiffened composite shells under combined mechanical and thermal loadings p 1189 N93-16793
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

CRITICAL PATH METHOD
On formulations of path-following techniques for structural stability analysis
[LR-676] p 1186 N93-16346

CRITICAL TEMPERATURE
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043

CROSS CORRELATION
ROSAT all sky survey observations of IRAS galaxies p 1362 N93-17133

CROSS FLOW
A new parameter for predicting crossflow instability p 1162 N93-16828
Experiments on swept-wing boundary-layer transition p 1162 N93-16829

CROSS POLARIZATION
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182

CROSS SECTIONS
The use of cross-section warping functions in composite rotor blade analysis
[NASA-CR-191772] p 1186 N93-16946

CRUISE MISSILES
Monitoring limits on sea-launched cruise missiles
[OTA-ISC-513] p 1061 N93-16632
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619

CRYOGENIC EQUIPMENT
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
Cryotribology: Development of cryotribological theories and application to cryogenic devices
[DE93-000404] p 1176 N93-16238
Performance measurements of superconducting current leads having low helium boiloff rates
[DE92-040730] p 1146 N93-16392

CRYOGENIC ROCKET PROPELLANTS
Developing a safe on-orbit cryogenic depot p 1393 N93-17426

CRYOGENIC TEMPERATURE
Cryotribology: Development of cryotribological theories and application to cryogenic devices
[DE93-000404] p 1176 N93-16238

CRYOGENIC WIND TUNNELS
Modeling and control study of the NASA 0.3-meter transonic cryogenic tunnel for use with sulfur hexafluoride medium
[NASA-CR-189737] p 1157 N93-16379
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710

CRYOGENICS
Simulation of cryogenic turbopump annular seals p 1181 N93-17318

CRYOPUMPING
Design and analysis of the cryopump for the D3-D advanced divertor
[DE93-001357] p 1179 N93-17389

CRYSTAL DEFECTS
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
Simulation of vortex-line pinning by defects in the Y-Ba-Cu-O system
[DE92-041185] p 1318 N93-16205
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
The 16th International Conference on Defects in Semiconductors
[AD-A258035] p 1328 N93-17754

CRYSTAL DISLOCATIONS
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005

CRYSTAL FILTERS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714

CRYSTAL GROWTH
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Atomic resolution imaging and analysis with the STEM
[DE92-041304] p 1166 N93-16150
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Growth on the reconstructed diamond (100) surface
[AD-A256954] p 1319 N93-16301
Process for single crystal growth of high T(c) superconductors
[AD-D015480] p 1320 N93-16485
Nucleation, crystal growth, and liquid/liquid phase separation in materials in microgravity, phase 3
[CTN-93-60612] p 1131 N93-16493
Study of an orbital accelerator for ion implantation and of protective coatings for materials
[CTN-93-60614] p 1298 N93-16546
Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597

Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612
The influence of microgravity on the microstructure and properties of eutectics, phase 4
[CTN-93-60629] p 1132 N93-16690
Study of FES/CAST/HGS
[NASA-CR-190945] p 1114 N93-16711
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2
[CTN-93-60631] p 1133 N93-16937
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution
p 1165 N93-17334
Process for the controlled growth of single-crystal films of silicon carbide polytypes on silicon carbide wafers
[NASA-CASE-LEW-15222-3] p 1327 N93-17413
Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492

CRYSTAL LATTICES
Simulation of vortex-line pinning by defects in the Y-Ba-Cu-O system
[DE92-041185] p 1318 N93-16205
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753

CRYSTAL OSCILLATORS
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268

CRYSTAL STRUCTURE
X ray crystal structure of an organoindium alkoxide dimer, (Ph2InOSiMe3)2
[AD-A257404] p 1315 N93-15862
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206
Apical oxygen ions and the electronic structure of the high T(sub c) cuprates
[PREPRINT-828] p 1324 N93-17223
Energetics and structural properties of twist grain boundaries in Cu p 1118 N93-17304
Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

CRYSTALLINITY
Application of grazing incidence x ray diffraction to polymer blends
[DE93-000709] p 1122 N93-16228
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525
Understanding crystallinity in aromatic polyimides
p 1128 N93-16764
Energetics and structural properties of twist grain boundaries in Cu p 1118 N93-17304

CRYSTALLITES
Understanding crystallinity in aromatic polyimides
p 1128 N93-16764

CRYSTALLIZATION
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918
Method and apparatus for controlling protein crystallization
[NASA-CASE-MFS-28688-1] p 1323 N93-17043

CRYSTALLOGRAPHY
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206
Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391

CRYSTALS
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378

CUBIC EQUATIONS
Construction of monotone extensions to boundary functions
[MEMO-1045] p 1268 N93-16845
On solving the Diophantine equation (x cubed) + (y cubed) + (z cubed) = k on a vector computer
[CWI-NM-R9121] p 1271 N93-17556

CUES
Simulator motion
[AD-A257683] p 1072 N93-17687

CULTURE (SOCIAL SCIENCES)
Space resources. Volume 4: Social concerns
[NASA-SP-509-VOL-4] p 1377 N93-16857
Space law and space resources p 1358 N93-16860
Strategies for broadening public involvement in space developments p 1349 N93-16861
Space migrations: Anthropology and the humanization of space p 1229 N93-16862
The influence of culture on space developments
p 1378 N93-16863

CUMULUS CLOUDS
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372

CURING
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984

CURRENT DENSITY
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828
Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897
Technique for current step measurements on the low field Metal Oxide Varistor (MOV)
[DE93-000843] p 1143 N93-15904
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924
High-temperature superconducting current leads
[DE92-040729] p 1145 N93-16028
Scaling laws for the critical current density of NbN films in high magnetic fields
[DE93-000604] p 1318 N93-16277
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process
[DE93-000870] p 1116 N93-17346
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357

CURVE FITTING
Stochastic integrals and goodness-of-fit tests
[ISBN-90-9003836-1] p 1275 N93-16223
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491

CYCLES
On Hamiltonian properties of 2-tough graphs
[MEMO-1037] p 1266 N93-16669
Cycles containing all vertices of maximum degree
[MEMO-1044] p 1268 N93-16844

CYCLIC LOADS
Prediction of thermal cycling induced matrix cracking
p 1100 N93-16780
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538

CYCLOGENESIS
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

CYCLONES
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

CYCLOTRON RADIATION
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985

CYLINDRICAL BODIES
Multi-ion ambipolar diffusion
[AD-A256568] p 1283 N93-15659
Hydrostatic pressure testing of graphite/epoxy cylinder C6-1
[DE93-000427] p 1185 N93-16240
On canonical cylinder sections for accurate determination of contact angle in microgravity
[DE93-000635] p 1130 N93-16377

Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Saddle clamp assembly
[NASA-CASE-MFS-28701-1] p 1178 N93-17057
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution
p 1165 N93-17334
Comparison of performances of different circular intakes p 1067 N93-17616

CYLINDRICAL SHELLS
Initial imperfection survey on a cylindrical shell at the Ultra-Centrifuge Nederland n.v.
[LR-682] p 1184 N93-16211
A semi-analytical formulation for the elastoplastic analysis of imperfect cylindrical shells
[LR-674] p 1185 N93-16282
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690

CYTOLOGY
Immunology presentation at the 1990 NASA/NSF Antarctica Biomedical Science Working Group
p 1222 N93-16806

D

DAMAGE
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates
p 1080 N93-15742
Composite material damage and fracture models for numerical simulations in support of fracture control
p 1080 N93-15743
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures
p 1080 N93-15744
Damage tolerance checking on Ni/H2 battery cells
p 1081 N93-15754
Multiple-site-damage in 2024-T3 alloy sheet
[LR-660] p 1112 N93-16279
Multiple-site-damage fatigue of riveted joints
[LR-679] p 1185 N93-16285
Federal Aviation Administration pavement modeling
p 1071 N93-16315
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606

DAMAGE ASSESSMENT
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Damage mechanics modelisation of composite structures: A physical approach of failure
p 1079 N93-15741
Stress analysis and damage evaluation of flawed composite laminates by hybrid-numerical methods
p 1100 N93-17340

DAMPING
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319

DATA
Data modelling in complex application domains
[TR-92-01] p 1355 N93-16371

DATA ACQUISITION
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Data acquisition for low-temperature geothermal well tests and long-term monitoring
[DE93-000387] p 1193 N93-15669
An investigation of requirements traceability to support systems development
[AD-A257444] p 1351 N93-15868
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems
p 1353 N93-16322
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477
Undersea data collection, analysis, and display system
[AD-D015476] p 1220 N93-16483
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Automated Weather Observing System (AWOS) Data Acquisition System (ADAS) Operational Test and Evaluation (OT/E) integration and OT/E operational test plan
[DOT/FAA/CT-TN90/65] p 1214 N93-16631
Increasingly automated procedure acquisition in dynamic systems
[NASA-TM-108112] p 1241 N93-16684
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle
p 1057 N93-16784
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036
LEAF research
[BCRS-91-16] p 1192 N93-17053
New D3-D tokamak plasma control system
[DE93-000877] p 1312 N93-17388
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Cosmic ray NM-64 neutron monitor data-18
[NOTA-INTERNA-972] p 1400 N93-17627
MicroSat data telemetry
[AD-A257468] p 1076 N93-17659

DATA BASE MANAGEMENT SYSTEMS
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
Information engineering and the information engineering facility versus rapid application development and focus
[AD-A257297] p 1350 N93-15895
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021
Analysis, design, and implementation of a database management system for the Naval Postgraduate School Alumni Association
[AD-A257109] p 1352 N93-16116
INFOTECH 1992: DOE Technical Information (TI) Meeting
[DE93-000467] p 1352 N93-16151
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036
NADIR: A prototype system for detecting network and file system abuse
[DE93-000861] p 1256 N93-17385
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635

DATA BASES
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869
A framework for classifying and resolving semantic conflicts using the enhanced entity-relationship model
[AD-A257452] p 1351 N93-15870
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
Information engineering and the information engineering facility versus rapid application development and focus
[AD-A257297] p 1350 N93-15895
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
Development of a faculty research and publication database system
[AD-A257107] p 1352 N93-16115
Analysis, design, and implementation of a database management system for the Naval Postgraduate School Alumni Association
[AD-A257109] p 1352 N93-16116
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
Directory of design support methods
[AD-A256987] p 1227 N93-16258
Stewardship of very large digital data archives
p 1353 N93-16321
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630
C&RE-SLC: Database for conservation and renewable energy activities
[DE93-001929] p 1196 N93-16653
Utilizing semantic networks to database and retrieve generalized stochastic colored Petri nets
[NASA-CR-191853] p 1355 N93-16707
Where have all the sources gone?
p 1373 N93-17144
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Towards automated support for extraction of reusable components p 1244 N93-17163
A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base
[DE93-000018] p 1399 N93-17174
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
GATOR: Requirements capturing of telephony features p 1247 N93-17505

Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
A framework for classifying and resolving semantic heterogeneity in object-oriented databases
[AD-A257597] p 1357 N93-17790

DATA COMPRESSION
Complexity optimized vector quantization: A neural network approach
[DE93-001304] p 1246 N93-17477

DATA CORRELATION
Development of an interactive code for updating dynamic finite element models p 1078 N93-15732

DATA FLOW ANALYSIS
The failure of failures in a paradigm for asynchronous communication
[CWI-CS-R9147] p 1237 N93-16410

DATA LINKS
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
Advanced Communications Technology Satellite high burst rate link evaluation terminal experiment control and monitor software maintenance manual, version 1.0
[NASA-CR-189161] p 1237 N93-16429
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
Results of DATAS investigation of illegal mode S ID's at JFK Airport
[DOT/FAA/CT-92/26] p 1059 N93-16841

DATA MANAGEMENT
User's guide for the longitudinal scalogram analysis program
[AD-A256817] p 1232 N93-15682
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
Department of Defense Directive (DODD) 8000.1 defense Information Management (IM) program
[AD-A256988] p 1353 N93-16259
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
The challenge of a data storage hierarchy p 1354 N93-16325
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
Desktop Computing Integration Project p 1254 N93-16795

DATA PROCESSING
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
CMOR: A configurable monitor
[DE92-040208] p 1233 N93-15902
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
Stratified hypermedia structures for information disclosure
[TR-91-27] p 1355 N93-16370
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
Undersea data collection, analysis, and display system
[AD-D015476] p 1220 N93-16483
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
On efficiently characterizing solutions of linear Diophantine equations and its application to data dependence analysis
[RUU-CS-92-01] p 1266 N93-16643
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Desktop Computing Integration Project p 1254 N93-16795
Verification of the computer programs SLAAP and DATA
[DE93-002597] p 1243 N93-16987
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Clustering properties of x ray sources from the analysis of the Ginga P(D) distribution p 1374 N93-17150
PDDP: A Parallel Data Distribution Preprocessor
[DE92-040400] p 1256 N93-17207
Neural network architectures to analyze OPAD data p 1262 N93-17336
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665
Automatic information processing and high performance skills: Individual differences and mechanisms of performance improvement in search-detection and complex tasks
[AD-A257711] p 1226 N93-17684
Multifractal cloud properties data assessment
[DE93-002638] p 1218 N93-17785

DATA PROCESSING EQUIPMENT
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597

DATA RECORDERS
The 19 mm data recorders similarities and differences p 1170 N93-16331

DATA RECORDING
Reproduction of digital signals in magnetic recording: A theoretical study
[ISBN-90-6275-757-X] p 1168 N93-16564
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538

DATA REDUCTION
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Verification of the computer programs SLAAP and DATA
[DE93-002597] p 1243 N93-16987
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
Multifractal cloud properties data assessment
[DE93-002638] p 1218 N93-17785

DATA RETRIEVAL
Data storage and retrieval system p 1354 N93-16324
The 19 mm data recorders similarities and differences p 1170 N93-16331
Data storage and retrieval system abstract p 1170 N93-16332
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765

DATA SIMULATION
Data modelling in complex application domains
[TR-92-01] p 1355 N93-16371

DATA SMOOTHING
A variational method for finite element stress recovery: Applications in one-dimension p 1189 N93-16785

DATA STORAGE
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
Stewardship of very large digital data archives p 1353 N93-16321
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems p 1353 N93-16322
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
Data storage and retrieval system p 1354 N93-16324
The challenge of a data storage hierarchy p 1354 N93-16325
Network accessible multi-terabyte archive p 1354 N93-16326
ICI optical data storage tape p 1354 N93-16327
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
Stability of metal particle and metal particulate media p 1170 N93-16329
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
The 19 mm data recorders similarities and differences p 1170 N93-16331
Data storage and retrieval system abstract p 1170 N93-16332
Open systems storage platforms p 1355 N93-16333
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Spacecraft optical disk recorder memory buffer control p 1170 N93-16773
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635

DATA STRUCTURES
A framework for classifying and resolving semantic conflicts using the enhanced entity-relationship model
[AD-A257452] p 1351 N93-15870
Data modelling in complex application domains
[TR-92-01] p 1355 N93-16371
Datatype laws without signatures
[CWI-CS-R9133] p 1268 N93-16851

DATA SYSTEMS
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
The challenge of a data storage hierarchy p 1354 N93-16325
Open systems storage platforms p 1355 N93-16333
Results of DATAS investigation of illegal mode S ID's at JFK Airport
[DOT/FAA/CT-92/26] p 1059 N93-16841
Utilization of geographic information system in lunar mapping p 1389 N93-17257

Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460
Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504

DATA TRANSFER (COMPUTERS)
Data storage and retrieval system p 1354 N93-16324

DATA TRANSMISSION
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
An overview of MANIFOLD and its implementation
[CWI-CS-R9142] p 1236 N93-16365
MicroSat data telemetry
[AD-A257468] p 1076 N93-17659

DAYTIME
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies p 1214 N93-16507

DEBRIS
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696

DECAMETRIC WAVES
An algorithm to quantify the performance of the JOVE program p 1254 N93-17306

DECELERATION
Measuring q(sub 0) using supernovae at z approximately 0.2
[DE92-041164] p 1363 N93-15918

DECIDUOUS TREES
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130

DECISION MAKING
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
The formal use of expert judgments in environmental management
[DE92-019481] p 1199 N93-15852
Development and enhancement of a model of performance and decision making under stress in a real life setting
[AD-A255699] p 1226 N93-16111
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Cognitive and affective components of mental workload: Understanding the effects of each on human decision making behavior p 1226 N93-16783
Domain specific software design for decision aiding p 1249 N93-17517
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733

DECISION THEORY
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
An improved classification tree analysis of high cost modules based upon an axiomatic definition of complexity p 1244 N93-17167
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733

DECOMPOSITION
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061
Domain decomposition as a mechanism for using asymptotic methods
[DE92-040759] p 1263 N93-16201
An intelligent decomposition approach for efficient design of non-hierarchic systems p 1254 N93-16762
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507

DECOUPLING
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515

DECOYS
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405

DEDUCTION
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742

DEEP SPACE
ROSAT deep surveys p 1362 N93-17145

DEFECTS
Initial imperfection survey on a cylindrical shell at the Ultra-Centrifuge Nederland n.v.
[LR-682] p 1184 N93-16211
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055
On the nature of bias and defects in the software specification process p 1244 N93-17166
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641
International Conference on Defects in Insulating Materials
[AD-A258004] p 1127 N93-17700
The 16th International Conference on Defects in Semiconductors
[AD-A258035] p 1328 N93-17754

DEFENSE PROGRAM
Strategic defense initiative: Estimates of brilliant pebbles' effectiveness are based on many unproven assumptions
[AD-A256810] p 1277 N93-15679
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
Strategic defense initiative: 15-year funding requirements
[AD-A256738] p 1277 N93-16070
Department of Defense Directive (DODD) 8000.1 defense Information Management (IM) program
[AD-A256988] p 1353 N93-16259
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669

DEFINITION
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702

DEFLECTION
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314

DEFORESTATION
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478

DEFORMATION
Damping
[LR-685] p 1184 N93-16214
Micro mechanical behavior of pavements p 1070 N93-16312
State of the art review of rutting and cracking inpavements p 1071 N93-16316
On formulations of path-following techniques for structural stability analysis
[LR-676] p 1186 N93-16346
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

DEGRADATION
A laser spectroscopy technique for evaluating in-situ degradation of composite materials
[AD-A256983] p 1097 N93-16255
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

DEGREES OF FREEDOM
Updating and localizing structural errors based on minimization of equation errors p 1077 N93-15719
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369

DELAMINATING
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates p 1080 N93-15742
Manufacturing and inspection of artificial delaminations in composite materials
[NLR-TP-91085-U] p 1099 N93-17582

DELAY
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352

DELAY LINES
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688

DELTA WINGS
Experimental and numerical investigation of vortex flow over a 76/60-deg double-delta wing
[LR-680] p 1054 N93-16210
Comparison of solution of various Euler solvers and one Navier-Stokes solver for the flow about a sharp-edged cropped delta wing
[NLR-TP-90340-U] p 1157 N93-16411
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797

DEMAGNETIZATION
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689

DEMAND (ECONOMICS)
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046
Future directions: Integrated resource planning
[DE92-040867] p 1197 N93-17208

DENDRITIC CRYSTALS
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505

DENSE PLASMAS
CRRES: The combined release and radiation effects satellite program directory
[NASA-CR-184504] p 1076 N93-15713

DENSIFICATION
Modeling of forced flow/thermal gradient chemical vapor infiltration
[DE93-001615] p 1125 N93-17032

DEPENDENT VARIABLES
C-integrable nonlinear partial differential equations in N + 1 dimensions
[PREPRINT-833] p 1269 N93-16955

DEPLOYMENT
Orbital manoeuvre effects on large flexible antennae p 1078 N93-15729
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
TELECOM 2 deployable reflectors p 1082 N93-15761

Deployment analysis and in orbit control of large reflectors p 1083 N93-15769
Dynamic deployment analysis of a mesh antenna reflector p 1083 N93-15770
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
Dynamic of large reflectors p 1084 N93-15773

DEPOSITION
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

DEPOSITS
Processing of metal and oxygen from lunar deposits p 1382 N93-16895
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment p 1386 N93-17240
Radon as a tracer for lunar volatiles p 1388 N93-17248

DEPTH MEASUREMENT
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224

DERIVATION
Modal derivation rules
[ML-91-07] p 1274 N93-17784

DESIGN
NASA/USRA advanced design program activity, 1991-1992
[NASA-CR-192063] p 1135 N93-17778

DESIGN ANALYSIS
Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
ROMPS critical design review. Volume 2: Robot module design documentation
[NASA-CR-191614] p 1240 N93-16642
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Multidisciplinary design optimization using response surface analysis p 1065 N93-16796
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
Design and analysis of seals for extended service life p 1181 N93-17283
Guide to object-oriented analysis and design p 1254 N93-17296
A process for prototyping onboard payload displays for Space Station Freedom p 1073 N93-17315
Design and analysis of the cryopump for the D3-D advanced divertor
[DE93-001357] p 1179 N93-17389
Software design as a problem in learning theory (a research overview) p 1248 N93-17509
Towards automation of user interface design p 1248 N93-17510
Domain specific software design for decision aiding p 1249 N93-17517
Knowledge modeling for software design p 1251 N93-17525
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802

DESIGN TO COST
Exodus: Prime Mover
[NASA-CR-192051] p 1064 N93-17803

DETECTION
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048
The ionosphere as a gamma ray burst detector p 1211 N93-17312
The 4th International Symposium on Analysis and Detection of Explosives: Programs and abstracts
[AD-A258029] p 1129 N93-17751

DETONATION
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363

DEUTERIUM
Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655

DEUTERIUM PLASMA
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044

DEVELOPING NATIONS
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092

DIAGNOSIS
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine
[DE92-040338] p 1172 N93-16098
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics
[DE93-002758] p 1106 N93-17212
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483

DIAMINES
Substituted 1,1,1-triaryl 2,2,2-trifluoroethanes and processes for their synthesis
[NASA-CASE-LEW-14345-7] p 1095 N93-17412

DIAMONDS
Dynamic fabrication of diamond thermal management substrates
[AD-A257213] p 1118 N93-15814
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Conduction in ion implanted single crystal diamond
[DE92-040861] p 1317 N93-16164
Heteroepitaxial diamond growth
[AD-A257356] p 1317 N93-16175
Growth on the reconstructed diamond (100) surface
[AD-A256954] p 1319 N93-16301
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925

DICHROISM
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651

DIELECTRIC PROPERTIES
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188

DIELECTRICS
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188

DIESEL ENGINES
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058

DIFFERENCE EQUATIONS
PDF turbulence modeling and DNS p 1153 N93-15794
Symmetry group of partial differential equations and of differential difference equations: The Toda lattice versus the Korteweg-de Vries equation
[PREPRINT-841] p 1270 N93-16995
Symmetries and conditional symmetries of differential-difference equations
[PREPRINT-858] p 1270 N93-16997

DIFFERENTIAL ABSORPTION LIDAR
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781

DIFFERENTIAL CALCULUS
Automatic differentiation bibliography
[DE92-040599] p 1263 N93-15944
ADIFOR: A FORTRAN system for portable automatic differentiation
[DE92-040743] p 1239 N93-16588

DIFFERENTIAL EQUATIONS
Turbulence modeling and experiments p 1153 N93-15796
Preconditioned time-difference methods for solving advective-diffusive systems
[DE92-014790] p 1262 N93-15879
Automatic differentiation bibliography
[DE92-040599] p 1263 N93-15944
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations
[NASA-TP-3315] p 1066 N93-16941
Symmetries and conditional symmetries of differential-difference equations
[PREPRINT-858] p 1270 N93-16997
Integrable singular integral evolution equations
[PREPRINT-880] p 1270 N93-17013
Parallel-iterated Runge-Kutta methods for stiff ordinary differential equations
[CWI-NM-R9117] p 1257 N93-17549
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731

DIFFERENTIAL GEOMETRY
Differential cartography
[AD-A257772] p 1192 N93-17728

DIFFERENTIATION (BIOLOGY)
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552

DIFFRACTION
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231
DIFFRACTION PATTERNS
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
DIFFUSERS
MHD Integrated Topping Cycle Project
[DE92-041284] p 1306 N93-15678
DIFFUSION
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859
Element diffusion in pulsating variables
[DE93-000795] p 1364 N93-16232
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736
DIFFUSION FLAMES
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
DIFFUSION THEORY
On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
DIFFUSION WELDING
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
DIFFUSIVITY
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
DIGITAL DATA
Stewardship of very large digital data archives p 1353 N93-16321
Network accessible multi-terabyte archive p 1354 N93-16326
ICI optical data storage tape p 1354 N93-16327
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
The 19 mm data recorders similarities and differences p 1170 N93-16331
Automated classification of basic-level terrain features in digital elevation models
[AD-A256932] p 1190 N93-16504
Reproduction of digital signals in magnetic recording: A theoretical study
[ISBN-90-6275-757-X] p 1168 N93-16564
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle p 1057 N93-16784
DIGITAL FILTERS
Error feedback for reduction of quantization errors due to arithmetic operations in recursive digital filters
[EL-9] p 1272 N93-17633
DIGITAL SIMULATION
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738
Composite material damage and fracture models for numerical simulations in support of fracture control p 1080 N93-15743
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
PDF turbulence modeling and DNS p 1153 N93-15794
Modeling of turbulence and transition p 1153 N93-15795
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transition
[NAL-SP-15] p 1160 N93-16809
Instability of spatially periodic flows p 1160 N93-16810
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811
Turbulence research: Where should we go? p 1160 N93-16812
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
Consideration on boundary-layer receptivity p 1160 N93-16814
Boundary layer transition in Coriolis force field p 1160 N93-16815
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Boundary-layer control on a freely falling sphere p 1161 N93-16819
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom p 1161 N93-16820
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
Development of wall turbulence structure p 1162 N93-16824
Mechanism of the mode selection in bifurcations p 1162 N93-16825
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
A new parameter for predicting crossflow instability p 1162 N93-16828
Experiments on swept-wing boundary-layer transition p 1162 N93-16829
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397
DIGITAL SYSTEMS
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658
Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
DIGITAL TECHNIQUES
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
DIGITAL TELEVISION
Standardization of end-to-end performance of digital video teleconferencing/video telephony systems
[AD-A257186] p 1137 N93-16001
DILUTION
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
DIMENSIONAL ANALYSIS
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
DIMENSIONAL STABILITY
Isostatic mounting platform p 1080 N93-15745
DIMERIZATION
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
DIMERS
X ray crystal structure of an organoindium alkoxide dimer, (Ph2InOSiMe3)2
[AD-A257404] p 1315 N93-15862
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865
Growth on the reconstructed diamond (100) surface
[AD-A256954] p 1319 N93-16301
DIODES
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Optoelectronic materials center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A257136] p 1301 N93-16079
DIOPHANTINE EQUATION
On efficiently characterizing solutions of linear Diophantine equations and its application to data dependence analysis
[RUU-CS-92-01] p 1266 N93-16643
On solving the Diophantine equation (x cubed) + (y cubed) + (z cubed) = k on a vector computer
[CWI-NM-R9121] p 1271 N93-17556
DIPOLE MOMENTS
Ab initio molecular orbital calculations for magnesium-containing systems
[AD-A255811] p 1287 N93-16397
DIRAC EQUATION
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071
Relativistic calculations of excitation and ionization of highly charged ions by electron impact
[DE93-002129] p 1296 N93-17783
DIRECT BROADCAST SATELLITES
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation p 1081 N93-15751
DIRECT CURRENT
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353
DIRECTIONAL ANTENNAS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
DIRECTORIES
Directory of design support methods
[AD-A256987] p 1227 N93-16258
DISABILITIES
Future Assets, Student Talent (FAST)
[NASA-CR-191632] p 1332 N93-16624
DISCRETE ADDRESS BEACON SYSTEM
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
DISCRETE FUNCTIONS
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
Functional expansion representations of artificial neural networks p 1262 N93-16772
DISILICIDES
Dependence of buried CoSi2 resistivity on ion implantation and annealing conditions
[DE92-010080] p 1322 N93-16930
DISPENSERS
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
DISPERSION
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
DISPLACEMENT
An interferometer having fused optical fibers, and apparatus and method using the interferometer
[NASA-CASE-LAR-14640-1-CU] p 1304 N93-17052
DISPLACEMENT MEASUREMENT
The world of grid methods
[NLR-TP-89298-U] p 1186 N93-16292
DISPLAY DEVICES
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
Grid free, modular, large screen display
[AD-D015474] p 1303 N93-16481
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752
DISSIPATION
Consecutive plate acoustic suppressor apparatus and methods
[NASA-CASE-LEW-15430-1] p 1282 N93-17051
DISSOCIATION
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865

Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925
Theory of field adsorption of hydrogen
[AD-A257139] p 1102 N93-15996
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268

DISSOLVED GASES
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075
Hydrographic data from Endeavor 214: A study of the Gulf Stream-Deep Western Boundary Current crossover
[AD-A257966] p 1221 N93-17737

DISSOLVING
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271

DISTANCE
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test)
[ESDU-92021] p 1061 N93-16635
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677

DISTANCE MEASURING EQUIPMENT
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676

DISTORTION
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Complexity optimized vector quantization: A neural network approach
[DE93-001304] p 1246 N93-17477

DISTRIBUTED PARAMETER SYSTEMS
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731

DISTRIBUTED PROCESSING
Proceedings of the Eleventh Annual ACM Symposium on Principles of Distributed Computing
[AD-A257294] p 1233 N93-15893
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
The failure of failures in a paradigm for asynchronous communication
[CWI-CS-R9147] p 1237 N93-16410
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Parallel processing for scientific computations
[NASA-CR-191910] p 1256 N93-17028
PDDP: A Parallel Data Distribution Preprocessor
[DE92-040400] p 1256 N93-17207
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730

DISTRIBUTION FUNCTIONS
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields p 1152 N93-17317
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319

DISTRIBUTION MOMENTS
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819

DIURNAL VARIATIONS
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies p 1214 N93-16507
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836

DIVERTERS
Measurement of impurity ion densities and energies in the divertor and edge regions of Alcator C-Mod tokamak
[DE92-040510] p 1307 N93-15922
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Small steady-state tokamak (TST) for divertor testing
[DE93-001213] p 1309 N93-16274
Design and analysis of the cryopump for the D3-D advanced divertor
[DE93-001357] p 1179 N93-17389

DMSP SATELLITES
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167

DOCUMENTATION
ROMPS critical design review. Volume 3: Furnace module design documentation
[NASA-CR-191615] p 1237 N93-16440

DOCUMENTS
Stewardship of very large digital data archives p 1353 N93-16321
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635

DOMAIN WALL
Solitons on domain walls
[PREPRINT-876] p 1289 N93-16980

DOMAINS
Domain decomposition as a mechanism for using asymptotic methods
[DE92-040759] p 1263 N93-16201
The KASE approach to domain-specific software systems p 1247 N93-17502
Domain specific software architectures: Command and control p 1247 N93-17503
Modeling software systems by domains p 1248 N93-17506
Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Towards automation of user interface design p 1248 N93-17510
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Model-based software design p 1249 N93-17514
Description of research interests and current work related to automating software design p 1249 N93-17515
Automating the design of scientific computing software p 1249 N93-17516
Domain specific software design for decision aiding p 1249 N93-17517
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518
Generic domain models in software engineering p 1250 N93-17520
Domain-specific functional software testing: A progress report p 1250 N93-17521
A domain-specific design architecture for composite material design and aircraft part redesign p 1250 N93-17522
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528

DOMES (STRUCTURAL FORMS)
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060

DONOR MATERIALS
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356

DOPED CRYSTALS
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
Photorefractive properties of doped BaTiO 3 and SBN
[AD-A257989] p 1305 N93-17748

DOPPLER EFFECT
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386

DOPPLER RADAR
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701

DOSAGE
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187

DOSIMETERS
Feasibility assessment and applications development of a radiobiological dosimeter for space applications, phase 2
[CTN-93-60609] p 1168 N93-16745

DOUGLAS AIRCRAFT
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947

DOWN-CONVERTERS
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191807] p 1230 N93-16709

DOWNLINKING
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817

DRAG
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634

DRAG DEVICES
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464

DRAG REDUCTION
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827

DRILLING
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237

DROP SIZE
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686
A study of the dynamics of droplet break-up
[CTN-93-60621] p 1132 N93-16746

DROP TOWERS
Drop tube research
[NASA-CR-191415] p 1132 N93-16717

DROPOUTS
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381

DROPS (LIQUIDS)
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956

Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
A study of the dynamics of droplet break-up
[CTN-93-60621] p 1132 N93-16746
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

DRUGS
User's guide for the longitudinal scalogram analysis program
[AD-A256817] p 1232 N93-15682
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187

DUCTED FAN ENGINES
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705

DUCTED FLOW
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
Streamwise computation of a circular-to-rectangular transition duct potential flow field
[NIAR-92-17] p 1159 N93-16628
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom p 1161 N93-16820
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822

DUCTED ROCKET ENGINES
Development testing of throttleable ducted rockets p 1092 N93-17610
Semi-propellants for ducted rockets p 1092 N93-17612

DUCTILITY
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012

DUCTS
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721

DUFFING DIFFERENTIAL EQUATION
Digital simulation and discrete modelling of a chaotic system
[RR-447] p 1279 N93-16561

DURABILITY
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

DUST
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737

DUST COLLECTORS
Dust control for Enabler
[NASA-CR-192065] p 1180 N93-17774

DWELL
An M/G/1 queue with dependence between interarrival and service times
[CWI-BS-R9125] p 1276 N93-16849

DYES
Microparticle-based fluorescence immunoassay
[DE92-040704] p 1103 N93-16195

DYNAMIC CHARACTERISTICS
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
A study of the Lute Metering Structure p 1189 N93-17294
Optimal dynamic range integrated continuous-time filters
[ISBN-90-6275-755-3] p 1150 N93-17395

DYNAMIC CONTROL
Ground test validation for precision structures p 1085 N93-15785
Dynamic feedback in nonlinear synthesis problems
[ISBN-90-9004142-7] p 1259 N93-16474
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192

DYNAMIC LOADS
Acoustic tests structural predictions p 1081 N93-15750
Development of a force measurement device p 1083 N93-15767
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660

DYNAMIC MODELS
Modelling dynamical systems with equality state-space constraints
[NLR-TP-89418-U] p 1259 N93-16275
Equivalent flexibility modelling for the recursive simulation of robot manipulator dynamics
[NLR-TP-89076-U] p 1259 N93-16291
Numerical solution of dynamical systems with state-space constraints
[NLR-TP-89419-U] p 1264 N93-16293
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
Supersymmetry in spin glass dynamics
[PREPRINT-843] p 1279 N93-16957
Object-oriented simulation for the Superconducting Super Collider
[DE92-015962] p 1299 N93-17205

DYNAMIC PROGRAMMING
Experiments with an incremental closure algorithm
[MEMO-INF-92-33] p 1236 N93-16336
The dynamics of description
[CWI-CS-R9143] p 1240 N93-16671
Dynamic parsers, evolving grammars and incremental languages
[PREPRINT-863] p 1243 N93-16998

DYNAMIC RANGE
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
Microchannel plate intensifier gain uniformity improvement in sealed tubes by selective scrubbing
[DE92-041082] p 1147 N93-16548

DYNAMIC RESPONSE
The use of inverse frequency response functions for multi degree-of-freedom modal parameter identification with error bounds p 1077 N93-15720
Acoustic tests structural predictions p 1081 N93-15750
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763
Power flow finite element analysis for beams and plates p 1083 N93-15765
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Design of joints for damped structures p 1084 N93-15776
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications p 1085 N93-15780
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
Environmental tailoring: A major perspective for mechanical testing for future space projects p 1086 N93-15787
Development of a unified airport pavement analysis and design system p 1071 N93-16317
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
Dynamic stability of maglev systems
[DE92-041104] p 1177 N93-16549
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466

DYNAMIC STABILITY
Dynamic stability of maglev systems
[DE92-041104] p 1177 N93-16549

DYNAMIC STRUCTURAL ANALYSIS
Updating and localizing structural errors based on minimization of equation errors p 1077 N93-15719
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
An analytical and experimental study on the design and verification of containment subjected to impact loading p 1078 N93-15726
Development of an interactive code for updating dynamic finite element models p 1078 N93-15732
Vibration characterisation for low level disturbances induced in telecommunications spacecraft p 1078 N93-15733
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
CAD to FEM tool p 1079 N93-15737
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
Service module structure of ISO spacecraft testing and design qualification p 1080 N93-15747
Polar Platform structure development program p 1081 N93-15749
Acoustic tests structural predictions p 1081 N93-15750
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation p 1081 N93-15751
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
TELECOM 2 deployable reflectors p 1082 N93-15761
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763
Power flow finite element analysis for beams and plates p 1083 N93-15765
Development of a force measurement device p 1083 N93-15767
Deployment analysis and in orbit control of large reflectors p 1083 N93-15769
Dynamic deployment analysis of a mesh antenna reflector p 1083 N93-15770
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
Equations of motion of multibody systems in the ESA-MIDAS software p 1084 N93-15772
Dynamic of large reflectors p 1084 N93-15773
Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications p 1085 N93-15780
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
A modal analysis and modelling of a lightly damped large space structure
[AD-A256566] p 1086 N93-15847
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
On formulations of path-following techniques for structural stability analysis
[LR-676] p 1186 N93-16346
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779
DYNAMICAL SYSTEMS
Numerical solution of dynamical systems with state-space constraints
[NLR-TP-89419-U] p 1264 N93-16293
On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
Increasingly automated procedure acquisition in dynamic systems
[NASA-TM-108112] p 1241 N93-16684
Functional expansion representations of artificial neural networks p 1262 N93-16772
Integrable cellular automata
[PREPRINT-869] p 1269 N93-16967
The Lagrangian approach to stochastic variational principles on curved manifolds
[PREPRINT-825] p 1277 N93-17221
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

E

E REGION
Experimenter's data package for the descending layers rocket
[NASA-TM-108591] p 1207 N93-16461
EARTH ATMOSPHERE
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867
Observation of the Earth-atmosphere system by NOAA satellite (acquisition, production, application, and use of NOAA data)
[BCRS-92-02] p 1207 N93-16221
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573
EARTH CORE
Modeling the geomagnetic field over Spain: Anomalous field, secular variation, and reference field
[MEMO-15] p 1211 N93-17634
EARTH CRUST
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094
Modeling the geomagnetic field over Spain: Anomalous field, secular variation, and reference field
[MEMO-15] p 1211 N93-17634
EARTH ENVIRONMENT
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474
EARTH IONOSPHERE
Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683
Effects of convection electric field on upwelling and escape of ionospheric O(+)
[NASA-CR-191669] p 1208 N93-16839
The ionosphere as a gamma ray burst detector p 1211 N93-17312
The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane
[DE93-000856] p 1376 N93-17384
EARTH MAGNETOSPHERE
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields p 1152 N93-17317
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
EARTH MANTLE
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094
EARTH MOVEMENTS
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
EARTH OBSERVING SYSTEM (EOS)
Stewardship of very large digital data archives p 1353 N93-16321
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
MODIS algorithm development and data visualization using ACTS
[NASA-CR-191940] p 1191 N93-16759
EARTH ORBITAL ENVIRONMENTS
LDEF solar cell radiation effects analysis
[NASA-CR-191776] p 1195 N93-16374
EARTH ORBITS
Beamed energy propulsion p 1095 N93-16917
IERS standards for 1992
[AD-A257973] p 1192 N93-17739
EARTH RESOURCES
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663
EARTH ROTATION
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
IERS standards for 1992
[AD-A257973] p 1192 N93-17739
EARTH SCIENCES
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
EARTH SURFACE
Radiation fluxes at the FIFE site
[NASA-CR-191717] p 1208 N93-16718
EARTH TERMINALS
An agile frequency synthesizer/RF generator for the SCAMP terminal
[AD-A256777] p 1137 N93-16052
EARTH TIDES
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695
EARTH-IONOSPHERE WAVEGUIDE
The ionosphere as a gamma ray burst detector p 1211 N93-17312
EARTH-MOON SYSTEM
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment p 1391 N93-17267
EARTHQUAKES
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
ECHELLE GRATINGS
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
ECLIPSING BINARY STARS
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
ECOLOGY
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526
ECONOMIC ANALYSIS
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745
ECONOMIC DEVELOPMENT
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999
ECONOMIC FACTORS
Impacts of sociopolitical conditions p 1379 N93-16873
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
ECONOMIC IMPACT
Estimating the regional economic significance of airports
[AD-A257658] p 1073 N93-17793
ECONOMICS
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
To build a mine: Prospect to product p 1379 N93-16876
Economic geology of the Moon: Some considerations p 1388 N93-17249
Estimating the regional economic significance of airports
[AD-A257658] p 1073 N93-17793
ECOSYSTEMS
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748
Life support and self-sufficiency in space communities p 1229 N93-16866
EDDY CURRENTS
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789
EDEMA
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187
EDUCATION
The SWOOPE experience: Precollege students mapping the environment
[DE92-040390] p 1198 N93-15663
Extracting viewpoints from multifunctional knowledge bases
[AD-A256008] p 1351 N93-15886
CD-ROM applications in Professional Military Education (PME)
[AD-A256662] p 1231 N93-15914
Functional requirements of an advanced instructional design advisor. Volume 1: Epitomizing functions
[AD-A256752] p 1234 N93-16049
Ventures in science
[DE93-003044] p 1331 N93-16521
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604
Future Assets, Student Talent (FAST)
[NASA-CR-191632] p 1332 N93-16624
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948
1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-184505] p 1339 N93-17279
Updating and expanding the library of materials on NASA Spacelink electronic information system p 1340 N93-17282
Development of a prototype interactive learning system using multi-media technology for mission independent training program p 1227 N93-17310
Automatic information processing and high performance skills: Individual differences and mechanisms of performance improvement in search-detection and complex tasks
[AD-A257711] p 1226 N93-17684
Integrating domain-specific reuse for system/software engineers course description
[AD-A257637] p 1252 N93-17723
EDUCATIONAL TELEVISION
Implementation of educational broadcasting in space, phase 1
[CTN-93-60623] p 1332 N93-16735
EIGENVALUES
Updating and localizing structural errors based on minimization of equation errors p 1077 N93-15719

Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
Minimum eigenvalue separation [AD-A256570] p 1262 N93-15848
Multidimensional strong large deviation theorems [AD-A256939] p 1263 N93-16129
A simple method to generate integrable symplectic maps [PREPRINT-795] p 1265 N93-16416
Stability of elliptical vortices [ITN-93-85181] p 1159 N93-16733
Bose realisation of a noncanonical Heisenberg algebra [PREPRINT-844] p 1269 N93-16958
A discrete Neumann system [PREPRINT-870] p 1279 N93-16968
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function [PREPRINT-882] p 1289 N93-17018

EIGENVECTORS
Multidimensional strong large deviation theorems [AD-A256939] p 1263 N93-16129
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Integrable singular integral evolution equations [PREPRINT-880] p 1270 N93-17013

EIKONAL EQUATION
Powerful algorithm for inversion of geophysical reflection profiles [ITN-93-85179] p 1267 N93-16743

EINSTEIN EQUATIONS
Brownian motion [PREPRINT-797] p 1280 N93-16418

EJECTORS
Experimental investigation of an ejector-powered free-jet facility [NASA-TM-105868] p 1056 N93-16704

EKMAN LAYER
Thermocline waves near to a free surface [AERO-REPT-9214] p 1159 N93-16578

EL NINO
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific [AD-A257476] p 1220 N93-17662

ELASTIC MEDIA
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium [PREPRINT-875] p 1187 N93-16979

ELASTIC PROPERTIES
NDE for thick section composites [AD-A257292] p 1181 N93-15837
Environmentally compliant thermoplastic powder coating, phase 1 [AD-A257232] p 1120 N93-15966
A laser spectroscopy technique for evaluating in-situ degradation of composite materials [AD-A256983] p 1097 N93-16255
Morphology, properties, and stability of thermoplastic polymer blends [ETN-92-92791] p 1124 N93-16491
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
Twin boundaries, interfaces and modulated structures in martensites [DE93-002136] p 1118 N93-17759

ELASTIC SCATTERING
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781
Orientational phase transitions in alloys [DE93-001702] p 1114 N93-16971
High energy elastic and diffractive scattering [DE93-000762] p 1292 N93-17231
Fast neutron scattering near shell closures: Scandium [DE93-002090] p 1294 N93-17485
Nuclear structure studies at intermediate energy [DE93-003661] p 1295 N93-17605

ELASTIC SYSTEMS
Micro mechanical behavior of pavements p 1070 N93-16312

ELASTIC WAVES
NDE for thick section composites [AD-A257292] p 1181 N93-15837

ELASTODYNAMICS
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems [AD-A256740] p 1184 N93-16035
Powerful algorithm for inversion of geophysical reflection profiles [ITN-93-85179] p 1267 N93-16743

ELASTOMERS
Compatibility of refrigerants and lubricants with elastomers [DE93-000539] p 1122 N93-16245
Surface epoxidation of elastomers [AD-D015457] p 1123 N93-16436

ELASTOMETERS
Space environmental effects on polymers and composites p 1128 N93-17302

ELASTOPLASTICITY
A semi-analytical formulation for the elastoplastic analysis of imperfect cylindrical shells [LR-674] p 1185 N93-16282

ELECTRIC ARCS
Microwave interaction with plasmas [AD-A258044] p 1313 N93-17705

ELECTRIC BATTERIES
Energy conversion and storage program [DE93-001545] p 1194 N93-16034
Anode for rechargeable ambient temperature lithium cells [NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278
High efficiency UHF oscillator for portable battery-powered applications [DE92-040961] p 1150 N93-17353
Development of test procedures for hybrid/electric vehicles [DE93-001943] p 1180 N93-17579

ELECTRIC CHARGE
Development of test procedures for hybrid/electric vehicles [DE93-001943] p 1180 N93-17579
The first particle: The electron [NOTA-INTERNA-974] p 1295 N93-17646
The energetics of ordered intermetallic alloys (of the transition metals) [DE93-001968] p 1117 N93-17753

ELECTRIC CHOPPERS
UHV-compatible electrostatically-driven tuning fork chopper [AD-A256943] p 1280 N93-16208

ELECTRIC CONDUCTORS
Magnetic flux-load current interactions in ferrous conductors [AD-A256632] p 1143 N93-15906
Electrochemical and electrode properties of stabilized bismuth oxide ceramics [ISBN-90-9003981-3] p 1125 N93-16570

ELECTRIC CONNECTORS
Performance measurements of superconducting current leads having low helium boiloff rates [DE92-040730] p 1146 N93-16392
Optical high-speed parallel backplane [AD-D015505] p 1148 N93-16608

ELECTRIC CONTACTS
Novel ways of depositing ZnTe films by a solution growth technique [DE92-010591] p 1111 N93-16019
Directory of design support methods [AD-A256987] p 1227 N93-16258

ELECTRIC CURRENT
Magnetic flux-load current interactions in ferrous conductors [AD-A256632] p 1143 N93-15906
Progress toward application of bulk high-T(sub c) superconductors [DE92-040735] p 1315 N93-15924
Processing high-(Tc) superconductors with GeV heavy ions [DE92-040755] p 1315 N93-15926
Scaling laws for the critical current density of NbN films in high magnetic fields [DE93-000604] p 1318 N93-16277
NiCd cells behaviour at high currents and low temperature for space applications [ITN-93-85176] p 1149 N93-16835
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials [DE93-001716] p 1323 N93-17075
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes [DE93-000651] p 1325 N93-17228
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process [DE93-000870] p 1116 N93-17346
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe [DE92-041133] p 1325 N93-17357
Manifestations of electric currents in interstellar molecular clouds [TRITA-EPP-91-05] p 1376 N93-17638

ELECTRIC DIPOLES
Maximal CP violation via Higgs-boson exchange [DE93-002417] p 1290 N93-17044

ELECTRIC DISCHARGES
The first particle: The electron [NOTA-INTERNA-974] p 1295 N93-17646

ELECTRIC ENERGY STORAGE
High energy and high power density ultracapacitors and supercapacitors [NASA-CASE-NPO-18568-1-CU] p 1149 N93-17274

ELECTRIC EQUIPMENT TESTS
Technique for current step measurements on the low field Metal Oxide Varistor (MOV) [DE93-000843] p 1143 N93-15904
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown [DE92-040960] p 1149 N93-17188
Generation of integrated circuit tests based on functional models [ETN-92-92674] p 1151 N93-17628

ELECTRIC FIELDS
Physics of the L-mode to H-mode transition in tokamaks [DE92-040697] p 1306 N93-15827
Physics and chemistry in high electric fields [AD-A257138] p 1280 N93-15854
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems [AD-A256659] p 1110 N93-15912
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4 [DE92-040955] p 1224 N93-16166
Radar observations of the effects of changing electric fields on the orientations of hydrometeors [AD-A256712] p 1213 N93-16170
High temperature smart sensors and actuators [AD-A256985] p 1158 N93-16517
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead [AD-D015508] p 1167 N93-16520
Inferences concerning the magnetospheric source region for auroral breakup [NASA-CR-191674] p 1208 N93-16536
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation [DE92-041134] p 1225 N93-16552
Effects of convection electric field on upwelling and escape of ionospheric O(+) [NASA-CR-191669] p 1208 N93-16839
Scattering from arbitrarily shaped microstrip patch antennas [NASA-TP-3291] p 1140 N93-16943
Drop oscillation and mass transfer in alternating electric fields [DE93-003595] p 1149 N93-17086
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields p 1152 N93-17317
Design and modeling of superconducting RFQ structures [DE93-000511] p 1326 N93-17376
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter [AD-A257694] p 1141 N93-17689

ELECTRIC FILTERS
Optimal dynamic range integrated continuous-time filters [ISBN-90-6275-755-3] p 1150 N93-17395

ELECTRIC FURNACES
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2 [CTN-93-60631] p 1133 N93-16937

ELECTRIC MOTOR VEHICLES
S/EV 92 (Solar and Electric Vehicles): Proceedings, volume 1 [DE93-001501] p 1180 N93-17577
Development of test procedures for hybrid/electric vehicles [DE93-001943] p 1180 N93-17579

ELECTRIC MOTORS
Compatibility of refrigerants and lubricants with motor materials [DE93-000540] p 1122 N93-16246

ELECTRIC NETWORKS
Flux flow, pinning, and resistive behavior in superconducting networks [DE93-002707] p 1324 N93-17081

ELECTRIC POTENTIAL
Improvement of thick a-Si radiation detectors by field profile tailoring [DE92-041192] p 1144 N93-15975
Optical system for linearizing non-linear electro-optic [AD-D015496] p 1303 N93-16495

Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468

ELECTRIC POWER PLANTS

Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187

ELECTRIC POWER SUPPLIES

Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
Bipolar current sources for the correction magnets of AmPS
[DIGEL-1992-2-REV] p 1150 N93-17393

ELECTRIC POWER TRANSMISSION

Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828

ELECTRIC PROPULSION

Advanced hybrid nuclear propulsion Mars mission performance enhancement
[DE93-001309] p 1090 N93-16177
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419

ELECTRIC RELAYS

Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056

ELECTRIC ROCKET ENGINES

Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626

ELECTRIC SWITCHES

Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056

ELECTRIC WELDING

Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010

ELECTRIC WIRE

Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380

ELECTRICAL ENGINEERING

National Defense Science and Engineering Graduate Fellowship Program in electrical engineering
[AD-A256975] p 1146 N93-16254

ELECTRICAL FAULTS

The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762

ELECTRICAL IMPEDANCE

Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Radio-frequency surface impedance of type-2 superconductors: Dependence upon the magnitude and angle of an applied static magnetic field
[DE92-040583] p 1316 N93-16014

ELECTRICAL INSULATION

International Conference on Defects in Insulating Materials
[AD-A258004] p 1127 N93-17700

ELECTRICAL MEASUREMENT

Optical system for linearizing non-linear electro-optic
[AD-D015496] p 1303 N93-16495
Correlation in photodetachment
[DE93-001843] p 1291 N93-17078
VLF/LF corona investigation
[AD-A258052] p 1141 N93-17709

ELECTRICAL PROPERTIES

Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
Ab initio molecular orbital calculations for magnesium-containing systems
[AD-A255811] p 1287 N93-16397
Accurate and efficient layout extraction
[ISBN-90-9004806-5] p 1147 N93-16499

ELECTRICAL RESISTIVITY

The electrical conductivity of sodium polysulfide melts
[DE92-041217] p 1100 N93-15677
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Magnetic flux-load current interactions in ferrous conductors
[AD-A256632] p 1143 N93-15906
Dependence of buried CoSi2 resistivity on ion implantation and annealing conditions
[DE92-010080] p 1322 N93-16930
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498

ELECTRICITY

Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810

ELECTRO-OPTICAL EFFECT

Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928

ELECTRO-OPTICAL PHOTOGRAPHY

Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739

ELECTRO-OPTICS

Optoelectronic materials center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A257136] p 1301 N93-16079
Solid state research
[AD-A256965] p 1318 N93-16251
Optical system for linearizing non-linear electro-optic
[AD-D015496] p 1303 N93-16495
Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492
Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702

ELECTROCHEMICAL CELLS

Electrochemical and electrode properties of stabilized bismuth oxide ceramics
[ISBN-90-9003981-3] p 1125 N93-16570
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278
Reaction kinetics and product distributions in photoelectrochemical cells
[DE93-003885] p 1198 N93-17471

ELECTROCHEMICAL MACHINING

The electrochemical machining of nickel based alloys
[DS-1933] p 1135 N93-17741

ELECTROCHEMICAL OXIDATION

Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762

ELECTROCHEMISTRY

Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
Application of scanning tunneling microscopy to electrochemistry
[AD-A255680] p 1101 N93-15955
Energy conversion and storage program
[DE93-001545] p 1194 N93-16034
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476
The electrochemical machining of nickel based alloys
[DS-1933] p 1135 N93-17741
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

ELECTRODE MATERIALS

The electrical conductivity of sodium polysulfide melts
[DE92-041217] p 1100 N93-15677
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

ELECTRODEPOSITION

Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531

ELECTRODES

Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network
[AD-A256789] p 1142 N93-15703
Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897
Application of scanning tunneling microscopy to electrochemistry
[AD-A255680] p 1101 N93-15955
Gas cooled fuel cell systems technology development
[DE92-001298] p 1194 N93-16084
High energy and high power density ultracapacitors and supercapacitors
[NASA-CASE-NPO-18568-1-CU] p 1149 N93-17274
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

ELECTRODYNAMICS

Tethers p 1089 N93-16915
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

ELECTROEPITAXY

Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934

ELECTROKINETICS

Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348

ELECTROLUMINESCENCE

Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349

ELECTROLYSIS

Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Oxygen from the lunar soil by molten silicate electrolysis p 1382 N93-16890

ELECTROLYTES

Gas cooled fuel cell systems technology development
[DE92-001298] p 1194 N93-16084
Potential modulation of equilibrium and excitation phenomena at the electrolyte-solid interface
[DE93-001685] p 1103 N93-16163
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003358] p 1198 N93-17574
The electrochemical machining of nickel based alloys
[DS-1933] p 1135 N93-17741

ELECTROLYTIC CELLS

SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541

ELECTROMAGNETIC FIELDS

Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520
Electromagnetic potential vectors and the Lagrangian of a charged particle
[NASA-TM-107703] p 1280 N93-16555

Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

ELECTROMAGNETIC INTERACTIONS
The Cabibbo-Kobayashi-Maskawa mixing matrix
[DE93-001255] p 1283 N93-15976
Dynamical approach to pair production from strong fields
[DE92-040224] p 1283 N93-16011
Study of high energy particles and protective layers for materials
[CTN-93-60613] p 1124 N93-16545
Stable isotope enrichment: Current and future potential
[DE92-041258] p 1326 N93-17368
Research in particle physics
[DE92-041135] p 1293 N93-17475

ELECTROMAGNETIC INTERFERENCE
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060

ELECTROMAGNETIC NOISE
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362

ELECTROMAGNETIC PROPERTIES
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699

ELECTROMAGNETIC PROPULSION
Electromagnetic launch of lunar material
p 1384 N93-16914

ELECTROMAGNETIC PULSES
Two-dimensional computer calculation of high-power microwave bandwidth broadening by air breakdown in a rectangular waveguide
[DE92-041083] p 1138 N93-16072
Possible application of transient electromagnetic pulses to high brightness e-guns
[DE92-040360] p 1138 N93-16100
Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599

ELECTROMAGNETIC RADIATION
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520
Reproduction of digital signals in magnetic recording: A theoretical study
[ISBN-90-6275-757-X] p 1168 N93-16564
The ionosphere as a gamma ray burst detector
p 1211 N93-17312
Preliminary observations of electromagnetic radiation from plasma in presence of a double layer
[TRITA-EPP-91-02] p 1312 N93-17636

ELECTROMAGNETIC SCATTERING
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Scattering from arbitrarily shaped microstrip patch antennas
[NASA-TP-3291] p 1140 N93-16943
Electromagnetic scattering in clouds
p 1142 N93-17327

ELECTROMAGNETIC SHIELDING
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520

ELECTROMAGNETIC SPECTRA
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
ROSAT and multi-wavelength observations of 3C 371
p 1361 N93-17121

ELECTROMAGNETIC SURFACE WAVES
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199

ELECTROMAGNETISM
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

ELECTROMAGNETS
Bipolar current sources for the correction magnets of AmPS
[DIGEL-1992-2-REV] p 1150 N93-17393

ELECTROMECHANICAL DEVICES
A design tool for electromechanical servo systems
[ISBN-90-9004089-7] p 1260 N93-16571

ELECTROMECHANICS
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

ELECTROMIGRATION
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348

ELECTRON ACCELERATION
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110

ELECTRON ACCELERATORS
High power picosecond CO2 laser system for ATF electron accelerator project
[DE92-040497] p 1171 N93-15832
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053
Common analysis of the Relativistic Klystron and the Standing-Wave Free-Electron Laser two-beam accelerator
[DE92-041205] p 1173 N93-16529
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706

ELECTRON AFFINITY
Correlation in photodetachment
[DE93-001843] p 1291 N93-17078

ELECTRON BEAM WELDING
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326

ELECTRON BEAMS
High power picosecond CO2 laser system for ATF electron accelerator project
[DE92-040497] p 1171 N93-15832
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
Design of a compact application-oriented free-electron laser
[DE92-040391] p 1172 N93-16183
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269
Method and system for electron beam lithography
[AD-D015397] p 1146 N93-16399
Conditioner for a helically transported electron beam
[DE92-041169] p 1297 N93-16526
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Fundamentals of high energy electron beam generation
[DE93-000745] p 1299 N93-17064
Spectroscopy of highly charged multi-electron ions
[DE93-001617] p 1291 N93-17181
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

ELECTRON CAPTURE
Atomic collision physics: A summary and some projections
[DE92-040638] p 1287 N93-16407
Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms
[DE93-001642] p 1292 N93-17345
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655

ELECTRON CLOUDS
Quantum chaos without classical counterpart
[PREPRINT-830] p 1331 N93-17215

ELECTRON CYCLOTRON HEATING
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985

ELECTRON DENSITY (CONCENTRATION)
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141
Experimental evidence of off-diagonal transport term and the discrepancy between energy/particle balance and perturbation analyses
[DE92-556732] p 1309 N93-16237

ELECTRON DENSITY PROFILES
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994

ELECTRON DIFFRACTION
Investigation of III-V superlattices and heterostructures by convergent-beam electron diffraction
[ETN-92-92784] p 1321 N93-16581

ELECTRON DISTRIBUTION
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396

ELECTRON EMISSION
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217

ELECTRON ENERGY
Transient x ray laser schemes at 1 millimicron and at 2 millimicron
[DE92-040670] p 1171 N93-15948
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340
Electron-temperature-gradient-induced instability in tokamak scrape-off layers
[DE93-000623] p 1309 N93-16376
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373

ELECTRON GUNS
Possible application of transient electromagnetic pulses to high brightness e-guns
[DE92-040360] p 1138 N93-16100

ELECTRON IMPACT
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374
Relativistic calculations of excitation and ionization of highly charged ions by electron impact
[DE93-002129] p 1296 N93-17783

ELECTRON IRRADIATION
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269

ELECTRON MICROSCOPES
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

ELECTRON MICROSCOPY
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561

ELECTRON MOBILITY
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140

ELECTRON PARAMAGNETIC RESONANCE
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794

ELECTRON PUMPING
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975

ELECTRON SCATTERING
Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396

ELECTRON SOURCES
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110

ELECTRON STATES
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
ELECTRON TRANSFER
Proceedings of the Sixteenth DOE Solar Photochemistry Research Conference
[DE93-001760] p 1193 N93-15899
Electronic transport in 3-5 semiconductors and their lattice matched heterojunctions
[AD-A256904] p 1316 N93-16023
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Atomic collision physics: A summary and some projections
[DE92-040638] p 1287 N93-16407
Aspects of electron transport in semiconductor nanostructures
[ETN-92-92787] p 1321 N93-16486
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356
ELECTRON TRANSITIONS
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462
ELECTRON TUNNELING
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476
ELECTRON-ION RECOMBINATION
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374
ELECTRON-POSITRON PAIRS
Status of QCD
[PREPRINT-842] p 1298 N93-16996
Investigation of neutrino properties in the process e(+)e(-) decay to nu-nu(bar)-gamma
[PREPRINT-887] p 1290 N93-17023
Probing the WWZ vertex at 500 GeV e(+)e(-) collider
[PREPRINT-831] p 1299 N93-17216
Search for pp decay to neutral H decay to (neutral Z)(neutral Z) decay to (mu +)(mu -)(mu +)(mu -) at the LHC
[NOTA-INTERNA-970] p 1300 N93-17644
ELECTRONIC CONTROL
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
ELECTRONIC COUNTERMEASURES
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
ELECTRONIC EQUIPMENT
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Natural convection from a horizontal heater in response to steady and pulsatile input powers
[AD-A257101] p 1156 N93-16126
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
ELECTRONIC EQUIPMENT TESTS
Evaluation of fast ADC's
[DE92-040582] p 1145 N93-16013
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
ELECTRONIC PACKAGING
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A257419] p 1171 N93-15864
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168
ELECTRONIC SPECTRA
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217
ELECTRONIC TRANSDUCERS
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
[IMFL-91-31] p 1056 N93-17542
ELECTRONIC WARFARE
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
ELECTRONS
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340
The first particle: The electron
[NOTA-INTERNA-974] p 1295 N93-17646
Methods development for electron transport
[AD-A257986] p 1295 N93-17698
ELECTROPHORESIS
Fluorescence detection for gel and capillary electrophoresis
[DE92-040585] p 1102 N93-16020
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468
ELECTROPHYSIOLOGY
Effective neurons and attractor neural networks in cortical environment
[PREPRINT-829] p 1223 N93-17214
ELECTROSTATICS
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208
ELECTROWINNING
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
ELEMENTARY PARTICLE INTERACTIONS
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231
Experimental studies of elementary particle interactions at high energies
[DE93-003652] p 1294 N93-17575
ELEMENTARY PARTICLES
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487
Research in elementary particle physics
[DE93-003153] p 1294 N93-17488
ELLIPSOMETERS
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
ELLIPSOMETRY
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
ELLIPTICAL ORBITS
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
EMBRITTLEMENT
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537
EMERGENCIES
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
EMISSION SPECTRA
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry
[DE92-040602] p 1308 N93-16145
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171
Gravitationally induced synchrotron radiation: A new test for general relativity
[PREPRINT-822] p 1297 N93-16420
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
Neural network architectures to analyze OPAD data p 1262 N93-17336
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464
EMISSIVITY
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767
EMITTANCE
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110
EMITTERS
RF vacuum microelectronics
[AD-A257208] p 1145 N93-16004
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682
EMULSIONS
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486
END EFFECTORS
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275
Double-V block fingers with cruciform recess
[NASA-CASE-GSC-13356-2] p 1180 N93-17625
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718
ENDOTHERMIC REACTIONS
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction
[DE93-001565] p 1107 N93-17461
ENERGY ABSORPTION
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
ENERGY BANDS
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334
Electronic structure and phase separation in superconducting cuprates
[PREPRINT-889] p 1323 N93-17025
ENERGY BUDGETS
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
ENERGY CONSERVATION
Energy analysis program
[DE93-001570] p 1199 N93-16045
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135
C&RE-SLC: Database for conservation and renewable energy activities
[DE93-001929] p 1196 N93-16653
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187

Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367

ENERGY CONSUMPTION
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
Climate change and related activities
[DE93-000477] p 1201 N93-16191
C&RE-SLC: Database for conservation and renewable energy activities
[DE93-001929] p 1196 N93-16653

ENERGY CONVERSION
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021
Energy conversion and storage program
[DE93-001545] p 1194 N93-16034
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037

ENERGY CONVERSION EFFICIENCY
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135
Climate change and related activities
[DE93-000477] p 1201 N93-16191
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036
Power beaming providing a space power infrastructure
[DE93-000850] p 1092 N93-17363

ENERGY DISSIPATION
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows
p 1152 N93-15793
Damping
[LR-685] p 1184 N93-16214
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
Passive scalar fluctuations in intermittent turbulence
[PREPRINT-779] p 1159 N93-16575
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696

ENERGY GAPS (SOLID STATE)
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017

ENERGY LEVELS
Variational derivation of equation for generalized pair correlation function p 1254 N93-16778
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

ENERGY METHODS
Power flow finite element analysis for beams and plates p 1083 N93-15765

ENERGY POLICY
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036

ENERGY REQUIREMENTS
Power system requirements p 1383 N93-16906

ENERGY SOURCES
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021

ENERGY SPECTRA
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Passive scalar fluctuations in intermittent turbulence
[PREPRINT-779] p 1159 N93-16575
Energy spectrum of the cosmic x ray background: Some considerations based on the Ginga results
p 1373 N93-17143
Meson spectroscopy and decay constants with Wilson fermions at beta = 6.4
[PREPRINT-823] p 1291 N93-17213

ENERGY STORAGE
Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896
Energy conversion and storage program
[DE93-001545] p 1194 N93-16034
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187

ENERGY TECHNOLOGY
Solar thermal electric and biomass power: Program overviews, fiscal years 1990-1991
[DE92-010582] p 1193 N93-15850
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
Energy analysis program
[DE93-001570] p 1199 N93-16045
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046
Energy and global warming impacts of CFC alternative technologies for foam building insulations
[DE92-019477] p 1200 N93-16085
Climate change and related activities
[DE93-000477] p 1201 N93-16191
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553
Technologies --- space power sources
p 1198 N93-16907
A review of selected energy-related data sets
[DE93-002180] p 1355 N93-17036

ENERGY TRANSFER
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079

ENGINE AIRFRAME INTEGRATION
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618

ENGINE DESIGN
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743

ENGINE INLETS
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
Comparison of performances of different circular intakes p 1067 N93-17616
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617

ENGINE NOISE
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705

ENGINE PARTS
Nonlinear analysis of Ariane 5 engine frame
[LR-678] p 1074 N93-16284
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686

ENGINEERING MANAGEMENT
Automated support for experience-based software management p 1244 N93-17164

ENGINEERS
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Modeling software systems by domains
p 1248 N93-17506

ENGLISH LANGUAGE
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

ENRICHMENT
Stable isotope enrichment: Current and future potential
[DE92-041258] p 1326 N93-17368

ENVIRONMENT EFFECTS
Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
C&RE-SLC: Database for conservation and renewable energy activities
[DE93-001929] p 1196 N93-16653
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Effects of the Mount Pinatubo eruption on the chemistry, radiative, and transport processes in the stratosphere
[DE93-001508] p 1203 N93-17211
Space environmental effects on polymers and composites p 1128 N93-17302
Lunar base activities and the lunar environment
p 1398 N93-17455
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532
S/EV 92 (Solar and Electric Vehicles): Proceedings, volume 1
[DE93-001501] p 1180 N93-17577

ENVIRONMENT MANAGEMENT
The formal use of expert judgments in environmental management
[DE92-019481] p 1199 N93-15852
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
Environmental Review Guide for Operations (ERGO)
[AD-A256922] p 1202 N93-16502
Future space development scenarios: Environmental considerations p 1073 N93-16864
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011

ENVIRONMENT MODELS
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526

ENVIRONMENT POLLUTION
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197

ENVIRONMENT PROTECTION
Environmental Review Guide for Operations (ERGO)
[AD-A256922] p 1202 N93-16502
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089

ENVIRONMENT SIMULATION
Virtual reality systems p 1232 N93-16775

ENVIRONMENTAL CONTROL
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
UPT scenarios: Implications for system reliability
p 1182 N93-17332

ENVIRONMENTAL MONITORING
Data acquisition for low-temperature geothermal well tests and long-term monitoring
[DE93-000387] p 1193 N93-15669
Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

ENVIRONMENTAL QUALITY
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046

Environmental Quality Information Analysis Center (EQIAC) operating procedures handbook
[DE92-041391] p 1201 N93-16271
Future space development scenarios: Environmental considerations p 1073 N93-16864
Environmental Quality Information Analysis Center multi-year plan
[DE92-040850] p 1204 N93-17352

ENVIRONMENTAL TESTS
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation p 1081 N93-15751
Environmental tailoring: A major perspective for mechanical testing for future space projects p 1086 N93-15787
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619

ENVIRONMENTS
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089

ENZYME ACTIVITY
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459

EPHEMERIDES
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168

EPIDEMIOLOGY
Epidemiologic research in Antarctica p 1221 N93-16800
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596

EPITAXY
Heteroepitaxial diamond growth
[AD-A257356] p 1317 N93-16175
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

EPOXIDATION
Surface epoxidation of elastomers
[AD-D015457] p 1123 N93-16436

EPOXY COMPOUNDS
Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030

EPOXY MATRIX COMPOSITES
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986

EPOXY RESINS
Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network
[AD-A256789] p 1142 N93-15703
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073

EQUATIONS OF MOTION
Equations of motion of multibody systems in the ESA-MIDAS software p 1084 N93-15772
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
Solitons on domain walls
[PREPRINT-876] p 1289 N93-16980
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362

EQUATIONS OF STATE
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248
Constitutive and equation of state models using object-oriented programming methods
[DE93-000740] p 1243 N93-17063

EQUATORIAL ATMOSPHERE
The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane
[DE93-000856] p 1376 N93-17384

EQUIVALENCE
Sahlqvist's theorem for boolean algebras with operators
[ML-91-10] p 1274 N93-17794

EQUIVALENT CIRCUITS
Quasi-optical power combining of solid state millimeter-wave sources: A proposal for graduate fellowship
[AD-A256644] p 1143 N93-15909

ERBIUM
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610

ERBIUM ISOTOPES
Tilted cranking classification of multiband spectra
[DE92-041187] p 1283 N93-15959

ERGODIC PROCESS
Ergodic properties of high dimensional symplectic maps
[PREPRINT-802] p 1276 N93-16422
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593
Polling systems and multiple branching processes
[CWI-BS-R9128] p 1267 N93-16726

EROSION
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Corrosion and arc erosion in MHD channels
[DE93-001721] p 1313 N93-17782

ERROR ANALYSIS
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396
Antenna analysis using neural networks p 1142 N93-16790
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations
[NASA-TP-3315] p 1066 N93-16941
Statistical error in a chord estimator of correlation dimension: The rule of five
[DE93-000687] p 1276 N93-17195
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

ERROR CORRECTING CODES
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

ERROR CORRECTING DEVICES
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

ERROR DETECTION CODES
Generation of integrated circuit tests based on functional models
[ETN-92-92674] p 1151 N93-17628
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

ERRORS
The use of inverse frequency response functions for multi degree-of-freedom modal parameter identification with error bounds p 1077 N93-15720
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

ESTERS
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037

ESTIMATES
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data p 1165 N93-16792

ESTIMATING
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Studies in estimation theory, applications, and implementation
[AD-A256964] p 1275 N93-16250
Quantifying parameters for Bayesian prior assumptions when estimating the probability of failure of software p 1254 N93-16777
Estimating the regional economic significance of airports
[AD-A257658] p 1073 N93-17793

ETCHING
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
RF vacuum microelectronics
[AD-A257320] p 1144 N93-15984

ETHICS
Future space development scenarios: Environmental considerations p 1073 N93-16864

ETHYL ALCOHOL
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459

ETHYLENE
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016

ETHYLENE COMPOUNDS
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401

EUCLIDEAN GEOMETRY
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677
Interacting Euclidean three-dimensional quantum gravity
[PREPRINT-867] p 1330 N93-16965
Problems with the Euclidean formulation of heavy quark effective theories
[PREPRINT-884] p 1290 N93-17020
A contribution to the theory and practice of multivariate splines
[ISBN-90-9004534-1] p 1272 N93-17591

EULER EQUATIONS OF MOTION
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations p 1154 N93-15802
Comparison of solution of various Euler solvers and one Navier-Stokes solver for the flow about a sharp-edged cropped delta wing
[NLR-TP-90340-U] p 1157 N93-16411
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478

Numerical solutions of the Euler equations for steady flow problems
[MBB-FE-202-S-PUB-473-A] p 1164 N93-17546
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789

EULER-LAGRANGE EQUATION
Equations of motion of multibody systems in the ESA-MIDAS software p 1084 N93-15772
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

EUROPE
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733

EUTECTIC ALLOYS
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
The influence of microgravity on the microstructure and properties of eutectics, phase 4
[CTN-93-60629] p 1132 N93-16690
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936

EUTECTICS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

EVALUATION
The formal use of expert judgments in environmental management
[DE92-019481] p 1199 N93-15852
Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473
Investigation of III-V superlattices and heterostructures by convergent-beam electron diffraction
[ETN-92-92784] p 1321 N93-16581
Automated Weather Observing System (AWOS) Data Acquisition System (ADAS) Operational Test and Evaluation (OT/E) integration and OT/E operational test plan
[DOT/FAA/CT-TN90/65] p 1214 N93-16631
Evaluation and recommendations for work group integration within the Materials and Processes Lab
p 1341 N93-17293
Reliability evaluation methodology for NASA applications p 1182 N93-17328
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720

EVAPORATION
Method and apparatus for controlling protein crystallization
[NASA-CASE-MFS-28688-1] p 1323 N93-17043
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721

EVAPORATORS
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347

EVAPOTRANSPIRATION
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178

EVENTS
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667

EXCAVATION
Mining nonterrestrial resources: Information needs and research topics p 1381 N93-16885
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237

EXCIMER LASERS
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865

EXCITATION
Modal identification of mechanical structures by means of tuned base-motion excitation p 1077 N93-15721
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033

EXHAUST EMISSION
A low emission vehicle procurement approach for Washington state
[DE92-040561] p 1176 N93-16406
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999

EXHAUST GASES
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
Energy analysis program
[DE93-001570] p 1199 N93-16045
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
A low emission vehicle procurement approach for Washington state
[DE92-040561] p 1176 N93-16406

EXHAUST NOZZLES
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704

EXOBIOLOGY
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
NASA/NSF Antarctic Science Working Group
p 1222 N93-16802
A manned exobiology laboratory based on the Moon
p 1074 N93-17457

EXPEDITIONS
A lunar polar expedition p 1395 N93-17433

EXPENDABLE STAGES (SPACECRAFT)
Conceptual analysis of a lunar base transportation system p 1392 N93-17415

EXPERIMENT DESIGN
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Advanced light source
[DE92-041181] p 1302 N93-16196
Representation of research paradigms as a function of familiarity with research domains
[AD-A256553] p 1263 N93-16266
Microwave processing of ceramics: Guidelines used at the Oak Ridge National Laboratory
[DE92-040862] p 1123 N93-16297
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496

EXPERIMENTATION
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826

EXPERT SYSTEMS
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
ExperCAT case studies
[AD-A256177] p 1211 N93-15871
Extracting viewpoints from multifunctional knowledge bases
[AD-A256008] p 1351 N93-15886
Project proposal active vision
[AD-A256490] p 1258 N93-15934
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
An expert system shell for inferring vegetation characteristics: Implementation of additional techniques (task E)
[NASA-CR-190999] p 1191 N93-16685
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
[NASA-CR-191000] p 1191 N93-16687
An expert system shell for inferring vegetation characteristics
[NASA-CR-191207] p 1191 N93-16691
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
Study of port of FRAMES artificial intelligence system
[NASA-CR-191703] p 1261 N93-16740
An intelligent decomposition approach for efficient design of non-hierarchic systems p 1254 N93-16762
The software-cycle model for re-engineering and reuse p 1244 N93-17165
A second generation expert system for checking and diagnosing AXAF's electric power system
p 1152 N93-17287
NADIR: A prototype system for detecting network and file system abuse
[DE93-000861] p 1256 N93-17385
Knowledge modeling for software design
p 1251 N93-17525
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Study of an adaptive maintenance strategy for logic systems
[ETN-92-92673] p 1252 N93-17640
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665
The Schoenmaker's paradox: Its solution in a belief dependence framework
[LP-91-05] p 1273 N93-17725
Belief dependence, revision and persistence
[LP-91-06] p 1273 N93-17727

EXPLOSIONS
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

EXPLOSIVES
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497
The 4th International Symposium on Analysis and Detection of Explosives: Programs and abstracts
[AD-A258029] p 1129 N93-17751

EXPONENTIAL FUNCTIONS
Comparison of tests, and local families
[MEMO-1034] p 1266 N93-16594

EXPOSURE
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
Effect of sonic boom asymmetry on subjective loudness
[NASA-TM-107708] p 1282 N93-16755

EXTERNAL TANKS
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
Heat flow in variable polarity plasma arc welds
p 1181 N93-17280
Reliability analysis of External Tank Attack Ring (ETA)
p 1182 N93-17322

EXTINCTION
Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169

EXTRACTION
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Lunar beneficiation p 1381 N93-16887
Oxygen from the lunar soil by molten silicate electrolysis p 1382 N93-16890
Plasma separation p 1313 N93-16892
Processes for metal extraction p 1382 N93-16893
Bioprocessing of ores: Application to space resources p 1382 N93-16894
Processing of metal and oxygen from lunar deposits p 1382 N93-16895
Networking electrochemical membrane separation devices: Theory and application
[DE93-001381] p 1106 N93-17066
Towards automated support for extraction of reusable components p 1244 N93-17163
The software-cycle model for re-engineering and reuse p 1244 N93-17165
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition
[DE93-001835] p 1127 N93-17529
EXTRAPOLATION
Parallel step-by-step methods
[CWI-NM-R9116] p 1256 N93-17545
EXTRATERRESTRIAL INTELLIGENCE
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191807] p 1230 N93-16709
EXTRATERRESTRIAL RADIATION
Investigation of ring current/storm dynamics: Preliminary results
[AD-A256704] p 1207 N93-16155
LDEF solar cell radiation effects analysis
[NASA-CR-191776] p 1195 N93-16374
Feasibility assessment and applications development of a radiobiological dosimeter for space applications, phase 2
[CTN-93-60609] p 1168 N93-16745
HI in galaxy outskirts and the extragalactic ionizing flux p 1372 N93-17139
EXTRATERRESTRIAL RESOURCES
Space resources. Volume 4: Social concerns
[NASA-SP-509-VOL-4] p 1377 N93-16857
Space law and space resources p 1358 N93-16860
Space resources. Overview
[NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
Issues for further study p 1379 N93-16874
Space resources. Volume 3: Materials
[NASA-SP-509-VOL-3] p 1379 N93-16875
Ground-based observation of near-Earth asteroids p 1360 N93-16879
Asteroid resources p 1380 N93-16880
Asteroid mining p 1381 N93-16884
Mining nonterrestrial resources: Information needs and research topics p 1381 N93-16885
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799
EXTRAVEHICULAR ACTIVITY
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619
EXTREME ULTRAVIOLET RADIATION
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
EXTREMELY HIGH FREQUENCIES
An agile frequency synthesizer/RF generator for the SCAMP terminal
[AD-A256777] p 1137 N93-16052
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
EXTREMELY LOW FREQUENCIES
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679
EXTRUDING
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932

F

F-16 AIRCRAFT
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538
F-18 AIRCRAFT
The F-18 systems research aircraft facility
[NASA-TM-4433] p 1072 N93-16753
FABRICATION
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
Dynamic fabrication of diamond thermal management substrates
[AD-A257213] p 1118 N93-15814
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
Initial imperfection survey on a cylindrical shell at the Ultra-Centrifuge Nederland n.v.
[LR-682] p 1184 N93-16211
Method of making Tl-Sr-Ca-Cu-Oxide superconductors comprising heating at elevated pressures in sealed container
[AD-D015482] p 1321 N93-16489
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Manufacturing and fabrication, part 3 --- extraterrestrial resources p 1382 N93-16898
Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Modeling of forced flow/thermal gradient chemical vapor infiltration
[DE93-001615] p 1125 N93-17032
Heat flow in variable polarity plasma arc welds p 1181 N93-17280
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357
A domain-specific design architecture for composite material design and aircraft part redesign p 1250 N93-17522
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003358] p 1198 N93-17574
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682
FABRICS
Design for producing fiberglass fabric in a lunar environment
[NASA-CR-192068] p 1135 N93-17770
FACE (ANATOMY)
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604
FACILITIES
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672
FACTORIZATION
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
On the history of the function M(x)/(square root of x) since Stieltjes
[CWI-NM-R9120] p 1271 N93-17555
Solving large dense systems of linear equations on systems with virtual memory and with cache
[CWI-NM-R9123] p 1271 N93-17558
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
FAILURE
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures p 1080 N93-15744
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
FAILURE ANALYSIS
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779
FAILURE MODES
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455
Mode interaction in stiffened composite shells under combined mechanical and thermal loadings p 1189 N93-16793
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
Thermostructural responses of carbon phenolics in a restrained thermal growth test p 1128 N93-17333
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779
FAIRINGS
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
FALLING SPHERES
Boundary-layer control on a freely falling sphere p 1161 N93-16819
FAN BLADES
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
FAST FOURIER TRANSFORMATIONS
A pipelined, high-precision FFT architecture
[AD-A257235] p 1263 N93-15969
A general purpose subroutine for fast fourier transform on a distributed memory parallel machine
[NASA-CR-189724] p 1241 N93-16681
An FFT-based method for attenuation correction in fluorescence confocal microscopy
[CWI-AM-R9114] p 1174 N93-16848
FAST NEUTRONS
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485

FATIGUE (MATERIALS)
Fatigue characterization of Ni-base alloys
p 1081 N93-15756
Testing and characterisation of metallic materials for structural analysis of high temperature components
p 1082 N93-15757
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
Multiple-site-damage fatigue of riveted joints
[LR-679] p 1185 N93-16285
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
Fatigue damage study in aluminum-2024 T3 alloys
p 1118 N93-16767
Prediction of thermal cycling induced matrix cracking
p 1100 N93-16780
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
A literature survey on the fatigue behaviour of hybrid composites
[NLR-TP-91345-U] p 1099 N93-17541

FATIGUE LIFE
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
A normal distribution or a Weibull distribution for fatigue lives
[LR-689] p 1275 N93-16216
Review of aeronautical fatigue investigation activities developed in Alenia-GAT during the period May 1990 - March 1991
[ETN-92-92884] p 1061 N93-16287
Federal Aviation Administration pavement modeling
p 1071 N93-16315
Multiaxial fatigue analysis of metals
p 1113 N93-16509
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660

FATIGUE TESTS
Multiple-site-damage in 2024-T3 alloy sheet
[LR-660] p 1112 N93-16279
Review of aeronautical fatigue investigation activities developed in Alenia-GAT during the period May 1990 - March 1991
[ETN-92-92884] p 1061 N93-16287
A preliminary examination of Y 1 (a proprietary thin-film ferroelectric produced by Symetrix Corporation)
[AD-A255692] p 1146 N93-16395
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562

FAULT TOLERANCE
Proceedings of the Eleventh Annual ACM Symposium on Principles of Distributed Computing
[AD-A257294] p 1233 N93-15893
Fault tolerant real-time systems
[AD-A257352] p 1235 N93-16174
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396
The failure of failures in a paradigm for asynchronous communication
[CWI-CS-R9147] p 1237 N93-16410
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723

FAULTS
Providing an empirical basis for optimizing the verification and testing phases of software development
p 1244 N93-17168

FEASIBILITY
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Bioprocessing of ores: Application to space resources
p 1382 N93-16894

FEASIBILITY ANALYSIS
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706

FEDERAL BUDGETS
Federal research: Small business innovation research shows success but can be strengthened
[AD-A256811] p 1350 N93-15680
Technology transfer: Federal efforts to enhance the competitiveness of small manufacturers
[AD-A256804] p 1358 N93-15704
NASA in the 21st century: A vision of greatness
p 1073 N93-16858
National Aeronautics and Space Administration
p 1358 N93-17091
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672

FEED SYSTEMS
Device for applying powder coatings
[AD-A256917] p 1124 N93-16501

FEEDBACK
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662

FEEDBACK CONTROL
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Redheffer's lemma and H(infinity)-control or infinite-dimensional systems
[W-9206] p 1259 N93-16355
Modeling and control study of the NASA 0.3-meter transonic cryogenic tunnel for use with sulfur hexafluoride medium
[NASA-CR-189737] p 1157 N93-16379
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191943] p 1237 N93-16383
Dynamic feedback in nonlinear synthesis problems
[ISBN-90-9004142-7] p 1259 N93-16474
A design tool for electromechanical servo systems
[ISBN-90-9004089-7] p 1260 N93-16571
JT-60 configuration parameters for feedback control determined by regression analysis
[DE92-556731] p 1310 N93-16650
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800

FEEDFORWARD CONTROL
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515
Functional expansion representations of artificial neural networks p 1262 N93-16772
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192

FELDSPARS
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372

FERMENTATION
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459

FERMIONS
Studies in theoretical particle physics
[DE93-000648] p 1284 N93-16161
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
Four-fermion operators with improved nearest-neighbour action
[PREPRINT-805] p 1287 N93-16443
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Low energy effects of heavy chiral fermions
[PREPRINT-872] p 1289 N93-16978
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
Strongly interacting fermion systems
[DE93-002839] p 1295 N93-17656

FERRITES
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053

FERRITIC STAINLESS STEELS
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479

FERROELECTRICITY
A preliminary examination of Y 1 (a proprietary thin-film ferroelectric produced by Symetrix Corporation)
[AD-A255692] p 1146 N93-16395
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277

FERROMAGNETIC MATERIALS
A Boltzmann-equation approach to the magnetoresistance of ferromagnetic-normal metallic multilayers
[DE92-041213] p 1270 N93-17361

FERROMAGNETIC RESONANCE
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260

FERROMAGNETISM
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278
Phase diagram by frustrated vortices in Potts models
[ROM1F-92-860] p 1281 N93-17217

FERTILIZERS
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271

FEYNMAN DIAGRAMS
Regularization of chiral gauge theories
[PREPRINT-888] p 1330 N93-17024
Probing the WWZ vertex at 500 GeV e(+)e(-) collider
[PREPRINT-831] p 1299 N93-17216

FIBER COMPOSITES
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
Recent developments of carbon fiber in Japan
[MTL-TR-92-48] p 1098 N93-16591
Understanding crystallinity in aromatic polyimides
p 1128 N93-16764
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030
Thermostructural responses of carbon phenolics in a restrained thermal growth test p 1128 N93-17333
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802

FIBER OPTICS
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711

Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
Armored fiber optic cables statement of government interest
[AD-D015459] p 1302 N93-16437
High-strength in-line fiber optic connector
[AD-D015446] p 1303 N93-16456
Polarization independent narrow channel wavelength division multiplexing fiber coupler and method for producing same
[AD-D015473] p 1303 N93-16480
Infrared fiber-optical temperature sensor
[AD-D015495] p 1167 N93-16492
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000

FIBER ORIENTATION
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986
Laminated conical shells: Considerations for the variations of the stiffness coefficients
[LR-671] p 1097 N93-16281

FIBER STRENGTH
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
Recent developments of carbon fiber in Japan
[MTL-TR-92-48] p 1098 N93-16591

FIELD ALIGNED CURRENTS
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173
Experimental observations of anomalous potential drops over ion density cavities
[TRITA-EPP-91-04] p 1312 N93-17637

FIELD EFFECT TRANSISTORS
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
Remote hydrogen sensing techniques
[NASA-CR-191411] p 1169 N93-17203
Wafer scale union
[AD-A258001] p 1152 N93-17749

FIELD EMISSION
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377
Preliminary investigation into the development of hardening devices using vacuum microelectronic technology
[AD-A258009] p 1152 N93-17750

FIELD THEORY (PHYSICS)
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Research in particle theory
[DE93-002868] p 1284 N93-16147
BRST field theory of relativistic particles
[NIKHEF-H/92-04] p 1286 N93-16341
On lattice chiral gauge theories
[PREPRINT-794] p 1278 N93-16415
On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
Electromagnetic potential vectors and the Lagrangian of a charged particle
[NASA-TM-107703] p 1280 N93-16555
Renormalization group in different fields of theoretical physics
[DE92-556707] p 1329 N93-16648
Low energy effects of heavy chiral fermions
[PREPRINT-872] p 1289 N93-16978
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium
[PREPRINT-875] p 1187 N93-16979
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
SU(3) lattice gauge fixing with overrelaxation and Gribov copies
[PREPRINT-839] p 1322 N93-16993
Fluctuations and thermodynamic variables in mean field spin glass models
[PREPRINT-883] p 1330 N93-17019
On the black-hole conformal field theory coupled to the Polyakov's string theory. A non perturbative analysis
[PREPRINT-852] p 1365 N93-17072
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487

FIGHTER AIRCRAFT
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670

FILAMENT WINDING
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
NDE for thick section composites
[AD-A257292] p 1181 N93-15837

FILM COOLING
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
Analysis of film cooling in rocket nozzles p 1095 N93-17339

FILM THICKNESS
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643

FINANCIAL MANAGEMENT
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745

FINE STRUCTURE
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177

FINITE DIFFERENCE THEORY
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations p 1154 N93-15802
Preconditioned time-difference methods for solving advective-diffusive systems
[DE92-014790] p 1262 N93-15879
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
Automating the design of scientific computing software p 1249 N93-17516
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534

FINITE ELEMENT METHOD
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
Some aspects for the application of a hierarchic family of Herrmann mixed compressible and incompressible finite elements p 1077 N93-15723
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
Development of an interactive code for updating dynamic finite element models p 1078 N93-15732
CAD to FEM tool p 1079 N93-15737
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
Composite material damage and fracture models for numerical simulations in support of fracture control p 1080 N93-15743
Power flow finite element analysis for beams and plates p 1083 N93-15765
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications p 1085 N93-15780
A modal analysis and modelling of a lightly damped large space structure
[AD-A256566] p 1086 N93-15847
Radial basis functions: A class of grid-free, scattered data approximations
[DE92-012675] p 1263 N93-15921
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
Optimization of an internally finned rotating heat pipe
[AD-A256725] p 1329 N93-15980
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems
[AD-A256740] p 1184 N93-16035
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Nonlinear analysis of Ariane 5 engine frame
[LR-678] p 1074 N93-16284
Development of user guidelines for a three-dimensional finite element pavement model p 1070 N93-16311
Thermoviscoelastic analysis of pavements p 1070 N93-16313
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314
Development of a unified airport pavement analysis and design system p 1071 N93-16317
Unified airport pavement design procedure p 1071 N93-16318
Uniform convergence estimates for multigrid V-cycle algorithms with less than full elliptic regularity
[DE92-041275] p 1238 N93-16532
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
Beam, plate, and shell finite elements for CSI design code p 1189 N93-16782
A variational method for finite element stress recovery: Applications in one-dimension p 1189 N93-16785
SAFSIM input manual: A computer program for the engineering simulation of flow systems
[DE93-002738] p 1163 N93-16922
The use of cross-section warping functions in composite rotor blade analysis
[NASA-CR-191772] p 1186 N93-16946

Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
Automating FEA programming p 1251 N93-17524
Multigrid for semiconductor device simulation: Cell-centered or vertex-centered multigrid?
[CWI-NM-R9118] p 1271 N93-17553
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

FINITE VOLUME METHOD
Multigrid for semiconductor device simulation: Cell-centered or vertex-centered multigrid?
[CWI-NM-R9118] p 1271 N93-17553
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557

FINS
Optimization of an internally finned rotating heat pipe
[AD-A256725] p 1329 N93-15980
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638

FIRE CONTROL
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867
Enhancement of multiple target track simulation
[AD-A257224] p 1278 N93-16236

FIRE PREVENTION
Aircraft wing compartment liner concept to reduce fuel spillage
[DOT/FAA/CT-TN92/34] p 1062 N93-17219

FIRES
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344

FIRMWARE
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674

FITTING
CFRP integral end fitting for high stability truss structures p 1084 N93-15774

FIXED WINGS
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697

FIXTURES
Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695

FLAME PROPAGATION
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795

FLAME RETARDANTS
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706

FLAME SPRAYING
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966

FLAMES
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Preliminary definition of experiments and procedures for terrestrial and space examination of flame structure
[APRL-X13-8] p 1105 N93-16728
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics
[DE93-002758] p 1106 N93-17212

FLAMMABILITY
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042

FLANGES
Saddle clamp assembly
[NASA-CASE-MFS-28701-1] p 1178 N93-17057

FLAPPING
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634

FLAPS (CONTROL SURFACES)
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787

FLASH BLINDNESS
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

FLAT PLATES
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892

FLAVOR (PARTICLE PHYSICS)
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248

FLEXIBLE BODIES
The damper placement problem for large flexible space structures p 1089 N93-16776

FLEXIBLE SPACECRAFT
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
Control law synthesis for large flexible spacecraft
[NLR-TP-91155-U] p 1088 N93-17539

FLIGHT
The NASA High-Speed Research Program p 1064 N93-16761

FLIGHT ALTITUDE
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538

FLIGHT CHARACTERISTICS
Potential missile flight performance gains from improvements to the propulsion system p 1092 N93-17609

FLIGHT CONDITIONS
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 1092 N93-17611

FLIGHT CONTROL
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Developing a control system for ARES 2 p 1069 N93-16769
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems p 1254 N93-17305
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800

FLIGHT CREWS
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 1224 N93-15824
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834

FLIGHT ENVELOPES
Potential missile flight performance gains from improvements to the propulsion system p 1092 N93-17609

FLIGHT INSTRUMENTS
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

FLIGHT MANAGEMENT SYSTEMS
Terminal area traffic management
[LR-684] p 1058 N93-16213
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316

FLIGHT OPERATIONS
Terminal area traffic management
[LR-684] p 1058 N93-16213

FLIGHT PLANS
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

FLIGHT SIMULATION
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562

FLIGHT SIMULATORS
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Simulator motion
[AD-A257683] p 1072 N93-17687

FLIGHT SURGEONS
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710

FLIGHT TESTS
Pitch control margin at high angle of attack-quantitative requirements (flight test correlation with simulation predictions)
[AD-A257418] p 1068 N93-16009
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

FLIGHT TRAINING
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262
Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834

FLIP-FLOPS
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709

FLIR DETECTORS
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846

FLOAT ZONES
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831

FLOATING POINT ARITHMETIC
Error feedback for reduction of quantization errors due to arithmetic operations in recursive digital filters
[EL-9] p 1272 N93-17633

FLOW CHARACTERISTICS
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data p 1165 N93-16792

FLOW DISTORTION
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821

FLOW DISTRIBUTION
Turbulence modeling and experiments p 1153 N93-15796
Modeling of turbulent shear flows p 1153 N93-15797
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Experimental and numerical investigation of vortex flow over a 76/60-deg double-delta wing
[LR-680] p 1054 N93-16210
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
Comparison of solution of various Euler solvers and one Navier-Stokes solver for the flow about a sharp-edged cropped delta wing
[NLR-TP-90340-U] p 1157 N93-16411
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467

Passive scalar fluctuations in intermittent turbulence
[PREPRINT-779] p 1159 N93-16575
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765
Improved shock-capturing of Jameson's scheme for the Navier-Stokes equations
[MEMO-1041] p 1163 N93-16842
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Acceleration of FDNS flow simulations using initial flowfields generated with a parabolized Navier-Stokes method p 1165 N93-17329
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789

FLOW MEASUREMENT
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

FLOW STABILITY
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
Stability of elliptical vortices
[ITN-93-85181] p 1159 N93-16733
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
Fundamental studies of fluid mechanics and stability in porous media
[DE93-002519] p 1163 N93-17046
Global flow characteristics on a curved channel. Goertler instability point
[DS-2141] p 1165 N93-17742

FLOW VELOCITY
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
Effect of a rotating propellier on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625
Wind tunnel seeding particles for laser velocimeter p 1057 N93-16770
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
[IMFL-91-31] p 1056 N93-17542

FLOW VISUALIZATION
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transition
[NAL-SP-15] p 1160 N93-16809
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
Experiments on swept-wing boundary-layer transition p 1162 N93-16829
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613
Global flow characteristics on a curved channel. Goertler instability point
[DS-2141] p 1165 N93-17742

FLUID DYNAMICS
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644

FLUID FILLED SHELLS
Marangoni-convection in a rotating liquid container
[LRT-WE-9-FB-14-1991] p 1164 N93-17552

FLUID FILMS
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981

FLUID FLOW
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670
Modeling of forced flow/thermal gradient chemical vapor infiltration
[DE93-001615] p 1125 N93-17032
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution p 1165 N93-17334
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
Numerical solutions of the Euler equations for steady flow problems
[MBB-FE-202-S-PUB-473-A] p 1164 N93-17546
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743

FLUID INJECTION
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714

FLUID MECHANICS
Some aspects for the application of a hierarchic family of Herrmann mixed compressible and incompressible finite elements p 1077 N93-15723
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842
On canonical cylinder sections for accurate determination of contact angle in microgravity
[DE93-000635] p 1130 N93-16377
The Goldstein Aeronautical Engineering Research Laboratory
[AERO-REPT-9109] p 1053 N93-16465
SAFSIM input manual: A computer program for the engineering simulation of flow systems
[DE93-002738] p 1163 N93-16922
Fundamental studies of fluid mechanics and stability in porous media
[DE93-002519] p 1163 N93-17046
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

FLUID-SOLID INTERACTIONS
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821

FLUIDS
Fluid separator
[NASA-CASE-MFS-28658-1] p 1163 N93-17039

FLUORESCENCE
Fluorescence detection for gel and capillary electrophoresis
[DE92-040585] p 1102 N93-16020
Microparticle-based fluorescence immunoassay
[DE92-040704] p 1103 N93-16195
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585
An FFT-based method for attenuation correction in fluorescence confocal microscopy
[CWI-AM-R9114] p 1174 N93-16848

FLUORIDES
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505

FLUORINE
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508

FLUORINE ORGANIC COMPOUNDS
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476

FLUORITE
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179

FLUOROHYDROCARBONS
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265

FLUOROPOLYMERS
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060

FLUTTER
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543

FLUX (RATE)
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018

FLUX DENSITY
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210

FLUX PINNING
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081

FLUX VECTOR SPLITTING
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558

FOAMS
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Energy and global warming impacts of CFC alternative technologies for foam building insulations
[DE92-019477] p 1200 N93-16085
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486

FOCAL PLANE DEVICES
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830

FOCUSING
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970

FOILS (MATERIALS)
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381

FOKKER-PLANCK EQUATION
Transverse phase-space evolution in non-stationary charged particle beams
[DE93-000618] p 1296 N93-15673
FOLDING STRUCTURES
Prefabricated foldable lunar base modular systems for habitats, offices, and laboratories p 1229 N93-17444
FOLIAGE
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
FORCED CONVECTION
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
FORECASTING
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
FOREST MANAGEMENT
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
FORESTS
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 4: Carbon emissions from deforestation in Mexico: Current situation and long-term scenarios
[DE93-001599] p 1204 N93-17344
FORKS
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208
FORMALDEHYDE
Theoretical characterization of the reaction CH3 + OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels
p 1107 N93-17408
FORMALISM
Datatype laws without signatures
[CWI-CS-R9133] p 1268 N93-16851
Modal logic and attribute value structures
[LP-92-02] p 1273 N93-17716
FORMATES
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347
FORTRAN
ADIFOR: A FORTRAN system for portable automatic differentiation
[DE92-040743] p 1239 N93-16588
An algebraic foundation for FORTRAN 90 communication intrinsics
[DE92-040393] p 1269 N93-16990
FOURIER ANALYSIS
Fixed points in spectral complexity
[AD-A256729] p 1263 N93-16068
Structure in gamma ray burst time profiles: Statistical Analysis 1 p 1344 N93-17308
FOURIER TRANSFORMATION
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Radial basis functions: A class of grid-free, scattered data approximations
[DE92-012675] p 1263 N93-15921
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491
Microcomputer simulation of a fourier approach to optical wave propagation
[AD-A257598] p 1305 N93-17796
FRACTALS
Study of precision accelerometers and fractal aggregates in microgravity, phase 2
[CTN-93-60616] p 1130 N93-16426
Study of precision accelerometers and fractal aggregates in microgravity
[CTN-93-60622] p 1168 N93-16935
FRACTOGRAPHY
Multiple-site-damage fatigue of riveted joints
[LR-679] p 1185 N93-16285
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562
FRACTURE MECHANICS
Spacecraft sustained load fracture control
p 1077 N93-15724
Composite material damage and fracture models for numerical simulations in support of fracture control
p 1080 N93-15743
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures
p 1080 N93-15744
Damage tolerance checking on Ni/H2 battery cells
p 1081 N93-15754
Testing and characterisation of metallic materials for structural analysis of high temperature components
p 1082 N93-15757
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Hermite interpolation algorithm for 2D fracture mechanics
[DE92-041266] p 1184 N93-16097
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone
[AD-A256991] p 1185 N93-16260
Multiple-site-damage fatigue of riveted joints
[LR-679] p 1185 N93-16285
State of the art review of rutting and cracking inpavements p 1071 N93-16316
A preliminary examination of Y 1 (a proprietary thin-film ferroelectric produced by Symetrix Corporation)
[AD-A255692] p 1146 N93-16395
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704
FRACTURE STRENGTH
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445
Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
Properties and uses of concrete, appendix B
p 1128 N93-16904
Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
Microstructure/mechanical-property relationships and R-curve behavior in Si3N4/Si3N4(w) composites
[DE92-041096] p 1098 N93-17004
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540
FRACTURES (MATERIALS)
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
FRACTURING
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082
FRAGMENTATION
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696
FRAGMENTS
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
FRAMES
Nonlinear analysis of Ariane 5 engine frame
[LR-678] p 1074 N93-16284
FREE CONVECTION
Fundamental studies of fluid mechanics and stability in porous media
[DE93-002519] p 1163 N93-17046
FREE ELECTRON LASERS
Sensitivity studies of a standing-wave free-electron laser
[DE93-000575] p 1170 N93-15696
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110
Design of a compact application-oriented free-electron laser
[DE92-040391] p 1172 N93-16183
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204
Common analysis of the Relativistic Klystron and the Standing-Wave Free-Electron Laser two-beam accelerator
[DE92-041205] p 1173 N93-16529
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706
FREE FALL
Boundary-layer control on a freely falling sphere
p 1161 N93-16819
FREE FLOW
Bypass transition in compressible boundary layers
p 1154 N93-15801
FREE JETS
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704
FREQUENCIES
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491
FREQUENCY CONTROL
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
FREQUENCY DISTRIBUTION
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353

FREQUENCY MEASUREMENT
Measurements of the cosmic microwave background temperature at 1.47 GHz
[DE93-000587] p 1400 N93-17379
FREQUENCY RANGES
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606
FREQUENCY RESPONSE
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle p 1057 N93-16784
FREQUENCY SHIFT
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722
FREQUENCY STABILITY
Vibration characterisation for low level disturbances induced in telecommunications spacecraft p 1078 N93-15733
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
FREQUENCY SYNTHESIZERS
An agile frequency synthesizer/RF generator for the SCAMP terminal
[AD-A256777] p 1137 N93-16052
FRESH WATER
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075
FRONTS (METEOROLOGY)
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
FUEL CELL POWER PLANTS
Gas cooled fuel cell systems technology development
[DE92-001298] p 1194 N93-16084
Advanced water-cooled phosphoric acid fuel cell development
[DE93-000215] p 1197 N93-17008
FUEL CELLS
Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919
DOE Headquarters MHD/fuel cell support contract
[DE92-040257] p 1194 N93-15935
Energy conversion and storage program
[DE93-001545] p 1194 N93-16034
Gas cooled fuel cell systems technology development
[DE92-001298] p 1194 N93-16084
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249
Networking electrochemical membrane separation devices: Theory and application
[DE93-001381] p 1106 N93-17066
FUEL COMBUSTION
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
FUEL PRODUCTION
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
FUEL SYSTEMS
Field demonstration of aviation turbine fuel MIL-T-83133C, grade JP-8 (NATO code F-34), at Fort Bliss, TX
[AD-A256945] p 1129 N93-16431
Aircraft wing compartment liner concept to reduce fuel spillage
[DOT/FAA/CT-TN92/34] p 1062 N93-17219
FUELS
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676
FULLERENES
An experiment to study fullerene formation under reduced gravity p 1134 N93-17335
FUNCTIONAL ANALYSIS
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693
FUNCTIONAL DESIGN SPECIFICATIONS
Experiment module/support module interface specification for the reusable reentry satellite
[NASA-CR-187885] p 1086 N93-15805
An initial model of requirements traceability: An empirical study
[AD-A256720] p 1275 N93-15978
Functional requirements of an advanced instructional design advisor. Volume 1: Epitomizing functions
[AD-A256752] p 1234 N93-16049
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693
Automating software design system DESTA p 1250 N93-17519
FUNCTIONALS
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781
FUNCTIONS (MATHEMATICS)
The use of inverse frequency response functions for multi degree-of-freedom modal parameter identification with error bounds p 1077 N93-15720
Proof elimination in type theory
[CS-9202] p 1278 N93-16351
Measurability of operator fields
[W-9204] p 1264 N93-16353
Normal forms in real time process algebra
[CWI-CS-R9149] p 1265 N93-16367
Polling systems and multiple branching processes
[CWI-BS-R9128] p 1267 N93-16726
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833
Calculate categorically
[CWI-CS-R9132] p 1268 N93-16850
Datatype laws without signatures
[CWI-CS-R9133] p 1268 N93-16851
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018
Combinatorial and topological phase structure of non-perturbative n-dimensional quantum gravity
[PREPRINT-861] p 1331 N93-17224
On the history of the function M(x)/(square root of x) since Stieltjes
[CWI-NM-R9120] p 1271 N93-17555
FURLABLE ANTENNAS
Dynamic deployment analysis of a mesh antenna reflector p 1083 N93-15770
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
Dynamic of large reflectors p 1084 N93-15773
FURNACES
ROMPS critical design review. Volume 3: Furnace module design documentation
[NASA-CR-191615] p 1237 N93-16440
FUSELAGES
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
FUSION REACTORS
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103
Small steady-state tokamak (TST) for divertor testing
[DE93-001213] p 1309 N93-16274
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
Oxidation and volatilization of a niobium alloy
[DE93-001927] p 1116 N93-17392
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706
FUZZY SETS
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Fuzzy set approach to quality function deployment: An investigation p 1274 N93-16779
FUZZY SYSTEMS
Telerobotic control of a mobile coordinated robotic server
[NASA-CR-191650] p 1259 N93-16387

G

GADOLINIUM
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652
GADOLINIUM-GALLIUM GARNET
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896
GALACTIC CLUSTERS
Contribution of clusters of galaxies to the XRB p 1374 N93-17148
Clustering properties of x ray sources from the analysis of the Ginga P(D) distribution p 1374 N93-17150
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
GALACTIC COSMIC RAYS
Study of high energy particles and protective layers for materials
[CTN-93-60613] p 1124 N93-16545
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794
North-south anisotropy during the quasi-stationary modulation of galactic cosmic rays
[NOTA-INTERNA-975] p 1400 N93-17647
The SVIRCO station: Measurement and study of the intensity of cosmic rays in Rome (Italy) from 1954
[NOTA-INTERNA-977] p 1401 N93-17648
GALACTIC EVOLUTION
The central engine of AGN's and its cosmological evolution p 1372 N93-17138
The evolution of AGN's at x ray wavelengths p 1372 N93-17141
The hard x ray luminosity function and evolution of AGN p 1373 N93-17142
GALACTIC NUCLEI
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137
GALACTIC RADIATION
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
Soft x ray segregation of Seyfert galaxies p 1362 N93-17135
GALERKIN METHOD
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems
[AD-A256740] p 1184 N93-16035
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
GALLIUM ALLOYS
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132
GALLIUM ANTIMONIDES
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132
GALLIUM ARSENIDES
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865
Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525
Investigation of III-V superlattices and heterostructures by convergent-beam electron diffraction
[ETN-92-92784] p 1321 N93-16581
Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934

Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055
Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688

GALLIUM NITRIDES
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525

GALLIUM PHOSPHIDES
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055

GAME THEORY
Robust approximate optimal guidance strategies for aeroassisted orbital transfer missions
p 1074 N93-16518

GAMMA RAY BURSTS
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
Structure in gamma ray burst time profiles: Statistical Analysis 1 p 1344 N93-17308
The ionosphere as a gamma ray burst detector
p 1211 N93-17312

GAMMA RAY OBSERVATORY
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
First results from the Compton Observatory
p 1366 N93-17102

GAMMA RAY SPECTRA
First results from the Compton Observatory
p 1366 N93-17102
An introduction to the pair-reflection model of X-ray spectra in AGN's p 1367 N93-17110
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
Soft x ray properties of the Geminga pulsar
p 1360 N93-17403

GAMMA RAY SPECTROMETERS
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234
Lunar prospector: A preliminary surface remote sensing resource assessment for the Moon
p 1389 N93-17256
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263

GAMMA RAYS
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
Milagro: A low energy threshold extensive air shower array
[DE93-000852] p 1400 N93-17383
Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga
[NASA-CR-191905] p 1360 N93-17401
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466

GAS CHROMATOGRAPHY
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192
Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473

GAS COMPOSITION
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234

GAS COOLED REACTORS
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge
[DE92-016788] p 1299 N93-17202

GAS DENSITY
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994

GAS DETECTORS
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

GAS DISCHARGES
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017

GAS DISSOCIATION
Vibration dissociation coupling in nonequilibrium flows
[NASA-CR-191775] p 1157 N93-16439

GAS DYNAMICS
Investigation of a possible galactic chimney
[AD-A257133] p 1364 N93-16077
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems
p 1165 N93-16786
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081

GAS FLOW
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

GAS IONIZATION
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017

GAS LASERS
Modification of Earth-satellite orbits using medium-energy pulsed lasers
[DE93-000858] p 1074 N93-16302

GAS MIXTURES
Adsorption of a binary gas mixture which laterally interacts on a random heterogeneous surface
[DE93-000706] p 1103 N93-16227
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683

GAS STREAMS
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186

GAS TUNGSTEN ARC WELDING
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234
Weld pool oscillation during gas tungsten arc welding
[ETN-92-92796] p 1177 N93-16568

GAS TURBINE ENGINES
Bypass transition in compressible boundary layers
p 1154 N93-15801
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

GAS VALVES
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061

GASEOUS ROCKET PROPELLANTS
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541

GASES
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

GASIFICATION
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942

GAUGE THEORY
The Cabibbo-Kobayashi-Maskawa mixing matrix
[DE93-001255] p 1283 N93-15976
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Research in elementary particle physics
[DE93-001858] p 1284 N93-16146
BRST field theory of relativistic particles
[NIKHEF-H/92-04] p 1286 N93-16341
On lattice chiral gauge theories
[PREPRINT-794] p 1278 N93-16415
Low energy effects of heavy chiral fermions
[PREPRINT-872] p 1289 N93-16978
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium
[PREPRINT-875] p 1187 N93-16979
SU(3) lattice gauge fixing with overrelaxation and Gribov copies
[PREPRINT-839] p 1322 N93-16993
A lattice study of electromagnetic decays of vector mesons
[PREPRINT-835] p 1289 N93-17014
Regularization of chiral gauge theories
[PREPRINT-888] p 1330 N93-17024
Gribov copies and smeared correlation functions in lattice QCD
[PREPRINT-892] p 1330 N93-17027
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
Probing the WWZ vertex at 500 GeV e(+)e(-) collider
[PREPRINT-831] p 1299 N93-17216
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787

GAUSS EQUATION
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961

GAUSSIAN ELIMINATION
Solving large dense systems of linear equations on systems with virtual memory and with cache
[CWI-NM-R9123] p 1271 N93-17558

GEARS
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396

GELLED PROPELLANTS
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686

GELS
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082

GENERAL AVIATION AIRCRAFT
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
Proceedings of the AIAA/FAA Joint Symposium on General Aviation Systems
[AD-A257780] p 1053 N93-17732

GENETIC ALGORITHMS
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876

GENETICS
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595

GEOCHEMISTRY
The Prospector mission
[DE93-000656] p 1385 N93-17194

GEODESIC LINES
Laminated conical shells: Considerations for the variations of the stiffness coefficients
[LR-671] p 1097 N93-16281

GEODESY
IERS standards for 1992
[AD-A257973] p 1192 N93-17739

GEODYNAMICS
IERS standards for 1992
[AD-A257973] p 1192 N93-17739

GEOGRAPHIC INFORMATION SYSTEMS
Utilization of geographic information system in lunar mapping p 1389 N93-17257

GEOLOGICAL FAULTS
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity
[ITN-93-85180] p 1208 N93-16744
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene
p 1209 N93-17093

GEOLOGICAL SURVEYS
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491

GEOLOGY
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092

GEOMAGNETISM
Annual report, 1990 - 1991 p 1402 N93-16749
Long-term variations in the geomagnetic activity level. 1: A connection with solar-wind sources
[NOTA-INTERNA-978] p 1399 N93-17631

Modeling the geomagnetic field over Spain: Anomalous field, secular variation, and reference field
[MEMO-15] p 1211 N93-17634

GEOMETRIC ACCURACY
Geometric constraint satisfaction
[CWI-CS-R9141] p 1236 N93-16339

GEOMETRICAL OPTICS
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104

GEOMETRY
Geometric constraint satisfaction
[CWI-CS-R9141] p 1236 N93-16339
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Nonlinear control problems and systems approximations: A geometric approach
[MEMO-1039] p 1261 N93-16951
Controllability distributions and systems approximations: A geometric approach
[MEMO-1040] p 1269 N93-16952
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604

GEOMORPHOLOGY
Automated classification of basic-level terrain features in digital elevation models
[AD-A256932] p 1190 N93-16504
Morphodynamics of intertidal regions
[BCRS-92-03] p 1220 N93-16574
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene
p 1209 N93-17093

GEOPHYSICS
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138
Annual report, 1990 - 1991 p 1402 N93-16749
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene
p 1209 N93-17093
Geophysical methods: An overview
p 1385 N93-17235
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588

GEOSTROPHIC WIND
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180

GEOSYNCHRONOUS ORBITS
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172

GEOTHERMAL ENERGY CONVERSION
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica
[DE93-000631] p 1210 N93-17193

GEOTHERMAL ENERGY UTILIZATION
Geothermal energy survey and technology
[DE93-716356] p 1193 N93-15903

GEOTHERMAL RESOURCES
Data acquisition for low-temperature geothermal well tests and long-term monitoring
[DE93-000387] p 1193 N93-15669
Geothermal energy survey and technology
[DE93-716356] p 1193 N93-15903
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica
[DE93-000631] p 1210 N93-17193

GEOTHERMAL TECHNOLOGY
Geothermal energy survey and technology
[DE93-716356] p 1193 N93-15903
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica
[DE93-000631] p 1210 N93-17193

GERMAN SPACE PROGRAM
Modern helicopter technologies at MBB and the application in future programmes
[MBB-UD-0599-91-PUB] p 1063 N93-17566

GERMANIUM
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029

GERMANIUM ALLOYS
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989

GERMANIUM COMPOUNDS
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050

GESTALT THEORY
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846

GET AWAY SPECIALS (STS)
ROMPS critical design review. Volume 2: Robot module design documentation
[NASA-CR-191614] p 1240 N93-16642
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673

GINGA SATELLITE
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095

GLARE
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

GLASS
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
Nucleation, crystal growth, and liquid/liquid phase separation in materials in microgravity, phase 3
[CTN-93-60612] p 1131 N93-16493
Glass and ceramics --- lunar resources
p 1383 N93-16900
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2
[CTN-93-60631] p 1133 N93-16937
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062

GLASS FIBER REINFORCED PLASTICS
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
A literature survey on the fatigue behaviour of hybrid composites
[NLR-TP-91345-U] p 1099 N93-17541

GLASS FIBERS
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465
Design for producing fiberglass fabric in a lunar environment
[NASA-CR-192068] p 1135 N93-17770
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

GLASS LASERS
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029

GLINT
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125

GLOBAL AIR POLLUTION
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474

GLOBAL POSITIONING SYSTEM
Correction of inertial measurements using GPS updates for underwater navigation
[AD-A257329] p 1058 N93-15988
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938
Multipath effects in a Global Positioning Satellite system receiver p 1059 N93-17311
Navstar global positioning system: Introduction and status
[NLR-TP-91008-U] p 1059 N93-17559

GLOBAL WARMING
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
Cloud amount and sunshine duration in the People's Republic of China, 1954-1988
[DE92-041023] p 1214 N93-16601
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209

GLOVES
Gloved operator performance study
[AD-A256894] p 1227 N93-16048

GLOW DISCHARGES
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136

GLUONS
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185

GLYCOLS
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401

GOERTLER INSTABILITY
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
Global flow characteristics on a curved channel. Goertler instability point
[DS-2141] p 1165 N93-17742

GOGGLES
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697

GOLD
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Phase behavior of Au and Pt surfaces
[DE92-041021] p 1112 N93-16203
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers
[DE93-000508] p 1318 N93-16243
Au(111) and Pt(111) surface phase behavior
[DE92-040881] p 1321 N93-16598
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467

GOLD ALLOYS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476

GOLD ISOTOPES
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926

GOODNESS OF FIT
Stochastic integrals and goodness-of-fit tests
[ISBN-90-9003836-1] p 1275 N93-16223
Comparison of tests, and local families
[MEMO-1034] p 1266 N93-16594

GOVERNMENT/INDUSTRY RELATIONS
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
A post cold war assessment of US space policy
p 1073 N93-17218

GRAIN BOUNDARIES
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers
[DE93-000508] p 1318 N93-16243
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393

Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475
Fatigue damage study in aluminum-2024 T3 alloys p 1118 N93-16767
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
Energetics and structural properties of twist grain boundaries in Cu p 1118 N93-17304
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

GRAIN SIZE
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252
Fatigue damage study in aluminum-2024 T3 alloys p 1118 N93-16767

GRAMMARS
Data modelling in complex application domains
[TR-92-01] p 1355 N93-16371
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
Generalized LR parsing for general context-free grammars
[CWI-CS-R9153] p 1242 N93-16853
Dynamic parsers, evolving grammars and incremental languages
[PREPRINT-863] p 1243 N93-16998
Fine-grain incremental implementation of algebraic specifications
[CWI-CS-R9159] p 1270 N93-17489
Lazy scanner generation for modular regular grammars
[CWI-CS-R9158-REV] p 1251 N93-17533
On the borderline between grammars and programs
[TR-91-17] p 1252 N93-17594
Lambek grammar: An information-based categorical grammar
[LP-92-01] p 1273 N93-17715

GRAND CANYON (AZ)
Wintertime meteorology of the Grand Canyon region
[DE93-001557] p 1216 N93-17179
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390

GRAPH THEORY
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
On Hamiltonian properties of 2-tough graphs
[MEMO-1037] p 1266 N93-16669
Cycles containing all vertices of maximum degree
[MEMO-1044] p 1268 N93-16844
A linear time algorithm for recognizing interval orders
[MEMO-1046] p 1242 N93-16846
Going stable in graph models
[ML-91-08] p 1274 N93-17786

GRAPHITE
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463

GRAPHITE-EPOXY COMPOSITES
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
NDE for thick section composites
[AD-A257292] p 1181 N93-15837
Hydrostatic pressure testing of graphite/epoxy cylinder C6-1
[DE93-000427] p 1185 N93-16240
A study of the Lute Metering Structure p 1189 N93-17294

GRAPHITIZATION
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705

GRAPHS (CHARTS)
Experiments with an incremental closure algorithm
[MEMO-INF-92-33] p 1236 N93-16336
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
On Hamiltonian properties of 2-tough graphs
[MEMO-1037] p 1266 N93-16669
Cycles containing all vertices of maximum degree
[MEMO-1044] p 1268 N93-16844
Going stable in graph models
[ML-91-08] p 1274 N93-17786

GRASSLANDS
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663

GRATINGS (SPECTRA)
The world of grid methods
[NLR-TP-89298-U] p 1186 N93-16292
Computer-generated gratings
[ISBN-951-22-0785-0] p 1252 N93-17599

GRAVIMETRY
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity
[ITN-93-85180] p 1208 N93-16744

GRAVITATION
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
A continuum string model for D greater than 1
[PREPRINT-853] p 1329 N93-16960

GRAVITATION THEORY
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Solutions to the strong-CP problem in a world with gravity
[DE93-002650] p 1291 N93-17200
Combinatorial and topological phase structure of non-perturbative n-dimensional quantum gravity
[PREPRINT-861] p 1331 N93-17224
Problems in particle theory
[DE93-003687] p 1293 N93-17469

GRAVITATIONAL EFFECTS
Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644
The influence of microgravity on the microstructure and properties of eutectics, phase 4
[CTN-93-60629] p 1132 N93-16690
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

GRAVITATIONAL FIELDS
Interacting Euclidean three-dimensional quantum gravity
[PREPRINT-867] p 1330 N93-16965
On the black-hole conformal field theory coupled to the Polyakov's string theory. A non perturbative analysis
[PREPRINT-852] p 1365 N93-17072

GRAVITATIONAL PHYSIOLOGY
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823

GRAVITONS
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940

GRAVITY ANOMALIES
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity
[ITN-93-85180] p 1208 N93-16744

GRAVITY WAVES
Kink-assisted mode hopping in a surface wave resonator
[AD-A256314] p 1207 N93-16264
Internal gravity waves in the equatorial Pacific
[DE93-001517] p 1211 N93-17653

GRAZING INCIDENCE
Application of grazing incidence x ray diffraction to polymer blends
[DE93-000709] p 1122 N93-16228

GREAT PLAINS CORRIDOR (NORTH AMERICA)
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

GREEN'S FUNCTIONS
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
Regularization of chiral gauge theories
[PREPRINT-888] p 1330 N93-17024

GREENHOUSE EFFECT
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
Energy analysis program
[DE93-001570] p 1199 N93-16045
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
Sensitivity of direct global warming potentials to key uncertainties
[DE92-041045] p 1201 N93-16298
Cloud amount and sunshine duration in the People's Republic of China, 1954-1988
[DE92-041023] p 1214 N93-16601
Global climate change: Some implications, opportunities, and challenges for US forestry
[DE92-040874] p 1203 N93-17209
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

GRID GENERATION (MATHEMATICS)
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557

GRIFFITH CRACK
Interference of wedge-shaped protrusions on the faces of a Griffith crack in biaxial stress
[DE92-041375] p 1185 N93-16270

GROUND BASED CONTROL
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
Developing satellite ground control software through graphical models p 1246 N93-17500

GROUND STATE
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585

GROUND STATIONS
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
A second generation expert system for checking and diagnosing AXAF's electric power system p 1152 N93-17287

GROUND SUPPORT EQUIPMENT
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Problems involving combined loading p 1189 N93-17314

GROUND SUPPORT SYSTEMS
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems p 1254 N93-17305

GROUND TESTS
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
A new ground test for determining the resolution of pushbroom sensors
[AD-A257193] p 1189 N93-16002
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge
[DE92-016788] p 1299 N93-17202
Ground testing of bioconvective variables such as morphological characterizations and mechanisms which regulate macroscopic patterns p 1224 N93-17303
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543

GROUND TRUTH
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
GROUND WATER
Data acquisition for low-temperature geothermal well tests and long-term monitoring
[DE93-000387] p 1193 N93-15669
GROUND WIND
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
GROUND-AIR-GROUND COMMUNICATION
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
GROUP THEORY
From the rotation group to the Poincare group
[DE93-000864] p 1279 N93-17386
GROUP VELOCITY
Beam loading compensation with variable group velocity
[DE93-001810] p 1297 N93-16199
GROWTH
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
GUIDANCE (MOTION)
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
GULF STREAM
Hydrographic data from Endeavor 214: A study of the Gulf Stream-Deep Western Boundary Current crossover
[AD-A257966] p 1221 N93-17737
GUN PROPELLANTS
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
GUNN EFFECT
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
GUST LOADS
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562
GYROSCOPES
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938

H

H I REGIONS
HI in galaxy outskirts and the extragalactic ionizing flux p 1372 N93-17139
H-INFINITY CONTROL
Redheffer's lemma and H(infinity)-control or infinite-dimensional systems
[W-9206] p 1259 N93-16355
Nonlinear H(infinity) control and Hamilton-Jacobi inequalities
[MEMO-1042] p 1268 N93-16843
H-60 HELICOPTER
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660
HABITABILITY
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
HABITATS
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806
HADRONS
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
Four-fermion operators with improved nearest-neighbour action
[PREPRINT-805] p 1287 N93-16443
QCD corrections to Z pair hadronic production
[PREPRINT-832] p 1288 N93-16954
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
High energy physics research
[DE93-001793] p 1299 N93-17482
Monte Carlo simulation of minimum bias events at the LHC energy
[NOTA-INTERNA-969] p 1294 N93-17544
HAFNIUM ISOTOPES
Tilted cranking classification of multiband spectra
[DE92-041187] p 1283 N93-15959
HALIDES
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
HALL EFFECT
Problems in particle theory
[DE93-003687] p 1293 N93-17469
HAMILTON-JACOBI EQUATION
Nonlinear H(infinity) control and Hamilton-Jacobi inequalities
[MEMO-1042] p 1268 N93-16843
HAMILTONIAN FUNCTIONS
Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Research in particle theory
[DE93-002868] p 1284 N93-16147
An approximate invariant using Lie algebra
[DE93-000564] p 1263 N93-16247
On Gupta-Bleuler quantization of systems with second-class constants
[NIKHEF-H/92-05] p 1264 N93-16342
The direct Monte Carlo method for calculating alloy phases
[DE93-000436] p 1113 N93-16450
On Hamiltonian properties of 2-tough graphs
[MEMO-1037] p 1266 N93-16669
Integrable singular integral evolution equations
[PREPRINT-880] p 1270 N93-17013
Time evolution of Caldirola-Kanai oscillators
[PREPRINT-846] p 1272 N93-17712
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758
HAND (ANATOMY)
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619
HANDBOOKS
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
Environmental Quality Information Analysis Center (EQIAC) operating procedures handbook
[DE92-041391] p 1201 N93-16271
HANDLING EQUIPMENT
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
HANG GLIDERS
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
HANKEL FUNCTIONS
Studies in estimation theory, applications, and implementation
[AD-A256964] p 1275 N93-16250
HARDNESS
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445
HARMONIC ANALYSIS
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
Modeling the geomagnetic field over Spain: Anomalous field, secular variation, and reference field
[MEMO-15] p 1211 N93-17634
HARMONIC EXCITATION
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Response of a viscous liquid column with anchored edges to axial excitations
[LRT-WE-9-FB-7-1991] p 1164 N93-17550
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551
HARMONIC GENERATIONS
Potential modulation of equilibrium and excitation phenomena at the electrolyte-solid interface
[DE93-001685] p 1103 N93-16163
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
HARMONIC GENERATORS
Synthesis and characterization of dipolar organic molecules for nonlinear optical materials
[AD-A257111] p 1302 N93-16118
HARMONICS
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673
HARTREE APPROXIMATION
An introduction to superconductivity
[PREPRINT-801] p 1280 N93-16421
HASTELLOY (TRADEMARK)
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649
HAZARDS
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
HAZE
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
HEALTH
Biomedical Polar Research Workshop Minutes
[NASA-TM-108026] p 1221 N93-16799
NASA/NSF Workshop on Antarctic Research p 1222 N93-16803
Infectious disease p 1222 N93-16804
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
HEAO 2
The x ray properties of a large, uniform QSO sample: Einstein observations of the LBQS p 1361 N93-17106
Extragalactic counterparts to Einstein slew survey sources p 1361 N93-17107
HEARING
Measurement and evaluation of blast overpressure during F-15A crew station vulnerability assessment test
[AD-A257152] p 1227 N93-16033
HEART DISEASES
Non-invasive evaluation of the cardiac autonomic nervous system by PET
[DE92-041077] p 1225 N93-16441
HEAT EXCHANGERS
Reusable Reentry Satellite (RRS): Thermal control trade study
[NASA-CR-186528] p 1087 N93-16719
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
HEAT FLUX
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Radiation fluxes at the FIFE site
[NASA-CR-191717] p 1208 N93-16718
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480
HEAT MEASUREMENT
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
HEAT PIPES
Optimization of an internally finned rotating heat pipe
[AD-A256725] p 1329 N93-15980
Thermal management in space p 1095 N93-16909

HEAT RESISTANT ALLOYS
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704

HEAT SHIELDING
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027

HEAT SINKS
Heat flow in variable polarity plasma arc welds p 1181 N93-17280

HEAT STORAGE
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
[DE93-001572] p 1193 N93-15810
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187

HEAT TRANSFER
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Domain decomposition: A blowup problem and the Ginzburg-Landu equations
[DE92-040736] p 1266 N93-16587
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
Heat flow in variable polarity plasma arc welds p 1181 N93-17280
Analysis of film cooling in rocket nozzles p 1095 N93-17339
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757

HEAT TRANSFER COEFFICIENTS
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038

HEAT TREATMENT
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479

HEATERS
A guide to automation techniques in calorimetry
[DE92-040948] p 1329 N93-15971
Natural convection from a horizontal heater in response to steady and pulsatile input powers
[AD-A257101] p 1156 N93-16126

HEATING
Microwave heating of lunar materials. Appendix A p 1383 N93-16903

HEATING EQUIPMENT
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747

HEAVY ELEMENTS
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734

HEAVY IONS
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926
Dynamical approach to pair production from strong fields
[DE92-040224] p 1283 N93-16011
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706

HEAVY LIFT LAUNCH VEHICLES
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326

HEISENBERG THEORY
Bose realisation of a noncanonical Heisenberg algebra
[PREPRINT-844] p 1269 N93-16958

HELICAL ANTENNAS
Broadband quadrifilar phased array helix
[AD-D015506] p 1139 N93-16519

HELICOPTER CONTROL
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
[AD-A256921] p 1060 N93-16186
Helicopter installations: From motor to rotor
[LR-675] p 1061 N93-16345
Developing a control system for ARES 2 p 1069 N93-16769
Mission oriented investigation of handling qualities through simulation
[MBB-UD-0600-91-PUB] p 1063 N93-17567

HELICOPTER DESIGN
Helicopter installations: From motor to rotor
[LR-675] p 1061 N93-16345
Test and integration concept for complex helicopter avionic systems
[MBB-UD-0605-91-PUB] p 1065 N93-17547
Modern helicopter technologies at MBB and the application in future programmes
[MBB-UD-0599-91-PUB] p 1063 N93-17566
Mission oriented investigation of handling qualities through simulation
[MBB-UD-0600-91-PUB] p 1063 N93-17567
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568

HELICOPTER ENGINES
Helicopter installations: From motor to rotor
[LR-675] p 1061 N93-16345
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines
[AD-A257754] p 1067 N93-17695

HELICOPTER PERFORMANCE
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
[AD-A256921] p 1060 N93-16186

HELICOPTER TAIL ROTORS
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569

HELICOPTERS
Helicopter installations: From motor to rotor
[LR-675] p 1061 N93-16345
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
Modern helicopter technologies at MBB and the application in future programmes
[MBB-UD-0599-91-PUB] p 1063 N93-17566
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571

HELIOSTATS
Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839

HELIOTRONS
The 3D MHD study of helias and heliotron
[AD-A257116] p 1307 N93-16123

HELIUM
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry
[DE92-040602] p 1308 N93-16145
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

HELIUM IONS
Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655

HELIUM ISOTOPES
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424
An artificially generated atmosphere near a lunar base p 1398 N93-17456

HELIUM PLASMA
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136

HELMET MOUNTED DISPLAYS
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570

HELMETS
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570

HEMISPHERICAL SHELLS
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755

HERBIG-HARO OBJECTS
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029

HERMITIAN POLYNOMIAL
Hermite interpolation algorithm for 2D fracture mechanics
[DE92-041266] p 1184 N93-16097

HESSIAN MATRICES
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791

HETEROCYCLIC COMPOUNDS
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834

HETERODYNING
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127

HETEROJUNCTION DEVICES
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970

HETEROJUNCTIONS
Electronic transport in 3-5 semiconductors and their lattice matched heterojunctions
[AD-A256904] p 1316 N93-16023
Center for High-Frequency Microelectronics
[AD-A257003] p 1145 N93-16030
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261

Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342

HEURISTIC METHODS
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507
Study of an adaptive maintenance strategy for logic systems
[ETN-92-92673] p 1252 N93-17640

HIERARCHIES
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
The challenge of a data storage hierarchy p 1354 N93-16325
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733

HIGH ELECTRON MOBILITY TRANSISTORS
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Wafer scale union
[AD-A258001] p 1152 N93-17749

HIGH ENERGY ELECTRONS
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
Fundamentals of high energy electron beam generation
[DE93-000745] p 1299 N93-17064

HIGH ENERGY INTERACTIONS
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
Duke University high energy physics
[DE92-040340] p 1296 N93-16180
The global second level trigger for ZEUS
[ETN-92-92816] p 1297 N93-16479
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
Status of QCD
[PREPRINT-842] p 1298 N93-16996
A lattice study of electromagnetic decays of vector mesons
[PREPRINT-835] p 1289 N93-17014
The b quark polarization at LEP
[PREPRINT-886] p 1290 N93-17022
Research in particle physics
[DE92-041135] p 1293 N93-17475
High energy physics research
[DE93-001793] p 1299 N93-17482
Research in elementary particle physics
[DE93-003153] p 1294 N93-17488
The study of multi-institutional collaborations in high-energy physics
[DE93-002337] p 1300 N93-17580
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605
Search for pp decay to neutral H decay to (neutral Z)(neutral Z) decay to (mu +)(mu -)(mu +)(mu -) at the LHC
[NOTA-INTERNA-970] p 1300 N93-17644

HIGH ENERGY PROPELLANTS
Semi-propellants for ducted rockets p 1092 N93-17612

HIGH FREQUENCIES
Preliminary observations of electromagnetic radiation from plasma in presence of a double layer
[TRITA-EPP-91-02] p 1312 N93-17636

HIGH LEVEL LANGUAGES
Compiling Prolog to standard ML: Some optimizations
[AD-A256193] p 1232 N93-15841
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Implementing higher-order algebraic specifications
[CWI-CS-R9150] p 1265 N93-16368
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766

HIGH PASS FILTERS
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438

HIGH POWER LASERS
Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A257419] p 1171 N93-15864
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
Adaptive optics for laser power beaming p 1305 N93-17307
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654

HIGH PRESSURE
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401

HIGH RESOLUTION
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
A ground-based search for lunar resources using high-resolution imaging in the infrared p 1386 N93-17241
A ROSAT high resolution x ray image of NGC 1068 p 1360 N93-17402
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701

HIGH REYNOLDS NUMBER
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787

HIGH SPEED
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
The NASA High-Speed Research Program p 1064 N93-16761
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359

HIGH SPEED CAMERAS
Millisecond readout CCD camera
[DE93-000694] p 1167 N93-16359

HIGH STRENGTH ALLOYS
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859

HIGH STRENGTH STEELS
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972

HIGH TEMPERATURE
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
High temperature smart sensors and actuators
[AD-A256985] p 1158 N93-16517
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377

HIGH TEMPERATURE ENVIRONMENTS
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495

HIGH TEMPERATURE GAS COOLED REACTORS
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463

HIGH TEMPERATURE GASES
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470
On the origin of the x ray background p 1374 N93-17149

HIGH TEMPERATURE PLASMAS
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry
[DE92-040602] p 1308 N93-16145

HIGH TEMPERATURE SUPERCONDUCTORS
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896
Nonlinear characteristics of superconducting transmission lines
[AD-A256388] p 1143 N93-15901
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
Three-terminal devices of high-T(sub c) superconductors: A status report and future challenges
[DE93-000654] p 1319 N93-16358
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Performance measurements of superconducting current leads having low helium boiloff rates
[DE92-040730] p 1146 N93-16392
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
Process for single crystal growth of high T(c) superconductors
[AD-D015480] p 1320 N93-16485
Method of making Tl-Sr-Ca-Cu-Oxide superconductors comprising heating at elevated pressures in sealed container
[AD-D015482] p 1321 N93-16489
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177
Apical oxygen ions and the electronic structure of the high T(sub c) cuprates
[PREPRINT-828] p 1324 N93-17223

Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
High temperature superconductivity
[AD-A257789] p 1151 N93-17696

HIGH VOLTAGES
VLF/LF corona investigation
[AD-A258052] p 1141 N93-17709

HILBERT SPACE
Measurability of operator fields
[W-9204] p 1264 N93-16353
On the sum of accretive operators
[ETN-92-92794] p 1265 N93-16566
Supersymmetry in spin glass dynamics
[PREPRINT-843] p 1279 N93-16957
The uncertainty principle
[ETN-92-92533] p 1331 N93-17589

HISTOGRAMS
Enhancement of video imagery by modified intensity-dependent spatial summation
[AD-A255689] p 1139 N93-16300
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137

HISTORIES
The first particle: The electron
[NOTA-INTERNA-974] p 1295 N93-17646

HMX
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708

HOLE MOBILITY
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
Low-energy physics of high-temperature superconductors
[DE92-040672] p 1317 N93-16194

HOLES (ELECTRON DEFICIENCIES)
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928
Low-energy physics of high-temperature superconductors
[DE92-040672] p 1317 N93-16194
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975

HOLES (MECHANICS)
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114

HOLLOW CATHODES
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253

HOLOGRAPHIC INTERFEROMETRY
Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765

HOLOGRAPHIC SPECTROSCOPY
Computer-generated gratings
[ISBN-951-22-0785-0] p 1252 N93-17599

HOLOGRAPHY
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102
Study of FES/CAST/HGS
[NASA-CR-190945] p 1114 N93-16711

HOMOGENEOUS TURBULENCE
Turbulence modeling and experiments
p 1153 N93-15796

HOT ELECTRONS
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Wafer scale union
[AD-A258001] p 1152 N93-17749

HOT ISOSTATIC PRESSING
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

HOT PRESSING
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921

HOT SURFACES
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543

HOT-WIRE ANEMOMETERS
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280

HOVERING
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
[AD-A256921] p 1060 N93-16186
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405

HOVERING ROCKET VEHICLES
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405
Lunar lava tube sensing p 1391 N93-17270

HUBBLE SPACE TELESCOPE
Hubble space telescope: The GO and GTO observing programs, version 3.0
[NASA-CR-191290] p 1359 N93-16949
An algorithm to quantify the performance of the JOVE program p 1254 N93-17306

HULLS (STRUCTURES)
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706

HUMAN BEHAVIOR
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108

HUMAN BEINGS
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604

HUMAN CENTRIFUGES
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

HUMAN FACTORS ENGINEERING
FAA Technical Center Aeronautical Data Link Research Plan
[DOT/FAA/CT-92/23] p 1135 N93-15698
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
Gloved operator performance study
[AD-A256894] p 1227 N93-16048
Directory of design support methods
[AD-A256987] p 1227 N93-16258
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455
Cognitive and affective components of mental workload: Understanding the effects of each on human decision making behavior p 1226 N93-16783
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
Portable seat lift
[NASA-CASE-MFS-28610-1] p 1228 N93-17045
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772

HUMAN PERFORMANCE
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108
Development and enhancement of a model of performance and decision making under stress in a real life setting
[AD-A255699] p 1226 N93-16111
NASA/NSF Workshop on Antarctic Research
p 1222 N93-16803
Infectious disease p 1222 N93-16804
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058
Some effects of time usage patterns on the productivity of engineers p 1343 N93-17301
Automatic information processing and high performance skills: Individual differences and mechanisms of performance improvement in search-detection and complex tasks
[AD-A257711] p 1226 N93-17684
Simulator motion
[AD-A257683] p 1072 N93-17687

HURRICANES
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658

HYBRID CIRCUITS
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688

HYBRID PROPULSION
Hybrid rocket performance p 1095 N93-17295

HYDRATES
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854

HYDRAULIC EQUIPMENT
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401

HYDRAULIC FLUIDS
A high pressure aerosol generator for viscous fluids
[AD-A256269] p 1157 N93-16401

HYDRAULIC JETS
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121

HYDRAULICS
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590

HYDRAZINES
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694

HYDRAZINIUM COMPOUNDS
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003

HYDRAZOIC ACID
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865

HYDROCARBON COMBUSTION
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Computed Potential Energy Surfaces for Chemical Reactions
[NASA-CR-191804] p 1107 N93-17407

HYDROCARBONS
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942

HYDROCYANIC ACID
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268

HYDRODYNAMIC EQUATIONS
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554

HYDRODYNAMICS
Impact modeling with smooth particle hydrodynamics
[DE92-017506] p 1155 N93-15882
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
Constitutive and equation of state models using object-oriented programming methods
[DE93-000740] p 1243 N93-17063

Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613

HYDROELASTICITY
Hydroelastic vibrations in a rectangular container under zero-gravity
[LRT-WE-9-FB-28-1991] p 1134 N93-17602

HYDROFORMING
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937

HYDROGEN
Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925
Theory of field adsorption of hydrogen
[AD-A257139] p 1102 N93-15996
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
Remote hydrogen sensing techniques
[NASA-CR-191411] p 1169 N93-17203
Theoretical characterization of the reaction CH3 + OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels p 1107 N93-17408
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

HYDROGEN ATOMS
Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms
[DE93-001642] p 1292 N93-17345
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction
[DE93-001565] p 1107 N93-17461

HYDROGEN EMBRITTLEMENT
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
Spacecraft sustained load fracture control p 1077 N93-15724
Damage tolerance checking on Ni/H2 battery cells p 1081 N93-15754
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859

HYDROGEN IONS
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928

HYDROGEN OXYGEN ENGINES
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
STME nozzle thermal analysis p 1095 N93-17291
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419

HYDROGEN PEROXIDE
Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network
[AD-A256789] p 1142 N93-15703

HYDROGEN PRODUCTION
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
Oxidation and volatilization of a niobium alloy
[DE93-001927] p 1116 N93-17392

HYDROGEN SULFIDE
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925

HYDROGENATION
Organometallic chemistry of bimetallic compounds
[DE93-002773] p 1115 N93-17201

HYDROGEOLOGY
Thermal diffusion processes in aqueous sodium chloride solutions
[DE93-002596] p 1105 N93-16656

HYDROGRAPHY
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
Hydrographic data from Endeavor 214: A study of the Gulf Stream-Deep Western Boundary Current crossover
[AD-A257966] p 1221 N93-17737

HYDROLOGY MODELS
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397

HYDROSTATIC PRESSURE
Hydrostatic pressure testing of graphite/epoxy cylinder C6-1
[DE93-000427] p 1185 N93-16240
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528

HYDROTHERMAL SYSTEMS
The hydrothermal synthesis of ceramic powders
[ETN-92-92785] p 1125 N93-16607

HYDROXYL RADICALS
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358

HYPERBOLIC DIFFERENTIAL EQUATIONS
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems
[AD-A256740] p 1184 N93-16035
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620

HYPERCUBE MULTIPROCESSORS
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
Exploratory designs for computational experiments
[DE93-002354] p 1243 N93-17040

HYPERGEOMETRIC FUNCTIONS
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593
The Hahn-Exton q-Bessel function
[ISBN-90-9004649-6] p 1271 N93-17587

HYPERONS
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362

HYPERSONIC AIRCRAFT
Hypersonic reconnaissance aircraft
[NASA-CR-192049] p 1064 N93-17804

HYPERSONIC FLIGHT
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543

HYPERSONIC FLOW
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
Hot experimental technique: A new requirement of aerothermodynamics
[MBB-FE-202-S-PUB-480] p 1057 N93-17543
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789

HYPERSONIC NOZZLES
Design of a nozzle for a hypersonic wind tunnel
[AERO-REPT-9113] p 1072 N93-16468

HYPERSONIC SPEED
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756

HYPERSONIC VEHICLES
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 1092 N93-17611

HYPERSONIC WIND TUNNELS
Design of a nozzle for a hypersonic wind tunnel
[AERO-REPT-9113] p 1072 N93-16468

HYPERVELOCITY FLOW
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems p 1165 N93-16786

HYPERVELOCITY IMPACT
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Impact modeling with smooth particle hydrodynamics
[DE92-017506] p 1155 N93-15882
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
Trade-offs in mass and effectiveness in satellite shielding: A design approach
[AD-A256693] p 1087 N93-16112
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696

HYPERVELOCITY PROJECTILES
Models of high velocity impact phenomena
[DE92-017452] p 1183 N93-15881

HYPOXIA
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187

HYSTERESIS
Damping
[LR-685] p 1184 N93-16214
Mathematical models of hysteresis
[DE93-001837] p 1281 N93-17034
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process
[DE93-000870] p 1116 N93-17346
Mathematical models of hysteresis
[DE93-001836] p 1281 N93-17530

I

IBM PERSONAL COMPUTERS
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088

ICE
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167

ICE CLOUDS
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477

ICE FORMATION
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477

ICE MAPPING
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225

ICE PREVENTION
Field demonstration of aviation turbine fuel MIL-T-83133C, grade JP-8 (NATO code F-34), at Fort Bliss, TX
[AD-A256945] p 1129 N93-16431
IDEAL GAS
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789
IDENTIFYING
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155
IGNITION
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
IGNITION SYSTEMS
The railplug: Development of a new ignitor for internal combustion engines
[DE93-003068] p 1176 N93-16178
ILLINOIS
University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760
ILLUMINATING
Endoscopic measurements using a panoramic annular lens
[NASA-CR-191727] p 1167 N93-16453
ILLUMINATION
Extraterrestrial applications of solar optics for interior illumination p 1305 N93-17449
ILMENITE
Lunar beneficiation p 1381 N93-16887
Processing lunar soils for oxygen and other materials p 1381 N93-16889
Application of manufactured products p 1383 N93-16902
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
IMAGE ANALYSIS
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Method of acoustic processing for acoustic image classification
[AD-D015454] p 1282 N93-16460
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
A metric for line segments
[CWI-BS-R9126] p 1268 N93-16832
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
IMAGE CONVERTERS
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
IMAGE ENHANCEMENT
Enhancement of video imagery by modified intensity-dependent spatial summation
[AD-A255689] p 1139 N93-16300
IMAGE INTENSIFIERS
Microchannel plate intensifier gain uniformity improvement in sealed tubes by selective scrubbing
[DE92-041082] p 1147 N93-16548
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
IMAGE PROCESSING
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Atomic resolution imaging and analysis with the STEM
[DE92-041304] p 1166 N93-16150
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Enhancement of video imagery by modified intensity-dependent spatial summation
[AD-A255689] p 1139 N93-16300
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Method of acoustic processing for acoustic image classification
[AD-D015454] p 1282 N93-16460
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604
Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739
An FFT-based method for attenuation correction in fluorescence confocal microscopy
[CWI-AM-R9114] p 1174 N93-16848
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188
The Prospector mission
[DE93-000656] p 1385 N93-17194
Complexity optimized vector quantization: A neural network approach
[DE93-001304] p 1246 N93-17477
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
IMAGE RECONSTRUCTION
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678
Computer-generated gratings
[ISBN-951-22-0785-0] p 1252 N93-17599
IMAGE RESOLUTION
A new ground test for determining the resolution of pushbroom sensors
[AD-A257193] p 1189 N93-16002
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
IMAGES
Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
IMAGING RADAR
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment p 1386 N93-17240
IMAGING SPECTROMETERS
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy p 1390 N93-17261
IMAGING TECHNIQUES
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
Laser guide stars: Bridge of ground-based lasers entering space
[AD-A256649] p 1171 N93-15887
Application of scanning tunneling microscopy to electrochemistry
[AD-A255680] p 1101 N93-15955
Atomic resolution imaging and analysis with the STEM
[DE92-041304] p 1166 N93-16150
Enhancement of video imagery by modified intensity-dependent spatial summation
[AD-A255689] p 1139 N93-16300
Endoscopic measurements using a panoramic annular lens
[NASA-CR-191727] p 1167 N93-16453
Grid free, modular, large screen display
[AD-D015474] p 1303 N93-16481
Undersea data collection, analysis, and display system
[AD-D015476] p 1220 N93-16483
Advanced imaging system
[NASA-CR-191800] p 1303 N93-16712
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
A ground-based search for lunar resources using high-resolution imaging in the infrared p 1386 N93-17241
High-resolution elemental mapping of the lunar surface p 1387 N93-17244
Lunar resources using moderate spectral resolution visible and near-infrared spectroscopy: Al/Si and soil maturity p 1387 N93-17247
Mapping the Moon in soft x rays: Promises and challenges p 1388 N93-17252
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697
IMIDES
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
IMMUNOASSAY
Microparticle-based fluorescence immunoassay
[DE92-040704] p 1103 N93-16195
IMMUNOLOGY
Immunology presentation at the 1990 NASA/NSF Antarctica Biomedical Science Working Group p 1222 N93-16806
IMPACT
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1169 N93-17041
IMPACT DAMAGE
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696
IMPACT LOADS
An analytical and experimental study on the design and verification of containment subjected to impact loading p 1078 N93-15726
IMPACT RESISTANCE
Impact on ceramic faced armour
[ETN-92-92797] p 1124 N93-16569
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
IMPACT STRENGTH
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911
IMPACT TESTS
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Models of high velocity impact phenomena
[DE92-017452] p 1183 N93-15881
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911
IMPEDANCE
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061
IMPEDANCE MATCHING
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691
IMPEDANCE MEASUREMENT
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061

NiCd cells behaviour at high currents and low temperature for space applications
[ITN-93-85176] p 1149 N93-16835

IMPINGEMENT
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647

IMPURITIES
Measurement of impurity ion densities and energies in the divertor and edge regions of Alcator C-Mod tokamak
[DE92-040510] p 1307 N93-15922
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
The 16th International Conference on Defects in Semiconductors
[AD-A258035] p 1328 N93-17754

IN SITU MEASUREMENT
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264

IN-FLIGHT MONITORING
Usage monitoring in the RNLN Fleet Air Arm (Marine Luchtvaarldienst)
[NLR-TP-91070-U] p 1062 N93-17394
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538

INCLINATION
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378

INCLUSIONS
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093

INCOMPRESSIBILITY
Some aspects for the application of a hierarchic family of Herrmann mixed compressible and incompressible finite elements p 1077 N93-15723

INCOMPRESSIBLE FLOW
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939

INCONEL (TRADEMARK)
Damage tolerance checking on Ni/H2 battery cells p 1081 N93-15754
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495

INCREASING
Fine-grain incremental implementation of algebraic specifications
[CWI-CS-R9159] p 1270 N93-17489

INDENTATION
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445

INDEPENDENT VARIABLES
C-integrable nonlinear partial differential equations in N + 1 dimensions
[PREPRINT-833] p 1269 N93-16955

INDEXES (DOCUMENTATION)
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065

INDIUM ALLOYS
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

INDIUM ANTIMONIDES
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132

INDIUM ARSENIDES
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

INDIUM COMPOUNDS
X ray crystal structure of an organoindium alkoxide dimer, (Ph2InOSiMe3)2
[AD-A257404] p 1315 N93-15862
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650

INDIUM PHOSPHIDES
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

INDOLES
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166

INDOOR AIR POLLUTION
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
Indoor ozone concentrations: Ventilation rate impacts and mechanisms of outdoor concentration attenuation
[DE93-000633] p 1205 N93-17576

INDUCTION HEATING
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007

INDUSTRIAL PLANTS
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135

INDUSTRIES
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325

INELASTIC SCATTERING
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

INEQUALITIES
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
Nonlinear H(infinity) control and Hamilton-Jacobi inequalities
[MEMO-1042] p 1268 N93-16843

INERTIAL CONFINEMENT FUSION
Recent diagnostic development for the Los Alamos Inertial Fusion Program
[DE92-040362] p 1306 N93-15849
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486

INERTIAL FUSION (REACTOR)
Recent diagnostic development for the Los Alamos Inertial Fusion Program
[DE92-040362] p 1306 N93-15849

INERTIAL NAVIGATION
Correction of inertial measurements using GPS updates for underwater navigation
[AD-A257329] p 1056 N93-15988
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402

INFECTIOUS DISEASES
Infectious disease p 1222 N93-16804

INFERENCE
Software design as a problem in learning theory (a research overview) p 1248 N93-17509
Semantics and comparative logic
[LP-91-09] p 1272 N93-17713

INFLATABLE STRUCTURES
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
Inflatable habitation for the lunar base p 1229 N93-17442

INFORMATION DISSEMINATION
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021
INFOTECH 1992: DOE Technical Information (TI) Meeting
[DE93-000467] p 1352 N93-16151
Environmental Quality Information Analysis Center multi-year plan
[DE92-040850] p 1204 N93-17352
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

INFORMATION FLOW
Applications of living systems theory to life in space p 1229 N93-16865
Logic and the flow of information
[LP-91-10] p 1357 N93-17714
Lambek grammar: An information-based categorical grammar
[LP-92-01] p 1273 N93-17715

INFORMATION MANAGEMENT
Development of a faculty research and publication database system
[AD-A257107] p 1352 N93-16115
Analysis, design, and implementation of a database management system for the Naval Postgraduate School Alumni Association
[AD-A257109] p 1352 N93-16116
INFOTECH 1992: DOE Technical Information (TI) Meeting
[DE93-000467] p 1352 N93-16151
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
Department of Defense Directive (DODD) 8000.1 defense Information Management (IM) program
[AD-A256988] p 1353 N93-16259
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752
Technical reference model for information management, version 1.2
[AD-A253476] p 1357 N93-17773

INFORMATION PROCESSING (BIOLOGY)
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Effective neurons and attractor neural networks in cortical environment
[PREPRINT-829] p 1223 N93-17214

INFORMATION RETRIEVAL
A framework for classifying and resolving semantic conflicts using the enhanced entity-relationship model
[AD-A257452] p 1351 N93-15870
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
Stratified hypermedia structures for information disclosure
[TR-91-27] p 1355 N93-16370

INFORMATION SYSTEMS
A framework for classifying and resolving semantic conflicts using the enhanced entity-relationship model
[AD-A257452] p 1351 N93-15870
CD-ROM applications in Professional Military Education (PME)
[AD-A256662] p 1231 N93-15914
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
International energy subject categories and scope
[DE92-018520] p 1352 N93-16021
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063

Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108
Development of a faculty research and publication database system
[AD-A257107] p 1352 N93-16115
Analysis, design, and implementation of a database management system for the Naval Postgraduate School Alumni Association
[AD-A257109] p 1352 N93-16116
INFOTECH 1992: DOE Technical Information (TI) Meeting
[DE93-000467] p 1352 N93-16151
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
Environmental Quality Information Analysis Center (EQIAC) operating procedures handbook
[DE92-041391] p 1201 N93-16271
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
EMASS (tm): An expandable solution for NASA space data storage needs p 1353 N93-16323
Stratified hypermedia structures for information disclosure
[TR-91-27] p 1355 N93-16370
Data modelling in complex application domains
[TR-92-01] p 1355 N93-16371
MODIS algorithm development and data visualization using ACTS
[NASA-CR-191940] p 1191 N93-16759
Updating and expanding the library of materials on NASA Spacelink electronic information system p 1340 N93-17282
Environmental Quality Information Analysis Center multi-year plan
[DE92-040850] p 1204 N93-17352
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669
Technical reference model for information management, version 1.2
[AD-A253476] p 1357 N93-17773
A framework for classifying and resolving semantic heterogeneity in object-oriented databases
[AD-A257597] p 1357 N93-17790

INFORMATION THEORY
Logic and the flow of information
[LP-91-10] p 1357 N93-17714

INFRARED ASTRONOMY
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354

INFRARED DETECTORS
A new ground test for determining the resolution of pushbroom sensors
[AD-A257193] p 1189 N93-16002
Infrared fiber-optical temperature sensor
[AD-D015495] p 1167 N93-16492

INFRARED FILTERS
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693

INFRARED IMAGERY
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755

INFRARED LASERS
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026

INFRARED RADAR
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751

INFRARED RADIATION
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137
A ground-based search for lunar resources using high-resolution imaging in the infrared p 1386 N93-17241
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573
IR materials producibility
[AD-A257695] p 1305 N93-17691

INFRARED RADIOMETERS
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830

INFRARED SIGNATURES
Basic research in the measurement, analysis, and modeling of atmospheric emissions
[AD-A256708] p 1200 N93-16137

INFRARED SOURCES (ASTRONOMY)
ROSAT all sky survey observations of IRAS galaxies p 1362 N93-17133
The x ray properties of warm IRAS galaxies p 1371 N93-17134

INFRARED SPACE OBSERVATORY (ISO)
Service module structure of ISO spacecraft testing and design qualification p 1080 N93-15747

INFRARED SPECTRA
Homogeneous-heterogeneous combustion: Thermal and chemical coupling
[DE93-002881] p 1100 N93-15840
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081

INFRARED SPECTROMETERS
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924

INFRARED SPECTROPHOTOMETERS
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041

INFRARED SPECTROSCOPY
Lunar resources using moderate spectral resolution visible and near-infrared spectroscopy: Al/Si and soil maturity p 1387 N93-17247

INFRARED TELESCOPES
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354

INGOTS
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932

INHOMOGENEITY
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433

INJECTION
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602

INJECTORS
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483

INJURIES
Development and enhancement of a model of performance and decision making under stress in a real life setting
[AD-A255699] p 1226 N93-16111

INLET FLOW
Effect of a rotating propeller on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625

INNER RADIATION BELT
CRRES: The combined release and radiation effects satellite program directory
[NASA-CR-184504] p 1076 N93-15713

INSERTION LOSS
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973

INSERTS
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124

INSPECTION
Development and applications of a new computer-controlled magnetic inspection system
[DE92-040579] p 1181 N93-15664
Monitoring limits on sea-launched cruise missiles
[OTA-ISC-513] p 1061 N93-16632
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
Usage monitoring in the RNLN Fleet Air Arm (Marine Luchtvaartdienst)
[NLR-TP-91070-U] p 1062 N93-17394
Manufacturing and inspection of artificial delaminations in composite materials
[NLR-TP-91085-U] p 1099 N93-17582

INSTRUMENT APPROACH
Human factors design principles for instrument approach procedure charts. Volume 1: Readability
[AD-A257234] p 1227 N93-15968
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343

INSTRUMENT LANDING SYSTEMS
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343

INSTRUMENT PACKAGES
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover p 1386 N93-17236
A lunar penetrator to determine solar-wind-implanted resources at depth in the lunar regolith p 1386 N93-17239

INSTRUMENTS
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948

INSULATORS
Microwave heating of lunar materials. Appendix A p 1383 N93-16903
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

INTEGRAL CALCULUS
Stochastic quantization, stochastic calculus and path integrals: Selected topics
[PREPRINT-837] p 1279 N93-16992
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473

INTEGRAL EQUATIONS
Random quadratic forms and the bootstrap for U-statistics
[W-9207] p 1275 N93-16356
C-integrable nonlinear partial differential equations in N + 1 dimensions
[PREPRINT-833] p 1269 N93-16955
Stochastic quantization, stochastic calculus and path integrals: Selected topics
[PREPRINT-837] p 1279 N93-16992
Integrable singular integral evolution equations
[PREPRINT-880] p 1270 N93-17013
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473

INTEGRAL TRANSFORMATIONS
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
Integrable nonlinear evolution equations with constraints: 1
[PREPRINT-824] p 1270 N93-17220
The Hahn-Exton q-Bessel function
[ISBN-90-9004649-6] p 1271 N93-17587

INTEGRALS
Stochastic integrals and goodness-of-fit tests
[ISBN-90-9003836-1] p 1275 N93-16223
INTEGRATED CIRCUITS
Integrated test and package methods for integrated photonics
[DE93-000748] p 1145 N93-16230
Three-terminal devices of high-T(sub c) superconductors: A status report and future challenges
[DE93-000654] p 1319 N93-16358
TOPICS: A contribution to analog design automation
[ISBN-90-9004786-7] p 1238 N93-16471
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
Accurate and efficient layout extraction
[ISBN-90-9004806-5] p 1147 N93-16499
The unofficial AMPLEX owner's manual
[DE93-001437] p 1148 N93-16651
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188
Optimal dynamic range integrated continuous-time filters
[ISBN-90-6275-755-3] p 1150 N93-17395
Generation of integrated circuit tests based on functional models
[ETN-92-92674] p 1151 N93-17628
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771
INTEGRATED MISSION CONTROL CENTER
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
INTEGRATED OPTICS
Integrated test and package methods for integrated photonics
[DE93-000748] p 1145 N93-16230
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
INTEGRATORS
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808
INTERACTIONAL AERODYNAMICS
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
INTERATOMIC FORCES
The binary collision approximation: Background and introduction
[DE92-040887] p 1285 N93-16276
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
INTERCALATION
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
INTERFACES
Integration of CAD tools in space vehicle design p 1079 N93-15739
Potential modulation of equilibrium and excitation phenomena at the electrolyte-solid interface
[DE93-001685] p 1103 N93-16163
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681
INTERFACIAL TENSION
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone
[AD-A256991] p 1185 N93-16260
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Response of a viscous liquid column with anchored edges to axial excitations
[LRT-WE-9-FB-7-1991] p 1164 N93-17550
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551
Hydroelastic vibrations in a rectangular container under zero-gravity
[LRT-WE-9-FB-28-1991] p 1134 N93-17602
INTERFERENCE IMMUNITY
Carrier wave signals interfering with Loran-C
[ETN-92-92528] p 1059 N93-17584
INTERFEROMETERS
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
An interferometer having fused optical fibers, and apparatus and method using the interferometer
[NASA-CASE-LAR-14640-1-CU] p 1304 N93-17052
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
Lunar lava tube sensing p 1391 N93-17270
INTERGALACTIC MEDIA
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
INTERGRANULAR CORROSION
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495
INTERLAMINAR STRESS
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 2: Reliability and failure analyses of 2-D carbon-carbon structural components
[AD-A257460] p 1089 N93-15838
INTERLAYERS
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
INTERMETALLICS
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753
INTERMOLECULAR FORCES
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670
INTERNAL COMBUSTION ENGINES
The railplug: Development of a new ignitor for internal combustion engines
[DE93-003068] p 1176 N93-16178
INTERNAL ENERGY
Damping
[LR-685] p 1184 N93-16214
INTERNAL WAVES
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
Internal gravity waves in the equatorial Pacific
[DE93-001517] p 1211 N93-17653
INTERNATIONAL COOPERATION
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
National Aeronautics and Space Administration p 1358 N93-17090
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733
INTERNATIONAL RELATIONS
A post cold war assessment of US space policy p 1073 N93-17218
INTERORBITAL TRAJECTORIES
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
INTERPLANETARY DUST
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690
INTERPLANETARY SPACECRAFT
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
INTERPOLATION
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Low sensitivity interpolation using feed-forward neural networks with one hidden layer
[AD-A257306] p 1258 N93-16006
Hermite interpolation algorithm for 2D fracture mechanics
[DE92-041266] p 1184 N93-16097
INTERPROCESSOR COMMUNICATION
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
An algebraic foundation for FORTRAN 90 communication intrinsics
[DE92-040393] p 1269 N93-16990
INTERSECTIONS
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
INTERSTELLAR GAS
Investigation of a possible galactic chimney
[AD-A257133] p 1364 N93-16077
INTERSTELLAR MATTER
Investigation of a possible galactic chimney
[AD-A257133] p 1364 N93-16077
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
Manifestations of electric currents in interstellar molecular clouds
[TRITA-EPP-91-05] p 1376 N93-17638
INTRAMOLECULAR STRUCTURES
Applications of molecular modeling to transition state energies and conformations
[AD-A257130] p 1284 N93-16074
INVARIANCE
Maximal CP violation via Higgs-boson exchange
[DE93-002417] p 1290 N93-17044
CP violation in the decays B(sup 0) yields (psi)K(sub s) and B(sup 0) yields (pi)(+)(pi)(-): A probe for new physics
[DE93-002413] p 1331 N93-17364
INVENTIONS
Patent write-ups: Patents available for licensing
[AD-A256694] p 1402 N93-16113
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
INVERSE KINEMATICS
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
Predesign of a simulator for inverse robot kinematics
[NLR-TP-91096-U] p 1180 N93-17583
INVERSE SCATTERING
Integrable singular integral evolution equations
[PREPRINT-880] p 1270 N93-17013
IODIDES
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158
ION ACCELERATORS
Study of an orbital accelerator for ion implantation and of protective coatings for materials
[CTN-93-60614] p 1298 N93-16546
ION ATOM INTERACTIONS
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles
[DE93-002654] p 1295 N93-17655
ION BEAMS
Transverse phase-space evolution in non-stationary charged particle beams
[DE93-000618] p 1296 N93-15673
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951

A simple positive/negative surface ionization source [DE93-000974] p 1285 N93-16198
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions [DE93-000970] p 1285 N93-16217
Prospects for studies of astrophysical interest with radioactive ion beams [DE92-041018] p 1364 N93-16225
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers [DE93-000508] p 1318 N93-16243
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams [DE93-000837] p 1292 N93-17362
Ion beam application for improved polymer surface properties [DE93-001375] p 1127 N93-17498
Ion-beam modification of Gd2Ti2O7 [DE93-001514] p 1328 N93-17652

ION CURRENTS
Investigation of ring current/storm dynamics: Preliminary results [AD-A256704] p 1207 N93-16155

ION DENSITY (CONCENTRATION)
Measurement of impurity ion densities and energies in the divertor and edge regions of Alcator C-Mod tokamak [DE92-040510] p 1307 N93-15922
Experimental observations of anomalous potential drops over ion density cavities [TRITA-EPP-91-04] p 1312 N93-17637

ION IMPLANTATION
Lattice damage in ion-implanted silicon-germanium alloys [DE92-040860] p 1110 N93-15951
Ion implantation effects in silicon carbide [DE92-041306] p 1097 N93-16090
Conduction in ion implanted single crystal diamond [DE92-040861] p 1317 N93-16164
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing [DE93-000969] p 1112 N93-16197
Study of high energy particles and protective layers for materials [CTN-93-60613] p 1124 N93-16545
Study of an orbital accelerator for ion implantation and of protective coatings for materials [CTN-93-60614] p 1298 N93-16546
Dependence of buried CoSi2 resistivity on ion implantation and annealing conditions [DE92-010080] p 1322 N93-16930
Solid State Division progress report, period ending 31 March 1992 [DE93-003665] p 1327 N93-17561

ION IRRADIATION
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers [DE93-000508] p 1318 N93-16243

ION MOTION
Inferences concerning the magnetospheric source region for auroral breakup [NASA-CR-191674] p 1208 N93-16536

ION PROPULSION
Electric propulsion p 1095 N93-16916

ION SOURCES
A simple positive/negative surface ionization source [DE93-000974] p 1285 N93-16198
Above-surface neutralization of highly charged ions: The formation of hollow atoms [DE93-001371] p 1288 N93-16603

ION TEMPERATURE
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U [DE93-715315] p 1127 N93-17472

ION TRAPS (INSTRUMENTATION)
Spectroscopy of highly charged multi-electron ions [DE93-001617] p 1291 N93-17181

IONIC COLLISIONS
Effects of convection electric field on upwelling and escape of ionospheric O(+) [NASA-CR-191669] p 1208 N93-16839
Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms [DE93-001642] p 1292 N93-17345
Future directions in electron-ion collision physics [DE93-000500] p 1292 N93-17374

IONIC CRYSTALS
Centimeter wave absorption in molecular crystals [AD-A257453] p 1315 N93-15875
International Conference on Defects in Insulating Materials [AD-A258004] p 1127 N93-17700

IONIZATION
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245
Relativistic calculations of excitation and ionization of highly charged ions by electron impact [DE93-002129] p 1296 N93-17783

IONIZATION POTENTIALS
The evolution of electronic structure in Al(n)Co(m) [DE92-040737] p 1314 N93-15833

IONIZING RADIATION
Effects of ionizing radiation on selected optical materials: An overview [DE93-001324] p 1300 N93-15660
AFRRI Reports --- Radiobiology [AD-A257231] p 1221 N93-15965
HI in galaxy outskirts and the extragalactic ionizing flux p 1372 N93-17139
On the biological effects of cosmic rays: Epidemiological study [NOTA-INTERNA-979] p 1400 N93-17596

IONOSPHERIC COMPOSITION
Experimenter's data package for the descending layers rocket [NASA-TM-108591] p 1207 N93-16461

IONOSPHERIC CURRENTS
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials [AD-A256716] p 1207 N93-16173

IONOSPHERIC DISTURBANCES
The ionosphere as a gamma ray burst detector p 1211 N93-17312

IONOSPHERIC PROPAGATION
Real-time ionospheric monitoring system using the GPS [AD-A256916] p 1058 N93-16141

IONOSPHERIC SOUNDING
Experimenter's data package for the descending layers rocket [NASA-TM-108591] p 1207 N93-16461

IONS
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions [DE93-000970] p 1285 N93-16217
The FNAS Gamma Ray Observatory [NASA-CR-191418] p 1399 N93-16944
Spectroscopy of highly charged multi-electron ions [DE93-001617] p 1291 N93-17181
Design and test of a superconducting structure for high-velocity ions [DE93-000513] p 1326 N93-17377
Relativistic calculations of excitation and ionization of highly charged ions by electron impact [DE93-002129] p 1296 N93-17783

IRIDIUM ALLOYS
Improvements in manufacture of iridium alloy materials [DE92-017126] p 1298 N93-16932

IRON
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu [DE92-041109] p 1108 N93-15674
Magnetic flux-load current interactions in ferrous conductors [AD-A256632] p 1143 N93-15906
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
Iron and alloys of iron --- lunar resources p 1382 N93-16899
Application of manufactured products p 1383 N93-16902
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001) [DE93-001305] p 1327 N93-17651

IRON ALLOYS
Grain competition in bicrystal welds [DE92-040707] p 1110 N93-15950
Iron and alloys of iron --- lunar resources p 1382 N93-16899
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys [DE93-003126] p 1114 N93-16927
First-principles approach to alloy phase stability [DE93-001323] p 1115 N93-17031
Characterization of solidification and weldability of Fe-29Ni-17Co alloys [DE93-000739] p 1115 N93-17059
Twin boundaries, interfaces and modulated structures in martensites [DE93-002136] p 1118 N93-17759

IRON COMPOUNDS
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry [DE93-000510] p 1293 N93-17375

IRON OXIDES
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260

IRRADIATION
AFRRI Reports --- Radiobiology [AD-A257231] p 1221 N93-15965
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment [AD-A255569] p 1316 N93-16136
Transient radiation effects in polarization-maintaining fibers [DE92-040355] p 1284 N93-16182
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials [DE93-001716] p 1323 N93-17075

ISING MODEL
The direct Monte Carlo method for calculating alloy phases [DE93-000436] p 1113 N93-16450
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model [PREPRINT-855] p 1330 N93-16961
Monte Carlo simulations on SIMD computer architectures [DE92-041210] p 1245 N93-17360

ISOBARS
Escape- and spreading width of the isobaric analog state [KVI-884] p 1293 N93-17400

ISOCYANATES
Energy and global warming impacts of CFC alternative technologies for foam building insulations [DE92-019477] p 1200 N93-16085

ISOLATION
Nutrition p 1222 N93-16805
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
Applications of living systems theory to life in space p 1229 N93-16865

ISOMERIZATION
Thermal isomerization and decomposition of ethynyldisilanes [DE92-040578] p 1102 N93-16012

ISOPARAMETRIC FINITE ELEMENTS
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media [AD-A256937] p 1138 N93-16207

ISOSTASY
Isostatic mounting platform p 1080 N93-15745

ISOTOPE EFFECT
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors [DE92-040748] p 1314 N93-15834
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta*-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors [DE92-040725] p 1320 N93-16454

ISOTOPE SEPARATION
Stable isotope enrichment: Current and future potential [DE92-041258] p 1326 N93-17368

ISOTOPIC LABELING
New techniques for positron emission tomography in the study of human neurological disorders [DE93-002098] p 1224 N93-15900
Non-invasive evaluation of the cardiac autonomic nervous system by PET [DE92-041077] p 1225 N93-16441

ISOTOPIC SPIN
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state [KVI-881] p 1293 N93-17399
Escape- and spreading width of the isobaric analog state [KVI-884] p 1293 N93-17400

ISOTROPIC MEDIA
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium [PREPRINT-875] p 1187 N93-16979

ISOTROPIC TURBULENCE
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800

ISOTROPY
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800

ISRAEL
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity [ITN-93-85180] p 1208 N93-16744
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study [ITN-93-85177] p 1215 N93-16836

ITERATION
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
On increasing the effective blocking factor of a matrix for a given cache organization
[AD-A257342] p 1351 N93-15995
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593

ITERATIVE SOLUTION
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Preconditioned time-difference methods for solving advective-diffusive systems
[DE92-014790] p 1262 N93-15879
Domain decomposition as a mechanism for using asymptotic methods
[DE92-040759] p 1263 N93-16201
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Domain decomposition: A blowup problem and the Ginzburg-Landu equations
[DE92-040736] p 1266 N93-16587
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604

IUE
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data
p 1368 N93-17113
ROSAT-IUE All Sky Survey (RIASS): First results on active galaxies p 1369 N93-17117
The quasar 1821+643 during the ROSAT survey
p 1361 N93-17119
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120

J

J-52 ENGINE
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686

JAMMERS
Evaluation of radar performance degradation due to standoff jamming
[AD-A257316] p 1137 N93-15983
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059

JAMMING
Evaluation of radar performance degradation due to standoff jamming
[AD-A257316] p 1137 N93-15983
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059

JAPAN
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

JET AIRCRAFT NOISE
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705

JET FLOW
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384

JET IMPINGEMENT
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613

JOINTS (JUNCTIONS)
Design of joints for damped structures
p 1084 N93-15776
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
Double-V block fingers with cruciform recess
[NASA-CASE-GSC-13356-2] p 1180 N93-17625
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734

JOSEPHSON JUNCTIONS
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210

JOURNAL BEARINGS
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528

JP-8 JET FUEL
Field demonstration of aviation turbine fuel MIL-T-83133C, grade JP-8 (NATO code F-34), at Fort Bliss, TX
[AD-A256945] p 1129 N93-16431

JUDGMENTS
The formal use of expert judgments in environmental management
[DE92-019481] p 1199 N93-15852
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189

JUNCTION TRANSISTORS
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210

JUPITER (PLANET)
An algorithm to quantify the performance of the JOVE program p 1254 N93-17306

K

K LINES
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095

K-EPSILON TURBULENCE MODEL
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596

KALMAN FILTERS
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
Correction of inertial measurements using GPS updates for underwater navigation
[AD-A257329] p 1058 N93-15988
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678

KAONS
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes
[PREPRINT-849] p 1290 N93-17069
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
High energy physics research
[DE93-001793] p 1299 N93-17482

KERNEL FUNCTIONS
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
Calculate categorically
[CWI-CS-R9132] p 1268 N93-16850

KERR MAGNETOOPTICAL EFFECT
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278

KEVLAR (TRADEMARK)
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605

KINEMATICS
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

KINETIC ENERGY
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows
p 1152 N93-15793
PDF turbulence modeling and DNS
p 1153 N93-15794
A dynamic study of fragmentation and energy loss during high velocity impact
[NASA-CR-184476] p 1186 N93-16696
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645

KINETICS
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049

KITS
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061

KLYSTRONS
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Common analysis of the Relativistic Klystron and the Standing-Wave Free-Electron Laser two-beam accelerator
[DE92-041205] p 1173 N93-16529

KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Tradeoffs in the utility of learned knowledge
[NASA-TM-108111] p 1242 N93-16750
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Model-based software design p 1249 N93-17514
Description of research interests and current work related to automating software design
p 1249 N93-17515
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518
A domain-specific design architecture for composite material design and aircraft part redesign
p 1250 N93-17522
Knowledge modeling for software design
p 1251 N93-17525
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
The Schoenmaker's paradox: Its solution in a belief dependence framework
[LP-91-05] p 1273 N93-17725
Belief dependence, revision and persistence
[LP-91-06] p 1273 N93-17727

KNOWLEDGE REPRESENTATION
Representation of research paradigms as a function of familiarity with research domains
[AD-A256553] p 1263 N93-16266
Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
The dynamics of description
[CWI-CS-R9143] p 1240 N93-16671
Utilizing semantic networks to database and retrieve generalized stochastic colored Petri nets
[NASA-CR-191853] p 1355 N93-16707
Quantification and partiality
[CWI-CS-R9152] p 1242 N93-16732
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
The KASE approach to domain-specific software systems p 1247 N93-17502

Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504
GATOR: Requirements capturing of telephony features p 1247 N93-17505
Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Software design as a problem in learning theory (a research overview) p 1248 N93-17509
Toward domain-specific design environments: Some representation ideas from the telecommunications domain p 1249 N93-17511
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518
Knowledge modeling for software design p 1251 N93-17525
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528
Semantics and comparative logic [LP-91-09] p 1272 N93-17713
The Schoenmaker's paradox: Its solution in a belief dependence framework [LP-91-05] p 1273 N93-17725
Belief dependence, revision and persistence [LP-91-06] p 1273 N93-17727

KONDO EFFECT
Low-energy physics of high-temperature superconductors [DE92-040672] p 1317 N93-16194

KORTEWEG-DEVRIES EQUATION
A discrete Neumann system [PREPRINT-870] p 1279 N93-16968
Lie point symmetries and exact solutions of nonlinear differential equations [PREPRINT-840] p 1269 N93-16994
Symmetry group of partial differential equations and of differential difference equations: The Toda lattice versus the Korteweg-de Vries equation [PREPRINT-841] p 1270 N93-16995

KRYPTON FLUORIDE LASERS
Mercury: A second-generation KrF laser for inertial fusion research [DE93-000698] p 1308 N93-16226

L

LABORATORIES
National Technology Initiative summary proceedings [DE93-001291] p 1358 N93-15941
The Goldstein Aeronautical Engineering Research Laboratory [AERO-REPT-9109] p 1053 N93-16465
A manned exobiology laboratory based on the Moon p 1074 N93-17457
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

LABORATORY EQUIPMENT
Implementation of educational broadcasting in space, phase 1 [CTN-93-60623] p 1332 N93-16735

LAGRANGE MULTIPLIERS
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes [PREPRINT-849] p 1290 N93-17069

LAMINAR BOUNDARY LAYER
Boundary layer transition in Coriolis force field p 1160 N93-16815
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816

LAMINAR FLOW
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts [AD-A257099] p 1156 N93-16124
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle p 1057 N93-16784
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
Design optimization of natural laminar flow bodies in compressible flow [NASA-CR-4478] p 1056 N93-16940

LAMINAR HEAT TRANSFER
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts [AD-A257099] p 1156 N93-16124

LAMINATES
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates p 1080 N93-15742
Characterization of thick glass reinforced composites [AD-A256881] p 1097 N93-16047
An introduction to Moire methods with applications in composite materials [AD-A255686] p 1097 N93-16107
An introduction to the rubber forming of thermoplastic composites [LR-683] p 1122 N93-16212
Stress calculations on the window section of an all-composite aircraft fuselage [LR-688] p 1060 N93-16215
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone [AD-A256991] p 1185 N93-16260
Laminated conical shells: Considerations for the variations of the stiffness coefficients [LR-671] p 1097 N93-16281
Relationship between mechanical-property and energy-absorption trends for composite tubes [NASA-TP-3284] p 1098 N93-16537
A90 project: Design of a composite fin [ETN-92-92773] p 1061 N93-16562
Prediction of thermal cycling induced matrix cracking p 1100 N93-16780
Stress analysis and damage evaluation of flawed composite laminates by hybrid-numerical methods p 1100 N93-17340
Manufacturing and inspection of artificial delaminations in composite materials [NLR-TP-91085-U] p 1099 N93-17582
SEP high performance composite materials: More than a job... a vocation [DS-2134] p 1099 N93-17747

LAND MANAGEMENT
Modeling socioeconomic and ecologic aspects of land-use change [DE93-001370] p 1205 N93-17478

LAND USE
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils [NASA-CR-191219] p 1202 N93-16748
Modeling socioeconomic and ecologic aspects of land-use change [DE93-001370] p 1205 N93-17478

LANDAU DAMPING
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak [DE93-001359] p 1311 N93-16985

LANDAU FACTOR
An introduction to superconductivity [PREPRINT-801] p 1280 N93-16421

LANDAU-GINZBURG EQUATIONS
Domain decomposition: A blowup problem and the Ginzburg-Landu equations [DE92-040736] p 1266 N93-16587

LANDING
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test) [ESDU-92021] p 1061 N93-16635

LANDING SITES
Lunar site characterization and mining p 1380 N93-16882

LANDSAT SATELLITES
National Aeronautics and Space Administration p 1358 N93-17091

LANGUAGE PROGRAMMING
NPSGDL: An object oriented graphics description language for virtual world application support [AD-A257337] p 1234 N93-15992
The failure of failures in a paradigm for asynchronous communication [CWI-CS-R9147] p 1237 N93-16410
Lazy scanner generation for modular regular grammars [CWI-CS-R9158-REV] p 1251 N93-17533
On the borderline between grammars and programs [TR-91-17] p 1252 N93-17594

LANGUAGES
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan [NASA-TM-108592] p 1356 N93-17592
Lambek grammar: An information-based categorical grammar [LP-92-01] p 1273 N93-17715
Modal logic and attribute value structures [LP-92-02] p 1273 N93-17716
Choice of working languages in a European working group for multi-criteria decision aid [REPT-92-27] p 1253 N93-17733

LANTHANUM ISOTOPES
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta) [DE93-000680] p 1316 N93-16043

LANTHANUM OXIDES
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta) [DE93-000855] p 1315 N93-15905

LAPLACE EQUATION
A computer program for predicting oceanic tidal currents [NASA-TM-104578] p 1219 N93-15695
Development and application of the quasi-potential transformation [DE93-000580] p 1262 N93-15897

LAPLACE TRANSFORMATION
Queueing systems on a circle [MEMO-1038] p 1276 N93-16670
Generalized steady-state: A system concept in simulation [REPT-92-25] p 1257 N93-17731

LARGE DEPLOYABLE REFLECTOR
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite p 1078 N93-15731

LARGE SPACE STRUCTURES
Adaptive structures for precision controlled large space systems p 1078 N93-15730
Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
Development of a laser-based measurement system for modal testing of large space structures p 1083 N93-15766
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Deployment analysis and in orbit control of large reflectors p 1083 N93-15769
Dynamic of large reflectors p 1084 N93-15773
Ground test validation for precision structures p 1085 N93-15785
A modal analysis and modelling of a lightly damped large space structure [AD-A256566] p 1086 N93-15847
An optimization-based integrated controls-structures design methodology for flexible space structures [NASA-TP-3283] p 1087 N93-16615
Technical needs and research opportunities provided by projected aeronautical and space systems [NASA-CR-192124] p 1073 N93-16629
The damper placement problem for large flexible space structures p 1089 N93-16776
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326
Control law synthesis for large flexible spacecraft [NLR-TP-91155-U] p 1088 N93-17539

LASER ABLATION
Growth of epitaxial thin films by pulsed laser ablation [DE92-040515] p 1319 N93-16296
Modification of Earth-satellite orbits using medium-energy pulsed lasers [DE93-000858] p 1074 N93-16302
Capillary discharge extreme ultraviolet lasers [DE92-040853] p 1173 N93-16446

LASER ALTIMETERS
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437

LASER ANNEALING
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment [NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277

LASER APPLICATIONS
Development of a laser-based measurement system for modal testing of large space structures p 1083 N93-15766
Transient x ray laser schemes at 1 millimicron and at 2 millimicron [DE92-040670] p 1171 N93-15948
Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine [DE92-040338] p 1172 N93-16098
Possible application of transient electromagnetic pulses to high brightness e-guns [DE92-040360] p 1138 N93-16100
Modification of Earth-satellite orbits using medium-energy pulsed lasers [DE93-000858] p 1074 N93-16302
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2 [NASA-CR-184485] p 1214 N93-16623
Application of a laser scanner to three dimensional visual sensing tasks [NASA-CR-191834] p 1174 N93-16664

Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Development of techniques required for the application of a laser to three dimensional visual sensing
[NASA-CR-191855] p 1174 N93-16706
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561

LASER ARRAYS
Power beaming providing a space power infrastructure
[DE93-000850] p 1092 N93-17363

LASER BEAMS
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
Sensitivity studies of a standing-wave free-electron laser
[DE93-000575] p 1170 N93-15696
Laser-induced dissociation of HN3(DN3) on GaAs(100) K
[AD-A257426] p 1315 N93-15865
Laser guide stars: Bridge of ground-based lasers entering space
[AD-A256649] p 1171 N93-15887
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664
Adaptive optics for laser power beaming
p 1305 N93-17307
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

LASER CAVITIES
Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610

LASER DEPOSITION
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218

LASER DOPPLER VELOCIMETERS
Wind tunnel seeding particles for laser velocimeter
p 1057 N93-16770
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data
p 1165 N93-16792

LASER FUSION
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486

LASER GUIDANCE
Laser guide stars: Bridge of ground-based lasers entering space
[AD-A256649] p 1171 N93-15887

LASER INDUCED FLUORESCENCE
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432
LEAF research
[BCRS-91-16] p 1192 N93-17053
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics
[DE93-002758] p 1106 N93-17212

LASER MATERIALS
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462
International Conference on Defects in Insulating Materials
[AD-A258004] p 1127 N93-17700

LASER MICROSCOPY
An FFT-based method for attenuation correction in fluorescence confocal microscopy
[CWI-AM-R9114] p 1174 N93-16848

LASER MODE LOCKING
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798

LASER OUTPUTS
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102
Mercury: A second-generation KrF laser for inertial fusion research
[DE93-000698] p 1308 N93-16226
Multiple element ring laser
[AD-D015471] p 1173 N93-16469
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610

LASER PLASMAS
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029

LASER POWER BEAMING
Laser power transmission p 1175 N93-16910
Adaptive optics for laser power beaming
p 1305 N93-17307
Power beaming providing a space power infrastructure
[DE93-000850] p 1092 N93-17363
Enabling lunar and space missions by laser power transmission p 1393 N93-17423

LASER PROPULSION
Modification of Earth-satellite orbits using medium-energy pulsed lasers
[DE93-000858] p 1074 N93-16302
Beamed energy propulsion p 1095 N93-16917

LASER PUMPING
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Transient x ray laser schemes at 1 millimicron and at 2 millimicron
[DE92-040670] p 1171 N93-15948

LASER RANGE FINDERS
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209

LASER SPECTROMETERS
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover
p 1386 N93-17236
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242

LASER SPECTROSCOPY
Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine
[DE92-040338] p 1172 N93-16098
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144
Microparticle-based fluorescence immunoassay
[DE92-040704] p 1103 N93-16195
A laser spectroscopy technique for evaluating in-situ degradation of composite materials
[AD-A256983] p 1097 N93-16255
An in situ technique for elemental analysis of lunar surfaces p 1388 N93-17254

LASER TARGETS
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

LASER WELDING
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059

LASING
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462

LATTICE PARAMETERS
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449

LATTICES
A study of improvement in lattice QCD
[SSCL-PREPRINT-766] p 1286 N93-16348
Lattice calculations of f(D) and f(B)
[SSCL-PREPRINT-798] p 1286 N93-16394
On lattice chiral gauge theories
[PREPRINT-794] p 1278 N93-16415
D decays, B-physics, and CP-violation from lattice QCD
[PREPRINT-799] p 1287 N93-16419
Weak matrix elements
[PREPRINT-854] p 1279 N93-16976
A lattice study of electromagnetic decays of vector mesons
[PREPRINT-835] p 1289 N93-17014
Gribov copies and smeared correlation functions in lattice QCD
[PREPRINT-892] p 1330 N93-17027
CP-violation in K(sup +/-) to 3 pi decays and lattice QCD B-factors
[PREPRINT-848] p 1323 N93-17068

LATTICES (MATHEMATICS)
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-792] p 1287 N93-16414
SU(3) lattice gauge fixing with overrelaxation and Gribov copies
[PREPRINT-839] p 1322 N93-16993
Symmetry group of partial differential equations and of differential difference equations: The Toda lattice versus the Korteweg-de Vries equation
[PREPRINT-841] p 1270 N93-16995

LAUE METHOD
Investigation of III-V superlattices and heterostructures by convergent-beam electron diffraction
[ETN-92-92784] p 1321 N93-16581
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391

LAUNCH VEHICLES
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Transport: Introduction p 1384 N93-16911
Directions for future Earth-to-orbit vehicles
p 1076 N93-17309
Reliability evaluation methodology for NASA applications p 1182 N93-17328
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
Applications of the Petite Amateur Navy Satellite (PANSAT)
[AD-A258015] p 1089 N93-17769
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780

LAUNCHING
Self-actuating slide valve system
[AD-D015456] p 1177 N93-16435
Potential missile flight performance gains from improvements to the propulsion system
p 1092 N93-17609

LAUNCHING BASES
Preliminary definition of a lunar landing and launch facility (Complex 39L) p 1394 N93-17429
Lunar base launch and landing facilities conceptual design p 1394 N93-17430

LAUNCHING PADS
Lunar base launch and landing facilities conceptual design p 1394 N93-17430

LAVA
Lunar lava tube sensing p 1391 N93-17270
A search for intact lava tubes on the Moon: Possible lunar base habitats
[PGD-PUBL-541] p 1396 N93-17438
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447

LAW (JURISPRUDENCE)
Technology transfer: Federal efforts to enhance the competitiveness of small manufacturers
[AD-A256804] p 1358 N93-15704
Energy analysis program
[DE93-001570] p 1199 N93-16045
Environmental Review Guide for Operations (ERGO)
[AD-A256922] p 1202 N93-16502

LAYOUTS
Accurate and efficient layout extraction
[ISBN-90-9004806-5] p 1147 N93-16499

LEAD ALLOYS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
LEAD ISOTOPES
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605
LEAD OXIDES
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
LEAD ZIRCONATE TITANATES
Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277
LEADING EDGE FLAPS
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
LEADING EDGES
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942
LEARNING
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
[NASA-CR-191000] p 1191 N93-16687
LEARNING THEORY
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108
Software design as a problem in learning theory (a research overview) p 1248 N93-17509
LEAST SQUARES METHOD
A normal distribution or a Weibull distribution for fatigue lives
[LR-689] p 1275 N93-16216
Precision and resolution in spectroscopic model fitting
[ISBN-90-6275-756-6] p 1104 N93-16582
Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
LECTURES
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
LENS DESIGN
Endoscopic measurements using a panoramic annular lens
[NASA-CR-191727] p 1167 N93-16453
LEPTONS
A lattice study of electromagnetic decays of vector mesons
[PREPRINT-835] p 1289 N93-17014
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
LEVERS
Portable seat lift
[NASA-CASE-MFS-28610-1] p 1228 N93-17045
LIAPUNOV FUNCTIONS
Ergodic properties of high dimensional symplectic maps
[PREPRINT-802] p 1276 N93-16422
Performance and stability robustness for uncertain linear systems: A quadratic approach
[LAAS-92199] p 1271 N93-17494
LIBRARIES
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
Updating and expanding the library of materials on NASA Spacelink electronic information system p 1340 N93-17282
LICENSING
Patent write-ups: Patents available for licensing
[AD-A256694] p 1402 N93-16113
LIE GROUPS
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
An approximate invariant using Lie algebra
[DE93-000564] p 1263 N93-16247
Quantum groups and Lie-admissable time evolution
[SSCL-PREPRINT-793] p 1264 N93-16349
Vertex operator representation of some quantum tori Lie algebras
[PREPRINT-834] p 1269 N93-16956
Lie point symmetries and exact solutions of nonlinear differential equations
[PREPRINT-840] p 1269 N93-16994
Symmetries and conditional symmetries of differential-difference equations
[PREPRINT-858] p 1270 N93-16997
LIFE (DURABILITY)
Testing and characterisation of metallic materials for structural analysis of high temperature components p 1082 N93-15757
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Toward full life cycle control: Adding maintenance measurement to the SEL p 1245 N93-17170
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740
LIFE CYCLE COSTS
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
LIFE RAFTS
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697
LIFE SCIENCES
Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
NASA/NSF Antarctic Science Working Group p 1222 N93-16802
NASA/NSF Workshop on Antarctic Research p 1222 N93-16803
Infectious disease p 1222 N93-16804
Nutrition p 1222 N93-16805
Immunology presentation at the 1990 NASA/NSF Antarctica Biomedical Science Working Group p 1222 N93-16806
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808
LIFE SUPPORT SYSTEMS
Reusable Reentry Satellite (RRS): Thermal control trade study
[NASA-CR-186528] p 1087 N93-16719
Annual report
[NASA-CR-191389] p 1228 N93-16840
UPT scenarios: Implications for system reliability p 1182 N93-17332
LIFT
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
LIFT DEVICES
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
LIFTOFF (LAUNCHING)
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
LIGANDS
Organometallic chemistry of bimetallic compounds
[DE93-002773] p 1115 N93-17201
LIGHT (VISIBLE RADIATION)
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
Soft x ray segregation of Seyfert galaxies p 1362 N93-17135
LIGHT AIRCRAFT
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802
LIGHT BEAMS
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654
LIGHT CURVE
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
Multifrequency observations of rapidly variable blazars p 1361 N93-17109
ROSAT and multi-wavelength observations of 3C 371 p 1361 N93-17121
LIGHT EMISSION
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
LIGHT GAS GUNS
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
LIGHT MODULATION
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
LIGHT SCATTERING
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
LIGHT SOURCES
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Advanced light source
[DE92-041181] p 1302 N93-16196
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483
LIGHT TRANSMISSION
Aerosol and light extinction databases for North America and Europe
[AD-A256710] p 1213 N93-16169
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
LIGHTNING
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida p 1219 N93-17285
Electromagnetic scattering in clouds p 1142 N93-17327
LIKELIHOOD RATIO
Comparison of tests, and local families
[MEMO-1034] p 1266 N93-16594

LIMITER CIRCUITS
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056
LIMITS (MATHEMATICS)
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
Integrable singular integral evolution equations
[PREPRINT-880] p 1270 N93-17013
LINE SPECTRA
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374
LINEAR ACCELERATORS
Sensitivity studies of a standing-wave free-electron laser
[DE93-000575] p 1170 N93-15696
High power picosecond CO2 laser system for ATF electron accelerator project
[DE92-040497] p 1171 N93-15832
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053
Beam loading compensation with variable group velocity
[DE93-001810] p 1297 N93-16199
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204
First results from the SLD silicon calorimeters
[DE93-001805] p 1167 N93-16219
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Design and modeling of superconducting RFQ structures
[DE93-000511] p 1326 N93-17376
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706
LINEAR ARRAYS
Optimal linear array heading in a directional noise field
[AD-A257336] p 1137 N93-15991
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608
Antenna analysis using neural networks
p 1142 N93-16790
LINEAR EQUATIONS
Studies in estimation theory, applications, and implementation
[AD-A256964] p 1275 N93-16250
On efficiently characterizing solutions of linear Diophantine equations and its application to data dependence analysis
[RUU-CS-92-01] p 1266 N93-16643
Solving large dense systems of linear equations on systems with virtual memory and with cache
[CWI-NM-R9123] p 1271 N93-17558
LINEAR OPERATORS
Measurability of operator fields
[W-9204] p 1264 N93-16353
Integrable nonlinear evolution equations with constraints: 1
[PREPRINT-824] p 1270 N93-17220
LINEAR PROGRAMMING
Parallel processing for linear programming
[ISBN-90-6275-754-5] p 1256 N93-16565
LINEAR QUADRATIC REGULATOR
Nonlinear adaptive control using backpropagating neural networks
[AD-A256828] p 1257 N93-15687
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
LINEAR RECEIVERS
Fast training of a high-speed voice and data modem receiver
[ACTA-POLYTEC-SCAND-EL-67] p 1140 N93-17632
LINEAR SYSTEMS
On the sum of accretive operators
[ETN-92-92794] p 1265 N93-16566
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
Performance and stability robustness for uncertain linear systems: A quadratic approach
[LAAS-92199] p 1271 N93-17494
Image representation of l(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
LINEARITY
A linear time algorithm for recognizing interval orders
[MEMO-1046] p 1242 N93-16846
LINEARIZATION
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
Nonlinear control problems and systems approximations: A geometric approach
[MEMO-1039] p 1261 N93-16951
Controllability distributions and systems approximations: A geometric approach
[MEMO-1040] p 1269 N93-16952
LINES (GEOMETRY)
A metric for line segments
[CWI-BS-R9126] p 1268 N93-16832
LINGUISTICS
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
Fuzzy set approach to quality function deployment: An investigation p 1274 N93-16779
Logic and the flow of information
[LP-91-10] p 1357 N93-17714
Modal logic and attribute value structures
[LP-92-02] p 1273 N93-17716
LININGS
Consecutive plate acoustic suppressor apparatus and methods
[NASA-CASE-LEW-15430-1] p 1282 N93-17051
Aircraft wing compartment liner concept to reduce fuel spillage
[DOT/FAA/CT-TN92/34] p 1062 N93-17219
LIPIDS
New class of lubricants derived from archaebacterial lipids
[AD-D015481] p 1124 N93-16487
LIQUID ATOMIZATION
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
LIQUID CHROMATOGRAPHY
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144
LIQUID COOLING
Natural convection from a horizontal heater in response to steady and pulsatile input powers
[AD-A257101] p 1156 N93-16126
Advanced water-cooled phosphoric acid fuel cell development
[DE93-000215] p 1197 N93-17008
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003358] p 1198 N93-17574
LIQUID CRYSTALS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
LIQUID HELIUM
High-temperature superconducting current leads
[DE92-040729] p 1145 N93-16028
Performance measurements of superconducting current leads having low helium boiloff rates
[DE92-040730] p 1146 N93-16392
LIQUID HYDROGEN
Developing a safe on-orbit cryogenic depot
p 1393 N93-17426
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743
LIQUID METALS
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838
LIQUID OXIDIZERS
Hybrid rocket performance p 1095 N93-17295
LIQUID OXYGEN
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Electromagnetic launch of lunar material
p 1384 N93-16914
Developing a safe on-orbit cryogenic depot
p 1393 N93-17426
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795
LIQUID PHASE EPITAXY
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934
LIQUID PROPELLANT ROCKET ENGINES
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
Reliability evaluation methodology for NASA applications p 1182 N93-17328
SEP high performance composite materials: More than a job... a vocation
[DS-2134] p 1099 N93-17747
LIQUID ROCKET PROPELLANTS
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799
LIQUID-LIQUID INTERFACES
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551
LIQUID-SOLID INTERFACES
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
LIQUID-VAPOR INTERFACES
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Interfacial area and interfacial transfer in two-phase flow systems
[DE93-000647] p 1157 N93-16378
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 1
[CTN-93-60610] p 1157 N93-16425
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
LISP (PROGRAMMING LANGUAGE)
Micrometer FX/DLX: A pedagogic compiler
[AD-A256821] p 1232 N93-15684
Automating FEA programming p 1251 N93-17524
LISTS
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
LITHIUM
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278

LITHIUM ALLOYS
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540
Flight simulation and constant amplitude fatigue crack growth in aluminum-lithium sheet and plate
[NLR-TP-91104-U] p 1063 N93-17562
LITHIUM COOLED REACTOR EXPERIMENT
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge
[DE92-016788] p 1299 N93-17202
LITHIUM NIOBATES
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
LITHOGRAPHY
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Method and system for electron beam lithography
[AD-D015397] p 1146 N93-16399
LOAD CARRYING CAPACITY
The prediction of the overall behavior of viscous composites
[ITN-93-85184] p 1098 N93-16855
LOAD DISTRIBUTION (FORCES)
Radial spline assembly for antifriction bearings
[NASA-CASE-MFS-28629-1] p 1179 N93-17084
LOAD TESTS
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates
p 1080 N93-15742
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
LOADING RATE
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
LOADS (FORCES)
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562
High torque capable, self locking, vibration isolating flexible shaft coupling statement of government interest
[AD-D015501] p 1178 N93-16583
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619
Problems involving combined loading
p 1189 N93-17314
Reliability analysis of External Tank Attack Ring (ETA)
p 1182 N93-17322
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606
LOCAL AREA NETWORKS
ATOMIC: A low-cost, very high-speed LAN
[AD-A257140] p 1233 N93-15855
Risk assessment of LAN communications
[AD-A257327] p 1137 N93-15987
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335
LOGIC CIRCUITS
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709
Telerobotic control of a mobile coordinated robotic server
[NASA-CR-191650] p 1259 N93-16387
Scan-based switching tests
[AD-A257712] p 1151 N93-17685
LOGIC PROGRAMMING
A module system for a programming language based on the LF logical framework
[AD-A256731] p 1235 N93-16069
Implementing higher-order algebraic specifications
[CWI-CS-R9150] p 1265 N93-16368
The dynamics of description
[CWI-CS-R9143] p 1240 N93-16671
LOGISTICS
Software development with application generators: The Naval Aviation Logistics Command Management Information System Case
[AD-A257624] p 1357 N93-17768
LOGISTICS MANAGEMENT
Software development with application generators: The Naval Aviation Logistics Command Management Information System Case
[AD-A257624] p 1357 N93-17768
LONG DURATION EXPOSURE FACILITY
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
LDEF solar cell radiation effects analysis
[NASA-CR-191776] p 1195 N93-16374
LONGITUDINAL CONTROL
Pitch control margin at high angle of attack-quantitative requirements (flight test correlation with simulation predictions)
[AD-A257418] p 1068 N93-16009
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
LONGITUDINAL STABILITY
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
LOOPS
Two loop calculation of the anomalous dimension of four-fermion operators with static heavy quarks
[PREPRINT-873] p 1291 N93-17073
LORAN C
Carrier wave signals interfering with Loran-C
[ETN-92-92528] p 1059 N93-17584
LOUDNESS
Effect of sonic boom asymmetry on subjective loudness
[NASA-TM-107708] p 1282 N93-16755
LOW COST
Ramjet propulsion for advanced projectiles
p 1067 N93-17615
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620
LOW FREQUENCIES
A modal analysis and modelling of a lightly damped large space structure
[AD-A256566] p 1086 N93-15847
Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626
VLF/LF corona investigation
[AD-A258052] p 1141 N93-17709
LOW GRAVITY MANUFACTURING
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775
LOW NOISE
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
LOW REYNOLDS NUMBER
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
LOW THRUST
Tethers p 1089 N93-16915
LOW THRUST PROPULSION
Electric propulsion p 1095 N93-16916
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems
p 1074 N93-17290
LOW TURBULENCE
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787
LUBRICANTS
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192
Miscibility of lubricants with refrigerants
[DE93-000538] p 1122 N93-16244
Compatibility of refrigerants and lubricants with elastomers
[DE93-000539] p 1122 N93-16245
Compatibility of refrigerants and lubricants with motor materials
[DE93-000540] p 1122 N93-16246
New class of lubricants derived from archaebacterial lipids
[AD-D015481] p 1124 N93-16487
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
LUBRICATING OILS
Compatibility of refrigerants and lubricants with engineering plastics
[DE93-000541] p 1128 N93-17807
LUBRICATION
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981
LUGS
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858
LUMINESCENCE
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432
LUMINOSITY
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
The evolution of AGN's at x ray wavelengths
p 1372 N93-17141
LUMINOUS INTENSITY
The x ray properties of warm IRAS galaxies
p 1371 N93-17134
The surface density of quasars and Seyfert galaxies at B is approximately 22.0 p 1375 N93-17157
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
LUNAR ATMOSPHERE
Astronomy on the Moon: Geological considerations
[SOEST-CONTRIB-2399] p 1363 N93-17434
Lunar base activities and the lunar environment
p 1398 N93-17455
An artificially generated atmosphere near a lunar base
p 1398 N93-17456
LUNAR BASED EQUIPMENT
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458
LUNAR BASES
Space resources. Volume 4: Social concerns
[NASA-SP-509-VOL-4] p 1377 N93-16857
Future space development scenarios: Environmental considerations p 1073 N93-16864
Life support and self-sufficiency in space communities
p 1229 N93-16866
Space resources. Overview
[NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Alternative scenarios utilizing nonterrestrial resources
p 1379 N93-16872
Issues for further study p 1379 N93-16874
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
Adaptive optics for laser power beaming
p 1305 N93-17307
The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1
[NASA-CP-3166-VOL-1] p 1391 N93-17414
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
Lunar base mission technology issues and orbital demonstration requirements on space station
p 1392 N93-17416
Adaption of space station technology for lunar operations p 1392 N93-17417
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419
Enabling lunar and space missions by laser power transmission p 1393 N93-17423
Preliminary definition of a lunar landing and launch facility (Complex 39L) p 1394 N93-17429

Lunar base launch and landing facilities conceptual design p 1394 N93-17430
The choice of the location of the lunar base p 1394 N93-17431
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
Astronomy on the Moon: Geological considerations [SOEST-CONTRIB-2399] p 1363 N93-17434
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437
A search for intact lava tubes on the Moon: Possible lunar base habitats [PGD-PUBL-541] p 1396 N93-17438
A seismic risk for the lunar base [CONTRIB-769] p 1396 N93-17439
Lunar architecture and urbanism p 1396 N93-17440
Earth-based analogs of lunar and planetary facilities p 1396 N93-17441
Inflatable habitation for the lunar base p 1229 N93-17442
Preliminary design study of lunar housing configurations p 1229 N93-17443
Prefabricated foldable lunar base modular systems for habitats, offices, and laboratories p 1229 N93-17444
Concrete lunar base investigation p 1230 N93-17445
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447
Lunar subsurface architecture enhanced by artificial biosphere concepts p 1230 N93-17448
Extraterrestrial applications of solar optics for interior illumination p 1305 N93-17449
Lunar base activities and the lunar environment p 1398 N93-17455
An artificially generated atmosphere near a lunar base p 1398 N93-17456
A manned exobiology laboratory based on the Moon p 1074 N93-17457
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

LUNAR COMPOSITION

Oxygen from the lunar soil by molten silicate electrolysis p 1382 N93-16890
Vapor phase pyrolysis p 1108 N93-16891
Plasma separation p 1313 N93-16892
Processes for metal extraction p 1382 N93-16893
Bioprocessing of ores: Application to space resources p 1382 N93-16894
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234
A lunar penetrator to determine solar-wind-implanted resources at depth in the lunar regolith p 1386 N93-17239
A ground-based search for lunar resources using high-resolution imaging in the infrared p 1386 N93-17241
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245
Lunar resources using moderate spectral resolution visible and near-infrared spectroscopy: Al/Si and soil maturity p 1387 N93-17247
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251
Assessment of the lunar surface layer and in situ materials to sustain construction-related applications p 1388 N93-17253
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
Remote assessment of lunar resource potential p 1391 N93-17268
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269

LUNAR CONSTRUCTION EQUIPMENT

Assessment of the lunar surface layer and in situ materials to sustain construction-related applications p 1388 N93-17253

LUNAR DUST

Dust control for Enabler [NASA-CR-192065] p 1180 N93-17774

LUNAR ENVIRONMENT

Human safety in the lunar environment p 1229 N93-16867
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237
Lunar resource assessment: An industry perspective p 1387 N93-17246
Economic geology of the Moon: Some considerations p 1388 N93-17249
The target: H2O on the Moon p 1388 N93-17250
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy p 1390 N93-17261
Environmental effects on lunar astronomical observatories p 1363 N93-17454
Lunar base activities and the lunar environment p 1398 N93-17455
Design of a radiator shade for testing in a simulated lunar environment [NASA-CR-192080] p 1229 N93-17710
Design for producing fiberglass fabric in a lunar environment [NASA-CR-192068] p 1135 N93-17770
NASA/USRA advanced design program activity, 1991-1992 [NASA-CR-192063] p 1135 N93-17778
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats [NASA-CR-192078] p 1229 N93-17806

LUNAR EXCAVATION EQUIPMENT

Lunar site characterization and mining p 1380 N93-16882
A baseline lunar mine p 1380 N93-16883

LUNAR EXPLORATION

Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix [NASA-CR-184490] p 1075 N93-16556
Space transfer vehicle concepts and requirements. Volume 1: Executive summary [NASA-CR-184488] p 1075 N93-16672
Space transfer vehicle concepts and requirements, volume 2, book 1 [NASA-CR-184489] p 1076 N93-16686
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
Issues for further study p 1379 N93-16874
To build a mine: Prospect to product p 1379 N93-16876
Lunar exploration for resource utilization p 1380 N93-16877
Lunar site characterization and mining p 1380 N93-16882
Utilization of geographic information system in lunar mapping p 1389 N93-17257
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
System model development for nuclear thermal propulsion [NASA-TM-108215] p 1299 N93-17343
A lunar polar expedition p 1395 N93-17433
The Lunar Orbital Prospector p 1395 N93-17436
The roles of humans and robots as field geologists on the Moon p 1397 N93-17450

LUNAR FLIGHT

The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1 [NASA-CP-3166-VOL-1] p 1391 N93-17414
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419
Advanced propulsion for LEO-Moon transport. 3: Transportation model p 1393 N93-17422
Lunar lander stage requirements based on the Civil Needs Data Base p 1394 N93-17427

LUNAR GEOLOGY

Lunar material resources: An overview p 1380 N93-16878
Lunar resource evaluation and mine site selection p 1380 N93-16881
Joint Workshop on New Technologies for Lunar Resource Assessment [NASA-CR-191918] p 1385 N93-17233
Geophysical methods: An overview p 1385 N93-17235
Economic geology of the Moon: Some considerations p 1388 N93-17249
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
Astronomy on the Moon: Geological considerations [SOEST-CONTRIB-2399] p 1363 N93-17434
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435
The roles of humans and robots as field geologists on the Moon p 1397 N93-17450

LUNAR LANDING

Space transfer vehicle concepts and requirements. Volume 1: Executive summary [NASA-CR-184488] p 1075 N93-16672
Lunar site characterization and mining p 1380 N93-16882
Preliminary definition of a lunar landing and launch facility (Complex 39L) p 1394 N93-17429
Lunar base launch and landing facilities conceptual design p 1394 N93-17430

LUNAR LANDING MODULES

Lunar lander stage requirements based on the Civil Needs Data Base p 1394 N93-17427
Lunar lander conceptual design p 1394 N93-17428

LUNAR LANDING SITES

Preliminary definition of a lunar landing and launch facility (Complex 39L) p 1394 N93-17429
Lunar base launch and landing facilities conceptual design p 1394 N93-17430
The choice of the location of the lunar base p 1394 N93-17431
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437

LUNAR LAUNCH

Preliminary definition of a lunar landing and launch facility (Complex 39L) p 1394 N93-17429
Lunar base launch and landing facilities conceptual design p 1394 N93-17430

LUNAR LIMB

Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432

LUNAR MAGNETIC FIELDS

Geophysical methods: An overview p 1385 N93-17235
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251

LUNAR MAPS

Mapping the Moon in soft x rays: Promises and challenges p 1388 N93-17252
Lunar prospector: A preliminary surface remote sensing resource assessment for the Moon p 1389 N93-17256
Utilization of geographic information system in lunar mapping p 1389 N93-17257
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265

LUNAR MARIA

The choice of the location of the lunar base p 1394 N93-17431
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435

LUNAR MINING

Issues for further study p 1379 N93-16874
Lunar site characterization and mining p 1380 N93-16882
A baseline lunar mine p 1380 N93-16883
Application of manufactured products p 1383 N93-16902
Utilization of space resources in the space transportation system p 1384 N93-16912
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435
An artificially generated atmosphere near a lunar base p 1398 N93-17456

LUNAR OBSERVATORIES

Astronomy on the Moon: Geological considerations [SOEST-CONTRIB-2399] p 1363 N93-17434
Some astronomical challenges for the twenty-first century p 1363 N93-17451
Radio astrometry from the Moon p 1363 N93-17452
Required technologies for lunar astronomical observatories p 1363 N93-17453
Environmental effects on lunar astronomical observatories p 1363 N93-17454

LUNAR ORBITS

Electromagnetic launch of lunar material p 1384 N93-16914
Beamed energy propulsion p 1095 N93-16917

LUNAR PROGRAMS

The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1 [NASA-CP-3166-VOL-1] p 1391 N93-17414

LUNAR RADIATION

Design of a radiator shade for testing in a simulated lunar environment [NASA-CR-192080] p 1229 N93-17710
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats [NASA-CR-192078] p 1229 N93-17806

LUNAR RESOURCES

Space resources. Overview [NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios [NASA-SP-509-VOL-1] p 1379 N93-16870
Issues for further study p 1379 N93-16874
To build a mine: Prospect to product p 1379 N93-16876
Lunar exploration for resource utilization p 1380 N93-16877

Lunar material resources: An overview
p 1380 N93-16878
Lunar resource evaluation and mine site selection
p 1380 N93-16881
Lunar site characterization and mining
p 1380 N93-16882
A baseline lunar mine p 1380 N93-16883
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Lunar beneficiation p 1381 N93-16887
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Processing lunar soils for oxygen and other materials
p 1381 N93-16889
Bioprocessing of ores: Application to space resources
p 1382 N93-16894
Processing of metal and oxygen from lunar deposits
p 1382 N93-16895
Lunar cement p 1382 N93-16897
Manufacturing and fabrication, part 3 --- extraterrestrial resources p 1382 N93-16898
Iron and alloys of iron --- lunar resources
p 1382 N93-16899
Glass and ceramics --- lunar resources
p 1383 N93-16900
Cement and concrete p 1383 N93-16901
Utilization of space resources in the space transportation system p 1384 N93-16912
Electromagnetic launch of lunar material
p 1384 N93-16914
Joint Workshop on New Technologies for Lunar Resource Assessment
[NASA-CR-191918] p 1385 N93-17233
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234
Geophysical methods: An overview
p 1385 N93-17235
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover
p 1386 N93-17236
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237
Shock-treated lunar soil simulant: Preliminary assessment as a construction material
p 1386 N93-17238
A lunar penetrator to determine solar-wind-implanted resources at depth in the lunar regolith
p 1386 N93-17239
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment
p 1386 N93-17240
A ground-based search for lunar resources using high-resolution imaging in the infrared
p 1386 N93-17241
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
Lunar resource assessment: An industry perspective
p 1387 N93-17246
Lunar resources using moderate spectral resolution visible and near-infrared spectroscopy: Al/Si and soil maturity p 1387 N93-17247
Radon as a tracer for lunar volatiles
p 1388 N93-17248
Economic geology of the Moon: Some considerations
p 1388 N93-17249
The target: H2O on the Moon p 1388 N93-17250
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251
Mapping the Moon in soft x rays: Promises and challenges p 1388 N93-17252
An in situ technique for elemental analysis of lunar surfaces p 1388 N93-17254
Lunar prospector: A preliminary surface remote sensing resource assessment for the Moon
p 1389 N93-17256
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
Remote assessment of lunar resource potential
p 1391 N93-17268
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799

LUNAR ROCKS
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617
Lunar material resources: An overview
p 1380 N93-16878
Lunar beneficiation p 1381 N93-16887
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Processing lunar soils for oxygen and other materials
p 1381 N93-16889
Bioprocessing of ores: Application to space resources
p 1382 N93-16894
Processing of metal and oxygen from lunar deposits
p 1382 N93-16895
Lunar cement p 1382 N93-16897
Application of manufactured products
p 1383 N93-16902
Microwave heating of lunar materials. Appendix A
p 1383 N93-16903
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446

LUNAR ROVING VEHICLES
Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix
[NASA-CR-184490] p 1075 N93-16556
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover
p 1386 N93-17236
Robotic lunar rover technologies and SEI supporting technologies at Sandia National Laboratories
p 1389 N93-17255
Lunar surface rovers p 1390 N93-17262
The roles of humans and robots as field geologists on the Moon p 1397 N93-17450
Dust control for Enabler
[NASA-CR-192065] p 1180 N93-17774

LUNAR SATELLITES
The Lunar Orbital Prospector p 1395 N93-17436

LUNAR SHELTERS
The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1
[NASA-CP-3166-VOL-1] p 1391 N93-17414
Lunar architecture and urbanism
p 1396 N93-17440
Inflatable habitation for the lunar base
p 1229 N93-17442
Preliminary design study of lunar housing configurations p 1229 N93-17443
Prefabricated foldable lunar base modular systems for habitats, offices, and laboratories p 1229 N93-17444
Concrete lunar base investigation
p 1230 N93-17445
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447
Lunar subsurface architecture enhanced by artificial biosphere concepts p 1230 N93-17448
Extraterrestrial applications of solar optics for interior illumination p 1305 N93-17449

LUNAR SOIL
Lunar material resources: An overview
p 1380 N93-16878
Lunar beneficiation p 1381 N93-16887
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Processing lunar soils for oxygen and other materials
p 1381 N93-16889
Oxygen from the lunar soil by molten silicate electrolysis p 1382 N93-16890
Vapor phase pyrolysis p 1108 N93-16891
Plasma separation p 1313 N93-16892
Lunar cement p 1382 N93-16897
Iron and alloys of iron --- lunar resources
p 1382 N93-16899
Cement and concrete p 1383 N93-16901
Application of manufactured products
p 1383 N93-16902
Microwave heating of lunar materials. Appendix A
p 1383 N93-16903
Electromagnetic launch of lunar material
p 1384 N93-16914
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237
Shock-treated lunar soil simulant: Preliminary assessment as a construction material
p 1386 N93-17238
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435

LUNAR SPACECRAFT
Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686
The Second Conference on Lunar Bases and Space Activities of the 21st Century, volume 1
[NASA-CP-3166-VOL-1] p 1391 N93-17414
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
Lunar base mission technology issues and orbital demonstration requirements on space station
p 1392 N93-17416
Adaption of space station technology for lunar operations p 1392 N93-17417
Operational considerations for lunar transportation
p 1392 N93-17418
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance
p 1393 N93-17420
Advanced propulsion for LEO-Moon transport. 2: Tether configurations in the LEO-Moon system
p 1393 N93-17421
Advanced propulsion for LEO-Moon transport. 3: Transportation model p 1393 N93-17422

LUNAR SURFACE
Human safety in the lunar environment
p 1229 N93-16867
Processing lunar soils for oxygen and other materials
p 1381 N93-16889
Processes for metal extraction p 1382 N93-16893
Electromagnetic launch of lunar material
p 1384 N93-16914
Geophysical methods: An overview
p 1385 N93-17235
Drilling and digging techniques for the early lunar outpost p 1386 N93-17237
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
High-resolution elemental mapping of the lunar surface p 1387 N93-17244
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245
Radon as a tracer for lunar volatiles
p 1388 N93-17248
The target: H2O on the Moon p 1388 N93-17250
Mapping the Moon in soft x rays: Promises and challenges p 1388 N93-17252
Assessment of the lunar surface layer and in situ materials to sustain construction-related applications
p 1388 N93-17253
An in situ technique for elemental analysis of lunar surfaces p 1388 N93-17254
Robotic lunar rover technologies and SEI supporting technologies at Sandia National Laboratories
p 1389 N93-17255
Lunar prospector: A preliminary surface remote sensing resource assessment for the Moon
p 1389 N93-17256
Utilization of geographic information system in lunar mapping p 1389 N93-17257
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
Lunar surface rovers p 1390 N93-17262
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment
p 1391 N93-17267
Remote assessment of lunar resource potential
p 1391 N93-17268
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
The choice of the location of the lunar base
p 1394 N93-17431
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
A lunar polar expedition p 1395 N93-17433
Astronomy on the Moon: Geological considerations
[SOEST-CONTRIB-2399] p 1363 N93-17434
The Lunar Orbital Prospector p 1395 N93-17436
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437
A search for intact lava tubes on the Moon: Possible lunar base habitats
[PGD-PUBL-541] p 1396 N93-17438
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447

Design for producing fiberglass fabric in a lunar environment
[NASA-CR-192068] p 1135 N93-17770
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

LUNAR SURFACE VEHICLES
Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix
[NASA-CR-184490] p 1075 N93-16556
Transport: Introduction p 1384 N93-16911

LUNAR TOPOGRAPHY
A search for intact lava tubes on the Moon: Possible lunar base habitats
[PGD-PUBL-541] p 1396 N93-17438

LUNAR TRAJECTORIES
Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672

LYMPHOCYTES
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552

LYRA CONSTELLATION
Convection in RR Lyrae stars
[DE93-000851] p 1376 N93-17382

M

MACH NUMBER
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
Comparison of performances of different circular intakes p 1067 N93-17616

MACHINE LEARNING
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
Tradeoffs in the utility of learned knowledge
[NASA-TM-108111] p 1242 N93-16750
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026

MACHINERY
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772

MACINTOSH PERSONAL COMPUTERS
Desktop Computing Integration Project p 1254 N93-16795

MACROMOLECULES
Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597

MAGELLANIC CLOUDS
Ultraviolet studies of novae in the large Magellanic cloud
[DE92-040348] p 1359 N93-16181
Time variability of extragalactic sources in the ecliptic pole regions p 1370 N93-17123

MAGNESIUM
Ab initio molecular orbital calculations for magnesium-containing systems
[AD-A255811] p 1287 N93-16397
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

MAGNESIUM ALLOYS
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982

MAGNETIC COILS
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
Properties of the superconductor in accelerator dipole magnets
[ISBN-90-9004244-X] p 1280 N93-16573
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007

MAGNETIC CONTROL
Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695

MAGNETIC COOLING
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896

MAGNETIC DIPOLES
Properties of the superconductor in accelerator dipole magnets
[ISBN-90-9004244-X] p 1280 N93-16573

MAGNETIC DISKS
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320

MAGNETIC DOMAINS
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330

MAGNETIC EFFECTS
Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828
Magnetic flux-load current interactions in ferrous conductors
[AD-A256632] p 1143 N93-15906
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226

MAGNETIC FIELD CONFIGURATIONS
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375

MAGNETIC FIELDS
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844
Active control of foundation transmissibility using magnetostrictive actuators
[AD-A257135] p 1145 N93-16078
The 3D MHD study of helias and heliotron
[AD-A257116] p 1307 N93-16123
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Neuroendocrine portion of Experiment 4
[DE92-040955] p 1224 N93-16166
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Scaling laws for the critical current density of NbN films in high magnetic fields
[DE93-000604] p 1318 N93-16277
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520
Conditioner for a helically transported electron beam
[DE92-041169] p 1297 N93-16526
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process
[DE93-000870] p 1116 N93-17346
A Boltzmann-equation approach to the magnetoresistance of ferromagnetic-normal metallic multilayers
[DE92-041213] p 1270 N93-17361

MAGNETIC FLUX
Magnetic flux-load current interactions in ferrous conductors
[AD-A256632] p 1143 N93-15906
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process
[DE93-000870] p 1116 N93-17346

MAGNETIC LEVITATION VEHICLES
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
Dynamic stability of maglev systems
[DE92-041104] p 1177 N93-16549
Effects of maglev-spectrum magnetic field exposure on CEM T-lymphoblastoid human cell growth and differentiation
[DE92-041134] p 1225 N93-16552

MAGNETIC MATERIALS
Ferrite research aimed at improving induction linac driven FEL performance, phase 2
[AD-A256779] p 1172 N93-16053

MAGNETIC MEASUREMENT
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872

MAGNETIC MIRRORS
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391

MAGNETIC MOMENTS
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959

MAGNETIC PERMEABILITY
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834
Magnetic susceptibility measurements for in situ characterization of lunar soil p 1390 N93-17260

MAGNETIC POLES
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173

MAGNETIC PROPERTIES
Spectroscopic and magnetic studies of tetravalent Pa and trivalent Th compounds
[DE92-041214] p 1100 N93-15676
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206

MAGNETIC RECORDING
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
Reproduction of digital signals in magnetic recording: A theoretical study
[ISBN-90-6275-757-X] p 1168 N93-16564

MAGNETIC RELAXATION
Magnetic hysteresis and flux creep of YBa2Cu3O(x) grown by the Melt-Power-Melt-Growth (MPMG) process
[DE93-000870] p 1116 N93-17346

MAGNETIC RESONANCE
Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349

MAGNETIC SHIELDING
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520

MAGNETIC SPECTROSCOPY
On the 17-keV conundrum
[DE93-000866] p 1286 N93-16305

MAGNETIC STORAGE
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590

MAGNETIC STORMS
Investigation of ring current/storm dynamics: Preliminary results
[AD-A256704] p 1207 N93-16155

MAGNETIC SUSPENSION
Dynamic stability of maglev systems
[DE92-041104] p 1177 N93-16549

Approaches to control of the large angle magnetic suspension test fixture
[NASA-CR-191890] p 1072 N93-16695

MAGNETIC TAPES
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
Data storage and retrieval system p 1354 N93-16324
Network accessible multi-terabyte archive p 1354 N93-16326
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330

MAGNETIC VARIATIONS
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199

MAGNETIZATION
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651

MAGNETO-OPTICS
Optical system for linearizing non-linear electro-optic
[AD-D015496] p 1303 N93-16495
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789

MAGNETOHYDRODYNAMIC FLOW
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670

MAGNETOHYDRODYNAMIC GENERATORS
MHD Integrated Topping Cycle Project
[DE92-041285] p 1306 N93-15666
MHD Integrated Topping Cycle Project
[DE92-041284] p 1306 N93-15678
DOE Headquarters MHD/fuel cell support contract
[DE92-040257] p 1194 N93-15935
Magnetohydrodynamic projects at the CDIF
[DE93-001854] p 1311 N93-17035
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347
Corrosion and arc erosion in MHD channels
[DE93-001721] p 1313 N93-17782

MAGNETOHYDRODYNAMIC STABILITY
Toroidal effects on drift wave turbulence
[DE93-000498] p 1306 N93-15672
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
Physics of the L-mode to H-mode transition in tokamaks
[DE92-040697] p 1306 N93-15827
The 3D MHD study of helias and heliotron
[AD-A257116] p 1307 N93-16123
Electron-temperature-gradient-induced instability in tokamak scrape-off layers
[DE93-000623] p 1309 N93-16376
High beta and second stability region transport and stability analysis
[DE93-000886] p 1310 N93-16534
JT-60 configuration parameters for feedback control determined by regression analysis
[DE92-556731] p 1310 N93-16650
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037
Theoretical reversed field pinch and tokamak studies
[DE93-002775] p 1312 N93-17085
The nonthermal model of disc accretion onto a magnetosphere p 1368 N93-17115
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
Stability of weak double layers
[TRITA-EPP-91-01] p 1313 N93-17649

MAGNETOHYDRODYNAMIC WAVES
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

MAGNETOHYDRODYNAMICS
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
Theoretical studies of a molecular beam generator
[NASA-CR-191716] p 1288 N93-16945

MAGNETOMETERS
Development and applications of a new computer-controlled magnetic inspection system
[DE92-040579] p 1181 N93-15664
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460

MAGNETOPLASMADYNAMICS
Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626

MAGNETORESISTIVITY
A Boltzmann-equation approach to the magnetoresistance of ferromagnetic-normal metallic multilayers
[DE92-041213] p 1270 N93-17361

MAGNETOSTATICS
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688

MAGNETOSTRICTION
Active control of foundation transmissibility using magnetostrictive actuators
[AD-A257135] p 1145 N93-16078

MAGNETRON SPUTTERING
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365

MAGNONS
Spin density waves in dilute CuMn alloys
[DE93-001628] p 1117 N93-17578

MAINTAINABILITY
Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504
Knowledge-intensive software design systems: Can too much knowledge be a burden? p 1250 N93-17518

MAINTENANCE
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
A classification procedure for the effective management of changes during the maintenance process p 1245 N93-17169
Toward full life cycle control: Adding maintenance measurement to the SEL p 1245 N93-17170
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space p 1181 N93-17284
Requirements for the implementation of schedule repair technology in the Experiment Scheduling Program p 1278 N93-17286
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Developing satellite ground control software through graphical models p 1246 N93-17500
Interactive specification acquisition via scenarios: A proposal p 1249 N93-17512
RT-Syn: A real-time software system generator p 1250 N93-17523
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620
Study of an adaptive maintenance strategy for logic systems
[ETN-92-92673] p 1252 N93-17640

MAN ENVIRONMENT INTERACTIONS
Natural and anthropogenic climate change
[DE93-000898] p 1200 N93-16162
Lunar base activities and the lunar environment p 1398 N93-17455

MAN MACHINE SYSTEMS
Fuzzy set approach to quality function deployment: An investigation p 1274 N93-16779
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581

MAN-COMPUTER INTERFACE
Transparently interposing user code at the system interface
[AD-A256636] p 1233 N93-15907
Questioning mechanisms during tutoring, conversation, and human-computer interaction
[AD-A257214] p 1235 N93-16108
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Stratified hypermedia structures for information disclosure
[TR-91-27] p 1355 N93-16370
Advanced Communications Technology Satellite high burst rate link evaluation terminal experiment control and monitor software maintenance manual, version 1.0
[NASA-CR-189161] p 1237 N93-16429
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Virtual reality systems p 1232 N93-16775
A process for prototyping onboard payload displays for Space Station Freedom p 1073 N93-17315
Towards automation of user interface design p 1248 N93-17510
Description of research interests and current work related to automating software design p 1249 N93-17515
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752

MANAGEMENT INFORMATION SYSTEMS
Information engineering and the information engineering facility versus rapid application development and focus
[AD-A257297] p 1350 N93-15895
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
Department of Defense Directive (DODD) 8000.1 defense Information Management (IM) program
[AD-A256988] p 1353 N93-16259
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
Software development with application generators: The Naval Aviation Logistics Command Management Information System Case
[AD-A257624] p 1357 N93-17768

MANAGEMENT METHODS
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806
Total quality management: Strengths and barriers to implementation and cultural adaptation p 1182 N93-16788
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

MANAGEMENT PLANNING
Total quality management: Strengths and barriers to implementation and cultural adaptation p 1182 N93-16788
The future of management: The NASA paradigm p 1350 N93-16859

MANAGEMENT SYSTEMS
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
TMN: Introduction and interpretation
[MEMO-INF-92-40] p 1140 N93-16592
Study of port of FRAMES artificial intelligence system
[NASA-CR-191703] p 1261 N93-16740
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Parallel processing for scientific computations
[NASA-CR-191910] p 1256 N93-17028
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797

MANGANESE ALLOYS
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936
Spin density waves in dilute CuMn alloys
[DE93-001628] p 1117 N93-17578

MANIFOLDS
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375

MANIFOLDS (MATHEMATICS)
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833
The Lagrangian approach to stochastic variational principles on curved manifolds
[PREPRINT-825] p 1277 N93-17221

MANIPULATORS
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
The M68HC11 gripper controller software
[NASA-CR-191873] p 1241 N93-16674
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators
[NASA-CR-191852] p 1261 N93-16708
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000426] p 1179 N93-17192
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481
Predesign of a simulator for inverse robot kinematics
[NLR-TP-91098-U] p 1180 N93-17583
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718

MANNED SPACE FLIGHT
Annual report
[NASA-CR-191389] p 1228 N93-16840
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326

MANUALS
User's guide for the longitudinal scalogram analysis program
[AD-A256817] p 1232 N93-15682
Advanced Communications Technology Satellite high burst rate link evaluation terminal experiment control and monitor software maintenance manual, version 1.0
[NASA-CR-189161] p 1237 N93-16429
Advanced imaging system
[NASA-CR-191800] p 1303 N93-16712
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663

MANUFACTURING
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
Fingerprinting of Materials
[NASA-CR-184482] p 1199 N93-15916
An introduction to the rubber forming of thermoplastic composites
[LR-683] p 1122 N93-16212
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
Recent developments of carbon fiber in Japan
[MTL-TR-92-48] p 1098 N93-16591
Development of a commercial photovoltaic concentrator module
[DE93-002594] p 1196 N93-16655
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Manufacturing and fabrication, part 3 --- extraterrestrial resources p 1382 N93-16898
Glass and ceramics --- lunar resources p 1383 N93-16900
Cement and concrete p 1383 N93-16901
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Evaluation and recommendations for work group integration within the Materials and Processes Lab p 1341 N93-17293
Manufacturing and inspection of artificial delaminations in composite materials
[NLR-TP-91085-U] p 1099 N93-17582
Preliminary investigation into the development of hardening devices using vacuum microelectronic technology
[AD-A258009] p 1152 N93-17750
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772

MANY BODY PROBLEM
Stochastic reaction diffusion equations and interacting particle systems
[PREPRINT-796] p 1265 N93-16417
Two loop calculation of the anomalous dimension of four-fermion operators with static heavy quarks
[PREPRINT-873] p 1291 N93-17073
Strongly interacting fermion systems
[DE93-002839] p 1295 N93-17656

MAPPING
The SWOOPE experience: Precollege students mapping the environment
[DE92-040390] p 1198 N93-15663
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074
Utilization of geographic information system in lunar mapping p 1389 N93-17257
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726
Differential cartography
[AD-A257772] p 1192 N93-17728

MARANGONI CONVECTION
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
Marangoni-convection in a rotating liquid container
[LRT-WE-9-FB-14-1991] p 1164 N93-17552

MARINE METEOROLOGY
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584

MARKET RESEARCH
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999

MARKOV CHAINS
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593

MARS (PLANET)
Space resources. Overview
[NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799

MARS ATMOSPHERE
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630

MARTENSITE
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

MARTENSITIC TRANSFORMATION
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

MASKS
RF vacuum microelectronics
[AD-A257320] p 1144 N93-15984

MASS
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387

MASS DISTRIBUTION
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690

MASS FLOW RATE
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614

MASS RATIOS
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389

MASS SPECTRA
QCD spectroscopy and phenomenology with improved actions
[PREPRINT-857] p 1106 N93-17015

MASS SPECTROMETERS
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover p 1386 N93-17236
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242

MASS SPECTROSCOPY
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry
[DE92-040602] p 1308 N93-16145
Remote hydrogen sensing techniques
[NASA-CR-191411] p 1169 N93-17203
Meson spectroscopy and decay constants with Wilson fermions at beta = 6.4
[PREPRINT-823] p 1291 N93-17213

MASS TRANSFER
Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086

MASSIVELY PARALLEL PROCESSORS
ATOMIC: A low-cost, very high-speed LAN
[AD-A257140] p 1233 N93-15855
High speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory
[DE92-017412] p 1254 N93-15880
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731

MATERIALS
Space resources. Volume 3: Materials
[NASA-SP-509-VOL-3] p 1379 N93-16875

MATERIALS HANDLING
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747

MATERIALS RECOVERY
Lunar exploration for resource utilization p 1380 N93-16877

MATERIALS SCIENCE
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
Federal Aviation Administration pavement modeling p 1071 N93-16315
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360

University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760

MATHEMATICAL LOGIC

An introduction mechanism for recursive functions: A case study
[MEMO-INF-92-34] p 1264 N93-16337
Proof elimination in type theory
[CS-9202] p 1278 N93-16351
A short proof of the decidability of bisimulation for normal BPA processed
[CWI-CS-R9151] p 1267 N93-16731
Quantification and partiality
[CWI-CS-R9152] p 1242 N93-16732
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742
Semantics and comparative logic
[LP-91-09] p 1272 N93-17713
Logic and the flow of information
[LP-91-10] p 1357 N93-17714
Modal logic and attribute value structures
[LP-92-02] p 1273 N93-17716
The Schoenmaker's paradox: Its solution in a belief dependence framework
[LP-91-05] p 1273 N93-17725
Belief dependence, revision and persistence
[LP-91-06] p 1273 N93-17727
Choice of working languages in a European working group for multi-criteria decision aid
[REPT-92-27] p 1253 N93-17733
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781
Modal derivation rules
[ML-91-07] p 1274 N93-17784
A note on the diagonalizable algebras of PA and ZF
[ML-91-09] p 1274 N93-17792
Sahlqvist's theorem for boolean algebras with operators
[ML-91-10] p 1274 N93-17794

MATHEMATICAL MODELS

Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
A finite element-boundary integral method for cavities in a circular cylinder
[NASA-CR-191381] p 1136 N93-15715
Composite material damage and fracture models for numerical simulations in support of fracture control p 1080 N93-15743
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
Modeling of turbulent shear flows p 1153 N93-15797
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
A modal analysis and modelling of a lightly damped large space structure
[AD-A256566] p 1086 N93-15847
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
Impact modeling with smooth particle hydrodynamics
[DE92-017506] p 1155 N93-15882
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Software measures and the capability maturity model
[AD-A257238] p 1234 N93-15962
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970
Optimization of an internally finned rotating heat pipe
[AD-A256725] p 1329 N93-15980
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
Conservation laws for elastic systems with dissipation
[AD-A257168] p 1280 N93-15999
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Adhesion in atomic scale metal contacts
[AD-A257137] p 1121 N93-16142
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
Natural and anthropogenic climate change
[DE93-000898] p 1200 N93-16162
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Experimental and numerical investigation of vortex flow over a 76/60-deg double-delta wing
[LR-680] p 1054 N93-16210
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Laminated conical shells: Considerations for the variations of the stiffness coefficients
[LR-671] p 1097 N93-16281
Unified Airport Design and Analysis Concepts Workshop
[DOT/FAA/RD-92/17] p 1069 N93-16309
State of the art of airport pavement analysis and design p 1070 N93-16310
Development of user guidelines for a three-dimensional finite element pavement model p 1070 N93-16311
Federal Aviation Administration pavement modeling p 1071 N93-16315
State of the art review of rutting and cracking inpavements p 1071 N93-16316
Development of a unified airport pavement analysis and design system p 1071 N93-16317
Unified airport pavement design procedure p 1071 N93-16318
Three-dimensional stress analysis of multilayered airport pavements: Integral transform approach p 1072 N93-16319
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
Hereditarily-finite sets and complete metric spaces
[CWI-CS-R9148] p 1265 N93-16366
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 1
[CTN-93-60610] p 1157 N93-16425
The variable polarity plasma arc welding process: Mathematical model of welding system
[NASA-CR-191430] p 1177 N93-16452
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Common analysis of the Relativistic Klystron and the Standing-Wave Free-Electron Laser two-beam accelerator
[DE92-041205] p 1173 N93-16529
Impact on ceramic faced armour
[ETN-92-92797] p 1124 N93-16569
A design tool for electromechanical servo systems
[ISBN-90-9004089-7] p 1260 N93-16571
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
Calculate categorically
[CWI-CS-R9132] p 1268 N93-16850
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934
Theoretical studies of a molecular beam generator
[NASA-CR-191716] p 1288 N93-16945
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Integrable cellular automata
[PREPRINT-869] p 1269 N93-16967
An exact solution in gauge theory of strait disclinations in an isotropic elastic medium
[PREPRINT-875] p 1187 N93-16979
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
Mathematical models of hysteresis
[DE93-001837] p 1281 N93-17034
Maximal CP violation via Higgs-boson exchange
[DE93-002417] p 1290 N93-17044
Constitutive and equation of state models using object-oriented programming methods
[DE93-000740] p 1243 N93-17063
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene p 1209 N93-17093
Power spectrum modelling of the x ray variability of NGC4051 p 1367 N93-17108
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica
[DE93-000631] p 1210 N93-17193
Statistical error in a chord estimator of correlation dimension: The rule of five
[DE93-000687] p 1276 N93-17195
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Object-oriented simulation for the Superconducting Super Collider
[DE92-015962] p 1299 N93-17205
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment p 1386 N93-17240
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466

Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
Automating the design of scientific computing software p 1249 N93-17516
A domain-specific design architecture for composite material design and aircraft part redesign p 1250 N93-17522
Automating FEA programming p 1251 N93-17524
Mathematical models of hysteresis
[DE93-001836] p 1281 N93-17530
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586
The Hahn-Exton q-Bessel function
[ISBN-90-9004649-6] p 1271 N93-17587
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604
Generation of integrated circuit tests based on functional models
[ETN-92-92674] p 1151 N93-17628
Internal gravity waves in the equatorial Pacific
[DE93-001517] p 1211 N93-17653
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744
Going stable in graph models
[ML-91-08] p 1274 N93-17786
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

MATHEMATICAL PROGRAMMING

Implementation of a parallel stochastic solving method for linearly constrained concave global optimization problems using parallel computing
[AD-A257112] p 1255 N93-16119
Calculate categorically
[CWI-CS-R9132] p 1268 N93-16850

MATHEMATICS

Studies in beamforming tracking neural networks mathematics
[AD-A255574] p 1258 N93-16039
Ventures in science
[DE93-003044] p 1331 N93-16521

MATRICES (MATHEMATICS)

Minimum eigenvalue separation
[AD-A256570] p 1262 N93-15848
Studies in estimation theory, applications, and implementation
[AD-A256964] p 1275 N93-16250
D decays, B-physics, and CP-violation from lattice QCD
[PREPRINT-799] p 1287 N93-16419
Vertex operator representation of some quantum tori Lie algebras
[PREPRINT-834] p 1269 N93-16956
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
From the rotation group to the Poincare group
[DE93-000864] p 1279 N93-17386
Solving large dense systems of linear equations on systems with virtual memory and with cache
[CWI-NM-R9123] p 1271 N93-17558
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791

MATRIX MATERIALS

Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
The prediction of the overall behavior of viscous composites
[ITN-93-85184] p 1098 N93-16855
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

MATRIX METHODS

Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates p 1080 N93-15742
MGMtool: A performance modelling tool based on matrix geometric techniques
[MEMO-INF-92-35] p 1236 N93-16338

MAXIMUM ENTROPY METHOD

Complexity optimized vector quantization: A neural network approach
[DE93-001304] p 1246 N93-17477

MAXWELL EQUATION

Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542
Electromagnetic potential vectors and the Lagrangian of a charged particle
[NASA-TM-107703] p 1280 N93-16555
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

MEASURING INSTRUMENTS

Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609

MECHANICAL DEVICES

Portable seat lift
[NASA-CASE-MFS-28610-1] p 1228 N93-17045
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674

MECHANICAL DRIVES

A systematic approach for the DRSS IOL APM design p 1081 N93-15753

MECHANICAL ENGINEERING

Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674
NASA/USRA advanced design program activity, 1991-1992
[NASA-CR-192063] p 1135 N93-17778

MECHANICAL PROPERTIES

Sample container technology p 1078 N93-15728
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
Mechanical properties of structural polymers. Computer simulations and key experiments
[AD-A257439] p 1119 N93-15866
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
Micro mechanical behavior of pavements p 1070 N93-16312
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692

MECHANICAL TWINNING

Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148

MEDICAL EQUIPMENT

Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine
[DE92-040338] p 1172 N93-16098

MEDICINE

Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712

MELT SPINNING

Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877

MELTING

Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597

MELTING POINTS

Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204

MELTS (CRYSTAL GROWTH)

Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081

MEMBRANE STRUCTURES

The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771

MEMBRANES

Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249
Networking electrochemical membrane separation devices: Theory and application
[DE93-001381] p 1106 N93-17066

MEMORY

Representation of research paradigms as a function of familiarity with research domains
[AD-A256553] p 1263 N93-16266
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Automatic information processing and high performance skills: Individual differences and mechanisms of performance improvement in search-detection and complex tasks
[AD-A257711] p 1226 N93-17684

MEMORY (COMPUTERS)

The challenge of a data storage hierarchy p 1354 N93-16325
Data storage and retrieval system abstract p 1170 N93-16332
Open systems storage platforms p 1355 N93-16333
Solving large dense systems of linear equations on systems with virtual memory and with cache
[CWI-NM-R9123] p 1271 N93-17558
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681
Error detection and correction unit with built-in self-test capability for spacecraft applications
[NASA-CR-190847] p 1089 N93-17771

MENTAL HEALTH

Life support and self-sufficiency in space communities p 1229 N93-16866

MENTAL PERFORMANCE

CAPS ReReader simulation model user's manual version 1.0
[AD-A257180] p 1234 N93-16000
Representation of research paradigms as a function of familiarity with research domains
[AD-A256553] p 1263 N93-16266

Cognitive and affective components of mental workload: Understanding the effects of each on human decision making behavior p 1226 N93-16783

MERCATOR PROJECTION
Differential cartography
[AD-A257772] p 1192 N93-17728

MERCURY CADMIUM TELLURIDES
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution p 1165 N93-17334
IR materials producibility
[AD-A257695] p 1305 N93-17691

MERCURY COMPOUNDS
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612

MERCURY TELLURIDES
IR materials producibility
[AD-A257695] p 1305 N93-17691

MESOMETEOROLOGY
A plan for accurate estimation of daily area-mean rainfall during the CaPE experiment p 1219 N93-17292
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572

MESONS
Lattice calculations of f(D) and f(B)
[SSCL-PREPRINT-798] p 1286 N93-16394
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-792] p 1287 N93-16414
D decays, B-physics, and CP-violation from lattice QCD
[PREPRINT-799] p 1287 N93-16419
B(sub c) production --- pseudoscalar meson
[PREPRINT-806] p 1287 N93-16444
Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964
CP violation in B(sub C) decays
[PREPRINT-871] p 1288 N93-16977
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016
Gribov copies and smeared correlation functions in lattice QCD
[PREPRINT-892] p 1330 N93-17027
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
Meson spectroscopy and decay constants with Wilson fermions at beta = 6.4
[PREPRINT-823] p 1291 N93-17213
CP violation in the decays B(sup 0) yields (psi)K(sub s) and B(sup 0) yields (pi)(+)(pi)(-): A probe for new physics
[DE93-002413] p 1331 N93-17364
Measurement of the branching ratio for D(+) yields (bar-K)*(892)(sup 0)mu(+)nu
[DE93-002414] p 1295 N93-17624

MESOSCALE PHENOMENA
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836
A plan for accurate estimation of daily area-mean rainfall during the CaPE experiment p 1219 N93-17292
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

MESOSPHERE
Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354

MESSAGE PROCESSING
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335
Domain specific software architectures: Command and control p 1247 N93-17503

METABOLISM
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049

METABOLITES
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265

METAL BONDING
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926

METAL COATINGS
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468

METAL FATIGUE
Multiaxial fatigue analysis of metals p 1113 N93-16509

METAL FIBERS
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981

METAL FILMS
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122

METAL FOILS
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176

METAL FUELS
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913

METAL HYDRIDES
First-principles studies of phase stability and the structural and dynamical properties of metal hydrides
[DE92-040855] p 1104 N93-16589

METAL IONS
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
A simple positive/negative surface ionization source
[DE93-000974] p 1285 N93-16198
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition
[DE93-001835] p 1127 N93-17529

METAL MATRIX COMPOSITES
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
Prediction of thermal cycling induced matrix cracking p 1100 N93-16780
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692

METAL NITRIDES
Scaling laws for the critical current density of NbN films in high magnetic fields
[DE93-000604] p 1318 N93-16277

METAL OXIDE SEMICONDUCTORS
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
A timing analysis of level-clocked circuitry
[AD-A256796] p 1143 N93-15888
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050
Feasibility assessment and applications development of a radiobiological dosimeter for space applications, phase 2
[CTN-93-60609] p 1168 N93-16745
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188

METAL OXIDES
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929

METAL PARTICLES
Stability of metal particle and metal particulate media p 1170 N93-16329
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330

METAL POWDER
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795

METAL PROPELLANTS
Semi-propellants for ducted rockets p 1092 N93-17612
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795

METAL SHEETS
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937
Damage tolerance behaviour of aluminium-lithium sheet alloys
[NLR-TP-91244-U] p 1117 N93-17540

METAL SPINNING
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755

METAL SURFACES
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981
Theory of field adsorption of hydrogen
[AD-A257139] p 1102 N93-15996
A simple positive/negative surface ionization source
[DE93-000974] p 1285 N93-16198
Above-surface neutralization of highly charged ions: The formation of hollow atoms
[DE93-001371] p 1288 N93-16603

METAL-GAS SYSTEMS
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701

METAL-METAL BONDING
Adhesion in atomic scale metal contacts
[AD-A257137] p 1121 N93-16142

METALLIC GLASSES
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918

METALLIC PLASMAS
Diagnostic behavior of the Wire Arc Plasma spray process
[DE93-000717] p 1308 N93-16229
METALLIZING
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
High energy and high power density ultracapacitors and supercapacitors
[NASA-CASE-NPO-18568-1-CU] p 1149 N93-17274
METALLURGY
Iron and alloys of iron --- lunar resources
p 1382 N93-16899
METALS
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
METEORITES
Asteroid resources p 1380 N93-16880
METEORITIC COMPOSITION
Asteroid resources p 1380 N93-16880
METEOROID SHOWERS
Meteor burst communication system
[AD-D015470] p 1139 N93-16466
METEOROLOGICAL PARAMETERS
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397
METEOROLOGICAL RADAR
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development
[DE93-000915] p 1202 N93-16535
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
METEOROLOGICAL SERVICES
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597
METEOROLOGY
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867
A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base
[DE93-000018] p 1399 N93-17174
Wintertime meteorology of the Grand Canyon region
[DE93-001557] p 1216 N93-17179
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
METHANATION
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
METHANE
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
METHOD OF MOMENTS
Scattering from arbitrarily shaped microstrip patch antennas
[NASA-TP-3291] p 1140 N93-16943
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
METHYL ALCOHOL
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
Theoretical characterization of the reaction CH3 + OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels
p 1107 N93-17408
METHYL COMPOUNDS
X ray crystal structure of an organoindium alkoxide dimer, (Ph2InOSiMe3)2
[AD-A257404] p 1315 N93-15862
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Spectroscopic investigation of the vibrational quasi-continuum arising from internal rotation of a methyl group
[DE92-040509] p 1104 N93-16586
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409
METRIC SPACE
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Hereditarily-finite sets and complete metric spaces
[CWI-CS-R9148] p 1265 N93-16366
A metric for line segments
[CWI-BS-R9126] p 1268 N93-16832
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833
MICHAEL REACTION
Applications of molecular modeling to transition state energies and conformations
[AD-A257130] p 1284 N93-16074
MICROANALYSIS
Fingerprinting of materials: Technical supplement
p 1199 N93-15917
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
MICROBIOLOGY
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
MICROCHANNEL PLATES
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
Microchannel plate intensifier gain uniformity improvement in sealed tubes by selective scrubbing
[DE92-041082] p 1147 N93-16548
MICROELECTRONICS
RF vacuum microelectronics
[AD-A257320] p 1144 N93-15984
RF vacuum microelectronics
[AD-A257208] p 1145 N93-16004
Center for High-Frequency Microelectronics
[AD-A257003] p 1145 N93-16030
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168
Solid state research
[AD-A256965] p 1318 N93-16251
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682
Preliminary investigation into the development of hardening devices using vacuum microelectronic technology
[AD-A258009] p 1152 N93-17750
MICROGRAVITY APPLICATIONS
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
A study of the dynamics of droplet break-up
[CTN-93-60621] p 1132 N93-16746
MICROMECHANICS
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates
p 1080 N93-15742
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
MICROORGANISMS
Ground testing of bioconvective variables such as morphological characterizations and mechanisms which regulate macroscopic patterns p 1224 N93-17303
UPT scenarios: Implications for system reliability
p 1182 N93-17332
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780
MICROPARTICLES
Microparticle-based fluorescence immunoassay
[DE92-040704] p 1103 N93-16195
MICROPHONES
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
MICROPLASMAS
An in situ technique for elemental analysis of lunar surfaces p 1388 N93-17254
MICROPROCESSORS
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
MICROSCOPES
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
MICROSCOPY
Advanced light source
[DE92-041181] p 1302 N93-16196
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
MICROSTRIP ANTENNAS
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
Scattering from arbitrarily shaped microstrip patch antennas
[NASA-TP-3291] p 1140 N93-16943
MICROSTRIP TRANSMISSION LINES
Nonlinear characteristics of superconducting transmission lines
[AD-A256388] p 1143 N93-15901
MICROSTRUCTURE
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
NDE for thick section composites
[AD-A257292] p 1181 N93-15837
Mechanical properties of structural polymers. Computer simulations and key experiments
[AD-A257439] p 1119 N93-15866
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
Heteroepitaxial diamond growth
[AD-A257356] p 1317 N93-16175
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269
Scaling laws for the critical current density of NbN films in high magnetic fields
[DE93-000604] p 1318 N93-16277
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449

Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475
Aspects of electron transport in semiconductor nanostructures
[ETN-92-92787] p 1321 N93-16486
The influence of microgravity on the microstructure and properties of eutectics, phase 4
[CTN-93-60629] p 1132 N93-16690
Development of equipment and technique to study solidification in microgravity, phase 1
[CTN-93-60608] p 1132 N93-16729
Fatigue damage study in aluminum-2024 T3 alloys
p 1118 N93-16767
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936
Microstructure/mechanical-property relationships and R-curve behavior in Si3N4/Si3N4(w) composites
[DE92-041096] p 1098 N93-17004
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065
X-ray studies of microstructures in semiconductors and superconducting materials
[DE93-001953] p 1324 N93-17198
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

MICROWAVE ANTENNAS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062

MICROWAVE CIRCUITS
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688

MICROWAVE EQUIPMENT
Nonlinear characteristics of superconducting transmission lines
[AD-A256388] p 1143 N93-15901
Solid state research
[AD-A256965] p 1318 N93-16251
Logarithmic-periodic microwave multiplexer
[AD-D015475] p 1147 N93-16482
Interim report on the analysis of the microwave power module
[NASA-TM-105908] p 1148 N93-16713

MICROWAVE FREQUENCIES
Microwave heating of lunar materials. Appendix A
p 1383 N93-16903

MICROWAVE IMAGERY
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755

MICROWAVE LANDING SYSTEMS
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343

MICROWAVE OSCILLATORS
Quasi-optical power combining of solid state millimeter-wave sources: A proposal for graduate fellowship
[AD-A256644] p 1143 N93-15909

MICROWAVE SOUNDING
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167

MICROWAVE TUBES
Conditioner for a helically transported electron beam
[DE92-041169] p 1297 N93-16526

MICROWAVES
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844
Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925
Two-dimensional computer calculation of high-power microwave bandwidth broadening by air breakdown in a rectangular waveguide
[DE92-041083] p 1138 N93-16072
Microwave processing of ceramics: Guidelines used at the Oak Ridge National Laboratory
[DE92-040862] p 1123 N93-16297
Microwave heating of lunar materials. Appendix A
p 1383 N93-16903
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706

MIDLATITUDE ATMOSPHERE
Experimenter's data package for the descending layers rocket
[NASA-TM-108591] p 1207 N93-16461

MIE SCATTERING
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542

MIGRATION
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers
[DE93-000508] p 1318 N93-16243

MILITARY AIRCRAFT
Usage monitoring in the RNLN Fleet Air Arm (Marine Luchtvaartdienst)
[NLR-TP-91070-U] p 1062 N93-17394
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

MILITARY HELICOPTERS
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697

MILITARY OPERATIONS
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672

MILITARY TECHNOLOGY
Strategic defense initiative: 15-year funding requirements
[AD-A256738] p 1277 N93-16070

MILKY WAY GALAXY
Investigation of a possible galactic chimney
[AD-A257133] p 1364 N93-16077

MILLIMETER WAVES
Experiences with large CFRP-radiotelescope reflectors
p 1084 N93-15777
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Quasi-optical power combining of solid state millimeter-wave sources: A proposal for graduate fellowship
[AD-A256644] p 1143 N93-15909

MILLING (MACHINING)
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989

MIMD (COMPUTERS)
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355

MIMO (CONTROL SYSTEMS)
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191943] p 1237 N93-16383

MINERAL DEPOSITS
To build a mine: Prospect to product
p 1379 N93-16876
Lunar material resources: An overview
p 1380 N93-16878
Lunar resource evaluation and mine site selection
p 1380 N93-16881

MINERAL EXPLORATION
Lunar site characterization and mining
p 1380 N93-16882

MINERAL OILS
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192

MINERALOGY
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
Remote assessment of lunar resource potential
p 1391 N93-17268
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269

MINERALS
Space resources. Volume 3: Materials
[NASA-SP-509-VOL-3] p 1379 N93-16875
Lunar beneficiation p 1381 N93-16887
Bioprocessing of ores: Application to space resources
p 1382 N93-16894
Processing of metal and oxygen from lunar deposits
p 1382 N93-16895
Lunar cement p 1382 N93-16897

MINING
Issues for further study p 1379 N93-16874
Space resources. Volume 3: Materials
[NASA-SP-509-VOL-3] p 1379 N93-16875
To build a mine: Prospect to product
p 1379 N93-16876
Lunar material resources: An overview
p 1380 N93-16878
Lunar resource evaluation and mine site selection
p 1380 N93-16881
Asteroid mining p 1381 N93-16884
Mining nonterrestrial resources: Information needs and research topics p 1381 N93-16885
Lunar resource assessment: An industry perspective
p 1387 N93-17246
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251

MINORITIES
Ventures in science
[DE93-003044] p 1331 N93-16521

MINORITY CARRIERS
Minority carrier transport in heavily doped silicon
[ETN-92-92527] p 1327 N93-17563

MIRRORS
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542

MISSILE CONTROL
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617

MISSILE DESIGN
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620

MISSILE SYSTEMS
Development testing of throttleable ducted rockets
p 1092 N93-17610

MISSILE TESTS
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619

MISSILES
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications
p 1092 N93-17611
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618

Smaller expendable turbojets p 1067 N93-17621

MISSION PLANNING

Experimenter's data package for the descending layers rocket
[NASA-TM-108591] p 1207 N93-16461

Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539

Space transfer vehicle concepts and requirements study, phase 2
[NASA-CR-191425] p 1075 N93-16660

Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672

Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683

Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686

Space resources. Overview
[NASA-SP-509] p 1378 N93-16869

Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870

Baseline program p 1379 N93-16871

Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872

Impacts of sociopolitical conditions p 1379 N93-16873

Systems engineering process and organization assessment p 1340 N93-17281

Development of a prototype interactive learning system using multi-media technology for mission independent training program p 1227 N93-17310

Conceptual analysis of a lunar base transportation system p 1392 N93-17415

Lunar lander stage requirements based on the Civil Needs Data Base p 1394 N93-17427

MIXING

Miscibility of lubricants with refrigerants
[DE93-000538] p 1122 N93-16244

Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-792] p 1287 N93-16414

Mixing of vector and axial correlators at finite volume: Implications for lattice computations
[PREPRINT-804] p 1287 N93-16424

Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964

MIXING LAYERS (FLUIDS)

Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508

MOBILE COMMUNICATION SYSTEMS

Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite p 1078 N93-15731

Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966

National Defense Science and Engineering Graduate Fellowship Program in electrical engineering
[AD-A256975] p 1146 N93-16254

MODAL RESPONSE

The use of inverse frequency response functions for multi degree-of-freedom modal parameter identification with error bounds p 1077 N93-15720

Modal identification of mechanical structures by means of tuned base-motion excitation p 1077 N93-15721

Development of an interactive code for updating dynamic finite element models p 1078 N93-15732

Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734

Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735

Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762

Development of a laser-based measurement system for modal testing of large space structures p 1083 N93-15766

Development of a force measurement device p 1083 N93-15767

On the dynamic qualification of large deployable antennas p 1083 N93-15768

Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778

MODELS

Development and enhancement of a model of performance and decision making under stress in a real life setting
[AD-A255699] p 1226 N93-16111

LEAF research
[BCRS-91-16] p 1192 N93-17053

MODEMS

Fast training of a high-speed voice and data modem receiver
[ACTA-POLYTEC-SCAND-EL-67] p 1140 N93-17632

MODERATORS

Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463

MODES (STANDING WAVES)

Mechanism of the mode selection in bifurcations p 1162 N93-16825

MODULES

An improved classification tree analysis of high cost modules based upon an axiomatic definition of complexity p 1244 N93-17167

Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504

MODULUS OF ELASTICITY

NDE for thick section composites
[AD-A257292] p 1181 N93-15837

Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030

MOIRE EFFECTS

An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107

Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644

MOIRE FRINGES

Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005

MOISTURE CONTENT

Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919

MOLECULAR ABSORPTION

Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143

MOLECULAR BEAM EPITAXY

Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816

Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845

Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A257419] p 1171 N93-15864

The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050

Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132

Growth of epitaxial thin films by pulsed laser ablation
[DE92-040515] p 1319 N93-16296

High efficiency cadmium telluride and zinc telluride based thin-film solar cells
[DE92-016403] p 1195 N93-16448

The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505

TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492

High temperature superconductivity
[AD-A257789] p 1151 N93-17696

MOLECULAR BEAMS

The evolution of electronic structure in Al(n)Co(m)
[DE92-040737] p 1314 N93-15833

The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050

UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208

Theoretical studies of a molecular beam generator
[NASA-CR-191716] p 1288 N93-16945

MOLECULAR BIOLOGY

Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359

MOLECULAR CLOUDS

Manifestations of electric currents in interstellar molecular clouds
[TRITA-EPP-91-05] p 1376 N93-17638

MOLECULAR COLLISIONS

Atomic probes of surface structure and dynamics
[DE92-040066] p 1283 N93-15885

Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175

MOLECULAR ENERGY LEVELS

Spectroscopic investigation of the vibrational quasi-continuum arising from internal rotation of a methyl group
[DE92-040509] p 1104 N93-16586

MOLECULAR EXCITATION

Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373

MOLECULAR GASES

Theory of field adsorption of hydrogen
[AD-A257139] p 1102 N93-15996

Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781

MOLECULAR IONS

Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875

MOLECULAR ORBITALS

Ab initio molecular orbital calculations for magnesium-containing systems
[AD-A255811] p 1287 N93-16397

MOLECULAR PHYSICS

Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351

MOLECULAR RELAXATION

Vibration dissociation coupling in nonequilibrium flows
[NASA-CR-191775] p 1157 N93-16439

MOLECULAR SPECTRA

Applications of molecular modeling to transition state energies and conformations
[AD-A257130] p 1284 N93-16074

MOLECULAR SPECTROSCOPY

Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143

MOLECULAR STRUCTURE

Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674

Mechanical properties of structural polymers. Computer simulations and key experiments
[AD-A257439] p 1119 N93-15866

Ab initio molecular orbital calculations for magnesium-containing systems
[AD-A255811] p 1287 N93-16397

Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351

Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356

Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487

MOLECULES

A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919

Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373

Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702

MOLYBDENUM

Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106

MOLYBDENUM COMPOUNDS

Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623

MOLYBDENUM DISULFIDES

Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005

MOMENTS OF INERTIA

Low-spin identical bands in odd-A nuclei
[DE92-041016] p 1287 N93-16600

MOMENTUM THEORY

Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

MOMENTUM TRANSFER
Time stability of Monte Carlo device simulation
[DE92-019375] p 1275 N93-15884
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Tokamak turbulence in self-regulated differentially rotating flow and L-H transition dynamics
[DE93-000443] p 1310 N93-16451
Tethers p 1089 N93-16915
MONEL (TRADEMARK)
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859
MONITORS
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
MONKEYS
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
MONOCHROMATORS
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391
MONOIDS
The many disguises of accumulation
[TR-91-26] p 1237 N93-16369
MONOMERS
Computer simulations of epoxy adhesive monomer interactions with alumina surfaces
[AD-A257119] p 1121 N93-16073
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
MONOMOLECULAR FILMS
Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702
MONOPROPELLANTS
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799
MONOTONE FUNCTIONS
Construction of monotone extensions to boundary functions
[MEMO-1045] p 1268 N93-16845
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781
MONTE CARLO METHOD
Time stability of Monte Carlo device simulation
[DE92-019375] p 1275 N93-15884
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Simulation of vortex-line pinning by defects in the Y-Ba-Cu-O system
[DE92-041185] p 1318 N93-16205
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Four-fermion operators with improved nearest-neighbour action
[PREPRINT-805] p 1287 N93-16443
B(sub c) production --- pseudoscalar meson
[PREPRINT-806] p 1287 N93-16444
The direct Monte Carlo method for calculating alloy phases
[DE93-000436] p 1113 N93-16450
Effects of convection electric field on upwelling and escape of ionospheric O(+)
[NASA-CR-191669] p 1208 N93-16839
Monte Carlo shower counter studies
[NASA-CR-191364] p 1243 N93-16933
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
Phase diagram by frustrated vortices in Potts models
[ROM1F-92-860] p 1281 N93-17217
Electromagnetic scattering in clouds p 1142 N93-17327
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360
Modeling the uncertain impacts of climate change
[DE92-041339] p 1204 N93-17370
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Monte Carlo simulation of minimum bias events at the LHC energy
[NOTA-INTERNA-969] p 1294 N93-17544
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645
MONTMORILLONITE
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
MOON
Space resources. Volume 4: Social concerns
[NASA-SP-509-VOL-4] p 1377 N93-16857
Utilization of space resources in the space transportation system p 1384 N93-16912
MOONQUAKES
A seismic risk for the lunar base
[CONTRIB-769] p 1396 N93-17439
MORPHOLOGY
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
Morphology, properties, and stability of thermoplastic polymer blends
[ETN-92-92791] p 1124 N93-16491
Ground testing of bioconvective variables such as morphological characterizations and mechanisms which regulate macroscopic patterns p 1224 N93-17303
MOSSBAUER EFFECT
Moessbauer spectroscopy for lunar resource assessment: Measurement of mineralogy and soil maturity p 1389 N93-17258
MOTION SICKNESS
Adaptation to transient postural perturbations
[NASA-CR-190959] p 1227 N93-16699
MOTION SIMULATION
Simulator motion
[AD-A257683] p 1072 N93-17687
MOTION SIMULATORS
Simulator motion
[AD-A257683] p 1072 N93-17687
MOTION STABILITY
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
MOVING TARGET INDICATORS
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
MULTICHANNEL COMMUNICATION
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
MULTIGRID METHODS
Uniform convergence estimates for multigrid V-cycle algorithms with less than full elliptic regularity
[DE92-041275] p 1238 N93-16532
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Improved shock-capturing of Jameson's scheme for the Navier-Stokes equations
[MEMO-1041] p 1163 N93-16842
Multigrid for semiconductor device simulation: Cell-centered or vertex-centered multigrid?
[CWI-NM-R9118] p 1271 N93-17553
Adaptive multigrid for the steady Euler equations
[CWI-NM-R9122] p 1164 N93-17557
MULTIPATH TRANSMISSION
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
Multipath effects in a Global Positioning Satellite system receiver p 1059 N93-17311
MULTIPHASE FLOW
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939
MULTIPLE TARGET TRACKING
Using an assumption-based truth maintenance system to switch contexts during data fusion processing
[AD-A256123] p 1258 N93-15933
Enhancement of multiple target track simulation
[AD-A257224] p 1278 N93-16236
MULTIPLEXING
Logarithmic-periodic microwave multiplexer
[AD-D015475] p 1147 N93-16482
The unofficial AMPLEX owner's manual
[DE93-001437] p 1148 N93-16651
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077
MULTIPROCESSING (COMPUTERS)
The Sandia Airborne Computer (SANDAC)
[DE92-014046] p 1231 N93-15878
High speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory
[DE92-017412] p 1254 N93-15880
Proceedings of the Eleventh Annual ACM Symposium on Principles of Distributed Computing
[AD-A257294] p 1233 N93-15893
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Scalable problems and memory bounded speedup
[NASA-CR-189726] p 1230 N93-16554
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Parallel processing for scientific computations
[NASA-CR-191910] p 1256 N93-17028
PDDP: A Parallel Data Distribution Preprocessor
[DE92-040400] p 1256 N93-17207
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
MULTISENSOR APPLICATIONS
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406
MULTISPECTRAL BAND SCANNERS
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
MULTIVARIABLE CONTROL
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191943] p 1237 N93-16383
MULTIVARIATE STATISTICAL ANALYSIS
Multidimensional strong large deviation theorems
[AD-A256939] p 1263 N93-16129
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
MUONS
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182
Measurement of the branching ratio for D(+) yields (bar-K)*(892)(sup 0)mu(+)nu
[DE93-002414] p 1295 N93-17624
Search for pp decay to neutral H decay to (neutral Z)(neutral Z) decay to (mu +)(mu -)(mu +)(mu -) at the LHC
[NOTA-INTERNA-970] p 1300 N93-17644
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645
MUSCLES
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805
MUSCULOSKELETAL SYSTEM
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805

MUTATIONS
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595
MYOELECTRICITY
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087

N

N-TYPE SEMICONDUCTORS
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
NACELLES
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
NASA PROGRAMS
Fingerprinting of Materials
[NASA-CR-184482] p 1199 N93-15916
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992
[NASA-CR-189691] p 1332 N93-16760
NASA in the 21st century: A vision of greatness
p 1073 N93-16858
Summer study postscript: A 1986 perspective
p 1350 N93-16868
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089
National Aeronautics and Space Administration
p 1358 N93-17090
1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-184505] p 1339 N93-17279
Updating and expanding the library of materials on NASA Spacelink electronic information system
p 1340 N93-17282
Developing satellite ground control software through graphical models p 1246 N93-17500
NASA SPACE PROGRAMS
Space resources. Overview
[NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Baseline program p 1379 N93-16871
Alternative scenarios utilizing nonterrestrial resources
p 1379 N93-16872
Impacts of sociopolitical conditions
p 1379 N93-16873
Report to the President on the US space program
[ISBN-0-16-041608-6] p 1073 N93-16950
National Aeronautics and Space Administration
p 1358 N93-17090
National Aeronautics and Space Administration
p 1358 N93-17091
NATIONAL AEROSPACE PLANE PROGRAM
National Aeronautics and Space Administration
p 1358 N93-17091
NATIONAL LAUNCH VEHICLE PROGRAM
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686
NATURAL LANGUAGE (COMPUTERS)
The dynamics of description
[CWI-CS-R9143] p 1240 N93-16671
Quantification and partiality
[CWI-CS-R9152] p 1242 N93-16732
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742
GATOR: Requirements capturing of telephony features p 1247 N93-17505
Automating software design system DESTA
p 1250 N93-17519
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665
NAVIER-STOKES EQUATION
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations
p 1154 N93-15802
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
Comparison of solution of various Euler solvers and one Navier-Stokes solver for the flow about a sharp-edged cropped delta wing
[NLR-TP-90340-U] p 1157 N93-16411
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797
Proceedings of the 7th and 8th NAL Workshops on Investigation and Control of Boundary-Layer Transitiion
[NAL-SP-15] p 1160 N93-16809
Improved shock-capturing of Jameson's scheme for the Navier-Stokes equations
[MEMO-1041] p 1163 N93-16842
Acceleration of FDNS flow simulations using initial flowfields generated with a parabolized Navier-Stokes method p 1165 N93-17329
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids including chemical equilibrium, volume 2
[AD-A257702] p 1164 N93-17683
Numerical solution and algorithm analysis for the unsteady Navier-Stokes equations on dynamic multiblock grids, volume 1
[AD-A257522] p 1165 N93-17789
NAVIGATION
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
NAVIGATION SATELLITES
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141
NAVSTAR SATELLITES
Navstar global positioning system: Introduction and status
[NLR-TP-91008-U] p 1059 N93-17559
NAVY
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
NEAR FIELDS
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
NEAR INFRARED RADIATION
Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081
NEGATIVE IONS
Correlation in photodetachment
[DE93-001843] p 1291 N93-17078
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358
NEON
Conduction in ion implanted single crystal diamond
[DE92-040861] p 1317 N93-16164
NEPHANALYSIS
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
NETHERLANDS
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397
Activities of the PTT --- the Netherlands Post, Telephone, and Telegraph (PTT)
[ISBN-90-72125-27-4] p 1140 N93-17398
NETWORK ANALYSIS
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
NETWORK CONTROL
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
NCC Simulation Model: Simulating the operations of the network control center, phase 2
[NASA-CR-191616] p 1140 N93-16716
NEUMANN PROBLEM
A discrete Neumann system
[PREPRINT-870] p 1279 N93-16968
NEURAL NETS
Nonlinear adaptive control using backpropagating neural networks
[AD-A256828] p 1257 N93-15687
Cloud data set for neural network classification studies
[AD-A256666] p 1211 N93-15701
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
Low sensitivity interpolation using feed-forward neural networks with one hidden layer
[AD-A257306] p 1258 N93-16006
Adaptive machine vision
[AD-A257363] p 1301 N93-16007
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Studies in beamforming tracking neural networks mathematics
[AD-A255574] p 1258 N93-16039
TOPGENE: An artificial intelligence approach to a design process
[ISBN-90-9004900-2] p 1259 N93-16490
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
Functional expansion representations of artificial neural networks p 1262 N93-16772
Antenna analysis using neural networks
p 1142 N93-16790
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026
Effective neurons and attractor neural networks in cortical environment
[PREPRINT-829] p 1223 N93-17214
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
Neural network architectures to analyze OPAD data
p 1262 N93-17336
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Complexity optimized vector quantization: A neural network approach
[DE93-001304] p 1246 N93-17477
Program 6 technical interchange meeting proceedings
[AD-A257736] p 1356 N93-17665
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797
NEURONS
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026
Effective neurons and attractor neural networks in cortical environment
[PREPRINT-829] p 1223 N93-17214
NEUROPHYSIOLOGY
Conversion of temporal correlations between stimuli to spatial correlations between attractors
[PREPRINT-856] p 1225 N93-16962
Mathematics and biology: The interface, challenges and opportunities
[DE92-041207] p 1223 N93-17359
NEUTRAL ATMOSPHERES
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

NEUTRAL BEAMS
Enhancement of D3-D neutral beam system for higher performance
[DE93-000878] p 1309 N93-16307
NEUTRAL CURRENTS
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340
NEUTRAL GASES
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994
NEUTRINO BEAMS
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
NEUTRINOS
Research in elementary particle physics
[DE93-001858] p 1284 N93-16146
The experimental status of neutrino masses and mixings
[DE93-000862] p 1285 N93-16303
On the 17-keV conundrum
[DE93-000866] p 1286 N93-16305
Neutrino mass and mixing, and non-accelerator experiments
[DE93-000867] p 1286 N93-16306
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
Global continuous symmetry and the 17keV neutrino
[PREPRINT-868] p 1288 N93-16966
Investigation of neutrino properties in the process e(+)e(-) decay to nu-nu(bar)-gamma
[PREPRINT-887] p 1290 N93-17023
Measurement of the branching ratio for D(+) yields (bar-K)*(892)(sup 0)mu(+)nu
[DE93-002414] p 1295 N93-17624
NEUTRON COUNTERS
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234
A lunar penetrator to determine solar-wind-implanted resources at depth in the lunar regolith p 1386 N93-17239
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371
NEUTRON DECAY
Escape- and spreading width of the isobaric analog state
[KVI-884] p 1293 N93-17400
NEUTRON DIFFRACTION
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561
NEUTRON EMISSION
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464
NEUTRON SCATTERING
Combined small-angle neutron and x ray scattering studies of polymers
[DE93-000440] p 1118 N93-15671
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561
NEUTRON SOURCES
Directional fast-neutron detectors
[DE93-000355] p 1292 N93-17371
NEUTRON SPECTRA
Escape- and spreading width of the isobaric analog state
[KVI-884] p 1293 N93-17400
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464
NEUTRON SPECTROMETERS
Gamma ray and neutron spectrometer for the lunar resource mapper p 1389 N93-17259
Combined gamma ray/neutron spectroscopy for mapping lunar resources p 1390 N93-17263
NEUTRON STARS
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
A Theoretical Analysis of Thermal Radiation from Neutron Stars
[NASA-CR-191906] p 1376 N93-17410
The Geminga neutron star: Evidence for nucleon superfluidity at very high density p 1376 N93-17411
NEUTRONS
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
Application of multistep compound and multistep direct models for data evaluation
[DE93-000865] p 1285 N93-16304
Evidence for the dominance of an I(sup G)J(sup PC) = 0(+)0(++) resonance in p(bar)n decay to 2 pi(+)
[PREPRINT-885] p 1290 N93-17021
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
Evidence of an I(sup G)J(sup PC) = O(+)O(++) resonance at 1.39 GeV/sq c and confutation of the zeta(1480) in a reanalysis of the p(bar)n decay to 2 pi(+)-3 pi(-) annihilation at rest
[PREPRINT-826] p 1291 N93-17222
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
NEW ZEALAND
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938
NEWTON METHODS
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593
NEWTONIAN FLUIDS
Classical fluids of negative heat capacity
[DE92-040507] p 1329 N93-15943
Fundamental studies of fluid mechanics and stability in porous media
[DE93-002519] p 1163 N93-17046
NICKEL
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
NICKEL ALLOYS
Fatigue characterization of Ni-base alloys p 1081 N93-15756
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059
Atomistic studies of grain boundaries in alloys and compounds
[DE93-002769] p 1115 N93-17083
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704
The electrochemical machining of nickel based alloys
[DS-1933] p 1135 N93-17741
NICKEL CADMIUM BATTERIES
NiCd cells behaviour at high currents and low temperature for space applications
[ITN-93-85176] p 1149 N93-16835
NICKEL COATINGS
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
NICKEL HYDROGEN BATTERIES
Damage tolerance checking on Ni/H2 battery cells p 1081 N93-15754
NICKEL ISOTOPES
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605
NICKEL OXIDES
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
NICKEL STEELS
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
NIGHT
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
NIGHT FLIGHTS (AIRCRAFT)
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
NIGHT VISION
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697
NIOBIUM
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377
NIOBIUM ALLOYS
Oxidation and volatilization of a niobium alloy
[DE93-001927] p 1116 N93-17392
NIOBIUM COMPOUNDS
Scaling laws for the critical current density of NbN films in high magnetic fields
[DE93-000604] p 1318 N93-16277
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007
NITRATE ESTERS
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842
NITRATES
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
NITROGEN
Compatibility of refrigerants and lubricants with motor materials
[DE93-000540] p 1122 N93-16246
Vibration dissociation coupling in nonequilibrium flows
[NASA-CR-191775] p 1157 N93-16439
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710
NITROGEN IONS
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217
NITROGEN POLYMERS
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
Surface epoxidation of elastomers
[AD-D015457] p 1123 N93-16436
NOAA SATELLITES
Observation of the Earth-atmosphere system by NOAA satellite (acquisition, production, application, and use of NOAA data)
[BCRS-92-02] p 1207 N93-16221
Identification of icing water clouds by NOAA AVHRR satellite data
[DLR-FB-92-11] p 1213 N93-16477
NOISE INTENSITY
Optimal linear array heading in a directional noise field
[AD-A257336] p 1137 N93-15991

NOISE REDUCTION
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material
p 1084 N93-15779
Consecutive plate acoustic suppressor apparatus and methods
[NASA-CASE-LEW-15430-1] p 1282 N93-17051
NONADIABATIC CONDITIONS
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356
NONDESTRUCTIVE TESTS
Development and applications of a new computer-controlled magnetic inspection system
[DE92-040579] p 1181 N93-15664
NDE for thick section composites
[AD-A257292] p 1181 N93-15837
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Advanced NDE research in electromagnetic, thermal, and coherent optics p 1182 N93-16789
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
Review of aeronautical fatigue investigations in the Netherlands during the period March 1989 - March 1991
[NLR-TP-91092-U] p 1062 N93-17535
Manufacturing and inspection of artificial delaminations in composite materials
[NLR-TP-91085-U] p 1099 N93-17582
NONEQUILIBRIUM CONDITIONS
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
NONEQUILIBRIUM FLOW
Vibration dissociation coupling in nonequilibrium flows
[NASA-CR-191775] p 1157 N93-16439
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems
p 1165 N93-16786
NONLINEAR EQUATIONS
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems
[AD-A256740] p 1184 N93-16035
Vortex breakdown incipience: Theoretical considerations
[NASA-CR-189734] p 1055 N93-16627
C-integrable nonlinear partial differential equations in N + 1 dimensions
[PREPRINT-833] p 1269 N93-16955
Non-linear WKB analysis of the string equation
[PREPRINT-862] p 1330 N93-16963
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071
Integrable nonlinear evolution equations with constraints: 1
[PREPRINT-824] p 1270 N93-17220
NONLINEAR FEEDBACK
Computer aided analysis of nonlinear systems
[RR-446] p 1239 N93-16576
NONLINEAR FILTERS
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
NONLINEAR OPTICS
Synthesis and characterization of dipolar organic molecules for nonlinear optical materials
[AD-A257111] p 1302 N93-16118
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702
Photorefractive properties of doped BaTiO 3 and SBN
[AD-A257989] p 1305 N93-17748
NONLINEAR PROGRAMMING
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791
NONLINEAR SYSTEMS
Nonlinear adaptive control using backpropagating neural networks
[AD-A256828] p 1257 N93-15687
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
Dynamic feedback in nonlinear synthesis problems
[ISBN-90-9004142-7] p 1259 N93-16474
On the sum of accretive operators
[ETN-92-92794] p 1265 N93-16566
Computer aided analysis of nonlinear systems
[RR-446] p 1239 N93-16576
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606
Functional expansion representations of artificial neural networks p 1262 N93-16772
Nonlinear H(infinity) control and Hamilton-Jacobi inequalities
[MEMO-1042] p 1268 N93-16843
Dynamic path controllability in economic models: From linearity to nonlinearity
[MEMO-1047] p 1357 N93-16847
Nonlinear control problems and systems approximations: A geometric approach
[MEMO-1039] p 1261 N93-16951
Controllability distributions and systems approximations: A geometric approach
[MEMO-1040] p 1269 N93-16952
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Prediction of nonlinear optical properties of large organic molecules p 1128 N93-17288
Mathematical models of hysteresis
[DE93-001836] p 1281 N93-17530
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674
NONLINEARITY
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
Nonlinear characteristics of superconducting transmission lines
[AD-A256388] p 1143 N93-15901
NONTHERMAL RADIATION
The nonthermal model of disc accretion onto a magnetosphere p 1368 N93-17115
NORMAL DENSITY FUNCTIONS
PDF turbulence modeling and DNS
p 1153 N93-15794
A normal distribution or a Weibull distribution for fatigue lives
[LR-689] p 1275 N93-16216
NORMALIZING
Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964
NORMALIZING (STATISTICS)
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
NORWAY
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
NOVAE
Ultraviolet studies of novae in the large Magellanic cloud
[DE92-040348] p 1359 N93-16181
NOZZLE DESIGN
Design of a nozzle for a hypersonic wind tunnel
[AERO-REPT-9113] p 1072 N93-16468
STME nozzle thermal analysis p 1095 N93-17291
NOZZLE FLOW
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017
Analysis of film cooling in rocket nozzles
p 1095 N93-17339
NUCLEAR ASTROPHYSICS
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
NUCLEAR CAPTURE
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
NUCLEAR CHEMISTRY
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
NUCLEAR DEFORMATION
Tilted cranking classification of multiband spectra
[DE92-041187] p 1283 N93-15959
Low-spin identical bands in odd-A nuclei
[DE92-041016] p 1287 N93-16600
Rotational band structure of intruder configurations: Success and limitations of the Cranked Shell Model
[DE93-001713] p 1288 N93-16972
NUCLEAR DEVICES
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
NUCLEAR ELECTRIC PROPULSION
Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626
NUCLEAR EXPLOSIONS
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
NUCLEAR FUELS
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424
NUCLEAR FUSION
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103
Nuclear structure research
[DE93-000405] p 1285 N93-16239
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
NUCLEAR MAGNETIC RESONANCE
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
NUCLEAR MODELS
Application of multistep compound and multistep direct models for data evaluation
[DE93-000865] p 1285 N93-16304
Rotational band structure of intruder configurations: Success and limitations of the Cranked Shell Model
[DE93-001713] p 1288 N93-16972
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605
NUCLEAR PHYSICS
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931

Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473
Research in particle physics
[DE92-041135] p 1293 N93-17475
The study of multi-institutional collaborations in high-energy physics
[DE93-002337] p 1300 N93-17580

NUCLEAR POWER PLANTS
Independent verification of tank volume measurements by pressure-volume authentication
[DE92-040680] p 1166 N93-15665
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466

NUCLEAR PROPULSION
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
Advanced hybrid nuclear propulsion Mars mission performance enhancement
[DE93-001309] p 1090 N93-16177
System model development for nuclear thermal propulsion
[NASA-TM-108157] p 1298 N93-16531
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424

NUCLEAR QUADRUPOLE RESONANCE
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043

NUCLEAR REACTIONS
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Application of multistep compound and multistep direct models for data evaluation
[DE93-000865] p 1285 N93-16304
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485

NUCLEAR REACTORS
New D3-D tokamak plasma control system
[DE93-000877] p 1312 N93-17388
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603

NUCLEAR RESEARCH
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184

NUCLEAR ROCKET ENGINES
System model development for nuclear thermal propulsion
[NASA-TM-108157] p 1298 N93-16531
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424

NUCLEAR STRUCTURE
Tilted cranking classification of multiband spectra
[DE92-041187] p 1283 N93-15959
Nuclear structure research
[DE93-000405] p 1285 N93-16239
Rotational band structure of intruder configurations: Success and limitations of the Cranked Shell Model
[DE93-001713] p 1288 N93-16972
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

NUCLEAR WEAPONS
Monitoring limits on sea-launched cruise missiles
[OTA-ISC-513] p 1061 N93-16632

NUCLEATE BOILING
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038

NUCLEATION
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391
Nucleation, crystal growth, and liquid/liquid phase separation in materials in microgravity, phase 3
[CTN-93-60612] p 1131 N93-16493
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505
Unsolved problems of crystallization and melting of flexible macromolecules
[DE92-040876] p 1125 N93-16597
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2
[CTN-93-60631] p 1133 N93-16937
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

NUCLEI (NUCLEAR PHYSICS)
Nuclear structure research
[DE93-000405] p 1285 N93-16239

NUCLEON POTENTIAL
Nuclear structure research
[DE93-000405] p 1285 N93-16239

NUCLEON-NUCLEON INTERACTIONS
Evidence for the dominance of an I(sup G)J(sup PC) = 0(+)0(++) resonance in p(bar)n decay to 2 pi(+)
[PREPRINT-885] p 1290 N93-17021
Evidence of an I(sup G)J(sup PC) = O(+)O(++) resonance at 1.39 GeV/sq c and confutation of the zeta(1480) in a reanalysis of the p(bar)n decay to 2 pi(+)-3 pi(-) annihilation at rest
[PREPRINT-826] p 1291 N93-17222
Monte Carlo simulation of minimum bias events at the LHC energy
[NOTA-INTERNA-969] p 1294 N93-17544
A two body relativistic equation for interacting nucleons
[NOTA-INTERNA-976] p 1295 N93-17630

NUCLEONS
The Geminga neutron star: Evidence for nucleon superfluidity at very high density p 1376 N93-17411

NUMBER THEORY
On the history of the function M(x)/(square root of x) since Stieltjes
[CWI-NM-R9120] p 1271 N93-17555

NUMERICAL ANALYSIS
Multi-ion ambipolar diffusion
[AD-A256568] p 1283 N93-15659
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
A study of improvement in lattice QCD
[SSCL-PREPRINT-766] p 1286 N93-16348
Aeroelastic stability and response of rotating structures
[NASA-CR-191803] p 1068 N93-16560
Non-linear WKB analysis of the string equation
[PREPRINT-862] p 1330 N93-16963
Numerical methods for the analysis of sampled-data systems and for the computation of system zeros p 1274 N93-17300
Stress analysis and damage evaluation of flawed composite laminates by hybrid-numerical methods p 1100 N93-17340
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

NUMERICAL CONTROL
Development and applications of a new computer-controlled magnetic inspection system
[DE92-040579] p 1181 N93-15664
The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
New D3-D tokamak plasma control system
[DE93-000877] p 1312 N93-17388
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484

NUMERICAL FLOW VISUALIZATION
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
Vortex breakdown incipience: Theoretical considerations
[NASA-CR-189734] p 1055 N93-16627

NUMERICAL INTEGRATION
Numerical solution of dynamical systems with state-space constraints
[NLR-TP-89419-U] p 1264 N93-16293

NUMERICAL WEATHER FORECASTING
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744

NUTRITION
Nutrition p 1222 N93-16805
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271

NUTRITIONAL REQUIREMENTS
Nutrition p 1222 N93-16805

NUTS (FASTENERS)
Slip joint connector
[NASA-CASE-MFS-28659-1] p 1178 N93-17080

NYLON (TRADEMARK)
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060

O

O RING SEALS
Design and analysis of seals for extended service life p 1181 N93-17283

OBJECT PROGRAMS
Object-oriented programming with mixins in Ada p 1245 N93-17171

OBJECT-ORIENTED PROGRAMMING
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
NPSGDL: An object oriented graphics description language for virtual world application support
[AD-A257337] p 1234 N93-15992
A Relational/Object-Oriented Database Management System: R/OODBMS
[AD-A257339] p 1351 N93-15993
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
Constitutive and equation of state models using object-oriented programming methods
[DE93-000740] p 1243 N93-17063
Object-oriented programming with mixins in Ada p 1245 N93-17171
Software Engineering Laboratory Ada performance study: Results and implications p 1245 N93-17172
Object-oriented simulation for the Superconducting Super Collider
[DE92-015962] p 1299 N93-17205
Guide to object-oriented analysis and design p 1254 N93-17296
Description of research interests and current work related to automating software design p 1249 N93-17515
Domain specific software design for decision aiding p 1249 N93-17517
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 1: The model
[OEFZS-4607-PT-1] p 1356 N93-17601
Direct access and external memory management of multimedia documents, an object-oriented approach. Part 2: The prototype
[OEFZS-4608-PT-2] p 1356 N93-17635
A framework for classifying and resolving semantic heterogeneity in object-oriented databases
[AD-A257597] p 1357 N93-17790

OBSTACLE AVOIDANCE
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369

OCEAN BOTTOM
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
OCEAN CURRENTS
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Meridional circulation in the tropical North Atlantic
[AD-A256906] p 1219 N93-16024
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
Hydrographic data from Endeavor 214: A study of the Gulf Stream-Deep Western Boundary Current crossover
[AD-A257966] p 1221 N93-17737
OCEAN DYNAMICS
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
OCEAN MODELS
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Undersea data collection, analysis, and display system
[AD-D015476] p 1220 N93-16483
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554
OCEAN SURFACE
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758
Internal gravity waves in the equatorial Pacific
[DE93-001517] p 1211 N93-17653
OCEANOGRAPHIC PARAMETERS
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
Undersea data collection, analysis, and display system
[AD-D015476] p 1220 N93-16483
OCEANOGRAPHY
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964
Bibliography of technical reports, 1991 from Woods Hole Institution
[AD-A257304] p 1220 N93-16083
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Hydrographic data from Endeavor 214: A study of the Gulf Stream-Deep Western Boundary Current crossover
[AD-A257966] p 1221 N93-17737
ODD-EVEN NUCLEI
Low-spin identical bands in odd-A nuclei
[DE92-041016] p 1287 N93-16600
OFFGASSING
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088
OILS
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046
ON-LINE SYSTEMS
The Aerospace Database data element dictionary with issues and recommendations from the meetings of July 24-25, August 13-14, and September 24-25, 1991
[NASA-TM-108156] p 1353 N93-16233
Data storage and retrieval system
p 1354 N93-16324
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
Technical reference model for information management, version 1.2
[AD-A253476] p 1357 N93-17773
ONBOARD DATA PROCESSING
Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
ONE DIMENSIONAL FLOW
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736
OPACITY
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
OPEN CIRCUIT VOLTAGE
NiCd cells behaviour at high currents and low temperature for space applications
[ITN-93-85176] p 1149 N93-16835
OPERATING COSTS
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672
OPERATING SYSTEMS (COMPUTERS)
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
Transparently interposing user code at the system interface
[AD-A256636] p 1233 N93-15907
Fault tolerant real-time systems
[AD-A257352] p 1235 N93-16174
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730
OPERATING TEMPERATURE
Design aspects of mid-size SMES using high temperature superconductors
[DE92-040723] p 1142 N93-15828
NiCd cells behaviour at high currents and low temperature for space applications
[ITN-93-85176] p 1149 N93-16835
OPERATIONAL AMPLIFIERS
Technique for current step measurements on the low field Metal Oxide Varistor (MOV)
[DE93-000843] p 1143 N93-15904
OPERATIONAL PROBLEMS
Environmental effects on lunar astronomical observatories p 1363 N93-17454
OPERATOR PERFORMANCE
Gloved operator performance study
[AD-A256894] p 1227 N93-16048
OPERATORS (MATHEMATICS)
Quantum groups and Lie-admissable time evolution
[SSCL-PREPRINT-793] p 1264 N93-16349
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
Measurability of operator fields
[W-9204] p 1264 N93-16353
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
A simple method to generate integrable symplectic maps
[PREPRINT-795] p 1265 N93-16416
Four-fermion operators with improved nearest-neighbour action
[PREPRINT-805] p 1287 N93-16443
Symmetry of wavefunctions in quantum algebras and supersymmetry
[DE92-041129] p 1265 N93-16551
On the sum of accretive operators
[ETN-92-92794] p 1265 N93-16566
The state operator in real time process algebra
[CWI-CS-R9140] p 1269 N93-16852
Vertex operator representation of some quantum tori Lie algebras
[PREPRINT-834] p 1269 N93-16956
Bose realisation of a noncanonical Heisenberg algebra
[PREPRINT-844] p 1269 N93-16958
Weak matrix elements
[PREPRINT-854] p 1279 N93-16976
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018
Two loop calculation of the anomalous dimension of four-fermion operators with static heavy quarks
[PREPRINT-873] p 1291 N93-17073
Sahlqvist's theorem for boolean algebras with operators
[ML-91-10] p 1274 N93-17794
OPHTHALMOLOGY
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 1224 N93-15824
OPTICAL COMMUNICATION
Vibration characterisation for low level disturbances induced in telecommunications spacecraft
p 1078 N93-15733
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
OPTICAL COMPUTERS
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
OPTICAL CORRELATORS
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
OPTICAL COUPLING
Enhanced polarization-dependent coupling between an optical waveguide and laterally coupled photodetector
[MBB-Z-0338-90-PUB] p 1305 N93-17642
OPTICAL DATA PROCESSING
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
OPTICAL DATA STORAGE MATERIALS
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
ICI optical data storage tape p 1354 N93-16327
Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928
OPTICAL DISKS
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
Spacecraft optical disk recorder memory buffer control
p 1170 N93-16773
OPTICAL EQUIPMENT
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581
OPTICAL FIBERS
Capillary liquid chromatography using laser-based and mass spectrometric detection
[DE92-040524] p 1102 N93-16144
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182
Armored fiber optic cables statement of government interest
[AD-D015459] p 1302 N93-16437
High-strength in-line fiber optic connector
[AD-D015446] p 1303 N93-16456
Polarization independent narrow channel wavelength division multiplexing fiber coupler and method for producing same
[AD-D015473] p 1303 N93-16480
An interferometer having fused optical fibers, and apparatus and method using the interferometer
[NASA-CASE-LAR-14640-1-CU] p 1304 N93-17052
International Conference on Defects in Insulating Materials
[AD-A258004] p 1127 N93-17700
OPTICAL FILTERS
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Conception and molecular beam epitaxial growth of (Ga,Al)As-(Ca,Sr)F2 multilayers for optical application
[LAAS-91306] p 1327 N93-17492
OPTICAL MATERIALS
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
Synthesis and characterization of dipolar organic molecules for nonlinear optical materials
[AD-A257111] p 1302 N93-16118
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
IR materials producibility
[AD-A257695] p 1305 N93-17691

OPTICAL MEASUREMENT
Development of a laser-based measurement system for modal testing of large space structures
p 1083 N93-15766
Infrared fiber-optical temperature sensor
[AD-D015495] p 1167 N93-16492
Optical system for linearizing non-linear electro-optic
[AD-D015496] p 1303 N93-16495
OPTICAL MEASURING INSTRUMENTS
Effects of ionizing radiation on selected optical materials: An overview
[DE93-001324] p 1300 N93-15660
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182
OPTICAL MEMORY (DATA STORAGE)
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709
NSSDC Conference on Mass Storage Systems and Technologies for Space and Earth Science Applications, volume 2
[NASA-CP-3165-VOL-2] p 1353 N93-16320
OPTICAL POLARIZATION
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458
Enhanced polarization-dependent coupling between an optical waveguide and laterally coupled photodetector
[MBB-Z-0338-90-PUB] p 1305 N93-17642
OPTICAL PROPERTIES
Effects of ionizing radiation on selected optical materials: An overview
[DE93-001324] p 1300 N93-15660
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Low-energy physics of high-temperature superconductors
[DE92-040672] p 1317 N93-16194
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Prediction of nonlinear optical properties of large organic molecules p 1128 N93-17288
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
Semi-propellants for ducted rockets
p 1092 N93-17612
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
OPTICAL PUMPING
Multiple element ring laser
[AD-D015471] p 1173 N93-16469
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462
OPTICAL PYROMETERS
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
OPTICAL RADAR
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development
[DE93-000915] p 1202 N93-16535
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701
OPTICAL REFLECTION
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
OPTICAL RESONATORS
Quasi-optical power combining of solid state millimeter-wave sources: A proposal for graduate fellowship
[AD-A256644] p 1143 N93-15909
OPTICAL SCANNERS
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664
Development of techniques required for the application of a laser to three dimensional visual sensing
[NASA-CR-191855] p 1174 N93-16706
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
Correlated optical observations with BATSE/CGRO on SCO X-1 p 1344 N93-17313
OPTICAL SWITCHING
Optoelectronic materials center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A257136] p 1301 N93-16079
OPTICAL THICKNESS
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
OPTICAL WAVEGUIDES
Integrated test and package methods for integrated photonics
[DE93-000748] p 1145 N93-16230
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231
Enhanced polarization-dependent coupling between an optical waveguide and laterally coupled photodetector
[MBB-Z-0338-90-PUB] p 1305 N93-17642
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643
OPTIMAL CONTROL
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
OPTIMIZATION
Updating and localizing structural errors based on minimization of equation errors p 1077 N93-15719
Experimental approach on the pyrotechnical shock reduction of Ariane-5 upper stage p 1075 N93-15764
Compiling Prolog to standard ML: Some optimizations
[AD-A256193] p 1232 N93-15841
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040
Implementation of a parallel stochastic solving method for linearly constrained concave global optimization problems using parallel computing
[AD-A257112] p 1255 N93-16119
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
The role of under-determined approximations in engineering and science application
p 1274 N93-16763
Multidisciplinary design optimization using response surface analysis p 1065 N93-16796
Design optimization of natural laminar flow bodies in compressible flow
[NASA-CR-4478] p 1056 N93-16940
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems
p 1074 N93-17290
Approximation, abstraction and decomposition in search and optimization p 1248 N93-17507
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595
Error feedback for reduction of quantization errors due to arithmetic operations in recursive digital filters
[EL-9] p 1272 N93-17633
A generalized asymptoticity problem in max algebra; the two-dimensional case
[REPT-92-29] p 1273 N93-17735
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740
OPTOELECTRONIC DEVICES
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
ORBIT TRANSFER VEHICLES
Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix
[NASA-CR-184490] p 1075 N93-16556
Space transfer vehicle concepts and requirements study, phase 2
[NASA-CR-191425] p 1075 N93-16660
Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
Transport: Introduction p 1384 N93-16911
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
Electric propulsion p 1095 N93-16916
ORBITAL ASSEMBLY
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
ORBITAL MANEUVERS
Orbital manoeuvre effects on large flexible antennae
p 1078 N93-15729
ORDER-DISORDER TRANSFORMATIONS
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
First-principles approach to alloy phase stability
[DE93-001323] p 1115 N93-17031
ORGANIC BORON COMPOUNDS
Separation of compounds with multiple -OH groups from dilute aqueous solutions via complexation with organoboronate
[DE92-041201] p 1107 N93-17358
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657
ORGANIC COMPOUNDS
Synthesis and characterization of dipolar organic molecules for nonlinear optical materials
[AD-A257111] p 1302 N93-16118
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta"-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454
ORGANIC MATERIALS
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
ORGANIC SILICON COMPOUNDS
Thermal isomerization and decomposition of ethynyldisilanes
[DE92-040578] p 1102 N93-16012
ORGANIC SULFUR COMPOUNDS
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta"-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
ORGANIC SUPERCONDUCTORS
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta"-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454
ORGANISMS
Ground testing of bioconvective variables such as morphological characterizations and mechanisms which regulate macroscopic patterns p 1224 N93-17303
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

ORGANIZATIONS
Source header list. Volume 1: A through J
[AD-A256000] p 1352 N93-16063
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064
Source hierarchy list. Volume 3: O through Z
[AD-A256102] p 1352 N93-16065
ORGANOMETALLIC COMPOUNDS
Organometallic chemistry of bimetallic compounds
[DE93-002773] p 1115 N93-17201
Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
ORTHOGONAL FUNCTIONS
Strong sequentiality of left-linear overlapping rewriting systems
[CWI-CS-R9146] p 1267 N93-16721
ORTHOGONALITY
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722
ORTHOTROPIC SHELLS
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690
OSCILLATIONS
Weld pool oscillation during gas tungsten arc welding
[ETN-92-92796] p 1177 N93-16568
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
OSCILLATORS
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Transient x ray laser schemes at 1 millimicron and at 2 millimicron
[DE92-040670] p 1171 N93-15948
Improvement in the control aspect of laser frequency stabilization for SUNLITE project p 1175 N93-16798
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688
Time evolution of Caldirola-Kanai oscillators
[PREPRINT-846] p 1272 N93-17712
OVERPRESSURE
Measurement and evaluation of blast overpressure during F-15A crew station vulnerability assessment test
[AD-A257152] p 1227 N93-16033
OXALATES
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
OXIDATION
Homogeneous-heterogeneous combustion: Thermal and chemical coupling
[DE93-002881] p 1100 N93-15840
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Stability of metal particle and metal particulate media p 1170 N93-16329
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Oxidation and volatilization of a niobium alloy
[DE93-001927] p 1116 N93-17392
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
OXIDATION RESISTANCE
Study of the different oxidation states of nickel base superalloys
[ETN-92-92555] p 1116 N93-17495
OXIDATION-REDUCTION REACTIONS
Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network
[AD-A256789] p 1142 N93-15703
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033
OXIDE FILMS
The chemical potential from extrinsic ions in oxide films on aluminum
[DE92-041313] p 1118 N93-15667
Evaluation of cerium oxide coated Cu cermets as inert anodes for aluminum electrowinning
[DE92-019333] p 1126 N93-17173
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777
OXIDES
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
Lunar cement p 1382 N93-16897
OXYGEN
Heteroepitaxial diamond growth
[AD-A257356] p 1317 N93-16175
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187
Effects of convection electric field on upwelling and escape of ionospheric O(+)
[NASA-CR-191669] p 1208 N93-16839
Processing lunar soils for oxygen and other materials p 1381 N93-16889
Oxygen from the lunar soil by molten silicate electrolysis p 1382 N93-16890
Vapor phase pyrolysis p 1108 N93-16891
Plasma separation p 1313 N93-16892
Processing of metal and oxygen from lunar deposits p 1382 N93-16895
OXYGEN IONS
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
Apical oxygen ions and the electronic structure of the high T(sub c) cuprates
[PREPRINT-828] p 1324 N93-17223
Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms
[DE93-001642] p 1292 N93-17345
OXYGEN ISOTOPES
New techniques for positron emission tomography in the study of human neurological disorders
[DE93-002098] p 1224 N93-15900
OXYGEN PRODUCTION
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Lunar beneficiation p 1381 N93-16887
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Processing lunar soils for oxygen and other materials p 1381 N93-16889
Application of manufactured products p 1383 N93-16902
Utilization of space resources in the space transportation system p 1384 N93-16912
Electromagnetic launch of lunar material p 1384 N93-16914
Lunar resource assessment: An industry perspective p 1387 N93-17246
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
OXYGENATION
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
OZONE
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645
Indoor ozone concentrations: Ventilation rate impacts and mechanisms of outdoor concentration attenuation
[DE93-000633] p 1205 N93-17576
OZONE DEPLETION
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042
OZONOMETRY
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645
OZONOSPHERE
Energy and global warming impacts of CFC alternative technologies for foam building insulations
[DE92-019477] p 1200 N93-16085

P

P WAVES
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
P-I-N JUNCTIONS
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512
P-TYPE SEMICONDUCTORS
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
PACIFIC OCEAN
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938
Internal gravity waves in the equatorial Pacific
[DE93-001517] p 1211 N93-17653
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662
PACKAGING
Integrated test and package methods for integrated photonics
[DE93-000748] p 1145 N93-16230
PACKET SWITCHING
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
MicroSat date telemetry
[AD-A257468] p 1076 N93-17659
PAINTS
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858
PAIR PRODUCTION
Dynamical approach to pair production from strong fields
[DE92-040224] p 1283 N93-16011
Theory working group: Summary of the results
[PREPRINT-803] p 1297 N93-16423
QCD corrections to Z pair hadronic production
[PREPRINT-832] p 1288 N93-16954
An introduction to the pair-reflection model of X-ray spectra in AGN's p 1367 N93-17110
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645
PALEOCLIMATOLOGY
Sensitivity of climate models: Comparison of simulated and observed patterns for past climates
[DE93-000893] p 1201 N93-16176
PALLADIUM ALLOYS
The direct Monte Carlo method for calculating alloy phases
[DE93-000436] p 1113 N93-16450
PALLADIUM COMPOUNDS
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
PANEL METHOD (FLUID DYNAMICS)
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
PANELS
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762

Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications
p 1085 N93-15780
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717

PANORAMIC CAMERAS
Preliminary results from the ROSAT WFC all sky survey: A sample of low galactic column density AGN's
p 1362 N93-17131

PARABOLIC REFLECTORS
Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839

PARABOLOID MIRRORS
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752

PARADOXES
The Schoenmaker's paradox: Its solution in a belief dependence framework
[LP-91-05] p 1273 N93-17725

PARALLEL COMPUTERS
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems
p 1353 N93-16322
An overview of MANIFOLD and its implementation
[CWI-CS-R9142] p 1236 N93-16365
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Automating FEA programming p 1251 N93-17524

PARALLEL FLOW
Instability of spatially periodic flows
p 1160 N93-16810
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821

PARALLEL PLATES
Method and apparatus for controlling protein crystallization
[NASA-CASE-MFS-28688-1] p 1323 N93-17043
Consecutive plate acoustic suppressor apparatus and methods
[NASA-CASE-LEW-15430-1] p 1282 N93-17051

PARALLEL PROCESSING (COMPUTERS)
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
ATOMIC: A low-cost, very high-speed LAN
[AD-A257140] p 1233 N93-15855
The design and implementation of a parallel persistent object system
[AD-A257447] p 1233 N93-15869
High speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory
[DE92-017412] p 1254 N93-15880
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040
Proceedings of the MIT Student Workshop on VLSI and Parallel Systems
[AD-A256795] p 1145 N93-16054
Report on the FX-91 programming language
[AD-A256798] p 1234 N93-16057
Implementation of a parallel stochastic solving method for linearly constrained concave global optimization problems using parallel computing
[AD-A257112] p 1255 N93-16119
A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860
[DE93-000460] p 1255 N93-16272
An improved spectral graph partitioning algorithm for mapping parallel computations
[DE93-002593] p 1236 N93-16364
An overview of MANIFOLD and its implementation
[CWI-CS-R9142] p 1236 N93-16365
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Compiler assisted recovery for fault-tolerant highly parallel multiprocessor architectures
[AD-A256942] p 1255 N93-16430
Advanced parallel systems
[AD-A256958] p 1255 N93-16434
Scalable problems and memory bounded speedup
[NASA-CR-189726] p 1230 N93-16554
Parallel processing for linear programming
[ISBN-90-6275-754-5] p 1256 N93-16565
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608
A general purpose subroutine for fast fourier transform on a distributed memory parallel machine
[NASA-CR-189724] p 1241 N93-16681
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723
An algebraic foundation for FORTRAN 90 communication intrinsics
[DE92-040393] p 1269 N93-16990
Parallel processing for scientific computations
[NASA-CR-191910] p 1256 N93-17028
PDDP: A Parallel Data Distribution Preprocessor
[DE92-040400] p 1256 N93-17207
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360

PARALLEL PROGRAMMING
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
Automating FEA programming p 1251 N93-17524
Parallel step-by-step methods
[CWI-NM-R9116] p 1256 N93-17545
Parallel-iterated Runge-Kutta methods for stiff ordinary differential equations
[CWI-NM-R9117] p 1257 N93-17549
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738

PARAMETER IDENTIFICATION
Updating and localizing structural errors based on minimization of equation errors p 1077 N93-15719
The use of inverse frequency response functions for multi degree-of-freedom modal parameter identification with error bounds p 1077 N93-15720
Modal identification of mechanical structures by means of tuned base-motion excitation p 1077 N93-15721
Practical aspects of on-orbit modal identification using free-decay data p 1079 N93-15734
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678

PARAMETERIZATION
On formulations of path-following techniques for structural stability analysis
[LR-676] p 1186 N93-16346
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations
[DE93-003245] p 1217 N93-17572
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

PARITY
Maximal CP violation via Higgs-boson exchange
[DE93-002417] p 1290 N93-17044

PARSING ALGORITHMS
An algorithm for the construction of dependency trees
[MEMO-INF-92-39] p 1240 N93-16668
Generalized LR parsing for general context-free grammars
[CWI-CS-R9153] p 1242 N93-16853
Dynamic parsers, evolving grammars and incremental languages
[PREPRINT-863] p 1243 N93-16998

PARTIAL DIFFERENTIAL EQUATIONS
Automatic differentiation bibliography
[DE92-040599] p 1263 N93-15944
A simple method to generate integrable symplectic maps
[PREPRINT-795] p 1265 N93-16416
On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
C-integrable nonlinear partial differential equations in N + 1 dimensions
[PREPRINT-833] p 1269 N93-16955
Stochastic quantization, stochastic calculus and path integrals: Selected topics
[PREPRINT-837] p 1279 N93-16992
Lie point symmetries and exact solutions of nonlinear differential equations
[PREPRINT-840] p 1269 N93-16994
Symmetry group of partial differential equations and of differential difference equations: The Toda lattice versus the Korteweg-de Vries equation
[PREPRINT-841] p 1270 N93-16995
Integrable nonlinear evolution equations with constraints: 1
[PREPRINT-824] p 1270 N93-17220
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

PARTICLE ACCELERATION
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110

PARTICLE ACCELERATOR TARGETS
Models of high velocity impact phenomena
[DE92-017452] p 1183 N93-15881
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

PARTICLE ACCELERATORS
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
Properties of the superconductor in accelerator dipole magnets
[ISBN-90-9004244-X] p 1280 N93-16573

PARTICLE BEAMS
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708
Reliability of numerical solutions of a diffusion equation modeling RF noise-induced dilution in particle beams
[DE92-040620] p 1296 N93-16022
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
An investigation of coherent quadrupole beam--beam effects
[DE92-041191] p 1297 N93-16527
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362

PARTICLE COLLISIONS
Dynamical approach to pair production from strong fields
[DE92-040224] p 1283 N93-16011
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
Duke University high energy physics
[DE92-040340] p 1296 N93-16180
First results from the SLD silicon calorimeters
[DE93-001805] p 1167 N93-16219
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646
Status of QCD
[PREPRINT-842] p 1298 N93-16996
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374
High energy physics research
[DE93-001793] p 1299 N93-17482

PARTICLE DIFFUSION
Reliability of numerical solutions of a diffusion equation modeling RF noise-induced dilution in particle beams
[DE92-040620] p 1296 N93-16022
Stochastic reaction diffusion equations and interacting particle systems
[PREPRINT-796] p 1265 N93-16417
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362

PARTICLE EMISSION
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Application of multistep compound and multistep direct models for data evaluation
[DE93-000865] p 1285 N93-16304
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464

PARTICLE IN CELL TECHNIQUE
Particle simulation algorithms with short-range forces in MHD and fluid flow
[DE93-000407] p 1306 N93-15670

A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860
[DE93-000460] p 1255 N93-16272

PARTICLE INTERACTIONS
Nuclear structure research
[DE93-000405] p 1285 N93-16239
Stochastic reaction diffusion equations and interacting particle systems
[PREPRINT-796] p 1265 N93-16417
Rotational band structure of intruder configurations: Success and limitations of the Cranked Shell Model
[DE93-001713] p 1288 N93-16972
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes
[PREPRINT-849] p 1290 N93-17069
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185
Research in particle physics
[DE92-041135] p 1293 N93-17475
Experimental studies of elementary particle interactions at high energies
[DE93-003652] p 1294 N93-17575

PARTICLE MASS
The experimental status of neutrino masses and mixings
[DE93-000862] p 1285 N93-16303
Neutrino mass and mixing, and non-accelerator experiments
[DE93-000867] p 1286 N93-16306
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-792] p 1287 N93-16414
Global continuous symmetry and the 17keV neutrino
[PREPRINT-868] p 1288 N93-16966
Solitons on domain walls
[PREPRINT-876] p 1289 N93-16980
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
QCD spectroscopy and phenomenology with improved actions
[PREPRINT-857] p 1106 N93-17015
Meson spectroscopy and decay constants with Wilson fermions at beta = 6.4
[PREPRINT-823] p 1291 N93-17213

PARTICLE MOTION
Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Integrable cellular automata
[PREPRINT-869] p 1269 N93-16967
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
Methods development for electron transport
[AD-A257986] p 1295 N93-17698
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

PARTICLE PRODUCTION
Duke University high energy physics
[DE92-040340] p 1296 N93-16180
B(sub c) production --- pseudoscalar meson
[PREPRINT-806] p 1287 N93-16444
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
CP violation in B(sub C) decays
[PREPRINT-871] p 1288 N93-16977
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399

PARTICLE SIZE DISTRIBUTION
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573

PARTICLE THEORY
Research in particle theory
[DE93-002868] p 1284 N93-16147
BRST field theory of relativistic particles
[NIKHEF-H/92-04] p 1286 N93-16341
On Gupta-Bleuler quantization of systems with second-class constants
[NIKHEF-H/92-05] p 1264 N93-16342
Theoretical particle physics
[DE93-000649] p 1329 N93-16357
Stochastic reaction diffusion equations and interacting particle systems
[PREPRINT-796] p 1265 N93-16417
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487
The first particle: The electron
[NOTA-INTERNA-974] p 1295 N93-17646
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787

PARTICLE TRAJECTORIES
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956

PARTICLES
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542
Wind tunnel seeding particles for laser velocimeter p 1057 N93-16770

PARTICULATE REINFORCED COMPOSITES
The prediction of the overall behavior of viscous composites
[ITN-93-85184] p 1098 N93-16855

PARTICULATES
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
Fluid separator
[NASA-CASE-MFS-28658-1] p 1163 N93-17039
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

PARTITIONS (MATHEMATICS)
Combinatorial and topological phase structure of non-perturbative n-dimensional quantum gravity
[PREPRINT-861] p 1331 N93-17224

PASCAL (PROGRAMMING LANGUAGE)
Automating software design system DESTA p 1250 N93-17519

PASSENGER AIRCRAFT
The design of a long range megatransport aircraft
[NASA-CR-192077] p 1064 N93-17711

PASSIVE SATELLITES
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616

PASSIVITY
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
Passivity and stress corrosion cracking of AISI 316 stainless steel in chloride-containing solutions
[ETN-92-92783] p 1113 N93-16580
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762

PATENTS
Patent write-ups: Patents available for licensing
[AD-A256694] p 1402 N93-16113
Meteor burst communication system
[AD-D015470] p 1139 N93-16466

PATTERN RECOGNITION
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
Adaptive machine vision
[AD-A257363] p 1301 N93-16007
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Fuzzy set methods for object recognition in space applications
[NASA-CR-191778] p 1238 N93-16559
Back propagation neural networks for facial verification
[DE93-001428] p 1260 N93-16604
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659
Investigation and modification of a commercially available tactile sensor suited for robotic applications
[NASA-CR-191833] p 1178 N93-16665
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
A metric for line segments
[CWI-BS-R9126] p 1268 N93-16832
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531

PAULI EXCLUSION PRINCIPLE
Variational derivation of equation for generalized pair correlation function p 1254 N93-16778

PAVEMENTS
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
Unified Airport Design and Analysis Concepts Workshop
[DOT/FAA/RD-92/17] p 1069 N93-16309
State of the art of airport pavement analysis and design p 1070 N93-16310
Development of user guidelines for a three-dimensional finite element pavement model p 1070 N93-16311
Micro mechanical behavior of pavements p 1070 N93-16312
Thermoviscoelastic analysis of pavements p 1070 N93-16313
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314
Federal Aviation Administration pavement modeling p 1071 N93-16315
State of the art review of rutting and cracking inpavements p 1071 N93-16316
Development of a unified airport pavement analysis and design system p 1071 N93-16317
Unified airport pavement design procedure p 1071 N93-16318
Three-dimensional stress analysis of multilayered airport pavements: Integral transform approach p 1072 N93-16319
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708

PAYLOAD INTEGRATION PLAN
Experiment module/support module interface specification for the reusable reentry satellite
[NASA-CR-187885] p 1086 N93-15805

PAYLOAD STATIONS
A process for prototyping onboard payload displays for Space Station Freedom p 1073 N93-17315

PAYLOADS
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
Outline for reusable reentry satellite system specification, volumes 1 - volume 9
[NASA-CR-185958] p 1086 N93-15791
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672
National Aeronautics and Space Administration p 1358 N93-17091
Lunar surface rovers p 1390 N93-17262
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316
Reliability evaluation methodology for NASA applications p 1182 N93-17328
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780

PELLETS
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602

PENETRATION
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
Weld pool oscillation during gas tungsten arc welding
[ETN-92-92796] p 1177 N93-16568

PENETROMETERS
A lunar penetrator to determine solar-wind-implanted resources at depth in the lunar regolith
p 1386 N93-17239
PERFORATED PLATES
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215
PERFORMANCE PREDICTION
MGMtool: A performance modelling tool based on matrix geometric techniques
[MEMO-INF-92-35] p 1236 N93-16338
Accurate and efficient layout extraction
[ISBN-90-9004806-5] p 1147 N93-16499
Interim report on the analysis of the microwave power module
[NASA-TM-105908] p 1148 N93-16713
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800
PERFORMANCE TESTS
Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
TELECOM 2 deployable reflectors
p 1082 N93-15761
Solar thermal electric and biomass power: Program overviews, fiscal years 1990-1991
[DE92-010582] p 1193 N93-15850
ExperCAT case studies
[AD-A256177] p 1211 N93-15871
Evaluation of fast ADC's
[DE92-040582] p 1145 N93-16013
Single and cross hot wire anemometry in incompressible flow
[LR-663] p 1167 N93-16280
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Scalable problems and memory bounded speedup
[NASA-CR-189726] p 1230 N93-16554
Automated Weather Observing System (AWOS) Data Acquisition System (ADAS) Operational Test and Evaluation (OT/E) integration and OT/E operational test plan
[DOT/FAA/CT-TN90/65] p 1214 N93-16631
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Networking electrochemical membrane separation devices: Theory and application
[DE93-001381] p 1106 N93-17066
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
Test and integration concept for complex helicopter avionic systems
[MBB-UD-0605-91-PUB] p 1065 N93-17547
Integrated helmet system testing for a nightflying helicopter
[MBB-UD-0604-91-PUB] p 1065 N93-17570
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003358] p 1198 N93-17574
Study of an adaptive maintenance strategy for logic systems
[ETN-92-92673] p 1252 N93-17640
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter
[AD-A257694] p 1141 N93-17689
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730
PERIODIC VARIATIONS
The central engine of AGN's and its cosmological evolution
p 1372 N93-17138
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
PERMANENT MAGNETS
Design of a compact application-oriented free-electron laser
[DE92-040391] p 1172 N93-16183
PERSIAN GULF
Energy technology evaluation report: Energy security
[DE93-001830] p 1194 N93-16046
PERSONAL COMPUTERS
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
PERSONNEL DEVELOPMENT
Desktop Computing Integration Project
p 1254 N93-16795
PERSONNEL MANAGEMENT
Total quality management: Strengths and barriers to implementation and cultural adaptation
p 1182 N93-16788
Some effects of time usage patterns on the productivity of engineers p 1343 N93-17301
Neural network applications: A literature review
[AD-A258148] p 1262 N93-17797
PERTURBATION
Minimum eigenvalue separation
[AD-A256570] p 1262 N93-15848
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Adaptation to transient postural perturbations
[NASA-CR-190959] p 1227 N93-16699
PERTURBATION THEORY
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
Study of precision accelerometers and fractal aggregates in microgravity
[CTN-93-60622] p 1168 N93-16935
Interacting Euclidean three-dimensional quantum gravity
[PREPRINT-867] p 1330 N93-16965
On the stability of a stringy black hole
[PREPRINT-879] p 1365 N93-16983
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568
PESTICIDES
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
PETRI NETS
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
Utilizing semantic networks to database and retrieve generalized stochastic colored Petri nets
[NASA-CR-191853] p 1355 N93-16707
TokenPasser: A petri net specification tool
[NASA-CR-191816] p 1241 N93-16725
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738
PHARMACOLOGY
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041
PHASE DIAGRAMS
The titanium-aluminum phase diagram: A review of the near Ti-50 at. pct. Al phase fields
[AD-A255685] p 1112 N93-16299
The direct Monte Carlo method for calculating alloy phases
[DE93-000436] p 1113 N93-16450
First-principles studies of phase stability and the structural and dynamical properties of metal hydrides
[DE92-040855] p 1104 N93-16589
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204
Phase diagram by frustrated vortices in Potts models
[ROM1F-92-860] p 1281 N93-17217
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
PHASE SEPARATION (MATERIALS)
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
Nucleation, crystal growth, and liquid/liquid phase separation in materials in microgravity, phase 3
[CTN-93-60612] p 1131 N93-16493
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses and glassy-metals, phase 1
[CTN-93-60630] p 1133 N93-16918
Electronic structure and phase separation in superconducting cuprates
[PREPRINT-889] p 1323 N93-17025
PHASE SHIFT
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
PHASE STABILITY (MATERIALS)
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062
PHASE TRANSFORMATIONS
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Phase behavior of Au and Pt surfaces
[DE92-041021] p 1112 N93-16203
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391
Au(111) and Pt(111) surface phase behavior
[DE92-040881] p 1321 N93-16598
Supersymmetry in spin glass dynamics
[PREPRINT-843] p 1279 N93-16957
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
PHASED ARRAYS
Broadband quadrifilar phased array helix
[AD-D015506] p 1139 N93-16519
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616
PHENOLIC RESINS
Thermostructural responses of carbon phenolics in a restrained thermal growth test p 1128 N93-17333
PHENOMENOLOGY
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372
PHENYLS
X ray crystal structure of an organoindium alkoxide dimer, (Ph2InOSiMe3)2
[AD-A257404] p 1315 N93-15862
PHOBOS
The Prospector mission
[DE93-000656] p 1385 N93-17194
PHOSPHINES
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
PHOSPHORIC ACID FUEL CELLS
Advanced water-cooled phosphoric acid fuel cell development
[DE93-000215] p 1197 N93-17008
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003358] p 1198 N93-17574
PHOSPHORUS
Conduction in ion implanted single crystal diamond
[DE92-040861] p 1317 N93-16164
PHOTOACOUSTIC SPECTROSCOPY
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264

PHOTOCATHODES
Possible application of transient electromagnetic pulses to high brightness e-guns
[DE92-040360] p 1138 N93-16100
Theoretical and experimental studies in accelerator physics
[DE92-040333] p 1296 N93-16110
PHOTOCHEMICAL REACTIONS
Proceedings of the Sixteenth DOE Solar Photochemistry Research Conference
[DE93-001760] p 1193 N93-15899
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356
Reaction kinetics and product distributions in photoelectrochemical cells
[DE93-003885] p 1198 N93-17471
Fundamental studies of passivity and passivity breakdown
[DE93-002747] p 1108 N93-17762
PHOTOCONDUCTIVITY
Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585
PHOTODETACHMENT
Correlation in photodetachment
[DE93-001843] p 1291 N93-17078
PHOTOELECTRIC EMISSION
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
Collective excitations photoemission spectra and optical gaps in strongly correlated Fermi systems
[PREPRINT-881] p 1289 N93-17017
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651
PHOTOELECTROCHEMICAL DEVICES
Reaction kinetics and product distributions in photoelectrochemical cells
[DE93-003885] p 1198 N93-17471
PHOTOELECTROCHEMISTRY
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
Proceedings of the Sixteenth DOE Solar Photochemistry Research Conference
[DE93-001760] p 1193 N93-15899
PHOTOELECTRONS
Design of a compact application-oriented free-electron laser
[DE92-040391] p 1172 N93-16183
PHOTOIONIZATION
Correlation in photodetachment
[DE93-001843] p 1291 N93-17078
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
PHOTOLUMINESCENCE
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349
PHOTOLYSIS
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
PHOTOMAPPING
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
PHOTOMETERS
Enhanced polarization-dependent coupling between an optical waveguide and laterally coupled photodetector
[MBB-Z-0338-90-PUB] p 1305 N93-17642
PHOTOMULTIPLIER TUBES
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Milagro: A low energy threshold extensive air shower array
[DE93-000852] p 1400 N93-17383
PHOTONICS
Integrated test and package methods for integrated photonics
[DE93-000748] p 1145 N93-16230
PHOTONS
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483
PHOTOPRODUCTION
Experimental studies of elementary particle interactions at high energies
[DE93-003652] p 1294 N93-17575
PHOTOSYNTHESIS
Proceedings of the Sixteenth DOE Solar Photochemistry Research Conference
[DE93-001760] p 1193 N93-15899
LEAF research
[BCRS-91-16] p 1192 N93-17053
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers
[DE92-041130] p 1129 N93-17459
PHOTOTHERMAL CONVERSION
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553
PHOTOVOLTAIC CELLS
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Development of a commercial photovoltaic concentrator module
[DE93-002594] p 1196 N93-16655
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
PHOTOVOLTAIC CONVERSION
Development of a commercial photovoltaic concentrator module
[DE93-002594] p 1196 N93-16655
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Enabling lunar and space missions by laser power transmission p 1393 N93-17423
PHYSICAL EXERCISE
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805
PHYSICAL FITNESS
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
PHYSICAL OPTICS
Large orbit gyroklystron development at Los Alamos
[DE92-040370] p 1144 N93-15938
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
Design of dispersion section for the ATF harmonic generation FEL
[DE93-001655] p 1174 N93-16970
Inverse Free Electron Laser accelerator
[DE93-001963] p 1175 N93-17654
PHYSIOLOGICAL RESPONSES
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
PHYSIOLOGY
Biomedical Polar Research Workshop Minutes
[NASA-TM-108026] p 1221 N93-16799
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
PIEZOELECTRIC CERAMICS
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
PIEZOELECTRIC CRYSTALS
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
PIEZOELECTRICITY
IR materials producibility
[AD-A257695] p 1305 N93-17691
PILOT PERFORMANCE
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
[AD-A256921] p 1060 N93-16186
Simulator motion
[AD-A257683] p 1072 N93-17687
PILOT PLANTS
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
Eleventh Annual Conference on Alcohol and Biomass Energy Technologies
[DE93-716346] p 1194 N93-15952
PILOT TRAINING
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189
PINNING
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699
PINS
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609
PIONS
Theory working group: Summary of the results
[PREPRINT-803] p 1297 N93-16423
Mixing of vector and axial correlators at finite volume: Implications for lattice computations
[PREPRINT-804] p 1287 N93-16424
Evidence for the dominance of an I(sup G)J(sup PC) = 0(+)0(++) resonance in p(bar)n decay to 2 pi(+) [PREPRINT-885] p 1290 N93-17021
Evidence of an I(sup G)J(sup PC) = O(+)O(++) resonance at 1.39 GeV/sq c and confutation of the zeta(1480) in a reanalysis of the p(bar)n decay to 2 pi(+)-3 pi(-) annihilation at rest
[PREPRINT-826] p 1291 N93-17222
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
PIPE FLOW
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604
PIPELINING (COMPUTERS)
A pipelined, high-precision FFT architecture
[AD-A257235] p 1263 N93-15969
PITCHING MOMENTS
Pitch control margin at high angle of attack-quantitative requirements (flight test correlation with simulation predictions)
[AD-A257418] p 1068 N93-16009
PITTING
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122
PIVOTS
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
PIXELS
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512
Displaying a color picture using a small number of colors
[ITN-93-85175] p 1242 N93-16739
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726
PLANE STRAIN
Some aspects for the application of a hierarchic family of Herrmann mixed compressible and incompressible finite elements p 1077 N93-15723
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
PLANE STRESS
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188

PLANE WAVES
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837
PLANETARY ATMOSPHERES
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
PLANETARY BASES
Earth-based analogs of lunar and planetary facilities
p 1396 N93-17441
PLANETARY BOUNDARY LAYER
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
PLANETARY EVOLUTION
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene
p 1209 N93-17093
PLANETARY GEOLOGY
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138
The Prospector mission
[DE93-000656] p 1385 N93-17194
PLANETARY MAPPING
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092
The Prospector mission
[DE93-000656] p 1385 N93-17194
PLANETARY NEBULAE
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829
PLANT STRESS
LEAF research
[BCRS-91-16] p 1192 N93-17053
PLANTING
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663
PLANTS (BOTANY)
Rangeland: Plant responses to elevated CO2
[DE93-000883] p 1203 N93-17178
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197
PLASMA ACCELERATORS
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923
Experimental observations of anomalous potential drops over ion density cavities
[TRITA-EPP-91-04] p 1312 N93-17637
PLASMA ANTENNAS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
PLASMA ARC WELDING
The variable polarity plasma arc welding process: Mathematical model of welding system
[NASA-CR-191430] p 1177 N93-16452
Heat flow in variable polarity plasma arc welds
p 1181 N93-17280
PLASMA CLOUDS
CRRES: The combined release and radiation effects satellite program directory
[NASA-CR-184504] p 1076 N93-15713
PLASMA COMPOSITION
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037
PLASMA CONTROL
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
Physics of the L-mode to H-mode transition in tokamaks
[DE92-040697] p 1306 N93-15827
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
The 3D MHD study of helias and heliotron
[AD-A257116] p 1307 N93-16123
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
High beta and second stability region transport and stability analysis
[DE93-000886] p 1310 N93-16534
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
New D3-D tokamak plasma control system
[DE93-000877] p 1312 N93-17388
PLASMA CURRENTS
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985
PLASMA DENSITY
Experimental evidence of off-diagonal transport term and the discrepancy between energy/particle balance and perturbation analyses
[DE92-556732] p 1309 N93-16237
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields
p 1152 N93-17317
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319
Studies of the charging of a thin dust layer in a plasma p 1313 N93-17320
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
PLASMA DIAGNOSTICS
Recent diagnostic development for the Los Alamos Inertial Fusion Program
[DE92-040362] p 1306 N93-15849
Measurement of impurity ion densities and energies in the divertor and edge regions of Alcator C-Mod tokamak
[DE92-040510] p 1307 N93-15922
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
PLASMA DIFFUSION
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
PLASMA DRIFT
Toroidal effects on drift wave turbulence
[DE93-000498] p 1306 N93-15672
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
PLASMA DYNAMICS
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
Correlation theory of a two-dimensional plasma turbulence with shear flow
[DE93-000880] p 1309 N93-16308
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
PLASMA EQUILIBRIUM
The 3D MHD study of helias and heliotron
[AD-A257116] p 1307 N93-16123
High beta and second stability region transport and stability analysis
[DE93-000886] p 1310 N93-16534
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
PLASMA HEATING
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
Enhancement of D3-D neutral beam system for higher performance
[DE93-000878] p 1309 N93-16307
PLASMA INTERACTIONS
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
PLASMA JETS
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705
PLASMA LAYERS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536
PLASMA OSCILLATIONS
Theoretical reversed field pinch and tokamak studies
[DE93-002775] p 1312 N93-17085
PLASMA PHYSICS
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
Preliminary observations of electromagnetic radiation from plasma in presence of a double layer
[TRITA-EPP-91-02] p 1312 N93-17636
Experimental observations of anomalous potential drops over ion density cavities
[TRITA-EPP-91-04] p 1312 N93-17637
Physics of the aurora
[TRITA-EPP-91-06] p 1376 N93-17639
Stability of weak double layers
[TRITA-EPP-91-01] p 1313 N93-17649
PLASMA POTENTIALS
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
PLASMA PROBES
Preliminary observations of electromagnetic radiation from plasma in presence of a double layer
[TRITA-EPP-91-02] p 1312 N93-17636
PLASMA PROPULSION
Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626
Electric propulsion p 1095 N93-16916
PLASMA RESONANCE
Study of an orbital accelerator for ion implantation and of protective coatings for materials
[CTN-93-60614] p 1298 N93-16546
PLASMA SHEATHS
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253
PLASMA SPRAYING
Diagnostic behavior of the Wire Arc Plasma spray process
[DE93-000717] p 1308 N93-16229
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
PLASMA TEMPERATURE
Toroidal effects on drift wave turbulence
[DE93-000498] p 1306 N93-15672

Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091

PLASMA TURBULENCE
Toroidal effects on drift wave turbulence
[DE93-000498] p 1306 N93-15672
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
Correlation theory of a two-dimensional plasma turbulence with shear flow
[DE93-000880] p 1309 N93-16308
Theoretical reversed field pinch and tokamak studies
[DE93-002775] p 1312 N93-17085

PLASMA WAVES
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319
Stability of weak double layers
[TRITA-EPP-91-01] p 1313 N93-17649

PLASMAS (PHYSICS)
Multi-ion ambipolar diffusion
[AD-A256568] p 1283 N93-15659
Duke University high energy physics
[DE92-040340] p 1296 N93-16180
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
JT-60 configuration parameters for feedback control determined by regression analysis
[DE92-556731] p 1310 N93-16650
The kappa distribution as a variational solution for an infinite plasma p 1313 N93-17319
Force-free time-harmonic plasmoids
[AD-A257765] p 1313 N93-17673

PLASMASPHERE
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields p 1152 N93-17317

PLASMONS
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503

PLASTIC AIRCRAFT STRUCTURES
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562

PLASTICS
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
Compatibility of refrigerants and lubricants with engineering plastics
[DE93-000541] p 1128 N93-17807

PLATES (STRUCTURAL MEMBERS)
Power flow finite element analysis for beams and plates p 1083 N93-15765
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
Beam, plate, and shell finite elements for CSI design code p 1189 N93-16782

PLATES (TECTONICS)
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938

PLATINUM
Phase behavior of Au and Pt surfaces
[DE92-041021] p 1112 N93-16203
Crystallography of Co/Pt multilayers and nanostructures
[DE92-041212] p 1320 N93-16449
Au(111) and Pt(111) surface phase behavior
[DE92-040881] p 1321 N93-16598
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623

PLUMES
The AlCl absorption feature in solid rocket plume radiation
[AD-A256645] p 1089 N93-15700
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Turbulence modeling and experiments p 1153 N93-15796
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Neural network architectures to analyze OPAD data p 1262 N93-17336
Semi-propellants for ducted rockets p 1092 N93-17612

PLUTONIUM
Processes for metal extraction p 1382 N93-16893

PNEUMATIC CONTROL
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157

POINCARE PROBLEM
From the rotation group to the Poincare group
[DE93-000864] p 1279 N93-17386

POINT DEFECTS
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951

POINT SOURCES
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837

POINTING CONTROL SYSTEMS
A systematic approach for the DRSS IOL APM design p 1081 N93-15753
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658

POISSON DENSITY FUNCTIONS
Queueing systems on a circle
[MEMO-1038] p 1276 N93-16670
An M/G/1 queue with dependence between interarrival and service times
[CWI-BS-R9125] p 1276 N93-16849
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692

POLAR REGIONS
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Biomedical Polar Research Workshop Minutes
[NASA-TM-108026] p 1221 N93-16799
A lunar polar expedition p 1395 N93-17433

POLARIMETRY
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130

POLARITY
The variable polarity plasma arc welding process: Mathematical model of welding system
[NASA-CR-191430] p 1177 N93-16452

POLARIZATION (CHARGE SEPARATION)
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356

POLARIZATION (WAVES)
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679

POLARIZATION CHARACTERISTICS
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
The b quark polarization at LEP
[PREPRINT-886] p 1290 N93-17022

POLARIZED LIGHT
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458

POLARIZED RADIATION
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651

POLARONS
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177

POLICIES
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089
A post cold war assessment of US space policy p 1073 N93-17218

POLITICS
A post cold war assessment of US space policy p 1073 N93-17218

POLLUTION CONTROL
Environmental Quality Information Analysis Center (EQIAC) operating procedures handbook
[DE92-041391] p 1201 N93-16271
A low emission vehicle procurement approach for Washington state
[DE92-040561] p 1176 N93-16406
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367
Global environmental security: Research and policy strategies for the 1990s
[DE92-040095] p 1204 N93-17474

POLLUTION MONITORING
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Detection of greenhouse-gas-induced climatic change
[DE93-003149] p 1205 N93-17532

POLLUTION TRANSPORT
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230

POLONIUM 210
Radon as a tracer for lunar volatiles p 1388 N93-17248

POLYATOMIC MOLECULES
Prediction of nonlinear optical properties of large organic molecules p 1128 N93-17288

POLYCARBONATES
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498

POLYCRYSTALS
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342

POLYESTERS
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095

POLYETHYLENES
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

POLYHEDRONS
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961

POLYIMIDES
Understanding crystallinity in aromatic polyimides p 1128 N93-16764

POLYMER BLENDS
Application of grazing incidence x ray diffraction to polymer blends
[DE93-000709] p 1122 N93-16228

Morphology, properties, and stability of thermoplastic polymer blends
[ETN-92-92791] p 1124 N93-16491

POLYMER CHEMISTRY
Mechanical properties of structural polymers. Computer simulations and key experiments
[AD-A257439] p 1119 N93-15866
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
Understanding crystallinity in aromatic polyimides p 1128 N93-16764
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition
[DE93-001835] p 1127 N93-17529
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657

POLYMER MATRIX COMPOSITES
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
A laser spectroscopy technique for evaluating in-situ degradation of composite materials
[AD-A256983] p 1097 N93-16255
The Airbus floor beam: Towards a cost-effective composite design and manufacture research project sponsored by Airbus industry
[LR-677] p 1061 N93-16283
Nonlinear optical composites of metal cluster laden polymers
[AD-D015396] p 1123 N93-16398
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
Space environmental effects on polymers and composites p 1128 N93-17302

POLYMERIC FILMS
Polyurethane self-priming topcoats
[AD-D015477] p 1124 N93-16484
High energy and high power density ultracapacitors and supercapacitors
[NASA-CASE-NPO-18568-1-CU] p 1149 N93-17274
Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349

POLYMERIZATION
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623

POLYMERS
Combined small-angle neutron and x ray scattering studies of polymers
[DE93-000440] p 1118 N93-15671
Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919

POLYNOMIALS
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593
A rewrite approach to polynomial ideal theory
[CWI-CS-R9160] p 1271 N93-17536

POLYSILANES
Thermal isomerization and decomposition of ethynyldisilanes
[DE92-040578] p 1102 N93-16012

POLYSTYRENE
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498

POLYSULFIDES
The electrical conductivity of sodium polysulfide melts
[DE92-041217] p 1100 N93-15677

POLYTOPES
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677

POLYURETHANE RESINS
Polyurethane self-priming topcoats
[AD-D015477] p 1124 N93-16484

POMERANCHUK THEOREM
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231

POROSITY
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930

POROUS BOUNDARY LAYER CONTROL
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736

POROUS MATERIALS
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Fundamental studies of fluid mechanics and stability in porous media
[DE93-002519] p 1163 N93-17046
Computing brine transport in porous media with an adaptive-grid method
[CWI-NM-R9201] p 1163 N93-17534
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736

PORPHYRINS
Supramolecular structures modeling photosynthetic reaction center function
[DE92-041123] p 1106 N93-17356

PORTABLE EQUIPMENT
An agile frequency synthesizer/RF generator for the SCAMP terminal
[AD-A256777] p 1137 N93-16052
Portable radar simulator
[AD-D015453] p 1139 N93-16459

POSEIDON SATELLITE
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758

POSITION (LOCATION)
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209

POSITION ERRORS
DME-derived positions compared with MLS- and ILS-derived positions
[NLR-TP-90119-U] p 1058 N93-16343
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481

POSITIONING
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664

POSITRON ANNIHILATION
Status of QCD
[PREPRINT-842] p 1298 N93-16996
Investigation of neutrino properties in the process e(+)e(-) decay to nu-nu(bar)-gamma
[PREPRINT-887] p 1290 N93-17023
Research in particle physics
[DE92-041135] p 1293 N93-17475
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600

POSITRONIUM
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600

POSITRONS
Non-invasive evaluation of the cardiac autonomic nervous system by PET
[DE92-041077] p 1225 N93-16441
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600

POSTURE
Adaptation to transient postural perturbations
[NASA-CR-190959] p 1227 N93-16699

POTASSIUM COMPOUNDS
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347

POTENTIAL ENERGY
Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372
Computed Potential Energy Surfaces for Chemical Reactions
[NASA-CR-191804] p 1107 N93-17407
Theoretical characterization of the reaction CH3 +OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels p 1107 N93-17408
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409

POTENTIAL FLOW
Streamwise computation of a circular-to-rectangular transition duct potential flow field
[NIAR-92-17] p 1159 N93-16628

POTENTIAL THEORY
Current European rotorcraft research activities on development of advanced CFD methods for the design of rotor blades (BRITE/EURAM DACRO project)
[MBB-UD-0601-91-PUB] p 1057 N93-17568

POWDER (PARTICLES)
Dynamic fabrication of diamond thermal management substrates
[AD-A257213] p 1118 N93-15814
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Strengthening of NiAl matrix composites
[AD-A256970] p 1097 N93-16252
Device for applying powder coatings
[AD-A256917] p 1124 N93-16501
The hydrothermal synthesis of ceramic powders
[ETN-92-92785] p 1125 N93-16607
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925

POWDERED ALUMINUM
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913

POWER BEAMING
Beamed energy propulsion p 1095 N93-16917

POWER LINES
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380

POWER SPECTRA
Passive scalar fluctuations in intermittent turbulence
[PREPRINT-779] p 1159 N93-16575
Power spectrum modelling of the x ray variability of NGC4051 p 1367 N93-17108

POWER SUPPLIES
Enabling lunar and space missions by laser power transmission p 1393 N93-17423

POWER TRANSMISSION
Multimegawatt dynamic NEP PMAD study
[NASA-CR-190764] p 1091 N93-16626
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007

PRANDTL NUMBER
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604

PRASEODYMIUM COMPOUNDS
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218

PREAMPLIFIERS
Electronic still camera
[NASA-CASE-MSC-21797-1] p 1169 N93-17076

PRECIPITATION (CHEMISTRY)
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197

PRECIPITATION (METEOROLOGY)
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170

The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data
[DE92-041261] p 1205 N93-17496

PRECIPITATION HARDENING
Characterization of Al 2219 material for the application of the spin-forming-process p 1081 N93-15755

PRECISION
Adaptive structures for precision controlled large space systems p 1078 N93-15730

PRECONDITIONING
Preconditioned time-difference methods for solving advective-diffusive systems
[DE92-014790] p 1262 N93-15879

PREDICTION ANALYSIS TECHNIQUES
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Damage mechanics modelisation of composite structures: A physical approach of failure p 1079 N93-15741
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744

PREDICTIONS
Role of combined numerical and experimental investigations in the justification of the structural integrity and damage tolerance of space structures p 1080 N93-15744
Acoustic tests structural predictions p 1081 N93-15750
Testing and characterisation of metallic materials for structural analysis of high temperature components p 1082 N93-15757
Residual stresses in welds and effect on crack growth prediction p 1082 N93-15758
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638
The use of cross-section warping functions in composite rotor blade analysis
[NASA-CR-191772] p 1186 N93-16946
Prediction of nonlinear optical properties of large organic molecules p 1128 N93-17288
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586

PREDICTOR-CORRECTOR METHODS
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Parallel step-by-step methods
[CWI-NM-R9116] p 1256 N93-17545

PREFLIGHT ANALYSIS
Ground test validation for precision structures p 1085 N93-15785

PREFORMS
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

PRELAUNCH TESTS
Service module structure of ISO spacecraft testing and design qualification p 1080 N93-15747
Sunshade support structure: Structure and testing p 1080 N93-15748
TELECOM 2 deployable reflectors p 1082 N93-15761

PREMIXED FLAMES
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931

PREPARATION
Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473

PREPROCESSING
PDDP: A Parallel Data Distribution Preprocessor
[DE92-040400] p 1256 N93-17207
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586

PRESIDENTIAL REPORTS
Report to the President on the US space program
[ISBN-0-16-041608-6] p 1073 N93-16950

PRESSURE DISTRIBUTION
Acoustic tests structural predictions p 1081 N93-15750
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
An introduction to the rubber forming of thermoplastic composites
[LR-683] p 1122 N93-16212
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797

PRESSURE EFFECTS
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055

PRESSURE GAGES
Independent verification of tank volume measurements by pressure-volume authentication
[DE92-040680] p 1166 N93-15665
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

PRESSURE GRADIENTS
Cosmic ray NM-64 neutron monitor data-18
[NOTA-INTERNA-972] p 1400 N93-17627

PRESSURE MEASUREMENT
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979

PRESSURE OSCILLATIONS
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614

PRESSURE PULSES
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942

PRESSURE RECOVERY
Comparison of performances of different circular intakes p 1067 N93-17616

PRESSURE REDUCTION
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018

PRESSURE SENSORS
Independent verification of tank volume measurements by pressure-volume authentication
[DE92-040680] p 1166 N93-15665
An interferometer having fused optical fibers, and apparatus and method using the interferometer
[NASA-CASE-LAR-14640-1-CU] p 1304 N93-17052
Cosmic ray NM-64 neutron monitor data-18
[NOTA-INTERNA-972] p 1400 N93-17627

PRESSURE VESSELS
Static-stress analysis of dual-axis safety vessel
[DE93-001860] p 1187 N93-17366
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497

PRINTED CIRCUITS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675
PCB tester selection for future systems, volume 1
[AD-A256256] p 1065 N93-16088
PCB tester selection for future systems, volume 2
[AD-A256252] p 1065 N93-16595
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608

PROBABILITY DENSITY FUNCTIONS
Multidimensional strong large deviation theorems
[AD-A256939] p 1263 N93-16129
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734

PROBABILITY DISTRIBUTION FUNCTIONS
Clustering properties of x ray sources from the analysis of the Ginga P(D) distribution p 1374 N93-17150

PROBABILITY THEORY
PDF turbulence modeling and DNS p 1153 N93-15794
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Queueing systems on a circle
[MEMO-1038] p 1276 N93-16670

PROBLEM SOLVING
Increasingly automated procedure acquisition in dynamic systems
[NASA-TM-108112] p 1241 N93-16684
The KASE approach to domain-specific software systems p 1247 N93-17502
A rewrite approach to polynomial ideal theory
[CWI-CS-R9160] p 1271 N93-17536
On solving the Diophantine equation (x cubed) + (y cubed) + (z cubed) = k on a vector computer
[CWI-NM-R9121] p 1271 N93-17556
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791

PROCEDURES
The effects of procedural structure and computer support upon selecting a tactical course of action
[AD-A257254] p 1350 N93-15806

PROCESS CONTROL (INDUSTRY)
The IEEE-488 interface to Paragon 500 process control software
[DE92-001289] p 1235 N93-16109
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001231] p 1195 N93-16135
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
Device for applying powder coatings
[AD-A256917] p 1124 N93-16501
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772

PRODUCT DEVELOPMENT
The railplug: Development of a new ignitor for internal combustion engines
[DE93-003068] p 1176 N93-16178
Automated support for experience-based software management p 1244 N93-17164
Toward full life cycle control: Adding maintenance measurement to the SEL p 1245 N93-17170
Software Engineering Laboratory Ada performance study: Results and implications p 1245 N93-17172
Bipolar current sources for the correction magnets of AmPS
[DIGEL-1992-2-REV] p 1150 N93-17393

PRODUCTION COSTS
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
An improved classification tree analysis of high cost modules based upon an axiomatic definition of complexity p 1244 N93-17167

PRODUCTION ENGINEERING
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325

PRODUCTION MANAGEMENT
Annual report
[NASA-CR-191389] p 1228 N93-16840

PRODUCTION PLANNING
CAD/CAM for assembly planning
[ISBN-90-370-0057-6] p 1246 N93-17490

PRODUCTIVITY
Total quality management: Strengths and barriers to implementation and cultural adaptation p 1182 N93-16788
Some effects of time usage patterns on the productivity of engineers p 1343 N93-17301

PROGRAM VERIFICATION (COMPUTERS)
Software measures and the capability maturity model
[AD-A257238] p 1234 N93-15962
Aspect: A formal specification language for detecting bugs
[AD-A256797] p 1234 N93-16056
Verification of the computer programs SLAAP and DATA
[DE93-002597] p 1243 N93-16987
SEDS1 mission software verification using a signal simulator p 1254 N93-17321
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745
PROGRAMMING ENVIRONMENTS
Software engineering laboratory series: Annotated bibliography of software engineering laboratory literature
[NASA-TM-108100] p 1237 N93-16380
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Creating an open environment software infrastructure p 1254 N93-16774
Collected Software Engineering Papers, Volume 10
[NASA-TM-108581] p 1243 N93-17161
The Software Engineering Laboratory: An operational software experience factory p 1243 N93-17162
Automated support for experience-based software management p 1244 N93-17164
A classification procedure for the effective management of changes during the maintenance process p 1245 N93-17169
Toward full life cycle control: Adding maintenance measurement to the SEL p 1245 N93-17170
Object-oriented programming with mixins in Ada p 1245 N93-17171
Software Engineering Laboratory Ada performance study: Results and implications p 1245 N93-17172
Working Notes from the 1992 AAAI Workshop on Automating Software Design. Theme: Domain Specific Software Design
[NASA-TM-108123] p 1246 N93-17499
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
The KASE approach to domain-specific software systems p 1247 N93-17502
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
Description of research interests and current work related to automating software design p 1249 N93-17515
Automating software design system DESTA p 1250 N93-17519
Generic domain models in software engineering p 1250 N93-17520
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
PROGRAMMING LANGUAGES
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
The design of the AIE: An object-oriented application development system
[DE92-041098] p 1234 N93-15929
Aspect: A formal specification language for detecting bugs
[AD-A256797] p 1234 N93-16056
Report on the FX-91 programming language
[AD-A256798] p 1234 N93-16057
A module system for a programming language based on the LF logical framework
[AD-A256731] p 1235 N93-16069
An overview of MANIFOLD and its implementation
[CWI-CS-R9142] p 1236 N93-16365
Advanced parallel systems
[AD-A256958] p 1255 N93-16434
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
Dynamic parsers, evolving grammars and incremental languages
[PREPRINT-863] p 1243 N93-16998
Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504
Model-based software design p 1249 N93-17514
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526
On the borderline between grammars and programs
[TR-91-17] p 1252 N93-17594
PROGRAMS
ROMPS critical design review. Volume 3: Furnace module design documentation
[NASA-CR-191615] p 1237 N93-16440
PROGRESS
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
PROJECT MANAGEMENT
Space transfer vehicle concepts and requirements. Volume 3: Program cost estimates
[NASA-CR-184491] p 1076 N93-16688
The future of management: The NASA paradigm p 1350 N93-16859
Strategies for broadening public involvement in space developments p 1349 N93-16861
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Systems engineering process and organization assessment p 1340 N93-17281
Evaluation and recommendations for work group integration within the Materials and Processes Lab p 1341 N93-17293
Some effects of time usage patterns on the productivity of engineers p 1343 N93-17301
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672
PROJECT PLANNING
DOE Headquarters MHD/fuel cell support contract
[DE92-040257] p 1194 N93-15935
Tradeoffs in the utility of learned knowledge
[NASA-TM-108111] p 1242 N93-16750
Baseline program p 1379 N93-16871
Environmental restoration program control management system
[DE93-000469] p 1203 N93-17011
Operational considerations for lunar transportation p 1392 N93-17418
Exodus: Prime Mover
[NASA-CR-192051] p 1064 N93-17803
PROJECT SETI
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191807] p 1230 N93-16709
PROJECTILES
Numerical and experimental studies of high-velocity impact fragmentation
[DE92-041145] p 1183 N93-15972
Impact on ceramic faced armour
[ETN-92-92797] p 1124 N93-16569
Interactive hyperbolic grid generation for projectile CFD
[BRL-MR-3971] p 1240 N93-16620
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Ramjet propulsion for advanced projectiles p 1067 N93-17615
PROJECTIVE GEOMETRY
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961
PROLOG (PROGRAMMING LANGUAGE)
Compiling Prolog to standard ML: Some optimizations
[AD-A256193] p 1232 N93-15841
Implementing higher-order algebraic specifications
[CWI-CS-R9150] p 1265 N93-16368
PROPAGATION MODES
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721
PROPELLANT COMBUSTION
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Liquid oxygen/metal gelled monopropellants
[NASA-CR-187193] p 1130 N93-17795
PROPELLANT PROPERTIES
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
PROPELLANT STORAGE
Developing a safe on-orbit cryogenic depot p 1393 N93-17426
PROPELLANT TANKS
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
PROPELLANTS
Potential missile flight performance gains from improvements to the propulsion system p 1092 N93-17609
PROPORTIONAL CONTROL
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067
PROPORTIONAL COUNTERS
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
A deep ROSAT observation of the highly variable AGN 1E1403+5439 or ROSAT non-detection of the weak AGN 1E1403+5439 p 1361 N93-17122
Where have all the sources gone? p 1373 N93-17144
ROSAT deep surveys p 1362 N93-17145
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
PROPULSION
Tethers p 1089 N93-16915
PROPULSION SYSTEM CONFIGURATIONS
Advanced hybrid nuclear propulsion Mars mission performance enhancement
[DE93-001309] p 1090 N93-16177
Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720
Electric propulsion p 1095 N93-16916
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems p 1074 N93-17290
Hybrid rocket performance p 1095 N93-17295
Modeling for health monitoring and control with applications to the Space Transportation Main Engine p 1095 N93-17298
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
Development testing of throttleable ducted rockets p 1092 N93-17610
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 1092 N93-17611
Ramjet propulsion for advanced projectiles p 1067 N93-17615
Smaller expendable turbojets p 1067 N93-17621
PROPULSION SYSTEM PERFORMANCE
Advanced hybrid nuclear propulsion Mars mission performance enhancement
[DE93-001309] p 1090 N93-16177
System model development for nuclear thermal propulsion
[NASA-TM-108157] p 1298 N93-16531
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
Electric propulsion p 1095 N93-16916
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems p 1074 N93-17290
Hybrid rocket performance p 1095 N93-17295
Modeling for health monitoring and control with applications to the Space Transportation Main Engine p 1095 N93-17298
System model development for nuclear thermal propulsion
[NASA-TM-108215] p 1299 N93-17343
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Potential missile flight performance gains from improvements to the propulsion system p 1092 N93-17609
Development testing of throttleable ducted rockets p 1092 N93-17610
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614
Ramjet propulsion for advanced projectiles p 1067 N93-17615

Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619
Smaller expendable turbojets p 1067 N93-17621
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686

PROSTATE GLAND
Diagnostic and therapeutic applications of diode lasers and solid state lasers in medicine
[DE92-040338] p 1172 N93-16098

PROSTHETIC DEVICES
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087

PROTACTINIUM
Spectroscopic and magnetic studies of tetravalent Pa and trivalent Th compounds
[DE92-041214] p 1100 N93-15676

PROTECTIVE CLOTHING
Protective helmet assembly
[NASA-CASE-MSC-21842-1] p 1228 N93-17088

PROTECTIVE COATINGS
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
Polyurethane self-priming topcoats
[AD-D015477] p 1124 N93-16484
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
Study of high energy particles and protective layers for materials
[CTN-93-60613] p 1124 N93-16545
Study of an orbital accelerator for ion implantation and of protective coatings for materials
[CTN-93-60614] p 1298 N93-16546
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468

PROTEIN CRYSTAL GROWTH
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Method and apparatus for controlling protein crystallization
[NASA-CASE-MFS-28688-1] p 1323 N93-17043

PROTEINS
Fluorescence detection for gel and capillary electrophoresis
[DE92-040585] p 1102 N93-16020
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique
[DE93-001654] p 1326 N93-17391
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487

PROTOCOL (COMPUTERS)
An investigation of requirements traceability to support systems development
[AD-A257444] p 1351 N93-15868
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
A tool for automated validation of network protocols
[AD-A256726] p 1255 N93-16066
TMN: Introduction and interpretation
[MEMO-INF-92-40] p 1140 N93-16592
RT-Syn: A real-time software system generator p 1250 N93-17523

PROTON BEAMS
Duke University high energy physics
[DE92-040340] p 1296 N93-16180

PROTON-PROTON REACTIONS
QCD corrections to Z pair hadronic production
[PREPRINT-832] p 1288 N93-16954

PROTONS
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605
Novel methods of acceleration
[AD-A258045] p 1300 N93-17706

PROTOTYPES
A TEOM (tm) particulate monitor for comet dust, near Earth space, and planetary atmospheres
[NASA-CR-190868] p 1363 N93-15690
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
High-speed repetitive pellet injector prototype for magnetic confinement fusion devices
[DE93-001361] p 1310 N93-16602
Development of a prototype interactive learning system using multi-media technology for mission independent training program p 1227 N93-17310
A process for prototyping onboard payload displays for Space Station Freedom p 1073 N93-17315
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316
Neural network architectures to analyze OPAD data p 1262 N93-17336
Towards automation of user interface design p 1248 N93-17510
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808

PROVING
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
Residual stresses in welds and effect on crack growth prediction p 1082 N93-15758
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405

PSEUDOMONAS
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675

PSYCHOLOGICAL FACTORS
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801

PSYCHOLOGY
European Science Notes Information Bulletin: Reports on current European and Middle Eastern science
[AD-A257228] p 1402 N93-15964

PULSARS
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248
Convection in RR Lyrae stars
[DE93-000851] p 1376 N93-17382
Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga
[NASA-CR-191905] p 1360 N93-17401
Soft x ray properties of the Geminga pulsar p 1360 N93-17403

PULSE COMMUNICATION
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722

PULSE DURATION
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691

PULSE GENERATORS
Fundamentals of high energy electron beam generation
[DE93-000745] p 1299 N93-17064

PULSE REPETITION RATE
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691

PULSED LASERS
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Growth of epitaxial thin films by pulsed laser ablation
[DE92-040515] p 1319 N93-16296
Modification of Earth-satellite orbits using medium-energy pulsed lasers
[DE93-000858] p 1074 N93-16302
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009
Adaptive optics for laser power beaming p 1305 N93-17307

PULSED RADIATION
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679
The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane
[DE93-000856] p 1376 N93-17384

PULSES
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757

PULTRUSION
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

PURIFICATION
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925

PURSUIT TRACKING
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067

PYROLYSIS
Flammability characteristics of fiber-reinforced epoxy composites for combat vehicle applications
[AD-A256844] p 1096 N93-15706
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Thermal isomerization and decomposition of ethynyldisilanes
[DE92-040578] p 1102 N93-16012
Vapor phase pyrolysis p 1108 N93-16891
Processes for metal extraction p 1382 N93-16893

PYROLYTIC GRAPHITE
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967

PYROMETERS
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747

PYROTECHNICS
Experimental approach on the pyrotechnical shock reduction of Ariane-5 upper stage p 1075 N93-15764

Q

Q SWITCHED LASERS
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Pulsed holography for hypervelocity impact diagnostics
[DE92-040259] p 1166 N93-15831
Multiple element ring laser
[AD-D015471] p 1173 N93-16469

QUADRATIC EQUATIONS
Performance and stability robustness for uncertain linear systems: A quadratic approach
[LAAS-92199] p 1271 N93-17494

QUADRATIC PROGRAMMING
Large-scale sequential quadratic programming algorithms
[AD-A257643] p 1253 N93-17791

QUADRUPOLES
Design of a compact application-oriented free-electron laser
[DE92-040391] p 1172 N93-16183
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646

Design and modeling of superconducting RFQ structures
[DE93-000511] p 1326 N93-17376
QUALIFICATIONS
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619
QUALITY CONTROL
Preparation of the Pacific region energy information exchange system
[DE93-716353] p 1351 N93-15953
A multiple objective optimization approach to quality control
[NASA-CR-191872] p 1181 N93-16657
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724
QUANTUM CHROMODYNAMICS
Research in particle theory
[DE93-002868] p 1284 N93-16147
A study of improvement in lattice QCD
[SSCL-PREPRINT-766] p 1286 N93-16348
Theoretical particle physics
[DE93-000649] p 1329 N93-16357
Lattice calculations of f(D) and f(B)
[SSCL-PREPRINT-798] p 1286 N93-16394
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-792] p 1287 N93-16414
D decays, B-physics, and CP-violation from lattice QCD
[PREPRINT-799] p 1287 N93-16419
Mixing of vector and axial correlators at finite volume: Implications for lattice computations
[PREPRINT-804] p 1287 N93-16424
QCD corrections to Z pair hadronic production
[PREPRINT-832] p 1288 N93-16954
Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964
Instability of the invisible axion
[PREPRINT-877] p 1289 N93-16981
Status of QCD
[PREPRINT-842] p 1298 N93-16996
QCD spectroscopy and phenomenology with improved actions
[PREPRINT-857] p 1106 N93-17015
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016
Problems with the Euclidean formulation of heavy quark effective theories
[PREPRINT-884] p 1290 N93-17020
Gribov copies and smeared correlation functions in lattice QCD
[PREPRINT-892] p 1330 N93-17027
CP-violation in K(sup +/-) to 3 pi decays and lattice QCD B-factors
[PREPRINT-848] p 1323 N93-17068
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070
Two loop calculation of the anomalous dimension of four-fermion operators with static heavy quarks
[PREPRINT-873] p 1291 N93-17073
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Solutions to the strong-CP problem in a world with gravity
[DE93-002650] p 1291 N93-17200
QUANTUM EFFICIENCY
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610
QUANTUM ELECTRODYNAMICS
Research in particle theory
[DE93-002868] p 1284 N93-16147
Atomic collision physics: A summary and some projections
[DE92-040638] p 1287 N93-16407
Spectroscopy of highly charged multi-electron ions
[DE93-001617] p 1291 N93-17181
High energy physics research
[DE93-001793] p 1299 N93-17482
Relativistic calculations of excitation and ionization of highly charged ions by electron impact
[DE93-002129] p 1296 N93-17783
QUANTUM ELECTRONICS
Solid state research
[AD-A256965] p 1318 N93-16251
Wafer scale union
[AD-A258001] p 1152 N93-17749
QUANTUM MECHANICS
Quantum groups and Lie-admissable time evolution
[SSCL-PREPRINT-793] p 1264 N93-16349
Aspects of electron transport in semiconductor nanostructures
[ETN-92-92787] p 1321 N93-16486
Symmetry of wavefunctions in quantum algebras and supersymmetry
[DE92-041129] p 1265 N93-16551
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018
Solutions to the strong-CP problem in a world with gravity
[DE93-002650] p 1291 N93-17200
Problems in particle theory
[DE93-003687] p 1293 N93-17469
The uncertainty principle
[ETN-92-92533] p 1331 N93-17589
QUANTUM NUMBERS
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
QUANTUM STATISTICS
Stochastic quantization, stochastic calculus and path integrals: Selected topics
[PREPRINT-837] p 1279 N93-16992
The uncertainty principle
[ETN-92-92533] p 1331 N93-17589
QUANTUM THEORY
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
Application of multistep compound and multistep direct models for data evaluation
[DE93-000865] p 1285 N93-16304
On Gupta-Bleuler quantization of systems with second-class constants
[NIKHEF-H/92-05] p 1264 N93-16342
On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
Renormalization group in different fields of theoretical physics
[DE92-556707] p 1329 N93-16648
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Interacting Euclidean three-dimensional quantum gravity
[PREPRINT-867] p 1330 N93-16965
Problems with the Euclidean formulation of heavy quark effective theories
[PREPRINT-884] p 1290 N93-17020
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185
Problems in particle theory
[DE93-003687] p 1293 N93-17469
The uncertainty principle
[ETN-92-92533] p 1331 N93-17589
QUANTUM WELLS
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
Quantum chaos without classical counterpart
[PREPRINT-830] p 1331 N93-17215
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643
QUARK MODELS
QCD on the light cone
[DE93-001822] p 1330 N93-17183
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
QUARK PARTON MODEL
B(sub c) production --- pseudoscalar meson
[PREPRINT-806] p 1287 N93-16444
QUARKS
The Cabibbo-Kobayashi-Maskawa mixing matrix
[DE93-001255] p 1283 N93-15976
Dynamical approach to pair production from strong fields
[DE92-040224] p 1283 N93-16011
Research in elementary particle physics
[DE93-001858] p 1284 N93-16146
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248
Nuclear physics and astrophysics
[DE93-002042] p 1364 N93-16362
Theory of the electroweak interactions
[SSCL-PREPRINT-775] p 1286 N93-16385
Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964
Weak matrix elements
[PREPRINT-854] p 1279 N93-16976
Problems with the Euclidean formulation of heavy quark effective theories
[PREPRINT-884] p 1290 N93-17020
The b quark polarization at LEP
[PREPRINT-886] p 1290 N93-17022
Two loop calculation of the anomalous dimension of four-fermion operators with static heavy quarks
[PREPRINT-873] p 1291 N93-17073
Dressed skeleton expansion and the coupling scale ambiguity problem
[DE93-002516] p 1331 N93-17185
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396
QUASARS
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
Recent results on 3C 273 p 1366 N93-17099
First results from the Compton Observatory p 1366 N93-17102
The x ray properties of a large, uniform QSO sample: Einstein observations of the LBQS p 1361 N93-17106
The quasar 1821+643 during the ROSAT survey p 1361 N93-17119
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120
A comparative study of soft x ray QSO spectra p 1361 N93-17124
Spectra of radio-loud quasars observed in the ROSAT/XRT all sky survey p 1361 N93-17125
ROSAT x ray spectra of quasars with a range of continuum properties and redshift p 1362 N93-17128
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
Selection of faint quasars based on variability p 1363 N93-17156
The surface density of quasars and Seyfert galaxies at B is approximately 22.0 p 1375 N93-17157
Optically selected quasars with Z greater than 4 p 1363 N93-17158
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
QUENCHING
Domain decomposition: A blowup problem and the Ginzburg-Landu equations
[DE92-040736] p 1266 N93-16587
QUENCHING (COOLING)
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590
QUERY LANGUAGES
Multiparadigm design environments
[AD-A257149] p 1231 N93-16031
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
QUEUEING THEORY
MGMtool: A performance modelling tool based on matrix geometric techniques
[MEMO-INF-92-35] p 1236 N93-16338
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Queueing systems on a circle
[MEMO-1038] p 1276 N93-16670
Polling systems and multiple branching processes
[CWI-BS-R9128] p 1267 N93-16726
An M/G/1 queue with dependence between interarrival and service times
[CWI-BS-R9125] p 1276 N93-16849
QUOTIENTS
Proof elimination in type theory
[CS-9202] p 1278 N93-16351

R

RACKS (FRAMES)
Problems involving combined loading p 1189 N93-17314

RADAR
Two-dimensional computer calculation of high-power microwave bandwidth broadening by air breakdown in a rectangular waveguide
[DE92-041083] p 1138 N93-16072

RADAR ANTENNAS
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953

RADAR DATA
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
Estimating lunar pyroclastic deposit depth from imaging radar data: Applications to lunar resource assessment
p 1386 N93-17240
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

RADAR DETECTION
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

RADAR ECHOES
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726

RADAR EQUIPMENT
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835

RADAR IMAGERY
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Lunar lava tube sensing p 1391 N93-17270

RADAR MAPS
The division of a circle or spherical surface into equal-area cells or pixels
[AD-A257770] p 1192 N93-17726

RADAR RECEIVERS
Portable radar simulator
[AD-D015453] p 1139 N93-16459

RADAR REFLECTORS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062

RADAR SCATTERING
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy
p 1390 N93-17261
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment
p 1391 N93-17267
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

RADAR TARGETS
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

RADAR TRACKING
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141
Radar observations of the effects of changing electric fields on the orientations of hydrometeors
[AD-A256712] p 1213 N93-16170
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment
p 1391 N93-17267

RADAR TRANSMITTERS
Portable radar simulator
[AD-D015453] p 1139 N93-16459

RADIAL DISTRIBUTION
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679

RADIANCE
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143

RADIANT FLUX DENSITY
Hard x ray observations of active galactic nuclei with SIGMA p 1360 N93-17100
Multifrequency observations of ROSAT selected radio sources p 1361 N93-17118
Preliminary results on the properties of the EMSS AGN's as derived from the ROSAT all sky survey
p 1362 N93-17129
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466
The SVIRCO station: Measurement and study of the intensity of cosmic rays in Rome (Italy) from 1954
[NOTA-INTERNA-977] p 1401 N93-17648

RADIATION ABSORPTION
Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875
Transport of desert aerosols and their influence on local temperatures and motions
[ITN-93-85173] p 1202 N93-16737
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781

RADIATION BELTS
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173

RADIATION CHEMISTRY
The contribution of electronically excited states to the radiation chemistry of organic systems
[DE92-040465] p 1104 N93-16585
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470

RADIATION COUNTERS
High energy physics research
[DE93-000305] p 1296 N93-15668
First results from the SLD silicon calorimeters
[DE93-001805] p 1167 N93-16219
On the 17-keV conundrum
[DE93-000866] p 1286 N93-16305
Monte Carlo shower counter studies
[NASA-CR-191364] p 1243 N93-16933
Milagro: A low energy threshold extensive air shower array
[DE93-000852] p 1400 N93-17383
Calibration of phoswich detectors
[KVI-891] p 1169 N93-17404

RADIATION DAMAGE
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652

RADIATION DETECTORS
High energy physics research
[DE93-000305] p 1296 N93-15668
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204
First results from the SLD silicon calorimeters
[DE93-001805] p 1167 N93-16219
On the 17-keV conundrum
[DE93-000866] p 1286 N93-16305
The global second level trigger for ZEUS
[ETN-92-92816] p 1297 N93-16479
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182
Experimental studies of elementary particle interactions at high energies
[DE93-003652] p 1294 N93-17575
Cosmic ray NM-64 neutron monitor data-18
[NOTA-INTERNA-972] p 1400 N93-17627

RADIATION DOSAGE
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596

RADIATION EFFECTS
Effects of ionizing radiation on selected optical materials: An overview
[DE93-001324] p 1300 N93-15660
CRRES: The combined release and radiation effects satellite program directory
[NASA-CR-184504] p 1076 N93-15713
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
Investigation of ring current/storm dynamics: Preliminary results
[AD-A256704] p 1207 N93-16155
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172
Transient radiation effects in polarization-maintaining fibers
[DE92-040355] p 1284 N93-16182
Diffusion-induced grain boundary migration during ion beam mixing of Au/Cu bilayers
[DE93-000508] p 1318 N93-16243
Structural changes induced by electron irradiation in graphite
[DE92-040863] p 1122 N93-16269
LDEF solar cell radiation effects analysis
[NASA-CR-191776] p 1195 N93-16374
Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
Magnetic studies of current conduction and flux pinning in high-T(sub c) cuprates: Virgin, irradiated, and oxygen deficient materials
[DE93-001716] p 1323 N93-17075
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
Oxidation and volatilization of a niobium alloy
[DE93-001927] p 1116 N93-17392
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652

RADIATION HARDENING
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970

RADIATION HAZARDS
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470

RADIATION MEASUREMENT
Gravitationally induced synchrotron radiation: A new test for general relativity
[PREPRINT-822] p 1297 N93-16420
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
The SVIRCO station: Measurement and study of the intensity of cosmic rays in Rome (Italy) from 1954
[NOTA-INTERNA-977] p 1401 N93-17648
RADIATION MEASURING INSTRUMENTS
The SVIRCO station: Measurement and study of the intensity of cosmic rays in Rome (Italy) from 1954
[NOTA-INTERNA-977] p 1401 N93-17648
RADIATION PROTECTION
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806
RADIATION PYROMETERS
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
RADIATION SHIELDING
CRRESRAD documentation
[AD-A256715] p 1213 N93-16172
Human safety in the lunar environment
p 1229 N93-16867
Design of a radiator shade for testing in a simulated lunar environment
[NASA-CR-192080] p 1229 N93-17710
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806
RADIATION SOURCES
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Variational derivation of equation for generalized pair correlation function p 1254 N93-16778
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378
RADIATION TRANSPORT
Experimental evidence of off-diagonal transport term and the discrepancy between energy/particle balance and perturbation analyses
[DE92-556732] p 1309 N93-16237
Renormalization group in different fields of theoretical physics
[DE92-556707] p 1329 N93-16648
Improved response functions for gamma-ray skyshine analyses
[DE93-003230] p 1400 N93-17466
RADIATIVE HEAT TRANSFER
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems
p 1165 N93-16786
RADIATIVE TRANSFER
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
Cloud scene simulation modeling
[AD-A256689] p 1212 N93-16096
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
RADICALS
Computed barrier heights for H + CH2O yields CH3O yields CH2OH p 1107 N93-17409
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction
[DE93-001565] p 1107 N93-17461
RADIO ALTIMETERS
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758
RADIO ASTRONOMY
Multifrequency observations of rapidly variable blazars
p 1361 N93-17109
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
RADIO AURORAS
An algorithm to quantify the performance of the JOVE program p 1254 N93-17306
RADIO COMMUNICATION
Meteor burst communication system
[AD-D015470] p 1139 N93-16466
RADIO CONTROL
Remote driving with reduced bandwidth communication
[DE92-040639] p 1139 N93-16408
RADIO EMISSION
Soft x ray segregation of Seyfert galaxies
p 1362 N93-17135
RADIO FREQUENCIES
RF vacuum microelectronics
[AD-A257320] p 1144 N93-15984
RF vacuum microelectronics
[AD-A257208] p 1145 N93-16004
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362
Design and modeling of superconducting RFQ structures
[DE93-000511] p 1326 N93-17376
RADIO FREQUENCY HEATING
Microwave processing of ceramics: Guidelines used at the Oak Ridge National Laboratory
[DE92-040862] p 1123 N93-16297
RADIO FREQUENCY INTERFERENCE
Carrier wave signals interfering with Loran-C
[ETN-92-92528] p 1059 N93-17584
RADIO JETS (ASTRONOMY)
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
RADIO NAVIGATION
Navstar global positioning system: Introduction and status
[NLR-TP-91008-U] p 1059 N93-17559
RADIO OBSERVATION
Multifrequency observations of ROSAT selected radio sources p 1361 N93-17118
Optically selected quasars with Z greater than 4
p 1363 N93-17158
RADIO RELAY SYSTEMS
Orbital manoeuvre effects on large flexible antennae
p 1078 N93-15729
RADIO SOURCES (ASTRONOMY)
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
Multifrequency observations of ROSAT selected radio sources p 1361 N93-17118
A new look at radio/x ray correlations
p 1362 N93-17136
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137
RADIO SPECTRA
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
Spectra of radio-loud quasars observed in the ROSAT/XRT all sky survey p 1361 N93-17125
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
RADIO TELESCOPES
Experiences with large CFRP-radiotelescope reflectors
p 1084 N93-15777
Radio astrometry from the Moon
p 1363 N93-17452
RADIO WAVES
Reliability of numerical solutions of a diffusion equation modeling RF noise-induced dilution in particle beams
[DE92-040620] p 1296 N93-16022
RADIOACTIVE DECAY
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Theory working group: Summary of the results
[PREPRINT-803] p 1297 N93-16423
The decay pi neutral to gamma nu nu-bar as a probe of the tau neutrino magnetic moment
[PREPRINT-847] p 1288 N93-16959
Improved renormalization constants for B decay and BB-bar mixing
[PREPRINT-864] p 1288 N93-16964
CP violation in B(sub C) decays
[PREPRINT-871] p 1288 N93-16977
A lattice study of electromagnetic decays of vector mesons
[PREPRINT-835] p 1289 N93-17014
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016
CP-violation in K(sup +/-) to 3 pi decays and lattice QCD B-factors
[PREPRINT-848] p 1323 N93-17068
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes
[PREPRINT-849] p 1290 N93-17069
QCD on the light cone
[DE93-001822] p 1330 N93-17183
Meson spectroscopy and decay constants with Wilson fermions at beta = 6.4
[PREPRINT-823] p 1291 N93-17213
CP violation in the decays B(sup 0) yields (psi)K(sub s) and B(sup 0) yields (pi)(+)(pi)(-): A probe for new physics
[DE93-002413] p 1331 N93-17364
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
Measurement of the branching ratio for D(+) yields (bar-K)*(892)(sup 0)mu(+)nu
[DE93-002414] p 1295 N93-17624
Search for pp decay to neutral H decay to (neutral Z)(neutral Z) decay to (mu +)(mu -)(mu +)(mu -) at the LHC
[NOTA-INTERNA-970] p 1300 N93-17644
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645
RADIOACTIVE ISOTOPES
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Stable isotope enrichment: Current and future potential
[DE92-041258] p 1326 N93-17368
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
RADIOACTIVE MATERIALS
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
RADIOACTIVE WASTES
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Thermal diffusion processes in aqueous sodium chloride solutions
[DE93-002596] p 1105 N93-16656
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931
RADIOACTIVITY
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225
RADIOBIOLOGY
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
On the biological effects of cosmic rays: Epidemiological study
[NOTA-INTERNA-979] p 1400 N93-17596
RADIOGRAPHY
High speed cineradiography using electronic imaging
[DE92-040366] p 1166 N93-15662
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497
RADIOISOTOPE BATTERIES
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932

RADIOLYSIS
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
RADIOMETERS
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
RADON
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
RADON ISOTOPES
Radon as a tracer for lunar volatiles
p 1388 N93-17248
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
RAIL TRANSPORTATION
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
Dynamic stability of maglev systems
[DE92-041104] p 1177 N93-16549
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577
RAILGUN ACCELERATORS
The railplug: Development of a new ignitor for internal combustion engines
[DE93-003068] p 1176 N93-16178
RAIN
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida
p 1219 N93-17285
A plan for accurate estimation of daily area-mean rainfall during the CaPE experiment p 1219 N93-17292
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679
RAIN FORESTS
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 2: Greenhouse gas emissions from deforestration in the Brazilian Amazon
[DE93-001526] p 1200 N93-16092
RAIN GAGES
Method and apparatus for acoustically measuring rainfall
[AD-D015450] p 1213 N93-16457
RAMAN SPECTRA
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
RAMAN SPECTROSCOPY
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
RAMJET ENGINES
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications
p 1092 N93-17611
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 1093 N93-17614
Ramjet propulsion for advanced projectiles
p 1067 N93-17615
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622
RAMJET MISSILES
Potential missile flight performance gains from improvements to the propulsion system
p 1092 N93-17609
RANDOM NOISE
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707
RANDOM PROCESSES
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
Chaotic dynamics in the Maxwell-Bloch equations
[DE93-000854] p 1278 N93-15898
Digital simulation and discrete modelling of a chaotic system
[RR-447] p 1279 N93-16561
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833
Statistical error in a chord estimator of correlation dimension: The rule of five
[DE93-000687] p 1276 N93-17195
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
A randomised schema mutator for evolutionary database optimisation
[TR-91-24] p 1356 N93-17595
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
RANDOM VARIABLES
Multidimensional strong large deviation theorems
[AD-A256939] p 1263 N93-16129
Random quadratic forms and the bootstrap for U-statistics
[W-9207] p 1275 N93-16356
RANDOM VIBRATION
A study of the Lute Metering Structure
p 1189 N93-17294
RANDOM WALK
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593
RANGE (EXTREMES)
Optimal dynamic range integrated continuous-time filters
[ISBN-90-6275-755-3] p 1150 N93-17395
RANGE SAFETY
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
RANGEFINDING
Positioning of the Tromso Station (Norway) by satellite laser ranging; campaign 1990 data acquisition and analysis
[LR-668] p 1058 N93-16209
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
RANGELANDS
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382
RAPID TRANSIT SYSTEMS
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577
RARE EARTH COMPOUNDS
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
RARE EARTH ELEMENTS
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
RAREFIED GASES
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
RATES (PER TIME)
Data storage and retrieval system
p 1354 N93-16324
RAY TRACING
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
RAYLEIGH-BENARD CONVECTION
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom
p 1161 N93-16820
RAYLEIGH-RITZ METHOD
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791
REACTING FLOW
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Combustion instabilities in a side-dump model ramjet combustor p 1067 N93-17613
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626
REACTION KINETICS
Homogeneous-heterogeneous combustion: Thermal and chemical coupling
[DE93-002881] p 1100 N93-15840
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Chemistry of oxygenates on transition metal surfaces: Activation of C-H, C-C, and C-O bonds
[DE92-040843] p 1110 N93-15927
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-001602] p 1101 N93-15942
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
[DE93-001527] p 1120 N93-16032
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
Pulsed laser kinetic studies of liquids under high pressure
[DE93-000884] p 1172 N93-16193
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268
Growth on the reconstructed diamond (100) surface
[AD-A256954] p 1319 N93-16301
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-191628] p 1055 N93-16538
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
[NASA-TM-105851] p 1104 N93-16614
A critical analysis of the accuracy of several numerical techniques for combustion kinetic rate equations
[NASA-TP-3315] p 1066 N93-16941
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033
Primary charge separation in isolated photosystem 2 reaction centers
[DE92-041128] p 1223 N93-17189
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics
[DE93-002758] p 1106 N93-17212
Computerized reduction of elementary reaction sets for CFD combustion modeling p 1108 N93-17337
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction
[DE93-001565] p 1107 N93-17461
Reaction kinetics and product distributions in photoelectrochemical cells
[DE93-003885] p 1198 N93-17471
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626
REACTIVITY
Computed Potential Energy Surfaces for Chemical Reactions
[NASA-CR-191804] p 1107 N93-17407
REACTOR DESIGN
Small steady-state tokamak (TST) for divertor testing
[DE93-001213] p 1309 N93-16274
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931
REACTOR MATERIALS
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103

Fracture toughness measurements with subsize disk compact specimens
[DE93-001374] p 1187 N93-17002
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603

REACTOR SAFETY
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037

READING
CAPS ReReader simulation model user's manual version 1.0
[AD-A257180] p 1234 N93-16000

READOUT
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512

REAL GASES
Computational study of real gas effects in high speed high temperature flow, volume 2
[AERO-REPT-9203-VOL-2] p 1054 N93-16470

REAL TIME OPERATION
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
An investigation of requirements traceability to support systems development
[AD-A257444] p 1351 N93-15868
Spatial light modulator nonlinearity effects in optical pattern recognition
[AD-A256184] p 1301 N93-15873
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
NPSGDL: An object oriented graphics description language for virtual world application support
[AD-A257337] p 1234 N93-15992
Video coding and the application level framing protocol architecture
[NASA-CR-192002] p 1138 N93-16055
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141
Fault tolerant real-time systems
[AD-A257352] p 1235 N93-16174
An open, parallel I/O computer as the platform for high-performance, high-capacity mass storage systems
p 1353 N93-16322
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
Study of port of FRAMES artificial intelligence system
[NASA-CR-191703] p 1261 N93-16740
The state operator in real time process algebra
[CWI-CS-R9140] p 1269 N93-16852
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Requirements for the implementation of schedule repair technology in the Experiment Scheduling Program
p 1278 N93-17286
Distributed intelligent control and management (DICAM) applications and support for semi-automated development p 1249 N93-17513
RT-Syn: A real-time software system generator
p 1250 N93-17523
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765

REATTACHED FLOW
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604

RECEIVERS
An MCM/chip concurrent engineering validation
[AD-A257415] p 1233 N93-15863
Multipath effects in a Global Positioning Satellite system receiver p 1059 N93-17311

RECEPTORS (PHYSIOLOGY)
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470

RECHARGING
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278

RECOMBINATION REACTIONS
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349

RECOMMENDATIONS
Spacecraft sustained load fracture control
p 1077 N93-15724

RECONNAISSANCE AIRCRAFT
Hypersonic reconnaissance aircraft
[NASA-CR-192049] p 1064 N93-17804

RECONSTRUCTION
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340

RECORDING INSTRUMENTS
Millisecond readout CCD camera
[DE93-000694] p 1167 N93-16359
Spacecraft optical disk recorder memory buffer control
p 1170 N93-16773
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077

RECRYSTALLIZATION
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

RECTANGLES
Hydroelastic vibrations in a rectangular container under zero-gravity
[LRT-WE-9-FB-28-1991] p 1134 N93-17602

RECTANGULAR WAVEGUIDES
Two-dimensional computer calculation of high-power microwave bandwidth broadening by air breakdown in a rectangular waveguide
[DE92-041083] p 1138 N93-16072
Computer program for numerical evaluation of the performance of a TM01 circular to TE10 rectangular waveguide mode converter
[AD-A257694] p 1141 N93-17689

RECURSIVE FUNCTIONS
Equivalent flexibility modelling for the recursive simulation of robot manipulator dynamics
[NLR-TP-89076-U] p 1259 N93-16291
An introduction mechanism for recursive functions: A case study
[MEMO-INF-92-34] p 1264 N93-16337
A short proof of the decidability of bisimulation for normal BPA processed
[CWI-CS-R9151] p 1267 N93-16731
Error feedback for reduction of quantization errors due to arithmetic operations in recursive digital filters
[EL-9] p 1272 N93-17633
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738

RECYCLING
MHD seed recovery/regeneration
[DE93-000904] p 1312 N93-17347

RED SHIFT
ROSAT x ray spectra of quasars with a range of continuum properties and redshift p 1362 N93-17128
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Optically selected quasars with Z greater than 4
p 1363 N93-17158

REDUCED GRAVITY
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
On canonical cylinder sections for accurate determination of contact angle in microgravity
[DE93-000635] p 1130 N93-16377
Study of precision accelerometers and fractal aggregates in microgravity, phase 2
[CTN-93-60616] p 1130 N93-16426
The influence of microgravity on the microstructure and properties of eutectics, phase 2
[CTN-93-60627] p 1131 N93-16427
Nucleation, crystal growth, and liquid/liquid phase separation in materials in microgravity, phase 3
[CTN-93-60612] p 1131 N93-16493
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Preliminary definition of experiments and procedures for terrestrial and space examination of flame structure
[APRL-X13-8] p 1105 N93-16728
Development of equipment and technique to study solidification in microgravity, phase 1
[CTN-93-60608] p 1132 N93-16729
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Implementation of educational broadcasting in space, phase 1
[CTN-93-60623] p 1332 N93-16735
A study of the dynamics of droplet break-up
[CTN-93-60621] p 1132 N93-16746
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934
Study of precision accelerometers and fractal aggregates in microgravity
[CTN-93-60622] p 1168 N93-16935
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2
[CTN-93-60631] p 1133 N93-16937
An experiment to study fullerene formation under reduced gravity p 1134 N93-17335
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805

REDUCTION (CHEMISTRY)
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition
[DE93-001835] p 1127 N93-17529

REDUNDANCY
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275

REDUNDANCY ENCODING
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920

REENTRY VEHICLES
Outline for reusable reentry satellite system specification, volumes 1 - volume 9
[NASA-CR-185958] p 1086 N93-15791
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803

Reusable Reentry Satellite (RRS): Configuration trade study
[NASA-CR-187772] p 1086 N93-15804
Experiment module/support module interface specification for the reusable reentry satellite
[NASA-CR-187885] p 1086 N93-15805
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027
Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix
[NASA-CR-184490] p 1075 N93-16556
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720

REFERENCE ATMOSPHERES
Effects of surface-based ducts on electromagnetic systems
[AD-A257443] p 1137 N93-15867

REFLECTANCE
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060

REFLECTED WAVES
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743

REFLECTOMETERS
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361

REFLECTOR ANTENNAS
Acoustic tests structural predictions
p 1081 N93-15750
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation
p 1081 N93-15751
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Dynamic deployment analysis of a mesh antenna reflector p 1083 N93-15770
Experiences with large CFRP-radiotelescope reflectors
p 1084 N93-15777
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
Antenna analysis using neural networks
p 1142 N93-16790

REFLECTORS
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
A systematic approach for the DRSS IOL APM design
p 1081 N93-15753
TELECOM 2 deployable reflectors
p 1082 N93-15761
Dynamic of large reflectors p 1084 N93-15773
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616

REFRACTION
Picosecond optical mixing in photorefractive materials
[AD-A256824] p 1170 N93-15685
Photorefractive properties of doped BaTiO 3 and SBN
[AD-A257989] p 1305 N93-17748

REFRACTIVITY
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643

REFRACTORY MATERIALS
Testing and characterisation of metallic materials for structural analysis of high temperature components
p 1082 N93-15757
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204

REFRIGERANTS
Non-inert refrigerant study for automotive applications
[DE92-041034] p 1120 N93-16042
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192
Thermophysical properties
[DE93-000493] p 1329 N93-16242
Miscibility of lubricants with refrigerants
[DE93-000538] p 1122 N93-16244
Compatibility of refrigerants and lubricants with elastomers
[DE93-000539] p 1122 N93-16245
Compatibility of refrigerants and lubricants with motor materials
[DE93-000540] p 1122 N93-16246
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367
Compatibility of refrigerants and lubricants with engineering plastics
[DE93-000541] p 1128 N93-17807

REFRIGERATING
High-temperature superconducting current leads
[DE92-040729] p 1145 N93-16028
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367

REFRIGERATORS
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
Magnetic refrigeration cycle analysis using selected thermodynamic property characterizations for gadolinium gallium garnet
[DE93-000448] p 1134 N93-15896
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367

REFUELING
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044

REGENERATION (PHYSIOLOGY)
Annual report
[NASA-CR-191389] p 1228 N93-16840

REGENERATIVE COOLING
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697

REGGE POLES
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231

REGOLITH
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617
Lunar exploration for resource utilization
p 1380 N93-16877
Application of manufactured products
p 1383 N93-16902
Shock-treated lunar soil simulant: Preliminary assessment as a construction material
p 1386 N93-17238
Lunar resource assessment: Strategies for surface exploration p 1391 N93-17266
High-resolution Earth-based lunar radar studies: Applications to lunar resource assessment
p 1391 N93-17267
Remote assessment of lunar resource potential
p 1391 N93-17268
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806

REGRESSION ANALYSIS
JT-60 configuration parameters for feedback control determined by regression analysis
[DE92-556731] p 1310 N93-16650
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405

REGRESSION COEFFICIENTS
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test)
[ESDU-92021] p 1061 N93-16635
Example of statistical techniques applied to analysis of measurements of the landing airborne manoeuvre. (Multiple linear regression with two independent variables and one dependent variable.)
[ESDU-92022] p 1062 N93-16636

REGULATIONS
PC-based expert system for integrated assessment of environmental compliance
[DE92-019964] p 1199 N93-15853
Environmental Review Guide for Operations (ERGO)
[AD-A256922] p 1202 N93-16502
Future space development scenarios: Environmental considerations p 1073 N93-16864

REINFORCED PLASTICS
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

REINFORCING MATERIALS
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065

RELATIVISTIC EFFECTS
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374

RELATIVISTIC PARTICLES
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
BRST field theory of relativistic particles
[NIKHEF-H/92-04] p 1286 N93-16341
A two body relativistic equation for interacting nucleons
[NOTA-INTERNA-976] p 1295 N93-17630

RELATIVISTIC THEORY
A two body relativistic equation for interacting nucleons
[NOTA-INTERNA-976] p 1295 N93-17630
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

RELATIVISTIC VELOCITY
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

RELATIVITY
Gravitationally induced synchrotron radiation: A new test for general relativity
[PREPRINT-822] p 1297 N93-16420

RELAXATION (MECHANICS)
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641

RELAXATION METHOD (MATHEMATICS)
SU(3) lattice gauge fixing with overrelaxation and Gribov copies
[PREPRINT-839] p 1322 N93-16993

RELIABILITY
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
Reliability evaluation methodology for NASA applications p 1182 N93-17328
UPT scenarios: Implications for system reliability
p 1182 N93-17332
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764

RELIABILITY ANALYSIS
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems
p 1254 N93-17305
Reliability analysis of External Tank Attack Ring (ETA)
p 1182 N93-17322
Reliability of numerical solutions of a diffusion equation modeling rf noise-induced dilution in particle beams
[DE93-000837] p 1292 N93-17362

RELIABILITY ENGINEERING
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040

RELIC RADIATION
Measurements of the cosmic microwave background temperature at 1.47 GHz
[DE93-000587] p 1400 N93-17379

RELIEF MAPS
Automated classification of basic-level terrain features in digital elevation models
[AD-A256932] p 1190 N93-16504

REMOTE CONSOLES
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373

REMOTE CONTROL
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224

Remote driving with reduced bandwidth communication
[DE92-040639] p 1139 N93-16408
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581

REMOTE SENSING
Effects of ionizing radiation on selected optical materials: An overview
[DE93-001324] p 1300 N93-15660
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171
Observation of the Earth-atmosphere system by NOAA satellite (acquisition, production, application, and use of NOAA data)
[BCRS-92-02] p 1207 N93-16221
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development
[DE93-000915] p 1202 N93-16535
An expert system shell for inferring vegetation characteristics: Implementation of additional techniques (task E)
[NASA-CR-190999] p 1191 N93-16685
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
[NASA-CR-191000] p 1191 N93-16687
An expert system shell for inferring vegetation characteristics
[NASA-CR-191207] p 1191 N93-16691
Lunar exploration for resource utilization
p 1380 N93-16877
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953
LEAF research
[BCRS-91-16] p 1192 N93-17053
Remote hydrogen sensing techniques
[NASA-CR-191411] p 1169 N93-17203
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
Joint Workshop on New Technologies for Lunar Resource Assessment
[NASA-CR-191918] p 1385 N93-17233
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234
Lunar resource assessment: An industry perspective
p 1387 N93-17246
Lunar prospector: A preliminary surface remote sensing resource assessment for the Moon
p 1389 N93-17256
Remote assessment of lunar resource potential
p 1391 N93-17268
Lunar lava tube sensing p 1391 N93-17270
A second generation expert system for checking and diagnosing AXAF's electric power system
p 1152 N93-17287
A plan for accurate estimation of daily area-mean rainfall during the CaPE experiment p 1219 N93-17292
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
Validation of simulated evaporation reductions using remote sensing in Mander (Netherlands)
[REPT-131] p 1192 N93-17397
The Lunar Orbital Prospector p 1395 N93-17436
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755

REMOTE SENSORS
Usefulness of the CAESAR scanner for operational vegetation mapping
[BCRS-91-39] p 1190 N93-16289
Device for sensing unwanted electric and magnetic fields in a remote sensor electrical lead
[AD-D015508] p 1167 N93-16520
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development
[DE93-000915] p 1202 N93-16535

RENORMALIZATION GROUP METHODS
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800
Renormalization of lattice two-fermion operators with improved nearest-neighbour action
[PREPRINT-765] p 1275 N93-16413
Renormalization group in different fields of theoretical physics
[DE92-556707] p 1329 N93-16648

REPRESENTATIONS
Generalized LR parsing for general context-free grammars
[CWI-CS-R9153] p 1242 N93-16853
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
Image representation of I(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729

REPRODUCTION (COPYING)
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666

REQUIREMENTS
Spacecraft sustained load fracture control
p 1077 N93-15724
Structural development of flight systems
p 1078 N93-15727
An initial model of requirements traceability: An empirical study
[AD-A256720] p 1275 N93-15978

RESCUE OPERATIONS
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697

RESEARCH
NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992
[NASA-CR-189691] p 1332 N93-16760

RESEARCH AIRCRAFT
The F-18 systems research aircraft facility
[NASA-TM-4433] p 1072 N93-16753

RESEARCH AND DEVELOPMENT
Report on Workshop on Research in Experimental Computer Science
[AD-A256874] p 1230 N93-15707
Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
Strategic defense initiative: 15-year funding requirements
[AD-A256738] p 1277 N93-16070
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
Technical needs and research opportunities provided by projected aeronautical and space systems
[NASA-CR-192124] p 1073 N93-16629
1991 research and technology
[NASA-TM-103924] p 1402 N93-16652
The NASA High-Speed Research Program
p 1064 N93-16761
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089
National Aeronautics and Space Administration
p 1358 N93-17091
Joint Workshop on New Technologies for Lunar Resource Assessment
[NASA-CR-191918] p 1385 N93-17233
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy
p 1390 N93-17261
1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-184505] p 1339 N93-17279
Systems engineering process and organization assessment p 1340 N93-17281
Modern helicopter technologies at MBB and the application in future programmes
[MBB-UD-0599-91-PUB] p 1063 N93-17566

RESEARCH FACILITIES
The Goldstein Aeronautical Engineering Research Laboratory
[AERO-REPT-9109] p 1053 N93-16465
The F-18 systems research aircraft facility
[NASA-TM-4433] p 1072 N93-16753

RESEARCH MANAGEMENT
Solar thermal electric and biomass power: Program overviews, fiscal years 1990-1991
[DE92-010582] p 1193 N93-15850
Energy conversion and storage program
[DE93-001545] p 1194 N93-16034
Duke University high energy physics
[DE92-040340] p 1296 N93-16180

RESEARCH PROJECTS
Computation and graphics in mathematical research
[DE92-040652] p 1235 N93-16089
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948
Expected benefits of federally-funded thermal energy storage research
[DE93-003139] p 1197 N93-17187
Activities of the PTT --- the Netherlands Post, Telephone, and Telegraph (PTT)
[ISBN-90-72125-27-4] p 1140 N93-17398
Research in particle physics
[DE92-041135] p 1293 N93-17475
High energy physics research
[DE93-001793] p 1299 N93-17482
Research in elementary particle physics
[DE93-003153] p 1294 N93-17488
The study of multi-institutional collaborations in high-energy physics
[DE93-002337] p 1300 N93-17580
NASA/USRA advanced design program activity, 1991-1992
[NASA-CR-192063] p 1135 N93-17778

RESEARCH VEHICLES
Lunar surface rovers p 1390 N93-17262

RESERVOIRS
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica
[DE93-000631] p 1210 N93-17193

RESIDUAL STRESS
Damage mechanisms and constitutive relations for cracked UD-layers in crossply laminates
p 1080 N93-15742
Residual stresses in welds and effect on crack growth prediction p 1082 N93-15758
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082

RESIN MATRIX COMPOSITES
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
A literature survey on the fatigue behaviour of hybrid composites
[NLR-TP-91345-U] p 1099 N93-17541
SEP high performance composite materials: More than a job... a vocation
[DS-2134] p 1099 N93-17747

RESISTORS
Microwave interaction with plasmas
[AD-A258044] p 1313 N93-17705

RESOLUTION
New kinematic functions for redundancy resolution using configuration control
[NASA-CASE-NPO-18608-1-CU] p 1261 N93-17275

RESONANCE
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963

RESONANCE SCATTERING
Resonance electron scattering by adsorbed molecules: (sigma)* resonance energy versus bond length
[DE93-000445] p 1292 N93-17373

RESONANT FREQUENCIES
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
Drop oscillation and mass transfer in alternating electric fields
[DE93-003595] p 1149 N93-17086

RESONANT TUNNELING
Quantum chaos without classical counterpart
[PREPRINT-830] p 1331 N93-17215
RESONATORS
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
Kink-assisted mode hopping in a surface wave resonator
[AD-A256314] p 1207 N93-16264
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353
RESOURCE ALLOCATION
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
RESOURCES MANAGEMENT
Geothermal energy survey and technology
[DE93-716356] p 1193 N93-15903
Cockpit resource management proficiency as a factor of primary flight training
[AD-A256995] p 1060 N93-16262
Future directions: Integrated resource planning
[DE92-040867] p 1197 N93-17208
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663
RESPIRATION
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
REUSABLE HEAT SHIELDING
Reusable Reentry Satellite (RRS): Thermal control trade study
[NASA-CR-186528] p 1087 N93-16719
REUSABLE SPACECRAFT
Outline for reusable reentry satellite system specification, volumes 1 - volume 9
[NASA-CR-185958] p 1086 N93-15791
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803
Reusable Reentry Satellite (RRS): Configuration trade study
[NASA-CR-187772] p 1086 N93-15804
Experiment module/support module interface specification for the reusable reentry satellite
[NASA-CR-187885] p 1086 N93-15805
Reusable Reentry Satellite (RRS): Thermal control trade study
[NASA-CR-186528] p 1087 N93-16719
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
REVERBERATION
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
REVERBERATION CHAMBERS
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
REVERSE FIELD PINCH
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Theoretical reversed field pinch and tokamak studies
[DE93-002775] p 1312 N93-17085
REYNOLDS NUMBER
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
[IMFL-91-31] p 1056 N93-17542
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761
REYNOLDS STRESS
Center for Modeling of Turbulence and Transition (CMOTT): Research Briefs, 1992
[NASA-TM-105834] p 1152 N93-15792
Turbulence modeling and experiments p 1153 N93-15796
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596
Critical assessment of Reynolds stress turbulence models using homogeneous flows
[NASA-TM-105954] p 1159 N93-16703
RHODIUM ALLOYS
The direct Monte Carlo method for calculating alloy phases
[DE93-000436] p 1113 N93-16450
RIBBONS
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
RIBLETS
Development of wall turbulence structure p 1162 N93-16824
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
RIEMANN MANIFOLD
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Combinatorial and topological phase structure of non-perturbative n-dimensional quantum gravity
[PREPRINT-861] p 1331 N93-17224
RIGID STRUCTURES
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
State of the art of airport pavement analysis and design p 1070 N93-16310
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061
RIGID WINGS
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
RIMS
Wheels for wheelchairs and the like
[NASA-CASE-MFS-28632-1] p 1228 N93-17042
RING CURRENTS
Investigation of ring current/storm dynamics: Preliminary results
[AD-A256704] p 1207 N93-16155
RING LASERS
Multiple element ring laser
[AD-D015471] p 1173 N93-16469
RING STRUCTURES
High torque capable, self locking, vibration isolating flexible shaft coupling statement of government interest
[AD-D015501] p 1178 N93-16583
RISK
A seismic risk for the lunar base
[CONTRIB-769] p 1396 N93-17439
RIVETED JOINTS
Multiple-site-damage fatigue of riveted joints
[LR-679] p 1185 N93-16285
ROBOT ARMS
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481
Predesign of a simulator for inverse robot kinematics
[NLR-TP-91098-U] p 1180 N93-17583
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718
ROBOT CONTROL
Knowledge-based planning
[AD-A257209] p 1350 N93-15812
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
Investigation and modification of a commercially available tactile sensor suited for robotic applications
[NASA-CR-191833] p 1178 N93-16665
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673
A Petri net controller for distributed hierarchical systems
[NASA-CR-191862] p 1276 N93-16675
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators
[NASA-CR-191852] p 1261 N93-16708
TokenPasser: A petri net specification tool
[NASA-CR-191816] p 1241 N93-16725
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
A method for surmounting an obstacle by a robot vehicle
[NASA-CASE-NPO-18764-1-CU] p 1179 N93-17272
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
ROBOT DYNAMICS
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
Modelling dynamical systems with equality state-space constraints
[NLR-TP-89418-U] p 1259 N93-16275
Equivalent flexibility modelling for the recursive simulation of robot manipulator dynamics
[NLR-TP-89076-U] p 1259 N93-16291
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators
[NASA-CR-191852] p 1261 N93-16708
Predesign of a simulator for inverse robot kinematics
[NLR-TP-91098-U] p 1180 N93-17583
ROBOT SENSORS
Parameter identification and adaptive control of cooperating robots
[AD-A256984] p 1259 N93-16256
Investigation and modification of a commercially available tactile sensor suited for robotic applications
[NASA-CR-191833] p 1178 N93-16665
Development of techniques required for the application of a laser to three dimensional visual sensing
[NASA-CR-191855] p 1174 N93-16706
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406
ROBOTICS
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
Architectures for intelligent machines
[NASA-CR-191875] p 1231 N93-16621
ROMPS critical design review. Volume 2: Robot module design documentation
[NASA-CR-191614] p 1240 N93-16642
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659
Calibration of the Aronson 6-DOF robotic platform
[NASA-CR-191856] p 1087 N93-16661
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664
Investigation and modification of a commercially available tactile sensor suited for robotic applications
[NASA-CR-191833] p 1178 N93-16665
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677
Model based estimation of image depth and displacement
[NASA-CR-191815] p 1241 N93-16678

Development of techniques required for the application of a laser to three dimensional visual sensing
[NASA-CR-191855] p 1174 N93-16706
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
Robotic lunar rover technologies and SEI supporting technologies at Sandia National Laboratories
p 1389 N93-17255
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space
p 1181 N93-17284
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326
Mobile manipulator configuration optimization using evolutionary programming
[DE92-041307] p 1261 N93-17369
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718

ROBOTS
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
ATL Products Division's entries into the computer mass storage marketplace p 1354 N93-16328
A design tool for electromechanical servo systems
[ISBN-90-9004089-7] p 1260 N93-16571
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
A method for surmounting an obstacle by a robot vehicle
[NASA-CASE-NPO-18764-1-CU] p 1179 N93-17272
The roles of humans and robots as field geologists on the Moon p 1397 N93-17450
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
Double-V block fingers with cruciform recess
[NASA-CASE-GSC-13356-2] p 1180 N93-17625

ROBUSTNESS (MATHEMATICS)
Performance and stability robustness for uncertain linear systems: A quadratic approach
[LAAS-92199] p 1271 N93-17494
Control law synthesis for large flexible spacecraft
[NLR-TP-91155-U] p 1088 N93-17539
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670

ROCKET ENGINE CASES
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299

ROCKET ENGINE DESIGN
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
Modeling for health monitoring and control with applications to the Space Transportation Main Engine
p 1095 N93-17298

ROCKET ENGINES
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 2: Reliability and failure analyses of 2-D carbon-carbon structural components
[AD-A257460] p 1089 N93-15838
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743

ROCKET EXHAUST
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

ROCKET LININGS
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697

ROCKET NOZZLES
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 1: Experimental determination of mechanical properties for a carbon-carbon composite
[AD-A257459] p 1090 N93-16010
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
Analysis of film cooling in rocket nozzles
p 1095 N93-17339

ROCKY MOUNTAINS (NORTH AMERICA)
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies
p 1214 N93-16507

RODS
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775

ROLL
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test)
[ESDU-92021] p 1061 N93-16635

ROOM TEMPERATURE
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278

ROSAT MISSION
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background
p 1368 N93-17112
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data
p 1368 N93-17113
ROSAT observations of AGN p 1361 N93-17116
ROSAT-IUE All Sky Survey (RIASS): First results on active galaxies p 1369 N93-17117
Multifrequency observations of ROSAT selected radio sources p 1361 N93-17118
The quasar 1821+643 during the ROSAT survey
p 1361 N93-17119
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120
ROSAT and multi-wavelength observations of 3C 371
p 1361 N93-17121
A deep ROSAT observation of the highly variable AGN 1E1403+5439 or ROSAT non-detection of the weak AGN 1E1403+5439 p 1361 N93-17122
Time variability of extragalactic sources in the ecliptic pole regions p 1370 N93-17123
A comparative study of soft x ray QSO spectra
p 1361 N93-17124
Spectra of radio-loud quasars observed in the ROSAT/XRT all sky survey p 1361 N93-17125
X ray spectra of bright BL Lacertae objects observed with ROSAT p 1361 N93-17126
Preliminary results on ROSAT observations of the Blazar PKS 0537-441 p 1362 N93-17127
ROSAT x ray spectra of quasars with a range of continuum properties and redshift p 1362 N93-17128
Preliminary results on the properties of the EMSS AGN's as derived from the ROSAT all sky survey
p 1362 N93-17129
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
Preliminary results from the ROSAT WFC all sky survey: A sample of low galactic column density AGN's
p 1362 N93-17131
Initial results from a ROSAT deep survey in Lynx
p 1362 N93-17132
ROSAT all sky survey observations of IRAS galaxies
p 1362 N93-17133
A new look at radio/x ray correlations
p 1362 N93-17136
ROSAT deep surveys p 1362 N93-17145
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155
Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga
[NASA-CR-191905] p 1360 N93-17401
A ROSAT high resolution x ray image of NGC 1068
p 1360 N93-17402
Soft x ray properties of the Geminga pulsar
p 1360 N93-17403
ROSAT in-orbit attitude measurement recovery
[MBB-UK-0168-92-PUB] p 1088 N93-17629

ROTARY WING AIRCRAFT
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
[AD-A256921] p 1060 N93-16186
Developing a control system for ARES 2
p 1069 N93-16769

ROTARY WINGS
Helicopter installations: From motor to rotor
[LR-675] p 1061 N93-16345

ROTATING DISKS
A new parameter for predicting crossflow instability
p 1162 N93-16828

ROTATING FLUIDS
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 1
[CTN-93-60610] p 1157 N93-16425
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 3
[CTN-93-60611] p 1158 N93-16544
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Marangoni-convection in a rotating liquid container
[LRT-WE-9-FB-14-1991] p 1164 N93-17552

ROTATING PLASMAS
Tokamak turbulence in self-regulated differentially rotating flow and L-H transition dynamics
[DE93-000443] p 1310 N93-16451
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003

ROTATION
A systematic approach for the DRSS IOL APM design
p 1081 N93-15753
From the rotation group to the Poincare group
[DE93-000864] p 1279 N93-17386

ROTOR AERODYNAMICS
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
Developing a control system for ARES 2
p 1069 N93-16769

ROTOR BLADES
The use of cross-section warping functions in composite rotor blade analysis
[NASA-CR-191772] p 1186 N93-16946
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569

ROTOR BODY INTERACTIONS
Developing a control system for ARES 2
p 1069 N93-16769

ROTORS
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681

RUBBER
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
An introduction to the rubber forming of thermoplastic composites
[LR-683] p 1122 N93-16212

RUBIDIUM
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844

RULES
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649
Modal derivation rules
[ML-91-07] p 1274 N93-17784

RUN TIME (COMPUTERS)
General-purpose automation programming: A case study on using a graphic language
[DE92-001071] p 1238 N93-16447
ADIFOR: A FORTRAN system for portable automatic differentiation
[DE92-040743] p 1239 N93-16588
Acceleration of FDNS flow simulations using initial flowfields generated with a parabolized Navier-Stokes method p 1165 N93-17329
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681

RUNGE-KUTTA METHOD
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations
p 1154 N93-15802

Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Digital simulation and discrete modelling of a chaotic system
[RR-447] p 1279 N93-16561
Improved shock-capturing of Jameson's scheme for the Navier-Stokes equations
[MEMO-1041] p 1163 N93-16842
Parallel step-by-step methods
[CWI-NM-R9116] p 1256 N93-17545
Parallel-iterated Runge-Kutta methods for stiff ordinary differential equations
[CWI-NM-R9117] p 1257 N93-17549
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593

RUNWAYS
Unified Airport Design and Analysis Concepts Workshop
[DOT/FAA/RD-92/17] p 1069 N93-16309
State of the art of airport pavement analysis and design p 1070 N93-16310
Development of user guidelines for a three-dimensional finite element pavement model p 1070 N93-16311
Micro mechanical behavior of pavements p 1070 N93-16312
Federal Aviation Administration pavement modeling p 1071 N93-16315
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734

RUTHENIUM
First-principles studies of phase stability and the structural and dynamical properties of metal hydrides
[DE92-040855] p 1104 N93-16589

RUTHENIUM COMPOUNDS
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001681] p 1290 N93-17033

S

S WAVES
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093

SAFETY
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720

SAFETY FACTORS
Reliability analysis of External Tank Attack Ring (ETA) p 1182 N93-17322
Developing a safe on-orbit cryogenic depot p 1393 N93-17426

SAFETY MANAGEMENT
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
Aviation safety research at the National Institute for Aviation Research Wichita State University: A report to the FAA Technical Center
[NIAR-92-2] p 1058 N93-16455
Special investigation report: Flight attendant training and performance during emergency situations
[PB92-917006] p 1058 N93-16834

SALINITY
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843

SAMPLED DATA SYSTEMS
Computer aided analysis of nonlinear systems
[RR-446] p 1239 N93-16576
Numerical methods for the analysis of sampled-data systems and for the computation of system zeros p 1274 N93-17300

SAMPLING
Earth benefits from NASA research and technology. Life sciences applications
[NASA-TM-108043] p 1358 N93-15712

SAN ANDREAS FAULT
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092

SANDWICH STRUCTURES
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material p 1084 N93-15779
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications p 1085 N93-15780
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215
Buckling problems of sandwich shells
[LR-690] p 1185 N93-16286

SATELLITE ALTIMETRY
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437

SATELLITE ANTENNAS
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616

SATELLITE ATTITUDE CONTROL
ROSAT in-orbit attitude measurement recovery
[MBB-UK-0168-92-PUB] p 1088 N93-17629

SATELLITE COMMUNICATION
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
An agile frequency synthesizer/RF generator for the SCAMP terminal
[AD-A256777] p 1137 N93-16052
A prototype automatic phase compensation module
[NASA-TM-105930] p 1148 N93-16616
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
Applications of the Petite Amateur Navy Satellite (PANSAT)
[AD-A258015] p 1089 N93-17769

SATELLITE CONFIGURATIONS
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738

SATELLITE CONTROL
Modification of Earth-satellite orbits using medium-energy pulsed lasers
[DE93-000858] p 1074 N93-16302

SATELLITE DESIGN
Simulation of geometric configurations of an in orbit satellite p 1079 N93-15738
Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778
Reusable Reentry Satellite (RRS): Configuration trade study
[NASA-CR-187772] p 1086 N93-15804
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720

SATELLITE IMAGERY
ExperCAT case studies
[AD-A256177] p 1211 N93-15871
Morphodynamics of intertidal regions
[BCRS-92-03] p 1220 N93-16574
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755

SATELLITE INSTRUMENTS
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817

SATELLITE NAVIGATION SYSTEMS
Navstar global positioning system: Introduction and status
[NLR-TP-91008-U] p 1059 N93-17559

SATELLITE NETWORKS
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
MicroSat data telemetry
[AD-A257468] p 1076 N93-17659

SATELLITE OBSERVATION
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017
Observation of the Earth-atmosphere system by NOAA satellite (acquisition, production, application, and use of NOAA data)
[BCRS-92-02] p 1207 N93-16221
Feasibility study on global operational forest cover monitoring network for FAO using satellite remote sensing
[BCRS-90-05] p 1190 N93-16222
Radiation fluxes at the FIFE site
[NASA-CR-191717] p 1208 N93-16718
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

SATELLITE ORBITS
ROSAT in-orbit attitude measurement recovery
[MBB-UK-0168-92-PUB] p 1088 N93-17629

SATELLITE ORIENTATION
ROSAT in-orbit attitude measurement recovery
[MBB-UK-0168-92-PUB] p 1088 N93-17629

SATELLITE POWER TRANSMISSION
Power beaming providing a space power infrastructure
[DE93-000850] p 1092 N93-17363

SATELLITE TRACKING
Real-time ionospheric monitoring system using the GPS
[AD-A256916] p 1058 N93-16141

SATELLITE-BORNE INSTRUMENTS
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
The Lunar Orbital Prospector p 1395 N93-17436
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437

SCALE (CORROSION)
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

SCALE MODELS
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite p 1078 N93-15731
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 1067 N93-17622

SCALING LAWS
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102

SCANDIUM ISOTOPES
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485

SCANNERS
Scan-based switching tests
[AD-A257712] p 1151 N93-17685

SCANNING ELECTRON MICROSCOPY
The use of the charge-induced voltage alteration technique to analyze precursors to dielectric breakdown
[DE92-040960] p 1149 N93-17188

SCANNING TUNNELING MICROSCOPY
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
Application of scanning tunneling microscopy to electrochemistry
[AD-A255680] p 1101 N93-15955
Adhesion in atomic scale metal contacts
[AD-A257137] p 1121 N93-16142
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158

SCATTERING
A laser spectroscopy technique for evaluating in-situ degradation of composite materials
[AD-A256983] p 1097 N93-16255
QCD on the light cone
[DE93-001822] p 1330 N93-17183
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788

SCATTERING AMPLITUDE
High energy elastic and diffractive scattering
[DE93-000762] p 1292 N93-17231

SCATTERING COEFFICIENTS
CP-violation in K(sup +/-) to 3 pi decays and lattice QCD B-factors
[PREPRINT-848] p 1323 N93-17068

SCATTERING CROSS SECTIONS
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463
Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra
[DE93-001635] p 1293 N93-17464
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
Nuclear structure studies at intermediate energy
[DE93-003661] p 1295 N93-17605

SCATTERING FUNCTIONS
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016

SCENE ANALYSIS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406

SCHEDULES
Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672

SCHEDULING
Requirements for the implementation of schedule repair technology in the Experiment Scheduling Program p 1278 N93-17286
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
The Starlite Project: Prototyping real-time software
[AD-A257773] p 1253 N93-17730

SCHMIDT TELESCOPES
Ground-based observation of near-Earth asteroids p 1360 N93-16879

SCHROEDINGER EQUATION
A simple method to generate integrable symplectic maps
[PREPRINT-795] p 1265 N93-16416
Integrable cellular automata
[PREPRINT-869] p 1269 N93-16967
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071
Time evolution of Caldirola-Kanai oscillators
[PREPRINT-846] p 1272 N93-17712

SCIENCE
Ventures in science
[DE93-003044] p 1331 N93-16521
National Science Foundation annual report, 1991
[NSF-92-1] p 1402 N93-16948
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089

SCIENTIFIC SATELLITES
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017
Developing satellite ground control software through graphical models p 1246 N93-17500
MicroSat data telemetry
[AD-A257468] p 1076 N93-17659

SCIENTISTS
Source hierarchy list. Volume 2: E through N
[AD-A256101] p 1352 N93-16064

SCINTILLATION COUNTERS
Experimental investigations in particle physics at intermediate energies
[DE93-000406] p 1284 N93-16160
Nuclear research with heavy ions
[DE92-040840] p 1285 N93-16184
Monte Carlo shower counter studies
[NASA-CR-191364] p 1243 N93-16933
Correlated optical observations with BATSE/CGRO on SCO X-1 p 1344 N93-17313
Calibration of phoswich detectors
[KVI-891] p 1169 N93-17404

SCREWS
Pressure wall patch
[NASA-CASE-MFS-28724-1] p 1088 N93-17061

SEA BREEZE
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836

SEA FLOOR SPREADING
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938

SEA ICE
Physical and dynamic properties of sea ice in the polar oceans
[AD-A256303] p 1219 N93-15843
Investigation of Antarctic sea ice concentration by means of selected algorithms
[AD-A257132] p 1220 N93-16076
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225

SEA LAUNCHING
Monitoring limits on sea-launched cruise missiles
[OTA-ISC-513] p 1061 N93-16632

SEA STATES
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758

SEA SURFACE TEMPERATURE
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662

SEA TRUTH
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224

SEA WATER
The behavior and dissolution of gas bubble clouds in an ocean environment
[AD-A257131] p 1220 N93-16075

SEALING
Design and analysis of seals for extended service life p 1181 N93-17283
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708

SEALS (STOPPERS)
Simulation of cryogenic turbopump annular seals p 1181 N93-17318
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734

SEARCH RADAR
Evaluation of radar performance degradation due to standoff jamming
[AD-A257316] p 1137 N93-15983

SEATS
Portable seat lift
[NASA-CASE-MFS-28610-1] p 1228 N93-17045

SECONDARY FLOW
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822

SECONDARY ION MASS SPECTROMETRY
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245

SECONDARY RADAR
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498

SECULAR VARIATIONS
Modeling the geomagnetic field over Spain: Anomalous field, secular variation, and reference field
[MEMO-15] p 1211 N93-17634

SEDIMENT TRANSPORT
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892

SEISMIC ENERGY
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586

SEISMIC WAVES
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586

SEISMOGRAMS
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138

SEISMOGRAPHS
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510

SEISMOLOGY
Proceedings of the Fourteenth Annual PL/DARPA Seismic Research Symposium
[AD-A256711] p 1206 N93-16138
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510

SELECTIVE DISSEMINATION OF INFORMATION
Risk assessment of LAN communications
[AD-A257327] p 1137 N93-15987

SELENIDES
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342

SELF ERECTING DEVICES
Prefabricated foldable lunar base modular systems for habitats, offices, and laboratories p 1229 N93-17444

SELF LUBRICATING MATERIALS
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

SEMANTICS
A framework for classifying and resolving semantic conflicts using the enhanced entity-relationship model
[AD-A257452] p 1351 N93-15870
The failure of failures in a paradigm for asynchronous communication
[CWI-CS-R9147] p 1237 N93-16410
The dynamics of description
[CWI-CS-R9143] p 1240 N93-16671
Strong sequentiality of left-linear overlapping rewriting systems
[CWI-CS-R9146] p 1267 N93-16721
Quantification and partiality
[CWI-CS-R9152] p 1242 N93-16732
A sound and complete calculus for update logic
[CWI-CS-R9155] p 1267 N93-16742
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526
Semantic query optimization in distributed database systems: A knowledge-based approach
[ISBN-90-9003849-3] p 1356 N93-17590
Semantics and comparative logic
[LP-91-09] p 1272 N93-17713
A framework for classifying and resolving semantic heterogeneity in object-oriented databases
[AD-A257597] p 1357 N93-17790

SEMICONDUCTING FILMS
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Process for the controlled growth of single-crystal films of silicon carbide polytypes on silicon carbide wafers
[NASA-CASE-LEW-15222-3] p 1327 N93-17413

SEMICONDUCTOR DEVICES
Time stability of Monte Carlo device simulation
[DE92-019375] p 1275 N93-15884
Technique for current step measurements on the low field Metal Oxide Varistor (MOV)
[DE93-000843] p 1143 N93-15904
Center for High-Frequency Microelectronics
[AD-A257003] p 1145 N93-16030
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Solid state research
[AD-A256965] p 1318 N93-16251
Aspects of electron transport in semiconductor nanostructures
[ETN-92-92787] p 1321 N93-16486
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512

Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599
The unofficial AMPLEX owner's manual
[DE93-001437] p 1148 N93-16651
Feasibility assessment and applications development of a radiobiological dosimeter for space applications, phase 2
[CTN-93-60609] p 1168 N93-16745
Process for the controlled growth of single-crystal films of silicon carbide polytypes on silicon carbide wafers
[NASA-CASE-LEW-15222-3] p 1327 N93-17413
Multigrid for semiconductor device simulation: Cell-centered or vertex-centered multigrid?
[CWI-NM-R9118] p 1271 N93-17553
Preliminary investigation into the development of hardening devices using vacuum microelectronic technology
[AD-A258009] p 1152 N93-17750
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

SEMICONDUCTOR DIODES
Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A257419] p 1171 N93-15864
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781

SEMICONDUCTOR LASERS
Communications: Fiber-coupled external-cavity semiconductor high-power laser
[AD-A257386] p 1171 N93-15860
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643
Wafer scale union
[AD-A258001] p 1152 N93-17749

SEMICONDUCTORS (MATERIALS)
The components of an optical RS flip-flop for an integrated optical processor
[AD-A256879] p 1301 N93-15709
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Physics and chemistry in high electric fields
[AD-A257138] p 1280 N93-15854
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930
RF vacuum microelectronics
[AD-A257320] p 1144 N93-15984
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
Electronic transport in 3-5 semiconductors and their lattice matched heterojunctions
[AD-A256904] p 1316 N93-16023
Center for High-Frequency Microelectronics
[AD-A257003] p 1145 N93-16030
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
Strained quantum well modulation-doped InGaSb/AlGaSb structures grown by molecular beam epitaxy
[DE93-000755] p 1316 N93-16132
A theoretical search for supervelocity semiconductors
[AD-A256912] p 1317 N93-16140
Nonlinear optical studies of resonant systems
[AD-A257001] p 1302 N93-16235
HACT spatial light modulator
[AD-A256994] p 1302 N93-16261
Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
Pressure as a probe of deep levels and defects in semiconductors: GaAs, GaP and their alloys
[DE93-000714] p 1323 N93-17055
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184
X-ray studies of microstructures in semiconductors and superconducting materials
[DE93-001953] p 1324 N93-17198
Remote hydrogen sensing techniques
[NASA-CR-191411] p 1169 N93-17203
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution p 1165 N93-17334
The 16th International Conference on Defects in Semiconductors
[AD-A258035] p 1328 N93-17754

SENSORS
Dielectric optical waveguide sensors integrated with GaAs active devices
[DE93-000750] p 1302 N93-16231

SEPARATED FLOW
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596
Effect of a rotating propeller on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism
[DE93-003624] p 1164 N93-17604

SEPARATORS
Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919
Fluid separator
[NASA-CASE-MFS-28658-1] p 1163 N93-17039
Development of an electrochemical hydrogen separator
[DE93-002606] p 1106 N93-17186

SEQUENCING
An algorithm for the construction of dependency trees
[MEMO-INF-92-39] p 1240 N93-16668

SEQUENTIAL CONTROL
A failures model for delay-insensitive processes and the soundness of laws for guarded choice
[CS-9106] p 1264 N93-16350
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352

SERIES (MATHEMATICS)
Hereditarily-finite sets and complete metric spaces
[CWI-CS-R9148] p 1265 N93-16366
Strong sequentiality of left-linear overlapping rewriting systems
[CWI-CS-R9146] p 1267 N93-16721

SERIES EXPANSION
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731

SERVICE LIFE
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040
Reliability assessment of critical electronic components
[AD-A256996] p 1146 N93-16263
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697
Design and analysis of seals for extended service life p 1181 N93-17283

SERVOCONTROL
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658
ROMPS critical design review. Volume 1: Hardware
[NASA-CR-191613] p 1240 N93-16673

SERVOMECHANISMS
A design tool for electromechanical servo systems
[ISBN-90-9004089-7] p 1260 N93-16571

SET THEORY
Proof elimination in type theory
[CS-9202] p 1278 N93-16351
Convergence of Julia sets in the approximation of lambda e(sup z) by lambda (1 + z/d)(sup d)
[W-9205] p 1264 N93-16354
Hereditarily-finite sets and complete metric spaces
[CWI-CS-R9148] p 1265 N93-16366
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Finite type structures within combinatory algebras
[ML-91-06] p 1273 N93-17781
Going stable in graph models
[ML-91-08] p 1274 N93-17786

SEWING
An industrial sewing machine variable speed controller
[NASA-CR-192066] p 1180 N93-17772

SEYFERT GALAXIES
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095
X ray spectral structure of Seyfert galaxies p 1366 N93-17098
Chaotic behaviour of x ray lightcurves of AGN? p 1366 N93-17101
Correlated hard x ray and UV variability in NGC 5548 p 1361 N93-17104
Power spectrum modelling of the x ray variability of NGC4051 p 1367 N93-17108
Preliminary results from the ROSAT WFC all sky survey: A sample of low galactic column density AGN's p 1362 N93-17131
The x ray properties of warm IRAS galaxies p 1371 N93-17134
Soft x ray segregation of Seyfert galaxies p 1362 N93-17135
On the origin of the x ray background p 1374 N93-17149
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
The surface density of quasars and Seyfert galaxies at B is approximately 22.0 p 1375 N93-17157
A ROSAT high resolution x ray image of NGC 1068 p 1360 N93-17402

SHADOWGRAPH PHOTOGRAPHY
Preliminary study for a fluid optical analysis system in microgravity adapted to Canadian needs
[CTN-93-60625] p 1131 N93-16644

SHAFTS (MACHINE ELEMENTS)
High torque capable, self locking, vibration isolating flexible shaft coupling statement of government interest
[AD-D015501] p 1178 N93-16583
Radial spline assembly for antifriction bearings
[NASA-CASE-MFS-28629-1] p 1179 N93-17084

SHALLOW WATER
Morphodynamics of intertidal regions
[BCRS-92-03] p 1220 N93-16574
A numerical model of the northwest European continental shelf on the Cray Y-MP2E
[CWI-NM-R9119] p 1252 N93-17554

SHAPE CONTROL
Deployment analysis and in orbit control of large reflectors p 1083 N93-15769

SHAPE MEMORY ALLOYS
Articulated control surface
[AD-D015464] p 1068 N93-16463

SHAPES
Streamwise computation of a circular-to-rectangular transition duct potential flow field
[NIAR-92-17] p 1159 N93-16628
Recognition of fiducial marks applied to robotic systems
[NASA-CR-191857] p 1168 N93-16659

SHEAR FLOW
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows p 1152 N93-15793
Modeling of turbulent shear flows p 1153 N93-15797
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Correlation theory of a two-dimensional plasma turbulence with shear flow
[DE93-000880] p 1309 N93-16308
Tokamak turbulence in self-regulated differentially rotating flow and L-H transition dynamics
[DE93-000443] p 1310 N93-16451
Turbulent secondary flow as a coherent structure of turbulent shear flows p 1161 N93-16822
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761

SHEAR LAYERS
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Development of wall turbulence structure p 1162 N93-16824

SHEAR PROPERTIES
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

SHEAR STRENGTH
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433
SHEAR STRESS
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
SHEARING
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
SHELL STABILITY
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412
SHELL THEORY
Rotational band structure of intruder configurations: Success and limitations of the Cranked Shell Model
[DE93-001713] p 1288 N93-16972
SHELLS (STRUCTURAL FORMS)
Buckling problems of sandwich shells
[LR-690] p 1185 N93-16286
Beam, plate, and shell finite elements for CSI design code p 1189 N93-16782
Mode interaction in stiffened composite shells under combined mechanical and thermal loadings p 1189 N93-16793
SHOCK
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
SHOCK ABSORBERS
Wheels for wheelchairs and the like
[NASA-CASE-MFS-28632-1] p 1228 N93-17042
SHOCK LAYERS
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
SHOCK LOADS
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
Shock-treated lunar soil simulant: Preliminary assessment as a construction material p 1386 N93-17238
SHOCK MEASURING INSTRUMENTS
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
SHOCK SPECTRA
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
SHOCK TESTS
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
Experimental approach on the pyrotechnical shock reduction of Ariane-5 upper stage p 1075 N93-15764
Shock-treated lunar soil simulant: Preliminary assessment as a construction material p 1386 N93-17238
SHOCK WAVE INTERACTION
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
SHOCK WAVES
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
SHORT CRACKS
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641
SHORT TAKEOFF AIRCRAFT
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694
SHROUDED PROPELLERS
Effect of a rotating propeller on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625
Acoustic mode measurements in the inlet of a model turbofan using a continuously rotating rake
[NASA-TM-105989] p 1066 N93-16705
SHROUDS
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058
SHUTTLE PALLET SATELLITES
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
SIDESLIP
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638
SIGNAL ANALYSIS
Project proposal active vision
[AD-A256490] p 1258 N93-15934
SIGNAL ANALYZERS
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
SIGNAL ENCODING
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585
SIGNAL FADING
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
SIGNAL GENERATORS
National Defense Science and Engineering Graduate Fellowship Program in electrical engineering
[AD-A256975] p 1146 N93-16254
SIGNAL PROCESSING
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Bayesian interpolation and deconvolution
[AD-A256185] p 1274 N93-15874
Project proposal active vision
[AD-A256490] p 1258 N93-15934
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438
Optical high-speed parallel backplane
[AD-D015505] p 1148 N93-16608
The unofficial AMPLEX owner's manual
[DE93-001437] p 1148 N93-16651
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191807] p 1230 N93-16709
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056
Acceleration recorder and playback module
[NASA-CASE-MSC-22008-1] p 1169 N93-17077
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087
The multiscale and wavelet transform with applications in well log analysis
[ETN-92-92526] p 1246 N93-17491
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722
SIGNAL TO NOISE RATIOS
Evaluation of radar performance degradation due to standoff jamming
[AD-A257316] p 1137 N93-15983
Optimal linear array heading in a directional noise field
[AD-A257336] p 1137 N93-15991
SIGNATURES
Fingerprinting of Materials
[NASA-CR-184482] p 1199 N93-15916
Fingerprinting of materials: Technical supplement p 1199 N93-15917
SIKORSKY AIRCRAFT
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
SILANES
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136
SILICATES
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Processing lunar soils for oxygen and other materials p 1381 N93-16889
SILICON
Effects of processing on MOS radiation hardening
[AD-A257361] p 1142 N93-15856
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
[AD-A255569] p 1316 N93-16136
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599
Mathematical modelling and computer simulation of crystal growth from liquid phase under microgravity conditions, phase 2
[CTN-93-60620] p 1133 N93-16934
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176] p 1294 N93-17600
SILICON ALLOYS
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Lattice damage in ion-implanted silicon-germanium alloys
[DE92-040860] p 1110 N93-15951
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
SILICON CARBIDES
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Ion implantation effects in silicon carbide
[DE92-041306] p 1097 N93-16090
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919
Process for the controlled growth of single-crystal films of silicon carbide polytypes on silicon carbide wafers
[NASA-CASE-LEW-15222-3] p 1327 N93-17413
Radiation effects and micromechanics of SiC/SiC composites
[DE93-003268] p 1099 N93-17603
SILICON DIOXIDE
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Preparation and evaluation of fused silica capillary columns for gas chromatography and micellar electrokinetic chromatography
[ETN-92-92818] p 1104 N93-16473
SILICON NITRIDES
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Development of a creep deformation and life prediction model for a HIPed silicon nitride ceramic
[DE93-000980] p 1123 N93-16273
Diffusion bonding of silicon nitride to austenitic stainless steel
[ETN-92-92789] p 1113 N93-16488
Microstructure/mechanical-property relationships and R-curve behavior in Si3N4/Si3N4(w) composites
[DE92-041096] p 1098 N93-17004
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062
SILICON OXIDES
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928

SILICON RADIATION DETECTORS
Improvement of thick a-Si radiation detectors by field profile tailoring
[DE92-041192] p 1144 N93-15975
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512
Feasibility assessment and applications development of a radiobiological dosimeter for space applications, phase 2
[CTN-93-60609] p 1168 N93-16745
SILICON TRANSISTORS
Minority carrier transport in heavily doped silicon
[ETN-92-92527] p 1327 N93-17563
SILVER
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924
Potential modulation of equilibrium and excitation phenomena at the electrolyte-solid interface
[DE93-001685] p 1103 N93-16163
Colloidal Au and Ag precipitates formed in Al2O3 by ion implantation and annealing
[DE93-000969] p 1112 N93-16197
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776
SILVER BROMIDES
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
SIMD (COMPUTERS)
Computational fluid dynamics with irregular grids on the connection machine
[INRIA-RR-1411] p 1157 N93-16478
The performance of PAGOSA on several SIMD and MIMD parallel computers
[DE93-002599] p 1256 N93-16988
Monte Carlo simulations on SIMD computer architectures
[DE92-041210] p 1245 N93-17360
SIMULATION
Enhancement of multiple target track simulation
[AD-A257224] p 1278 N93-16236
Parallel algorithms for simulating continuous time Markov chains
[NASA-CR-189729] p 1238 N93-16550
Above-surface neutralization of highly charged ions: The formation of hollow atoms
[DE93-001371] p 1288 N93-16603
NCC Simulation Model: Simulating the operations of the network control center, phase 2
[NASA-CR-191616] p 1140 N93-16716
NiCd cells behaviour at high currents and low temperature for space applications
[ITN-93-85176] p 1149 N93-16835
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
SIMULATORS
Modeling of radiation effects in CMOS
[AD-A257236] p 1144 N93-15970
Portable radar simulator
[AD-D015453] p 1139 N93-16459
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
SINE WAVES
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
SINGLE CRYSTALS
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
Potential modulation of equilibrium and excitation phenomena at the electrolyte-solid interface
[DE93-001685] p 1103 N93-16163
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Process for single crystal growth of high T(c) superconductors
[AD-D015480] p 1320 N93-16485
The 10th International Conference on Crystal Growth (ICCG-10)
[AD-A256938] p 1321 N93-16505
Brittle to ductile transition in cleavage fracture
[DE93-002466] p 1187 N93-17012
Crystallographic and magnetic properties of UPdSn
[DE92-040243] p 1324 N93-17206
Anode for rechargeable ambient temperature lithium cells
[NASA-CASE-NPO-18580-1-CU] p 1150 N93-17278
Process for the controlled growth of single-crystal films of silicon carbide polytypes on silicon carbide wafers
[NASA-CASE-LEW-15222-3] p 1327 N93-17413
Fatigue in single crystal nickel superalloys
[AD-A258038] p 1117 N93-17704
SINGULARITY (MATHEMATICS)
On a symmetry of turbulence
[AD-A256647] p 1155 N93-15910
On the stability of a stringy black hole
[PREPRINT-879] p 1365 N93-16983
SINTERING
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062
SISO (CONTROL SYSTEMS)
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
SITE SELECTION
Lunar resource evaluation and mine site selection p 1380 N93-16881
Lunar site characterization and mining p 1380 N93-16882
The choice of the location of the lunar base p 1394 N93-17431
Geological and geophysical field investigations from a lunar base at Mare Smythii p 1394 N93-17432
Astronomy on the Moon: Geological considerations
[SOEST-CONTRIB-2399] p 1363 N93-17434
Helium mining on the Moon: Site selection and evaluation p 1395 N93-17435
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437
A search for intact lava tubes on the Moon: Possible lunar base habitats
[PGD-PUBL-541] p 1396 N93-17438
SITTING POSITION
Portable seat lift
[NASA-CASE-MFS-28610-1] p 1228 N93-17045
SIZE DISTRIBUTION
Atomization of JP-10/B4C gelled slurry fuel
[AD-A256827] p 1128 N93-15686
A cloud chamber study of the effect which nonprecipitating clouds have on the aerosol size distribution
[AD-A256730] p 1200 N93-16139
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
SKIN FRICTION
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
SKY SURVEYS (ASTRONOMY)
Extragalactic counterparts to Einstein slew survey sources p 1361 N93-17107
ROSAT-IUE All Sky Survey (RIASS): First results on active galaxies p 1369 N93-17117
The quasar 1821+643 during the ROSAT survey p 1361 N93-17119
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120
Spectra of radio-loud quasars observed in the ROSAT/XRT all sky survey p 1361 N93-17125
Initial results from a ROSAT deep survey in Lynx p 1362 N93-17132
ROSAT all sky survey observations of IRAS galaxies p 1362 N93-17133
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
SLEEVES
Self-actuating slide valve system
[AD-D015456] p 1177 N93-16435
SLENDER CONES
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
SLEWING
Extragalactic counterparts to Einstein slew survey sources p 1361 N93-17107
SLIDING FRICTION
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
SLOTS
Radial spline assembly for antifriction bearings
[NASA-CASE-MFS-28629-1] p 1179 N93-17084
SLURRIES
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
SLURRY PROPELLANTS
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
SMALL SCIENTIFIC SATELLITES
Applications of the Petite Amateur Navy Satellite (PANSAT)
[AD-A258015] p 1089 N93-17769
SMART STRUCTURES
Ground test validation for precision structures p 1085 N93-15785
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
SMOKE
Semi-propellants for ducted rockets p 1092 N93-17612
SNOW
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
SNOW COVER
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755
SOCIAL FACTORS
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801
Space resources. Volume 4: Social concerns
[NASA-SP-509-VOL-4] p 1377 N93-16857
Strategies for broadening public involvement in space developments p 1349 N93-16861
Space resources. Volume 1: Scenarios
[NASA-SP-509-VOL-1] p 1379 N93-16870
Impacts of sociopolitical conditions p 1379 N93-16873
Modeling socioeconomic and ecologic aspects of land-use change
[DE93-001370] p 1205 N93-17478
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592
SOCIAL ISOLATION
Summary of presentation for research on social structure, agreement, and conflict in groups in extreme and isolated environments p 1221 N93-16801
SOCIOLOGY
Global climate change: Social and economic research issues
[DE92-041151] p 1199 N93-15974
SODIUM
Conduction in ion implanted single crystal diamond
[DE92-040861] p 1317 N93-16164
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
SODIUM CHLORIDES
Thermal diffusion processes in aqueous sodium chloride solutions
[DE93-002596] p 1105 N93-16656
SODIUM COMPOUNDS
The electrical conductivity of sodium polysulfide melts
[DE92-041217] p 1100 N93-15677
SODIUM SULFUR BATTERIES
The electrical conductivity of sodium polysulfide melts
[DE92-041217] p 1100 N93-15677
SOFTWARE ENGINEERING
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
Information engineering and the information engineering facility versus rapid application development and focus
[AD-A257297] p 1350 N93-15895
Software measures and the capability maturity model
[AD-A257238] p 1234 N93-15962
Directory of design support methods
[AD-A256987] p 1227 N93-16258
The challenge of a data storage hierarchy p 1354 N93-16325
The position of the mathematician in the development of digital simulation systems with application to computational physics
[NLR-TP-90168-U] p 1236 N93-16344
Software engineering laboratory series: Annotated bibliography of software engineering laboratory literature
[NASA-TM-108100] p 1237 N93-16380

Functional requirements of an advanced instructional design advisor: Simulation authoring, Volume 3
[AD-A256650] p 1238 N93-16500
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Creating an open environment software infrastructure
p 1254 N93-16774
Quantifying parameters for Bayesian prior assumptions when estimating the probability of failure of software
p 1254 N93-16777
Towards automated support for extraction of reusable components p 1244 N93-17163
The software-cycle model for re-engineering and reuse p 1244 N93-17165
Fine-grain incremental implementation of algebraic specifications
[CWI-CS-R9159] p 1270 N93-17489
Software design as a problem in learning theory (a research overview) p 1248 N93-17509
Towards automation of user interface design
p 1248 N93-17510
Toward domain-specific design environments: Some representation ideas from the telecommunications domain p 1249 N93-17511
Model-based software design p 1249 N93-17514
Automating the design of scientific computing software p 1249 N93-17516
Domain specific software design for decision aiding
p 1249 N93-17517
Automating software design system DESTA
p 1250 N93-17519
Generic domain models in software engineering
p 1250 N93-17520
A domain-specific design architecture for composite material design and aircraft part redesign
p 1250 N93-17522
RT-Syn: A real-time software system generator
p 1250 N93-17523
Knowledge-based design of generate-and-patch problem solvers that solve global resource assignment problems p 1251 N93-17527
Proceedings of the 2nd International Conference on Algebraic Methodology and Software Technology
[AD-A257487] p 1272 N93-17664
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763

SOFTWARE RELIABILITY

Quantifying parameters for Bayesian prior assumptions when estimating the probability of failure of software
p 1254 N93-16777
The Software Engineering Laboratory: An operational software experience factory p 1243 N93-17162
On the nature of bias and defects in the software specification process p 1244 N93-17166
Providing an empirical basis for optimizing the verification and testing phases of software development
p 1244 N93-17168
Using software metrics and software reliability models to attain acceptable quality software for flight and ground support software for avionic systems
p 1254 N93-17305
Domain specific software architectures: Command and control p 1247 N93-17503

SOFTWARE REUSE

The domain-specific software architecture program
[AD-A257225] p 1232 N93-15818
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
Collected Software Engineering Papers, Volume 10
[NASA-TM-108581] p 1243 N93-17161
Towards automated support for extraction of reusable components p 1244 N93-17163
The software-cycle model for re-engineering and reuse p 1244 N93-17165
Domain specific software design for decision aiding
p 1249 N93-17517
Generic domain models in software engineering
p 1250 N93-17520
RT-Syn: A real-time software system generator
p 1250 N93-17523
CARDS: A blueprint and environment for domain-specific software reuse p 1251 N93-17528
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669
Integrating domain-specific reuse for system/software engineers course description
[AD-A257637] p 1252 N93-17723

SOFTWARE TOOLS

Development of an interactive code for updating dynamic finite element models p 1078 N93-15732
CAD to FEM tool p 1079 N93-15737
Integration of CAD tools in space vehicle design
p 1079 N93-15739
Specifying, predicting, and verifying the timing properties of hard-real-time programming languages and systems
[AD-A257296] p 1233 N93-15894
Transparently interposing user code at the system interface
[AD-A256636] p 1233 N93-15907
A tool for automated validation of network protocols
[AD-A256726] p 1255 N93-16066
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
BEEMER: An integrated optics design tool
[DE92-040401] p 1236 N93-16295
MGMtool: A performance modelling tool based on matrix geometric techniques
[MEMO-INF-92-35] p 1236 N93-16338
Software engineering laboratory series: Annotated bibliography of software engineering laboratory literature
[NASA-TM-108100] p 1237 N93-16380
TOPICS: A contribution to analog design automation
[ISBN-90-9004786-7] p 1238 N93-16471
Parallel processing for linear programming
[ISBN-90-6275-754-5] p 1256 N93-16565
Development of a computer assisted toolbox for aerodynamic design of aircraft at subcritical conditions with application to three-surface and canard aircraft
[ISBN-90-6275-768-5] p 1239 N93-16567
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579
On efficiently characterizing solutions of linear Diophantine equations and its application to data dependence analysis
[RUU-CS-92-01] p 1266 N93-16643
TokenPasser: A petri net specification tool
[NASA-CR-191816] p 1241 N93-16725
CRUISE: Creative user interface for software engineering
[ITN-93-85172] p 1242 N93-16736
Creating an open environment software infrastructure
p 1254 N93-16774
Collected Software Engineering Papers, Volume 10
[NASA-TM-108581] p 1243 N93-17161
The Software Engineering Laboratory: An operational software experience factory p 1243 N93-17162
Automated support for experience-based software management p 1244 N93-17164
The software-cycle model for re-engineering and reuse p 1244 N93-17165
Software Engineering Laboratory Ada performance study: Results and implications p 1245 N93-17172
The KASE approach to domain-specific software systems p 1247 N93-17502
Issues in knowledge representation to support maintainability: A case study in scientific data preparation p 1247 N93-17504
Meta-tools for software development and knowledge acquisition p 1248 N93-17508
Interactive specification acquisition via scenarios: A proposal p 1249 N93-17512
Automating the design of scientific computing software p 1249 N93-17516
Automating software design system DESTA
p 1250 N93-17519
Generic domain models in software engineering
p 1250 N93-17520
Practical architecture of design optimisation software for aircraft structures taking the MBB-LAGRANGE code as an example
[MBB-FE-251-S-PUB-479] p 1063 N93-17565
The control of test costs: Experience of the FADEC software
[ETN-93-93384] p 1357 N93-17745
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808

SOIL EROSION

Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382

SOIL MAPPING

High-resolution elemental mapping of the lunar surface p 1387 N93-17244

SOIL SCIENCE

Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197

SOILS

State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
Human impacts on soil carbon dynamics of deep-rooted Amazonian forests and effect of land use change on the carbon cycle in Amazon soils
[NASA-CR-191219] p 1202 N93-16748
Soil organic matter dynamics and the global carbon cycle
[DE93-001367] p 1203 N93-17197

SOL-GEL PROCESSES

Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928

SOLAR ACTIVITY EFFECTS

Long-term variations in the geomagnetic activity level. 1: A connection with solar-wind sources
[NOTA-INTERNA-978] p 1399 N93-17631

SOLAR CELLS

Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
LDEF solar cell radiation effects analysis
[NASA-CR-191776] p 1195 N93-16374
High efficiency cadmium telluride and zinc telluride based thin-film solar cells
[DE92-016403] p 1195 N93-16448
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Development of a commercial photovoltaic concentrator module
[DE93-002594] p 1196 N93-16655
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
Results of the 1992 NASA/JPL Balloon Flight Solar Cell Calibration Program
[NASA-CR-191630] p 1197 N93-16698
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802

SOLAR COLLECTORS

Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839
Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application
[DE93-003229] p 1197 N93-17468

SOLAR COOLING

Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087

SOLAR COSMIC RAYS

Study of high energy particles and protective layers for materials
[CTN-93-60613] p 1124 N93-16545

SOLAR DYNAMIC POWER SYSTEMS

Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617

SOLAR ELECTRIC PROPULSION

Electric propulsion p 1095 N93-16916

SOLAR ENERGY

Open-cycle absorption solar cooling: Natural convection heat and mass transfer from falling films in vertical channels
[DE92-040999] p 1195 N93-16087

A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base
[DE93-000018] p 1399 N93-17174
S/EV 92 (Solar and Electric Vehicles): Proceedings, volume 1
[DE93-001501] p 1180 N93-17577

SOLAR ENERGY CONVERSION
Solar thermal electric and biomass power: Program overviews, fiscal years 1990-1991
[DE92-010582] p 1193 N93-15850
Proceedings of the Sixteenth DOE Solar Photochemistry Research Conference
[DE93-001760] p 1193 N93-15899
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553
Technologies --- space power sources p 1198 N93-16907

SOLAR FLARES
Characterization of radiation-induced damage in high performance polymers by electron paramagnetic resonance imaging spectroscopy p 1128 N93-16794

SOLAR GENERATORS
Solar thermal electric and biomass power: Program overviews, fiscal years 1990-1991
[DE92-010582] p 1193 N93-15850
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553

SOLAR MAGNETIC FIELD
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944

SOLAR POWERED AIRCRAFT
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802

SOLAR RADIATION
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base
[DE93-000018] p 1399 N93-17174
An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution
[DE93-003333] p 1210 N93-17573

SOLAR RADIATION SHIELDING
Sunshade support structure: Structure and testing p 1080 N93-15748

SOLAR SENSORS
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717

SOLAR SYSTEM
Space law and space resources p 1358 N93-16860
Space migrations: Anthropology and the humanization of space p 1229 N93-16862

SOLAR TERRESTRIAL INTERACTIONS
Long-term variations in the geomagnetic activity level. 1: A connection with solar-wind sources
[NOTA-INTERNA-978] p 1399 N93-17631
North-south anisotropy during the quasi-stationary modulation of galactic cosmic rays
[NOTA-INTERNA-975] p 1400 N93-17647

SOLAR THERMAL ELECTRIC POWER PLANTS
An overview of current activities at the National Solar Thermal Test Facility
[DE92-041160] p 1196 N93-16553

SOLAR THERMAL PROPULSION
Beamed energy propulsion p 1095 N93-16917

SOLAR WIND
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245
Long-term variations in the geomagnetic activity level. 1: A connection with solar-wind sources
[NOTA-INTERNA-978] p 1399 N93-17631
North-south anisotropy during the quasi-stationary modulation of galactic cosmic rays
[NOTA-INTERNA-975] p 1400 N93-17647

SOLAR-PUMPED LASERS
Laser power transmission p 1175 N93-16910

SOLDERED JOINTS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675

SOLENOIDS
Cryotribology: Development of cryotribological theories and application to cryogenic devices
[DE93-000404] p 1176 N93-16238

SOLID ELECTROLYTES
Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561

SOLID LUBRICANTS
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

SOLID MECHANICS
Development of user guidelines for a three-dimensional finite element pavement model p 1070 N93-16311
Micro mechanical behavior of pavements p 1070 N93-16312

SOLID PHASES
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391

SOLID PROPELLANT COMBUSTION
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
Development testing of throttleable ducted rockets p 1092 N93-17610
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

SOLID PROPELLANT ROCKET ENGINES
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid-propellant rocket plumes
[AD-A256176] p 1090 N93-16015
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605
National Aeronautics and Space Administration p 1358 N93-17091
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299
Thermostructural responses of carbon phenolics in a restrained thermal growth test p 1128 N93-17333
Semi-propellants for ducted rockets p 1092 N93-17612
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

SOLID PROPELLANTS
Department of Defense Explosives Safety Board Explosives Safety Seminar abstracts (1959-1990)
[AD-A250032] p 1128 N93-15932
International Workshop on Mathematical Methods in Combustion
[AD-A258161] p 1108 N93-17798

SOLID ROCKET PROPELLANTS
The AlCl absorption feature in solid rocket plume radiation
[AD-A256645] p 1089 N93-15700
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Development testing of throttleable ducted rockets p 1092 N93-17610

SOLID SOLUTIONS
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204

SOLID STATE
Solid state research
[AD-A256965] p 1318 N93-16251
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561
University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760

SOLID STATE DEVICES
Quasi-optical power combining of solid state millimeter-wave sources: A proposal for graduate fellowship
[AD-A256644] p 1143 N93-15909
Electrochemical and electrode properties of stabilized bismuth oxide ceramics
[ISBN-90-9003981-3] p 1125 N93-16570

SOLID STATE LASERS
Development of a short pulse high power infrared laser
[NASA-TM-108146] p 1170 N93-15822
Possible application of transient electromagnetic pulses to high brightness e-guns
[DE92-040360] p 1138 N93-16100
Resonantly pumped, erbium-doped, GSGG, 2.8 micron, solid state laser with energy recycling and high slope efficiency
[AD-D015517] p 1174 N93-16610
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689

SOLID-SOLID INTERFACES
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

SOLIDIFICATION
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
Study of FES/CAST/HGS
[NASA-CR-190945] p 1114 N93-16711
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Development of equipment and technique to study solidification in microgravity, phase 1
[CTN-93-60608] p 1132 N93-16729
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution p 1165 N93-17334

SOLITARY WAVES
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Kink-assisted mode hopping in a surface wave resonator
[AD-A256314] p 1207 N93-16264
Solitons on domain walls
[PREPRINT-876] p 1289 N93-16980
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
A method to generate integrable nonlinear equations of the Dirac-type and their N-soliton solutions
[PREPRINT-851] p 1270 N93-17071

SOLUBILITY
Miscibility of lubricants with refrigerants
[DE93-000538] p 1122 N93-16244
Slow-release fertilizer
[NASA-CASE-MSC-21953-1-NP] p 1179 N93-17271
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
Compatibility of refrigerants and lubricants with engineering plastics
[DE93-000541] p 1128 N93-17807

SOLUTIONS
Passivity and stress corrosion cracking of AISI 316 stainless steel in chloride-containing solutions
[ETN-92-92783] p 1113 N93-16580
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929

SOLVENTS
Physical aging and solvent effects on the fracture of LaRC-TPI adhesives p 1128 N93-16766
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984

SONAR
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060

SONDES
Application of nuclear well logging techniques to lunar resource assessment p 1385 N93-17234

SONIC BOOMS
Effect of sonic boom asymmetry on subjective loudness
[NASA-TM-107708] p 1282 N93-16755

SOUND PRESSURE
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
Measurement and evaluation of blast overpressure during F-15A crew station vulnerability assessment test [AD-A257152] p 1227 N93-16033
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor [NASA-TM-105979] p 1066 N93-16715

SOUND PROPAGATION
Consecutive plate acoustic suppressor apparatus and methods [NASA-CASE-LEW-15430-1] p 1282 N93-17051

SOUND TRANSMISSION
A comparison of acoustic impedance measurement techniques [AD-A255566] p 1282 N93-16061
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems p 1165 N93-16786

SOUND WAVES
Scattering and radiation by shells and nonlinear acoustics of particle suspensions [AD-A257257] p 1281 N93-15890
A comparison of acoustic impedance measurement techniques [AD-A255566] p 1282 N93-16061
System for determining the angle of impact of an object on a structure [NASA-CASE-LAR-14817-1] p 1169 N93-17041
Stability of weak double layers [TRITA-EPP-91-01] p 1313 N93-17649

SOUNDING ROCKETS
Experimenter's data package for the descending layers rocket [NASA-TM-108591] p 1207 N93-16461

SOUTHERN OSCILLATION
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific [AD-A257476] p 1220 N93-17662

SPACE ADAPTATION SYNDROME
Adaptation to transient postural perturbations [NASA-CR-190959] p 1227 N93-16699

SPACE BASED RADAR
Power beaming providing a space power infrastructure [DE93-000850] p 1092 N93-17363

SPACE BASES
Space resources. Overview [NASA-SP-509] p 1378 N93-16869
Space resources. Volume 1: Scenarios [NASA-SP-509-VOL-1] p 1379 N93-16870
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
Power system requirements p 1383 N93-16906
The transportation depot: An orbiting vehicle support facility p 1393 N93-17425
Developing a safe on-orbit cryogenic depot p 1393 N93-17426

SPACE CHARGE
A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860 [DE93-000460] p 1255 N93-16272
Quantum chaos without classical counterpart [PREPRINT-830] p 1331 N93-17215

SPACE COMMERCIALIZATION
A study for protein crystallization in microgravity [REPT-3211-ER-02-VOL-1] p 1131 N93-16547
Properties and uses of concrete, appendix B p 1128 N93-16904
Autonomous support for microorganism research in space [NASA-CR-192062] p 1223 N93-17780

SPACE COMMUNICATION
Implementation of educational broadcasting in space, phase 1 [CTN-93-60623] p 1332 N93-16735

SPACE DEBRIS
Trade-offs in mass and effectiveness in satellite shielding: A design approach [AD-A256693] p 1087 N93-16112
Hypervelocity impact effects on solar cells [NASA-CR-191802] p 1196 N93-16680

SPACE ENVIRONMENT SIMULATION
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458
Design of a radiator shade for testing in a simulated lunar environment [NASA-CR-192080] p 1229 N93-17710

SPACE ERECTABLE STRUCTURES
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite p 1078 N93-15731
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760
Deployment analysis and in orbit control of large reflectors p 1083 N93-15769
Dynamic deployment analysis of a mesh antenna reflector p 1083 N93-15770
Dynamic of large reflectors p 1084 N93-15773

SPACE EXPLORATION
Technical needs and research opportunities provided by projected aeronautical and space systems [NASA-CR-192124] p 1073 N93-16629
Power systems for space exploration [RAND-P-7768] p 1091 N93-16754
NASA/NSF Antarctic Science Working Group p 1222 N93-16802
NASA in the 21st century: A vision of greatness p 1073 N93-16858
The future of management: The NASA paradigm p 1350 N93-16859
Strategies for broadening public involvement in space developments p 1349 N93-16861
Space migrations: Anthropology and the humanization of space p 1229 N93-16862
The influence of culture on space developments p 1378 N93-16863
Future space development scenarios: Environmental considerations p 1073 N93-16864
Summer study postscript: A 1986 perspective p 1350 N93-16868
Space resources. Volume 1: Scenarios [NASA-SP-509-VOL-1] p 1379 N93-16870
Baseline program p 1379 N93-16871
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
Impacts of sociopolitical conditions p 1379 N93-16873
Space resources. Volume 3: Materials [NASA-SP-509-VOL-3] p 1379 N93-16875
Tethers p 1089 N93-16915
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1 [S-HRG-102-716-PT-1] p 1358 N93-17089
National Aeronautics and Space Administration p 1358 N93-17090
Joint Workshop on New Technologies for Lunar Resource Assessment [NASA-CR-191918] p 1385 N93-17233
Updating and expanding the library of materials on NASA Spacelink electronic information system p 1340 N93-17282
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
System model development for nuclear thermal propulsion [NASA-TM-108215] p 1299 N93-17343
In situ propellant production: Alternatives for Mars exploration [NASA-CR-192213] p 1130 N93-17799

SPACE FLIGHT
Long-duration isolation and confinement: Human factors issues and research requirements p 1223 N93-16808

SPACE FLIGHT STRESS
Cognitive and affective components of mental workload: Understanding the effects of each on human decision making behavior p 1226 N93-16783

SPACE HABITATS
Space resources. Volume 4: Social concerns [NASA-SP-509-VOL-4] p 1377 N93-16857
The influence of culture on space developments p 1378 N93-16863
Life support and self-sufficiency in space communities p 1229 N93-16866
Human safety in the lunar environment p 1229 N93-16867
Inflatable habitation for the lunar base p 1229 N93-17442
Prefabricated foldable lunar base modular systems for habitats, offices, and laboratories p 1229 N93-17444
Lunar subsurface architecture enhanced by artificial biosphere concepts p 1230 N93-17448

SPACE HEATING (BUILDINGS)
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance [DE93-001572] p 1193 N93-15810

SPACE INDUSTRIALIZATION
Space law and space resources p 1358 N93-16860
Summer study postscript: A 1986 perspective p 1350 N93-16868
Lunar exploration for resource utilization p 1380 N93-16877
Utilization of space resources in the space transportation system p 1384 N93-16912

SPACE LAW
Space law and space resources p 1358 N93-16860
National Aeronautics and Space Administration p 1358 N93-17090
A post cold war assessment of US space policy p 1073 N93-17218

SPACE MANUFACTURING
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
Application of manufactured products p 1383 N93-16902
Properties and uses of concrete, appendix B p 1128 N93-16904
Lunar preform manufacturing [NASA-CR-192064] p 1135 N93-17775

SPACE MISSIONS
Nutrition p 1222 N93-16805
Alternative scenarios utilizing nonterrestrial resources p 1379 N93-16872
Space resources. Volume 2: Energy, power, and transport [NASA-SP-509-VOL-2] p 1383 N93-16905
The Prospector mission [DE93-000656] p 1385 N93-17194
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
Enabling lunar and space missions by laser power transmission p 1393 N93-17423
A lunar polar expedition p 1395 N93-17433

SPACE OBSERVATIONS (FROM EARTH)
Ground-based observation of near-Earth asteroids p 1360 N93-16879
Lunar lava tube sensing p 1391 N93-17270

SPACE PLASMAS
CRRES: The combined release and radiation effects satellite program directory [NASA-CR-184504] p 1076 N93-15713
Studies of the charging of a thin dust layer in a plasma p 1313 N93-17320
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
Studies of dynamic processes related to active experiments in space plasmas [NASA-CR-191771] p 1313 N93-17801

SPACE PLATFORMS
Isostatic mounting platform p 1080 N93-15745
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762
Applied, theoretical modeling of space-based assembly, using expert system architecture for computer-aided engineering tool development p 1087 N93-16539
The transportation depot: An orbiting vehicle support facility p 1393 N93-17425

SPACE POWER REACTORS
Advanced hybrid nuclear propulsion Mars mission performance enhancement [DE93-001309] p 1090 N93-16177
Power systems for space exploration [RAND-P-7768] p 1091 N93-16754
Nuclear energy technology p 1300 N93-16908
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge [DE92-016788] p 1299 N93-17202
System model development for nuclear thermal propulsion [NASA-TM-108215] p 1299 N93-17343
Power beaming providing a space power infrastructure [DE93-000850] p 1092 N93-17363

SPACE PROCESSING
ROMPS critical design review. Volume 2: Robot module design documentation [NASA-CR-191614] p 1240 N93-16642
ROMPS critical design review. Volume 1: Hardware [NASA-CR-191613] p 1240 N93-16673
Study of FES/CAST/HGS [NASA-CR-190945] p 1114 N93-16711
Drop tube research [NASA-CR-191415] p 1132 N93-16717
Multicolor pyrometer for materials processing in space [NASA-CR-190876] p 1132 N93-16747
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Design for producing fiberglass fabric in a lunar environment [NASA-CR-192068] p 1135 N93-17770

SPACE PROGRAMS
NASA in the 21st century: A vision of greatness p 1073 N93-16858
Strategies for broadening public involvement in space developments p 1349 N93-16861
Summer study postscript: A 1986 perspective p 1350 N93-16868
National Aeronautics and Space Administration p 1358 N93-17090
A post cold war assessment of US space policy p 1073 N93-17218

SPACE SHUTTLE BOOSTERS
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605
SPACE SHUTTLE MAIN ENGINE
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
STME nozzle thermal analysis p 1095 N93-17291
Experimental investigation of a simulated LOX injector flow field and other nonintrusive measurement efforts p 1095 N93-17297
Neural network architectures to analyze OPAD data p 1262 N93-17336
SPACE SHUTTLE MISSIONS
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
Immunology presentation at the 1990 NASA/NSF Antarctica Biomedical Science Working Group p 1222 N93-16806
SPACE SHUTTLE ORBITERS
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756
SPACE SHUTTLE PAYLOADS
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
SPACE SHUTTLES
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
Heat flow in variable polarity plasma arc welds p 1181 N93-17280
Operational considerations for lunar transportation p 1392 N93-17418
Design of a resistive exercise device for use on the Space Shuttle
[NASA-CR-192079] p 1229 N93-17805
SPACE STATION FREEDOM
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
National Aeronautics and Space Administration p 1358 N93-17091
Heat flow in variable polarity plasma arc welds p 1181 N93-17280
Design and analysis of seals for extended service life p 1181 N93-17283
Space environmental effects on polymers and composites p 1128 N93-17302
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
A process for prototyping onboard payload displays for Space Station Freedom p 1073 N93-17315
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
Lunar base mission technology issues and orbital demonstration requirements on space station p 1392 N93-17416
Adaption of space station technology for lunar operations p 1392 N93-17417
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780
SPACE STATION PAYLOADS
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780
SPACE STATION POLAR PLATFORMS
Polar Platform structure development program p 1081 N93-15749
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
SPACE STATION POWER SUPPLIES
Space resources. Volume 2: Energy, power, and transport
[NASA-SP-509-VOL-2] p 1383 N93-16905
Power system requirements p 1383 N93-16906
Technologies --- space power sources p 1198 N93-16907
Nuclear energy technology p 1300 N93-16908
Thermal management in space p 1095 N93-16909
Laser power transmission p 1175 N93-16910
SPACE STATION PROPULSION
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
SPACE STATIONS
Space law and space resources p 1358 N93-16860
Applications of living systems theory to life in space p 1229 N93-16865
Concrete: Potential material for Space Station p 1089 N93-16896
The transportation depot: An orbiting vehicle support facility p 1393 N93-17425
Developing a safe on-orbit cryogenic depot p 1393 N93-17426
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
SPACE SUITS
A comparison of hand grasp breakaway strengths and bare-handed grip strengths of the astronauts, SML 3 test subjects, and the subjects from the general population
[NASA-TP-3286] p 1225 N93-16619
SPACE TRANSPORTATION
Space transfer vehicle concepts and requirements study, phase 2
[NASA-CR-191425] p 1075 N93-16660
NASA in the 21st century: A vision of greatness p 1073 N93-16858
Space resources. Volume 2: Energy, power, and transport
[NASA-SP-509-VOL-2] p 1383 N93-16905
Transport: Introduction p 1384 N93-16911
Modeling for health monitoring and control with applications to the Space Transportation Main Engine p 1095 N93-17298
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
Lunar base mission technology issues and orbital demonstration requirements on space station p 1392 N93-17416
Operational considerations for lunar transportation p 1392 N93-17418
Electric propulsion for lunar exploration and lunar base development p 1392 N93-17419
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
Advanced propulsion for LEO-Moon transport. 2: Tether configurations in the LEO-Moon system p 1393 N93-17421
Advanced propulsion for LEO-Moon transport. 3: Transportation model p 1393 N93-17422
The transportation depot: An orbiting vehicle support facility p 1393 N93-17425
Lunar lander conceptual design p 1394 N93-17428
SPACE TRANSPORTATION SYSTEM
Technical needs and research opportunities provided by projected aeronautical and space systems
[NASA-CR-192124] p 1073 N93-16629
Space transfer vehicle concepts and requirements. Volume 1: Executive summary
[NASA-CR-184488] p 1075 N93-16672
The influence of culture on space developments p 1378 N93-16863
Utilization of space resources in the space transportation system p 1384 N93-16912
Aluminum-fueled rockets for the space transportation system p 1095 N93-16913
CFD analysis on control of secondary losses in STME LOX turbines with endwall fences p 1165 N93-17289
STME nozzle thermal analysis p 1095 N93-17291
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
SPACE TRANSPORTATION SYSTEM FLIGHTS
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space p 1181 N93-17284
Analysis of Waves in Space Plasma (WISP) near field simulation and experiment p 1313 N93-17324
SPACE WEAPONS
Strategic defense initiative: Estimates of brilliant pebbles' effectiveness are based on many unproven assumptions
[AD-A256810] p 1277 N93-15679
SPACE-TIME FUNCTIONS
Mode analysis and Ward identities for perturbative quantum gravity in de Sitter space
[DE92-040503] p 1328 N93-15940
Conservation laws for elastic systems with dissipation
[AD-A257168] p 1280 N93-15999
SPACEBORNE EXPERIMENTS
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
ROMPS critical design review. Volume 2: Robot module design documentation
[NASA-CR-191614] p 1240 N93-16642
Study of FES/CAST/HGS
[NASA-CR-190945] p 1114 N93-16711
Preliminary definition of experiments and procedures for terrestrial and space examination of flame structure
[APRL-X13-8] p 1105 N93-16728
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730
Measurements and calculations of the characteristics for a space-based neutron sensor
[DE93-001429] p 1399 N93-17067
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
Autonomous support for microorganism research in space
[NASA-CR-192062] p 1223 N93-17780
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801
SPACEBORNE LASERS
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
SPACEBORNE TELESCOPES
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
Assessment of the lunar surface layer and in situ materials to sustain construction-related applications p 1388 N93-17253
A study of the Lute Metering Structure p 1189 N93-17294
SPACECRAFT ANTENNAS
The numerical simulation of the inflation process of space rigidized antenna structures p 1083 N93-15771
SPACECRAFT CONSTRUCTION MATERIALS
Spacecraft sustained load fracture control p 1077 N93-15724
SPACECRAFT CONTROL
Adaptive structures for precision controlled large space systems p 1078 N93-15730
Spacecraft command and control using AI planning techniques. The O-Plan2 project
[AD-A257395] p 1258 N93-16008
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
SPACECRAFT DESIGN
Integration of CAD tools in space vehicle design p 1079 N93-15739
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803
Experimenter's data package for the descending layers rocket
[NASA-TM-108591] p 1207 N93-16461
Space transfer vehicle concepts and requirements. Volume 2, book 2: Appendix
[NASA-CR-184490] p 1075 N93-16556
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
Space transfer vehicle concepts and requirements study, phase 2
[NASA-CR-191425] p 1075 N93-16660
Multidisciplinary design optimization using response surface analysis p 1065 N93-16796
Conceptual analysis of a lunar base transportation system p 1392 N93-17415
Operational considerations for lunar transportation p 1392 N93-17418
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
Advanced propulsion for LEO-Moon transport. 2: Tether configurations in the LEO-Moon system p 1393 N93-17421
Lunar lander stage requirements based on the Civil Needs Data Base p 1394 N93-17427
Lunar lander conceptual design p 1394 N93-17428
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756

SPACECRAFT DOCKING
The transportation depot: An orbiting vehicle support facility p 1393 N93-17425
SPACECRAFT EQUIPMENT
Lunar surface rovers p 1390 N93-17262
SPACECRAFT GUIDANCE
Robust approximate optimal guidance strategies for aeroassisted orbital transfer missions p 1074 N93-16518
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
SPACECRAFT INSTRUMENTS
Effects of ionizing radiation on selected optical materials: An overview
[DE93-001324] p 1300 N93-15660
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
SPACECRAFT LAUNCHING
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
SPACECRAFT MODULES
Service module structure of ISO spacecraft testing and design qualification p 1080 N93-15747
Experiment module/support module interface specification for the reusable reentry satellite
[NASA-CR-187885] p 1086 N93-15805
Adaption of space station technology for lunar operations p 1392 N93-17417
SPACECRAFT POWER SUPPLIES
Advanced hybrid nuclear propulsion Mars mission performance enhancement
[DE93-001309] p 1090 N93-16177
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
Space resources. Volume 2: Energy, power, and transport
[NASA-SP-509-VOL-2] p 1383 N93-16905
Power system requirements p 1383 N93-16906
Technologies --- space power sources p 1198 N93-16907
Nuclear energy technology p 1300 N93-16908
Thermal management in space p 1095 N93-16909
Laser power transmission p 1175 N93-16910
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge
[DE92-016788] p 1299 N93-17202
Enabling lunar and space missions by laser power transmission p 1393 N93-17423
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717
SPACECRAFT PROPULSION
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Reusable Reentry Satellite (RRS): Propulsion system trade study
[NASA-CR-186527] p 1087 N93-16720
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Space resources. Volume 2: Energy, power, and transport
[NASA-SP-509-VOL-2] p 1383 N93-16905
Transport: Introduction p 1384 N93-16911
Advanced propulsion for LEO-Moon transport. 1: A method for evaluating advanced propulsion performance p 1393 N93-17420
Advanced propulsion for LEO-Moon transport. 2: Tether configurations in the LEO-Moon system p 1393 N93-17421
Advanced propulsion for LEO-Moon transport. 3: Transportation model p 1393 N93-17422
Lunar He-3, fusion propulsion, and space development p 1393 N93-17424
Lunar lander conceptual design p 1394 N93-17428
In situ propellant production: Alternatives for Mars exploration
[NASA-CR-192213] p 1130 N93-17799
SPACECRAFT RADIATORS
Thermal management in space p 1095 N93-16909
SPACECRAFT SHIELDING
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027
Trade-offs in mass and effectiveness in satellite shielding: A design approach
[AD-A256693] p 1087 N93-16112
SPACECRAFT STRUCTURES
Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
Modal identification of mechanical structures by means of tuned base-motion excitation p 1077 N93-15721
Structural development of flight systems p 1078 N93-15727
Sunshade support structure: Structure and testing p 1080 N93-15748
Polar Platform structure development program p 1081 N93-15749
On the dynamic qualification of large deployable antennas p 1083 N93-15768
Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
Environmental tailoring: A major perspective for mechanical testing for future space projects p 1086 N93-15787
An optimization-based integrated controls-structures design methodology for flexible space structures
[NASA-TP-3283] p 1087 N93-16615
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537
SPACECRAFT SURVIVABILITY
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
SPACECRAFT TRAJECTORIES
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Robust approximate optimal guidance strategies for aeroassisted orbital transfer missions p 1074 N93-16518
SPACECREWS
Applications of living systems theory to life in space p 1229 N93-16865
Life support and self-sufficiency in space communities p 1229 N93-16866
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
SPACELAB
STS-40 Spacelab Life Sciences 1 (SLS-1): The first dedicated spacelab life sciences mission
[NASA-TM-108034] p 1221 N93-15823
SPACING
Gloved operator performance study
[AD-A256894] p 1227 N93-16048
SPALLING
Hypervelocity impact effects on solar cells
[NASA-CR-191802] p 1196 N93-16680
SPARK IGNITION
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
SPATIAL DISTRIBUTION
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531
Microcomputer simulation of a fourier approach to optical wave propagation
[AD-A257598] p 1305 N93-17796
SPATIAL FILTERING
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438
SPATIAL RESOLUTION
Recent diagnostic development for the Los Alamos Inertial Fusion Program
[DE92-040362] p 1306 N93-15849
Atomic resolution imaging and analysis with the STEM
[DE92-041304] p 1166 N93-16150
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738
SPECIFIC HEAT
Classical fluids of negative heat capacity
[DE92-040507] p 1329 N93-15943
Pulse combustor with controllable oscillations
[DE93-002003] p 1108 N93-17757
SPECIFICATIONS
Outline for reusable reentry satellite system specification, volumes 1 - volume 9
[NASA-CR-185958] p 1086 N93-15791
Towards formal specification and proof of finite element software within the ATES development systems
[ISBN-90-9004337-3] p 1239 N93-16572
On the nature of bias and defects in the software specification process p 1244 N93-17166
Fine-grain incremental implementation of algebraic specifications
[CWI-CS-R9159] p 1270 N93-17489
GATOR: Requirements capturing of telephony features p 1247 N93-17505
Interactive specification acquisition via scenarios: A proposal p 1249 N93-17512
Model-based software design p 1249 N93-17514
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
SPECTRA
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
SPECTRAL CORRELATION
Implementation of the one bit spectral correlation algorithm
[AD-A257748] p 1141 N93-17671
SPECTRAL EMISSION
The spectra of accretion discs in active galactic nuclei p 1368 N93-17111
The central engine of AGN's and its cosmological evolution p 1372 N93-17138
SPECTRAL ENERGY DISTRIBUTION
ROSAT-IUE All Sky Survey (RIASS): First results on active galaxies p 1369 N93-17117
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
The 10-year monitoring of the compact radio sources in the nuclear regions of M82 p 1362 N93-17137
Escape- and spreading width of the isobaric analog state
[KVI-884] p 1293 N93-17400
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
Search for pp decay to neutral H decay to (neutral Z)(neutral Z) decay to (mu +)(mu -)(mu +)(mu -) at the LHC
[NOTA-INTERNA-970] p 1300 N93-17644
SPECTRAL LINE WIDTH
The Baldwin effect in complete optically selected samples of quasars p 1363 N93-17159
SPECTRAL METHODS
Numerical simulation of thermal convection in a rectangular duct flow heated from its bottom p 1161 N93-16820
A discrete Neumann system
[PREPRINT-870] p 1279 N93-16968
SPECTRAL REFLECTANCE
An expert system shell for inferring vegetation characteristics: Implementation of additional techniques (task E)
[NASA-CR-190999] p 1191 N93-16685
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
[NASA-CR-191000] p 1191 N93-16687
An expert system shell for inferring vegetation characteristics
[NASA-CR-191207] p 1191 N93-16691
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264
SPECTRAL RESOLUTION
Radiometric design of sensors and quantitative evaluation of remote sensing data in the optical spectral region
[DLR-FB-92-01] p 1191 N93-16514
Precision and resolution in spectroscopic model fitting
[ISBN-90-6275-756-6] p 1104 N93-16582
High spectral resolution measurements for the ARM Program
[DE93-002772] p 1209 N93-16924
Lunar resources using moderate spectral resolution visible and near-infrared spectroscopy: Al/Si and soil maturity p 1387 N93-17247
An in situ technique for elemental analysis of lunar surfaces p 1388 N93-17254
SPECTRAL SIGNATURES
X ray spectral structure of Seyfert galaxies p 1366 N93-17098
SPECTRAL THEORY
Refinement and testing of the radiative transfer parameterization in the PL global spectral model
[AD-A256840] p 1212 N93-15960
SPECTROMETERS
Lunar UV-visible-IR mapping interferometric spectrometer p 1390 N93-17265
SPECTROPHOTOMETERS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714
SPECTROPHOTOMETRY
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041

Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000

SPECTROSCOPIC ANALYSIS
Growth studies of CVD-MBE by in-situ diagnostics
[AD-A257216] p 1314 N93-15816
Fluorescence detection for gel and capillary electrophoresis
[DE92-040585] p 1102 N93-16020
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
Electron energy loss investigation of hole-plasmon excitation following the in situ doping of Si(111) by boron
[AD-A256924] p 1310 N93-16503
Precision and resolution in spectroscopic model fitting
[ISBN-90-6275-756-6] p 1104 N93-16582
Spectroscopic investigation of the vibrational quasi-continuum arising from internal rotation of a methyl group
[DE92-040509] p 1104 N93-16586
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Spectroscopy of highly charged multi-electron ions
[DE93-001617] p 1291 N93-17181
Escape- and spreading width of the isobaric analog state
[KVI-884] p 1293 N93-17400
The 4th International Symposium on Analysis and Detection of Explosives: Programs and abstracts
[AD-A258029] p 1129 N93-17751

SPECTROSCOPY
Photoelectrochemical fabrication of spectroscopic diffraction gratings, phase 2
[NASA-CR-190875] p 1300 N93-15692
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043
QCD spectroscopy and phenomenology with improved actions
[PREPRINT-857] p 1106 N93-17015
An exploratory study of meson spectroscopy and matrix elements with an improved fermion action at beta = 6.0
[PREPRINT-850] p 1290 N93-17070

SPECTRUM ANALYSIS
Development of an automated scanning monochromator for sensitivity calibration of the MUSTANG instrument
[AD-A256830] p 1166 N93-15688
Vibration characterisation for low level disturbances induced in telecommunications spacecraft
p 1078 N93-15733
Fixed points in spectral complexity
[AD-A256729] p 1263 N93-16068
Theory working group: Summary of the results
[PREPRINT-803] p 1297 N93-16423
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data
p 1165 N93-16792
Demonstration of a method for extracting 2D NMR information from a reduced set of selected 1D experiments
[ITN-93-85183] p 1105 N93-16854
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095
X ray spectral structure of Seyfert galaxies
p 1366 N93-17098
ROSAT x ray spectra of quasars with a range of continuum properties and redshift p 1362 N93-17128
Preliminary results on the properties of the EMSS AGN's as derived from the ROSAT all sky survey
p 1362 N93-17129
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
Initial results from a ROSAT deep survey in Lynx
p 1362 N93-17132
COMPAS: Compositional mineralogy with a photoacoustic spectrometer p 1390 N93-17264
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
Implementation of the one bit spectral correlation algorithm
[AD-A257748] p 1141 N93-17671

SPEECH
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585

SPEECH BASEBAND COMPRESSION
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585

SPEED INDICATORS
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
[IMFL-91-31] p 1056 N93-17542

SPHERES
A simple positive/negative surface ionization source
[DE93-000974] p 1285 N93-16198

SPHERICAL HARMONICS
A computer program for predicting oceanic tidal currents
[NASA-TM-104578] p 1219 N93-15695

SPHERICAL TANKS
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497

SPHEROIDS
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010

SPIN
Low-spin identical bands in odd-A nuclei
[DE92-041016] p 1287 N93-16600
Fluctuations and thermodynamic variables in mean field spin glass models
[PREPRINT-883] p 1330 N93-17019
Spin structures of Fe/Gd and Fe/Cr multilayers determined by polarized neutron reflectometry
[DE93-000510] p 1293 N93-17375

SPIN DYNAMICS
Low-energy physics of high-temperature superconductors
[DE92-040672] p 1317 N93-16194

SPIN GLASS
Supersymmetry in spin glass dynamics
[PREPRINT-843] p 1279 N93-16957
Fluctuations and thermodynamic variables in mean field spin glass models
[PREPRINT-883] p 1330 N93-17019

SPINEL
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908

SPIRAL GALAXIES
ROSAT all sky survey observations of IRAS galaxies
p 1362 N93-17133
HI in galaxy outskirts and the extragalactic ionizing flux p 1372 N93-17139
On the suitability of starburst galaxies as a contributor to the CXRB p 1373 N93-17147

SPIRALS (CONCENTRATORS)
Fluid separator
[NASA-CASE-MFS-28658-1] p 1163 N93-17039

SPLINE FUNCTIONS
A contribution to the theory and practice of multivariate splines
[ISBN-90-9004534-1] p 1272 N93-17591

SPLINES
Radial spline assembly for antifriction bearings
[NASA-CASE-MFS-28629-1] p 1179 N93-17084

SPRAY CHARACTERISTICS
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647

SPRAYED COATINGS
Diagnostic behavior of the Wire Arc Plasma spray process
[DE93-000717] p 1308 N93-16229
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229

SPRAYERS
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647

SPREAD SPECTRUM TRANSMISSION
PACISM: A design aid for the development of the petite amateur Navy satellite
[AD-A256719] p 1086 N93-15977
Applications of the Petite Amateur Navy Satellite (PANSAT)
[AD-A258015] p 1089 N93-17769

SPUTTERING
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
Lunar and asteroid composition using a remote secondary ion mass spectrometer p 1387 N93-17245

STABILITY
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Stability of metal particle and metal particulate media
p 1170 N93-16329
Morphology, properties, and stability of thermoplastic polymer blends
[ETN-92-92791] p 1124 N93-16491
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791
On the stability of a stringy black hole
[PREPRINT-879] p 1365 N93-16983
Sintering silicon nitride
[NASA-CASE-LEW-15489-1] p 1126 N93-17062
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617
Going stable in graph models
[ML-91-08] p 1274 N93-17786
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787

STABILITY TESTS
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007

STABILIZATION
An empirical approach to predicting long term behavior of metal particle based recording media
p 1170 N93-16330

STAGE SEPARATION
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781

STAGNATION FLOW
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation
[DE93-001554] p 1203 N93-17050

STAINLESS STEELS
Passivity and stress corrosion cracking of AISI 316 stainless steel in chloride-containing solutions
[ETN-92-92783] p 1113 N93-16580
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Generation of aerosolized particulate contamination by the wear of stainless steels
[DE93-000742] p 1115 N93-17047
UPT scenarios: Implications for system reliability
p 1182 N93-17332
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606

STANDARDS
IERS standards for 1992
[AD-A257973] p 1192 N93-17739

STANDING WAVES
Sensitivity studies of a standing-wave free-electron laser
[DE93-000575] p 1170 N93-15696
Kink-assisted mode hopping in a surface wave resonator
[AD-A256314] p 1207 N93-16264

STAR CLUSTERS
The central engine of AGN's and its cosmological evolution p 1372 N93-17138

STARBURST GALAXIES
ROSAT all sky survey observations of IRAS galaxies
p 1362 N93-17133
On the suitability of starburst galaxies as a contributor to the CXRB p 1373 N93-17147

STATIC LOADS
Effects of interfacial debonding and fiber breakage on static and dynamic buckling of fibers embedded in matrices
[AD-A257326] p 1183 N93-15986
Hydrostatic pressure testing of graphite/epoxy cylinder C6-1
[DE93-000427] p 1185 N93-16240
Static-stress analysis of dual-axis safety vessel
[DE93-001860] p 1187 N93-17366

STATIC PRESSURE
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

STATIC STABILITY
Pitch control margin at high angle of attack-quantitative requirements (flight test correlation with simulation predictions)
[AD-A257418] p 1068 N93-16009
STATIC TESTS
Sunshade support structure: Structure and testing p 1080 N93-15748
STATIONKEEPING
Modification of Earth-satellite orbits using medium-energy pulsed lasers
[DE93-000858] p 1074 N93-16302
STATISTICAL ANALYSIS
User's guide for the longitudinal scalogram analysis program
[AD-A256817] p 1232 N93-15682
Nonlinear adaptive control using backpropagating neural networks
[AD-A256828] p 1257 N93-15687
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Acoustically induced vibration of platform mounted equipment containing printed circuit boards p 1082 N93-15762
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
On a symmetry of turbulence
[AD-A256647] p 1155 N93-15910
Fast high-resolution techniques applied to the Direction Of Arrival (DOA) of signals problem
[AD-A257331] p 1137 N93-15989
Random quadratic forms and the bootstrap for U-statistics
[W-9207] p 1275 N93-16356
Example of statistical techniques applied to analysis of landing ground roll distance measurements (linear regression, correlation coefficient and F-test)
[ESDU-92021] p 1061 N93-16635
Example of statistical techniques applied to analysis of measurements of the landing airborne manoeuvre. (Multiple linear regression with two independent variables and one dependent variable.)
[ESDU-92022] p 1062 N93-16636
Effect of sonic boom asymmetry on subjective loudness
[NASA-TM-107708] p 1282 N93-16755
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Structure in gamma ray burst time profiles: Statistical Analysis 1 p 1344 N93-17308
Reliability evaluation methodology for NASA applications p 1182 N93-17328
Fast neutron scattering near shell closures: Scandium
[DE93-002090] p 1294 N93-17485
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660
STATISTICAL CORRELATION
Statistical error in a chord estimator of correlation dimension: The rule of five
[DE93-000687] p 1276 N93-17195
Implementation of the one bit spectral correlation algorithm
[AD-A257748] p 1141 N93-17671
STATISTICAL DISTRIBUTIONS
Multidimensional strong large deviation theorems
[AD-A256939] p 1263 N93-16129
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707
STATISTICAL MECHANICS
Classical fluids of negative heat capacity
[DE92-040507] p 1329 N93-15943
Brownian motion
[PREPRINT-797] p 1280 N93-16418
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759
STATISTICAL TESTS
Stochastic integrals and goodness-of-fit tests
[ISBN-90-9003836-1] p 1275 N93-16223
Comparison of tests, and local families
[MEMO-1034] p 1266 N93-16594
STATORS
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620
STEADY FLOW
Particle contact on flat plates in flow: A model for initial larval contact
[AD-A257275] p 1155 N93-15892
Computational investigations of a NACA 0012 airfoil in low Reynolds number flows
[AD-A257300] p 1053 N93-15920
Numerical solutions of the Euler equations for steady flow problems
[MBB-FE-202-S-PUB-473-A] p 1164 N93-17546
STEADY STATE
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731
STEEL STRUCTURES
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497
STEELS
Magnetic flux-load current interactions in ferrous conductors
[AD-A256632] p 1143 N93-15906
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Static-stress analysis of dual-axis safety vessel
[DE93-001860] p 1187 N93-17366
STEERABLE ANTENNAS
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
STELLAR COMPOSITION
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
Element diffusion in pulsating variables
[DE93-000795] p 1364 N93-16232
STELLAR CONVECTION
Convection in RR Lyrae stars
[DE93-000851] p 1376 N93-17382
STELLAR ENVELOPES
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829
STELLAR EVOLUTION
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
STELLAR FLARES
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
STELLAR LUMINOSITY
The hard x ray luminosity function and evolution of AGN p 1373 N93-17142
STELLAR MAGNETOSPHERES
The nonthermal model of disc accretion onto a magnetosphere p 1368 N93-17115
STELLAR MODELS
Observational constraints on AGN models p 1360 N93-17097
An introduction to the pair-reflection model of X-ray spectra in AGN's p 1367 N93-17110
Evolutionary hybrid accretion disc models of AGN and the ROSAT cosmic x ray background p 1368 N93-17112
The nonthermal model of disc accretion onto a magnetosphere p 1368 N93-17115
STELLAR PHYSICS
Nuclear masses and fission barriers for astrophysical applications
[DE93-000869] p 1376 N93-17387
STELLAR RADIATION
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
STELLAR ROTATION
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248
STELLAR SPECTRA
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029
STELLAR WINDS
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829
STELLARATORS
Fluctuation studies of ECH plasmas in the ATF torsatron and the IMS stellarator
[DE93-001204] p 1308 N93-16152
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
STEREOCHEMISTRY
A biotechnical approach to studies on the biodegradation of chlorobenzenes and trichloroethylene
[AD-A258033] p 1107 N93-17675
STEREOSCOPIC VISION
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Application of a laser scanner to three dimensional visual sensing tasks
[NASA-CR-191834] p 1174 N93-16664
Multisensor perception and scene interpretation
[LAAS-91305] p 1304 N93-17406
STIELTJES INTEGRAL
On the history of the function M(x)/(square root of x) since Stieltjes
[CWI-NM-R9120] p 1271 N93-17555
STIFFENING
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791
STIFFNESS
Isostatic mounting platform p 1080 N93-15745
Sunshade support structure: Structure and testing p 1080 N93-15748
TELECOM 2 deployable reflectors p 1082 N93-15761
CFRP integral end fitting for high stability truss structures p 1084 N93-15774
Laminated conical shells: Considerations for the variations of the stiffness coefficients
[LR-671] p 1097 N93-16281
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
Stiffnesses by (TtN) ensemble molecular dynamics p 1274 N93-17331
STIFFNESS MATRIX
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593
STIMULATED EMISSION
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
Self-similarity in stimulated Raman scattering
[PREPRINT-878] p 1304 N93-16982
STIMULATION
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026
STOCHASTIC PROCESSES
Sojourns, extremes, and self-intersections of stochastic processes
[AD-A257251] p 1274 N93-15820
Latin hypercube sampling as a tool in uncertainty: Analysis of computer models
[DE92-018917] p 1231 N93-15883
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Optimal allocation under partial ordering of lifetimes of components
[AD-A255577] p 1181 N93-16040
Implementation of a parallel stochastic solving method for linearly constrained concave global optimization problems using parallel computing
[AD-A257112] p 1255 N93-16119
Stochastic integrals and goodness-of-fit tests
[ISBN-90-9003836-1] p 1275 N93-16223
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335
Random quadratic forms and the bootstrap for U-statistics
[W-9207] p 1275 N93-16356
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Stochastic reaction diffusion equations and interacting particle systems
[PREPRINT-796] p 1265 N93-16417
Ergodic properties of high dimensional symplectic maps
[PREPRINT-802] p 1276 N93-16422

On a class of stochastic reaction-diffusion equations in two space dimensions
[PREPRINT-777] p 1265 N93-16442
Approximation methods for stochastic petri nets
[NASA-CR-191851] p 1276 N93-16662
Queueing systems on a circle
[MEMO-1038] p 1276 N93-16670
Utilizing semantic networks to database and retrieve generalized stochastic colored Petri nets
[NASA-CR-191853] p 1355 N93-16707
Effects of convection electric field on upwelling and escape of ionospheric O(+)
[NASA-CR-191669] p 1208 N93-16839
An M/G/1 queue with dependence between interarrival and service times
[CWI-BS-R9125] p 1276 N93-16849
Stochastic quantization, stochastic calculus and path integrals: Selected topics
[PREPRINT-837] p 1279 N93-16992
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026
Providing an empirical basis for optimizing the verification and testing phases of software development
p 1244 N93-17168
The Lagrangian approach to stochastic variational principles on curved manifolds
[PREPRINT-825] p 1277 N93-17221
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738

STOICHIOMETRY
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043

STOPPING POWER
Equilibrium charge state distributions of 1-30 keV atomic projectiles transiting thin carbon foils
[DE93-000792] p 1293 N93-17381

STORAGE RINGS (PARTICLE ACCELERATORS)
Reconstruction of (x, Q squared) and extraction of structure functions in neutral current scattering at HERA
[NIKHEF-H/92-02] p 1297 N93-16340
Theory working group: Summary of the results
[PREPRINT-803] p 1297 N93-16423
The global second level trigger for ZEUS
[ETN-92-92816] p 1297 N93-16479
Quadrupole modes in linearized beam-beam interaction in e(+)e(-) colliding rings
[DE92-556477] p 1298 N93-16646
The b quark polarization at LEP
[PREPRINT-886] p 1290 N93-17022
Probing the WWZ vertex at 500 GeV e(+)e(-) collider
[PREPRINT-831] p 1299 N93-17216
Bipolar current sources for the correction magnets of AmPS
[DIGEL-1992-2-REV] p 1150 N93-17393
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483
Monte Carlo simulation of minimum bias events at the LHC energy
[NOTA-INTERNA-969] p 1294 N93-17544
Energy measurement in collider experiments and search for scalar quarks in neutral Z degree decays at LEP 1
[HU-SEFT-1991-09] p 1300 N93-17598
Muon rates at the LHC
[NOTA-INTERNA-971] p 1300 N93-17645

STORMS
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida
p 1219 N93-17285
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

STORMS (METEOROLOGY)
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506

STRAIN DISTRIBUTION
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
Mechanical properties of Carbon Fibre Reinforced Plastics (CFRP) under variation of fibre and matrix strain to failure
[DLR-FB-90-06] p 1098 N93-16476
Determination of the strain field from an HREM image of a Si Lomer dislocation
[DE92-041176] p 1187 N93-17005

STRAIN ENERGY METHODS
The damper placement problem for large flexible space structures p 1089 N93-16776
Stability of generally stiffened anisotropic noncircular cylinders p 1189 N93-16791

STRAIN ENERGY RELEASE RATE
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone
[AD-A256991] p 1185 N93-16260

STRAIN GAGE ACCELEROMETERS
Load monitoring of F-16 A/B aircraft of the RNLAF with a smart electronic device
[NLR-TP-91116-U] p 1062 N93-17538

STRAIN GAGES
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609

STRAIN MEASUREMENT
The world of grid methods
[NLR-TP-89298-U] p 1186 N93-16292
Stress analysis and damage evaluation of flawed composite laminates by hybrid-numerical methods
p 1100 N93-17340
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

STRAIN RATE
Models of high velocity impact phenomena
[DE92-017452] p 1183 N93-15881
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667

STRAKES
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157

STRANGENESS
Interpretation of rapidly rotating pulsars
[DE93-000576] p 1364 N93-16248

STRATA
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038

STRATIFIED FLOW
Interfacial area and interfacial transfer in two-phase flow systems
[DE93-000647] p 1157 N93-16378

STRATOCUMULUS CLOUDS
Parameterization of GCM subgrid nonprecipitating cumulus and stratocumulus clouds using stochastic/phenomenological methods
[DE93-000424] p 1217 N93-17372

STRATOSPHERE
Effects of the Mount Pinatubo eruption on the chemistry, radiative, and transport processes in the stratosphere
[DE93-001508] p 1203 N93-17211

STREAK CAMERAS
Time-resolved electron-beam characterizations with optical transition radiation
[DE92-041122] p 1173 N93-16204

STRESS (PHYSIOLOGY)
Development and enhancement of a model of performance and decision making under stress in a real life setting
[AD-A255699] p 1226 N93-16111

STRESS ANALYSIS
Turbulence modeling and experiments
p 1153 N93-15796
Unified Airport Pavement Design and Analysis Concepts Workshops
[AD-A257157] p 1069 N93-15998
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
A semi-analytical formulation for the elastoplastic analysis of imperfect cylindrical shells
[LR-674] p 1185 N93-16282
Thermoviscoelastic analysis of pavements
p 1070 N93-16313
Unified airport pavement design procedure
p 1071 N93-16318
Three-dimensional stress analysis of multilayered airport pavements: Integral transform approach
p 1072 N93-16319
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596
Stress analysis and damage evaluation of flawed composite laminates by hybrid-numerical methods
p 1100 N93-17340
Static-stress analysis of dual-axis safety vessel
[DE93-001860] p 1187 N93-17366
Static-stress analysis of dual-axis confinement vessel
[DE93-000499] p 1135 N93-17497
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

STRESS CORROSION CRACKING
Failure analysis of the main rotor retention nut from AH-64 helicopter
[AD-A256815] p 1060 N93-15681
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
Spacecraft sustained load fracture control
p 1077 N93-15724
Passivity and stress corrosion cracking of AISI 316 stainless steel in chloride-containing solutions
[ETN-92-92783] p 1113 N93-16580
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927
Irradiation-assisted stress corrosion cracking of austenitic alloys
[DE92-040988] p 1116 N93-17341
Spacecraft sustained load fracture control
[NLR-TP-91093-U] p 1088 N93-17537

STRESS CYCLES
Fatigue characterization of Ni-base alloys
p 1081 N93-15756

STRESS DISTRIBUTION
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 2: Reliability and failure analyses of 2-D carbon-carbon structural components
[AD-A257460] p 1089 N93-15838
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990
Autofrettage: Stress distribution under load and retained stresses after depressurization
[AD-A256418] p 1183 N93-16018
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314
A variational method for finite element stress recovery: Applications in one-dimension p 1189 N93-16785
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

STRESS FUNCTIONS
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215

STRESS INTENSITY FACTORS
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
Fracture mechanics of dissimilar material bonded through an orthotropic interfacial zone
[AD-A256991] p 1185 N93-16260
The axisymmetric crack problem in a nonhomogeneous medium
[AD-A256955] p 1186 N93-16433
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637
Fatigue propagation behaviour of short cracks in aluminum alloys
[ESDU-92030] p 1113 N93-16641

STRESS RATIO
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637

STRESS RELAXATION
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560

STRESS WAVES
Highly accurate adaptive finite element schemes for nonlinear hyperbolic problems
[AD-A256740] p 1184 N93-16035
STRESS-STRAIN RELATIONSHIPS
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 1: Experimental determination of mechanical properties for a carbon-carbon composite
[AD-A257459] p 1090 N93-16010
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
STRESS-STRAIN-TIME RELATIONS
Thermoviscoelastic analysis of pavements
p 1070 N93-16313
STRESSES
Hydrostatic pressure testing of graphite/epoxy cylinder C6-1
[DE93-000427] p 1185 N93-16240
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391
Creep rupture properties of a nickel-base heat-resistant alloy Hastelloy XR under varying stress condition
[DE92-556729] p 1114 N93-16649
STRING THEORY
A continuum string model for D greater than 1
[PREPRINT-853] p 1329 N93-16960
Non-linear WKB analysis of the string equation
[PREPRINT-862] p 1330 N93-16963
On the black-hole conformal field theory coupled to the Polyakov's string theory. A non perturbative analysis
[PREPRINT-852] p 1365 N93-17072
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
Problems in particle theory
[DE93-003687] p 1293 N93-17469
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487
Metastable cosmic strings in realistic models
[DE93-002647] p 1331 N93-17787
STRIP TRANSMISSION LINES
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered dielectric media
[AD-A256937] p 1138 N93-16207
STRONGLY COUPLED PLASMAS
Simulation of a strongly coupled plasma experiment
[DE92-040351] p 1307 N93-16099
STRONTIUM COMPOUNDS
Kinetics of hexacelsian to celsian phase transformation in SrAl2Si2O8
[NASA-TM-105913] p 1123 N93-16372
STRONTIUM OXIDES
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
STRUCTURAL ANALYSIS
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
Reusable Reentry Satellite (RRS): Configuration trade study
[NASA-CR-187772] p 1086 N93-15804
Initial imperfection survey on a cylindrical shell at the Ultra-Centrifuge Nederland n.v.
[LR-682] p 1184 N93-16211
Review of aeronautical fatigue investigation activities developed in Alenia-GAT during the period May 1990 - March 1991
[ETN-92-92884] p 1061 N93-16287
The world of grid methods
[NLR-TP-89298-U] p 1186 N93-16292
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314
Federal Aviation Administration pavement modeling
p 1071 N93-16315
Development of a unified airport pavement analysis and design system p 1071 N93-16317
The modeling of piezoceramic patch interactions with shells, plates and beams
[NASA-CR-189740] p 1278 N93-16611
A study of the Lute Metering Structure
p 1189 N93-17294
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
STRUCTURAL DESIGN
Spacecraft Structures and Mechanical Testing, volume 2
[ESA-SP-321-VOL-2] p 1076 N93-15718
An analytical and experimental study on the design and verification of containment subjected to impact loading
p 1078 N93-15726
Structural development of flight systems
p 1078 N93-15727
Sample container technology p 1078 N93-15728
Adaptive structures for precision controlled large space systems p 1078 N93-15730
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite
p 1078 N93-15731
Isostatic mounting platform p 1080 N93-15745
Service module structure of ISO spacecraft testing and design qualification p 1080 N93-15747
Sunshade support structure: Structure and testing
p 1080 N93-15748
Polar Platform structure development program
p 1081 N93-15749
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation
p 1081 N93-15751
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
Design of joints for damped structures
p 1084 N93-15776
Experiences with large CFRP-radiotelescope reflectors
p 1084 N93-15777
Dynamic identification in the development of satellite structures. Analytical dynamic model updating: The challenge for the nineties p 1084 N93-15778
Reusable Reentry Satellite (RRS): Configuration trade study
[NASA-CR-187772] p 1086 N93-15804
A90 project: Design of a composite fin
[ETN-92-92773] p 1061 N93-16562
The damper placement problem for large flexible space structures p 1089 N93-16776
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299
Inflatable habitation for the lunar base
p 1229 N93-17442
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564
Influence of cross section variations on the structural behaviour of composite rotor blades
[MBB-UD-0602-91-PUB] p 1063 N93-17569
Design of a radiator shade for testing in a simulated lunar environment
[NASA-CR-192080] p 1229 N93-17710
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
Exodus: Prime Mover
[NASA-CR-192051] p 1064 N93-17803
STRUCTURAL DESIGN CRITERIA
Sample container technology p 1078 N93-15728
On the dynamic qualification of large deployable antennas p 1083 N93-15768
ORFEUS CFRP structure: A high stiffness-low thermal strain space telescope structure p 1084 N93-15775
STRUCTURAL FAILURE
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
An introduction to Moire methods with applications in composite materials
[AD-A255686] p 1097 N93-16107
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299
STRUCTURAL MEMBERS
Slip joint connector
[NASA-CASE-MFS-28659-1] p 1178 N93-17080
STRUCTURAL PROPERTIES (GEOLOGY)
The gravimetric anomaly over the Makhtesh Hagadol and its vicinity
[ITN-93-85180] p 1208 N93-16744
STRUCTURAL STABILITY
CFRP integral end fitting for high stability truss structures p 1084 N93-15774
On formulations of path-following techniques for structural stability analysis
[LR-676] p 1186 N93-16346
Aeroelastic stability and response of rotating structures
[NASA-CR-191803] p 1068 N93-16560
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641
STRUCTURAL STRAIN
The effect of initial imperfections on shell stability: A review
[LR-618] p 1186 N93-16412
STRUCTURAL VIBRATION
Modal identification of mechanical structures by means of tuned base-motion excitation p 1077 N93-15721
Vibration characterisation for low level disturbances induced in telecommunications spacecraft
p 1078 N93-15733
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Acoustically induced vibration of platform mounted equipment containing printed circuit boards
p 1082 N93-15762
Power flow finite element analysis for beams and plates p 1083 N93-15765
Development of a laser-based measurement system for modal testing of large space structures
p 1083 N93-15766
Structure-acoustic finite element analyses for noise reduction investigations of launcher payload compartment structures made of CFRP sandwich material
p 1084 N93-15779
Fluid-structure interaction applied to the analysis of a test sandwich panel typical for spatial applications
p 1085 N93-15780
Effect of the payload on the surrounding internal acoustic environment at lift-off p 1085 N93-15782
Adaptive feedforward control of structural intensity in a beam
[AD-A256780] p 1183 N93-15915
STRUCTURED PROGRAMMING
Geometric constraint satisfaction
[CWI-CS-R9141] p 1236 N93-16339
On the borderline between grammars and programs
[TR-91-17] p 1252 N93-17594
STRUTS
Sunshade support structure: Structure and testing
p 1080 N93-15748
STUDENTS
The SWOOPE experience: Precollege students mapping the environment
[DE92-040390] p 1198 N93-15663
Ventures in science
[DE93-003044] p 1331 N93-16521
Future Assets, Student Talent (FAST)
[NASA-CR-191632] p 1332 N93-16624
STYPHNATES
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708
STYRENES
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
SUBMARINES
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
SUBMILLIMETER WAVES
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
Experiences with large CFRP-radiotelescope reflectors
p 1084 N93-15777
SUBROUTINES
A general purpose subroutine for fast fourier transform on a distributed memory parallel machine
[NASA-CR-189724] p 1241 N93-16681
SUBSONIC FLOW
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
SUBSONIC SPEED
Effect of a rotating propeller on the separation angle of attack and distortion in ducted propeller inlets
[NASA-TM-105935] p 1055 N93-16625
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787
SUBSONIC WIND TUNNELS
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704
SUBSTRATES
Dynamic fabrication of diamond thermal management substrates
[AD-A257213] p 1118 N93-15814
The Fourth International Symposium on Si-based molecular beam
[AD-A257241] p 1316 N93-16050

Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
Dual cure solventless coating process
[DE93-001352] p 1125 N93-16984
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

SULFATES
Development and application of the quasi-potential transformation
[DE93-000580] p 1262 N93-15897

SULFUR
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

SULFUR COMPOUNDS
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834

SULFUR FLUORIDES
Modeling and control study of the NASA 0.3-meter transonic cryogenic tunnel for use with sulfur hexafluoride medium
[NASA-CR-189737] p 1157 N93-16379
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710

SUMS
On the sum of accretive operators
[ETN-92-92794] p 1265 N93-16566

SUNFLOWERS
Environmental impact research program and defense natural resources program: Maximilian sunflower (Helianthus maximiliani), section 7.4.3, US Army Corps of Engineers Wildlife Resources Management Manual
[AD-A257478] p 1205 N93-17663

SUNLIGHT
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125
Cloud amount and sunshine duration in the People's Republic of China, 1954-1988
[DE92-041023] p 1214 N93-16601
Extraterrestrial applications of solar optics for interior illumination p 1305 N93-17449
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717

SUPERCHARGERS
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405

SUPERCOMPUTERS
Data storage and retrieval system abstract
p 1170 N93-16332
Open systems storage platforms
p 1355 N93-16333

SUPERCONDUCTING DEVICES
Three-terminal devices of high-T(sub c) superconductors: A status report and future challenges
[DE93-000654] p 1319 N93-16358

SUPERCONDUCTING FILMS
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
Growth of epitaxial thin films by pulsed laser ablation
[DE92-040515] p 1319 N93-16296
Large magnetic field induced fluctuation effect in superconducting Bi2Sr2Ca2Cu3O10 tape
[DE92-041314] p 1321 N93-16533
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
High temperature superconductivity
[AD-A257789] p 1151 N93-17696
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699

SUPERCONDUCTING MAGNETS
Advanced materials: The key to attractive magnetic fusion power reactors
[DE92-040637] p 1307 N93-16103
The influence of deformation-induced martensite on the cryogenic behavior of 300-series stainless steels
[DE92-041208] p 1111 N93-16149
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
Cryotribology: Development of cryotribological theories and application to cryogenic devices
[DE93-000404] p 1176 N93-16238
Properties of the superconductor in accelerator dipole magnets
[ISBN-90-9004244-X] p 1280 N93-16573
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007
Mathematical models of hysteresis
[DE93-001837] p 1281 N93-17034

SUPERCONDUCTING SUPER COLLIDER
High energy physics research
[DE93-000305] p 1296 N93-15668
Recent efforts on nonlinear dynamics
[DE92-040625] p 1280 N93-15945
Research in elementary particle physics
[DE93-001858] p 1284 N93-16146
Influence of cable eddy currents on magnetic field harmonics
[DE92-040549] p 1280 N93-16200
An approximate invariant using Lie algebra
[DE93-000564] p 1263 N93-16247
A parallel implementation of particle tracking with space charge effects on an INTEL iPSC/860
[DE93-000460] p 1255 N93-16272
Object-oriented simulation for the Superconducting Super Collider
[DE92-015962] p 1299 N93-17205
Experimental studies of elementary particle interactions at high energies
[DE93-003652] p 1294 N93-17575
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space
[DE93-002046] p 1273 N93-17758

SUPERCONDUCTIVITY
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
NQR study of local structures and cooling rate dependent superconductivity in La2CuO(4+delta)
[DE93-000680] p 1316 N93-16043
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
An introduction to superconductivity
[PREPRINT-801] p 1280 N93-16421
The central bond C-13 double bond C-13 isotope effect for superconductivity in the high-T(sub c) beta*-(ET)(sub 2)I(sub 3) phase and its implications regarding the superconductivity pairing mechanism in TTF-based organic superconductors
[DE92-040725] p 1320 N93-16454
Electromagnetic launch of lunar material
p 1384 N93-16914
Flux flow, pinning, and resistive behavior in superconducting networks
[DE93-002707] p 1324 N93-17081
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
Transport and magnetization critical current densities in TlBa2Ca2Cu3O(x) tapes
[DE93-000651] p 1325 N93-17228
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
Local critical current measurements on (Bi,Pb)2Sr2Ca2Cu3O(sub x) tape with an electromagnetic probe
[DE92-041133] p 1325 N93-17357
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
Design and modeling of superconducting RFQ structures
[DE93-000511] p 1326 N93-17376
Design and test of a superconducting structure for high-velocity ions
[DE93-000513] p 1326 N93-17377
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380
Research programs on elementary particle and field theories and superconductivity
[DE93-003147] p 1294 N93-17487
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561

SUPERCONDUCTORS
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
Radio-frequency surface impedance of type-2 superconductors: Dependence upon the magnitude and angle of an applied static magnetic field
[DE92-040583] p 1316 N93-16014
ICCG-10: The 10th International Conference on Crystal Growth
[AD-A256986] p 1318 N93-16257
Investigating thermal hydraulic quenchback in a cable-in-conduit superconductor
[DE92-040864] p 1147 N93-16590
Electronic structure and phase separation in superconducting cuprates
[PREPRINT-889] p 1323 N93-17025
X-ray studies of microstructures in semiconductors and superconducting materials
[DE93-001953] p 1324 N93-17198
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350

SUPERCRITICAL FLOW
Instability of spatially periodic flows
p 1160 N93-16810

SUPERCRITICAL FLUIDS
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842

SUPERFLUIDITY
Neutron superfluid dynamics
[DE92-040386] p 1364 N93-16101
The Geminga neutron star: Evidence for nucleon superfluidity at very high density p 1376 N93-17411

SUPERGIANT STARS
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829

SUPERHIGH FREQUENCIES
Plasma reflectors for electronic beam steering in radar systems
[AD-D015399] p 1307 N93-16062
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220

SUPERLATTICES
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Probing redox-induced molecular transformations by atomic-resolution scanning tunneling microscopy: Iodide adsorption and electrooxidation on Au(111) in aqueous solution
[AD-A257347] p 1103 N93-16158
Magneto-optic characterizations of superlattices and wedged sandwiches with oscillatory interlayer magnetic coupling
[DE93-000607] p 1319 N93-16278
Investigation of III-V superlattices and heterostructures by convergent-beam electron diffraction
[ETN-92-92784] p 1321 N93-16581
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926

SUPERNOVAE
Measuring q(sub 0) using supernovae at z approximately 0.2
[DE92-041164] p 1363 N93-15918
Prospects for studies of astrophysical interest with radioactive ion beams
[DE92-041018] p 1364 N93-16225

SUPERPLASTICITY
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667
SUPERSONIC AIRCRAFT
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 1065 N93-17618
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746
SUPERSONIC COMBUSTION
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389
SUPERSONIC COMBUSTION RAMJET ENGINES
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications
p 1092 N93-17611
SUPERSONIC FLOW
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746
SUPERSONIC NOZZLES
Design of a nozzle for a hypersonic wind tunnel
[AERO-REPT-9113] p 1072 N93-16468
SUPERSONIC SPEED
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608
Comparison of performances of different circular intakes p 1067 N93-17616
SUPERSONIC TRANSPORTS
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
The NASA High-Speed Research Program
p 1064 N93-16761
The 1990 high-speed civil transport studies
[NASA-CR-189618] p 1062 N93-16947
The 1990 high-speed civil transport studies. Summary report
[NASA-CR-189619] p 1062 N93-16999
SUPERSYMMETRY
Nuclear structure research
[DE93-000405] p 1285 N93-16239
Symmetry of wavefunctions in quantum algebras and supersymmetry
[DE92-041129] p 1265 N93-16551
Supersymmetry in spin glass dynamics
[PREPRINT-843] p 1279 N93-16957
Quantized algebras, field theory, and deformed Goldstone bosons
[PREPRINT-836] p 1330 N93-16991
SUPPORT SYSTEMS
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
Automated support for experience-based software management p 1244 N93-17164
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316
SUPPORTS
Sunshade support structure: Structure and testing
p 1080 N93-15748
Nonlinear analysis of Ariane 5 engine frame
[LR-678] p 1074 N93-16284
SUPPRESSORS
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056
SURFACE ACOUSTIC WAVE DEVICES
Magnetostatic wave technology
[AD-A257723] p 1328 N93-17688
SURFACE IONIZATION
A simple positive/negative surface ionization source
[DE93-000974] p 1285 N93-16198
A remote laser mass spectrometer for lunar resource assessment p 1386 N93-17242
SURFACE LAYERS
Workshop on Innovative Instrumentation for the In Situ Study of Atmosphere-Surface Interactions on Mars
[NASA-CR-191638] p 1377 N93-16630
SURFACE PROPERTIES
Radio-frequency surface impedance of type-2 superconductors: Dependence upon the magnitude and angle of an applied static magnetic field
[DE92-040583] p 1316 N93-16014
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Polarimetric measurements of natural surfaces at 95 GHz
[AD-A256981] p 1138 N93-16130
Phase behavior of Au and Pt surfaces
[DE92-041021] p 1112 N93-16203
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Au(111) and Pt(111) surface phase behavior
[DE92-040881] p 1321 N93-16598
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
The surface density of quasars and Seyfert galaxies at B is approximately 22.0 p 1375 N93-17157
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth
[DE93-002788] p 1328 N93-17788
SURFACE REACTIONS
Morphological aspects of surface reactions
[DE92-040522] p 1100 N93-15694
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
[AD-A256659] p 1110 N93-15912
Probing electrochemical adsorbate structure and reactions with in-situ atomic-resolution scanning microscopy: Some progress and prospects
[AD-A256660] p 1101 N93-15913
Analysis of low energy electron emission arising during slow multicharged ion-surface interactions
[DE93-000970] p 1285 N93-16217
Adsorption of a binary gas mixture which laterally interacts on a random heterogeneous surface
[DE93-000706] p 1103 N93-16227
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
Above-surface neutralization of highly charged ions: The formation of hollow atoms
[DE93-001371] p 1288 N93-16603
SURFACE ROUGHNESS
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
SURFACE TEMPERATURE
A study of forced convection boiling under reduced gravity
[NASA-CR-190771] p 1132 N93-16694
Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
A Theoretical Analysis of Thermal Radiation from Neutron Stars
[NASA-CR-191906] p 1376 N93-17410
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
SURFACE VEHICLES
Remote driving with reduced bandwidth communication
[DE92-040639] p 1139 N93-16408
A method for surmounting an obstacle by a robot vehicle
[NASA-CASE-NPO-18764-1-CU] p 1179 N93-17272
Simulator motion
[AD-A257683] p 1072 N93-17687
SURFACE WATER
Measurements of carbon dioxide in the Southern Ocean along the WOCE S-4 section
[DE92-040334] p 1220 N93-16294
SURFACE WAVES
Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
Surface-related multiple elimination, an inversion approach
[ISBN-90-9004520-1] p 1210 N93-17586
SURVEILLANCE RADAR
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498
SURVEYS
Geothermal energy survey and technology
[DE93-716356] p 1193 N93-15903
Industry survey of space system cost benefits from New Ways Of Doing Business p 1346 N93-17325
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460
State-of-the-art survey of flexible pavement crack sealing procedures in the United States
[AD-A258050] p 1072 N93-17708
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777
SURVIVAL
Applications of living systems theory to life in space
p 1229 N93-16865
SWEEP EFFECT
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
SWEPT WINGS
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797
SWEPTBACK WINGS
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Experiments on swept-wing boundary-layer transition
p 1162 N93-16829
SWITCHES
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973
Photoconductive semiconductor switches for high power radiation
[DE92-040968] p 1147 N93-16599
SWITCHING
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253
Domain-specific functional software testing: A progress report p 1250 N93-17521
Scan-based switching tests
[AD-A257712] p 1151 N93-17685
SWITCHING CIRCUITS
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
SYMMETRY
The crystal structures of oxygen deficient rare earth oxides
[DE92-040331] p 1317 N93-16179
Effects of non-crystallographic symmetry on structure factor statistics
[ITN-93-85182] p 1321 N93-16734
A continuum string model for D greater than 1
[PREPRINT-853] p 1329 N93-16960
Lie point symmetries and exact solutions of nonlinear differential equations
[PREPRINT-840] p 1269 N93-16994
Symmetry group of partial differential equations and of differential difference equations: The Toda lattice versus the Korteweg-de Vries equation
[PREPRINT-841] p 1270 N93-16995
Symmetries and conditional symmetries of differential-difference equations
[PREPRINT-858] p 1270 N93-16997
Multiple-inlet configuration for missiles with skid-to-turn control mode p 1069 N93-17617
SYNAPSES
Non-invasive evaluation of the cardiac autonomic nervous system by PET
[DE92-041077] p 1225 N93-16441
Constraints on learning in dynamic synapses
[PREPRINT-890] p 1226 N93-17026
SYNCHRONOUS PLATFORMS
Wavelength tunable liquid crystal imaging filters for remote sensing from geosynchronous platforms
[NASA-CR-184487] p 1314 N93-15714

SYNCHROTRON RADIATION
Gravitationally induced synchrotron radiation: A new test for general relativity
[PREPRINT-822] p 1297 N93-16420
Simulated high heat load performance of an inclined crystal monochromator
[DE93-000506] p 1326 N93-17378
Charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-001855] p 1294 N93-17483

SYNCHROTRONS
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
Free-electron laser research and development at BNL
[DE93-000373] p 1175 N93-17009

SYNOPTIC METEOROLOGY
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180

SYNTAX
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
An algorithm for the construction of dependency trees
[MEMO-INF-92-39] p 1240 N93-16668
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741

SYNTHESIS (CHEMISTRY)
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834
Mechanical properties of structural polymers. Computer simulations and key experiments
[AD-A257439] p 1119 N93-15866
Synthesis of new energetic materials
[AD-A257200] p 1129 N93-16003
The synthesis of chemiluminescent flavoabzymes and their use in metal ion detection
[AD-A255567] p 1102 N93-16037
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060
Applications of molecular modeling to transition state energies and conformations
[AD-A257130] p 1284 N93-16074
Studies in theoretical particle physics
[DE93-000648] p 1284 N93-16161
The hydrothermal synthesis of ceramic powders
[ETN-92-92785] p 1125 N93-16607
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919
Multifunctional nanocomposite materials
[DE93-002767] p 1099 N93-17082
Organometallic chemistry of bimetallic compounds
[DE93-002773] p 1115 N93-17201
An experiment to study fullerene formation under reduced gravity p 1134 N93-17335
Substituted 1,1,1-triaryl 2,2,2-trifluoroethanes and processes for their synthesis
[NASA-CASE-LEW-14345-7] p 1095 N93-17412
Low-density foam materials from styrene-divinylbenzene inverse emulsions
[DE93-002854] p 1127 N93-17486
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition
[DE93-001835] p 1127 N93-17529
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657

SYNTHESIZERS
Automating software design system DESTA p 1250 N93-17519
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585

SYSTEMS ANALYSIS
An initial model of requirements traceability: An empirical study
[AD-A256720] p 1275 N93-15978
An intelligent decomposition approach for efficient design of non-hierarchic systems p 1254 N93-16762
Applications of living systems theory to life in space p 1229 N93-16865
SAFSIM input manual: A computer program for the engineering simulation of flow systems
[DE93-002738] p 1163 N93-16922
Interactive specification acquisition via scenarios: A proposal p 1249 N93-17512

SYSTEMS ENGINEERING
A systematic approach for the DRSS IOL APM design p 1081 N93-15753
Rapid prototyping of application specific signal processors program
[AD-A257212] p 1136 N93-15813
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
Space transfer vehicle concepts and requirements, volume 2, book 1
[NASA-CR-184489] p 1076 N93-16686
NCC Simulation Model: Simulating the operations of the network control center, phase 2
[NASA-CR-191616] p 1140 N93-16716
Systems engineering process and organization assessment p 1340 N93-17281
Developing a safe on-orbit cryogenic depot p 1393 N93-17426
Imaging System (INEL) development software evaluation
[DE93-001940] p 1246 N93-17484
Domain specific software architectures: Command and control p 1247 N93-17503
Automating the design of scientific computing software p 1249 N93-17516
Knowledge modeling for software design p 1251 N93-17525
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669
Integrating domain-specific reuse for system/software engineers course description
[AD-A257637] p 1252 N93-17723
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
Software development with application generators: The Naval Aviation Logistics Command Management Information System Case
[AD-A257624] p 1357 N93-17768

SYSTEMS INTEGRATION
Analysis of fluid structure interaction of spacecraft's fluid tanks using combined boundary element and finite element methods p 1077 N93-15722
Integration of CAD tools in space vehicle design p 1079 N93-15739
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Test and integration concept for complex helicopter avionic systems
[MBB-UD-0605-91-PUB] p 1065 N93-17547
TIGER development status overview
[MBB-UD-0607-91-PUB] p 1063 N93-17571

SYSTEMS SIMULATION
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335
MGMtool: A performance modelling tool based on matrix geometric techniques
[MEMO-INF-92-35] p 1236 N93-16338
An object-oriented modelling technique for analysis and design of complex (real-time) systems
[ISBN-90-9005046-9] p 1231 N93-16347
Conversion of discrete event simulation models to diagnostic models
[MEMO-INF-92-37] p 1240 N93-16667
Verification and validation of simulation models
[FEW-542] p 1277 N93-17405
The use of typed lambda calculus for comprehension and construction of simulation models in the domain of ecology p 1251 N93-17526
Generalized steady-state: A system concept in simulation
[REPT-92-25] p 1257 N93-17731
Parallel simulation of stochastic Petri nets using recursive equations
[INRIA-RR-1520] p 1257 N93-17738

SYSTEMS STABILITY
The computer aided derivation of linearized dynamical models for stability analysis. Part 1: Description of the general model
[IW-90035-R-PT-1] p 1239 N93-16579

SYSTOLIC ARRAYS
Reliable and efficient parallel processing algorithms and architectures for modern signal processing
[NASA-CR-191969] p 1241 N93-16723

T

TAILLESS AIRCRAFT
Mathematical optimization: A powerful tool for aircraft design
[MBB-FE-2-S-PUB-478] p 1063 N93-17564

TAKEOFF
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715

TANKS (CONTAINERS)
Independent verification of tank volume measurements by pressure-volume authentication
[DE92-040680] p 1166 N93-15665
Cycle 0(CY1991) NLS trade studies and analyses report. Book 1: Structures and core vehicle
[NASA-CR-184471] p 1134 N93-16682
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Hydroelastic vibrations in a rectangular container under zero-gravity
[LRT-WE-9-FB-28-1991] p 1134 N93-17602

TAPE RECORDERS
ICI optical data storage tape p 1354 N93-16327
The 19 mm data recorders similarities and differences p 1170 N93-16331

TAPES
Fabrication and properties of high-T(sub c) tapes and coils made from silver-clad Bi-2223 superconductors
[DE92-040760] p 1318 N93-16202

TARGET ACQUISITION
Evaluation of radar performance degradation due to standoff jamming
[AD-A257316] p 1137 N93-15983
A new ground test for determining the resolution of pushbroom sensors
[AD-A257193] p 1189 N93-16002
Adaptive machine vision
[AD-A257363] p 1301 N93-16007
Enhancement of multiple target track simulation
[AD-A257224] p 1278 N93-16236
Evaluation of Night Vision Goggles (NVG) for maritime search and rescue
[AD-A257704] p 1228 N93-17697
Non-Gaussian noise models and coherent detection of radar targets
[AD-A258049] p 1141 N93-17707

TARGET MASKING
The forward masking effects of low-level laser glare on target location performance in a visual search task
[AD-A258022] p 1175 N93-17703

TARGET RECOGNITION
Dual waveband signal processing system
[AD-D015493] p 1139 N93-16438

TARGETS
Heterodyne array for measurement of target velocity
[AD-D015402] p 1302 N93-16127

TASK PLANNING (ROBOTICS)
Knowledge-based planning
[AD-A257209] p 1350 N93-15812

TATB
Effects of particle beams on explosives
[AD-A256878] p 1128 N93-15708

TAYLOR SERIES
Nonlinear control problems and systems approximations: A geometric approach
[MEMO-1039] p 1261 N93-16951
Controllability distributions and systems approximations: A geometric approach
[MEMO-1040] p 1269 N93-16952

TDR SATELLITES
A systematic approach for the DRSS IOL APM design p 1081 N93-15753

TEARING MODES (PLASMAS)
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185

TECHNICAL WRITING
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592

TECHNOLOGIES
Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1993, Part 1
[S-HRG-102-716-PT-1] p 1358 N93-17089

TECHNOLOGY ASSESSMENT
Inflatable, space-rigidized structures: Progress in design, technology and verification p 1080 N93-15746
Terminal area traffic management
[LR-684] p 1058 N93-16213
Technical needs and research opportunities provided by projected aeronautical and space systems
[NASA-CR-192124] p 1073 N93-16629
Power systems for space exploration
[RAND-P-7768] p 1091 N93-16754
Photovoltaic manufacturing technology report, phase 1
[DE93-000027] p 1197 N93-17191
Evaluation and recommendations for work group integration within the Materials and Processes Lab p 1341 N93-17293

Directions for future Earth-to-orbit vehicles
p 1076 N93-17309
Lunar base mission technology issues and orbital demonstration requirements on space station
p 1392 N93-17416
Navstar global positioning system: Introduction and status
[NLR-TP-91008-U] p 1059 N93-17559
Modern helicopter technologies at MBB and the application in future programmes
[MBB-UD-0599-91-PUB] p 1063 N93-17566

TECHNOLOGY TRANSFER
Technology transfer: Federal efforts to enhance the competitiveness of small manufacturers
[AD-A256804] p 1358 N93-15704
Patent write-ups: Patents available for licensing
[AD-A256694] p 1402 N93-16113
INFOTECH 1992: DOE Technical Information (TI) Meeting
[DE93-000467] p 1352 N93-16151
Integrated automation for support of research and development
[NLR-MP-88063-U] p 1235 N93-16290
Future Assets, Student Talent (FAST)
[NASA-CR-191632] p 1332 N93-16624
NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992
[NASA-CR-189691] p 1332 N93-16760
1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-184505] p 1339 N93-17279
Environmental Quality Information Analysis Center multi-year plan
[DE92-040850] p 1204 N93-17352

TECHNOLOGY UTILIZATION
Fiber-optic three axis magnetometer prototype development
[NASA-CR-191882] p 1301 N93-15711
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
CD-ROM applications in Professional Military Education (PME)
[AD-A256662] p 1231 N93-15914
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941
Mining nonterrestrial resources: Information needs and research topics p 1381 N93-16885
Robotic lunar rover technologies and SEI supporting technologies at Sandia National Laboratories
p 1389 N93-17255
The quickest, lowest-cost lunar resource assessment program: Integrated high-tech Earth-based astronomy
p 1390 N93-17261

TECTONICS
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094
Kinematics of the New Zealand plate boundary: Relative motion by GPS across networks of 1000 km and 50 km spacing
[NASA-CR-191714] p 1209 N93-16938
An investigation of extensional tectonics of southern California
[NASA-CR-191359] p 1209 N93-17092
Palinspastic reconstruction of southeastern California and southwestern Arizona for the middle Miocene
p 1209 N93-17093

TELECOMMUNICATION
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
TMN: Introduction and interpretation
[MEMO-INF-92-40] p 1140 N93-16592
Queueing systems on a circle
[MEMO-1038] p 1276 N93-16670
Multipath effects in a Global Positioning Satellite system receiver p 1059 N93-17311
Activities of the PTT --- the Netherlands Post, Telephone, and Telegraph (PTT)
[ISBN-90-72125-27-4] p 1140 N93-17398
Toward domain-specific design environments: Some representation ideas from the telecommunications domain p 1249 N93-17511
Environment/tool integrator for software development, version 1.1
[AD-A257607] p 1253 N93-17808

TELECONFERENCING
Standardization of end-to-end performance of digital video teleconferencing/video telephony systems
[AD-A257186] p 1137 N93-16001

TELEGRAPH SYSTEMS
Activities of the PTT --- the Netherlands Post, Telephone, and Telegraph (PTT)
[ISBN-90-72125-27-4] p 1140 N93-17398

TELEMETRY
The CRRES Microelectronics Package (MEP) data processing system
[AD-A256709] p 1145 N93-16168
Results of the 1992 NASA/JPL Balloon Flight Solar Cell Calibration Program
[NASA-CR-191630] p 1197 N93-16698
MicroSat data telemetry
[AD-A257468] p 1076 N93-17659

TELEOPERATORS
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover
p 1386 N93-17236
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581

TELEPHONES
Domain-specific functional software testing: A progress report p 1250 N93-17521

TELEPHONY
Standardization of end-to-end performance of digital video teleconferencing/video telephony systems
[AD-A257186] p 1137 N93-16001
Activities of the PTT --- the Netherlands Post, Telephone, and Telegraph (PTT)
[ISBN-90-72125-27-4] p 1140 N93-17398
GATOR: Requirements capturing of telephony features p 1247 N93-17505

TELEROBOTICS
Stereo vision controlled bilateral telerobotic remote assembly station
[AD-A257113] p 1302 N93-16120
Telerobotic control of a mobile coordinated robotic server
[NASA-CR-191650] p 1259 N93-16387
Remote driving with reduced bandwidth communication
[DE92-040639] p 1139 N93-16408
A telerobotic digital controller system
[NASA-CR-191799] p 1260 N93-16658
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
Operator-tailored adjustable control station with movable monitors and cameras for viewing systems in robotics and teleoperations
[NASA-CASE-NPO-17837-1-CU] p 1304 N93-17273
The roles of humans and robots as field geologists on the Moon p 1397 N93-17450

TELESCOPES
Development, manufacturing and alignment of 2 m diameter mirror for PRONAOS p 1081 N93-15752
Measuring q(sub 0) using supernovae at z approximately 0.2
[DE92-041164] p 1363 N93-15918
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
Required technologies for lunar astronomical observatories p 1363 N93-17453
Environmental effects on lunar astronomical observatories p 1363 N93-17454

TELEVISION CAMERAS
A study on focusing in telescience using the TelePODI breadboard
[NLR-TP-91036-U] p 1305 N93-17581

TELEVISION EQUIPMENT
Remote driving with reduced bandwidth communication
[DE92-040639] p 1139 N93-16408

TELLURIUM ALLOYS
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936

TEMPERATURE CONTROL
Dynamic fabrication of diamond thermal management substrates
[AD-A257213] p 1118 N93-15814
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
Reusable Reentry Satellite (RRS): Thermal control trade study
[NASA-CR-186528] p 1087 N93-16719
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
Thermal management in space p 1095 N93-16909
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
Design of a radiator shade for testing in a simulated lunar environment
[NASA-CR-192080] p 1229 N93-17710

TEMPERATURE DEPENDENCE
Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875
Temperature dependence of species concentrations near the substrate during CVD diamond growth
[AD-A256762] p 1316 N93-16071
Thermophysical properties
[DE93-000493] p 1329 N93-16242
Status and covariance files of the scattering matrix of graphite
[DE93-001632] p 1126 N93-17463

TEMPERATURE DISTRIBUTION
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
An introduction to the rubber forming of thermoplastic composites
[LR-683] p 1122 N93-16212
The titanium-aluminum phase diagram: A review of the near Ti-50 at. pct. Al phase fields
[AD-A255685] p 1112 N93-16299
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826

TEMPERATURE EFFECTS
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Melt spinning of intermetallic alloys: Heat transfer and microstructure
[AD-A257455] p 1109 N93-15877
Temperature history and microstructure of alumina
[DE92-041196] p 1119 N93-15930
Thermal distortion limits on the performance of XUV free-electron lasers configured with a multifacet-mirror ring resonator
[DE92-040387] p 1171 N93-15939
Temperature distribution and thermally induced stresses in electronic packages
[AD-A257334] p 1144 N93-15990
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
The influence of heat treatment on the performance of highly corrosion resistant aluminum alloys
[AD-A257115] p 1111 N93-16122
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Mode interaction in stiffened composite shells under combined mechanical and thermal loadings
p 1189 N93-16793
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
Nucleation, crystal growth and liquid/liquid phase separation studies in inorganic glasses, glassy-metals and polymers, phase 2
[CTN-93-60631] p 1133 N93-16937
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

TEMPERATURE GRADIENTS
Electron-temperature-gradient-induced instability in tokamak scrape-off layers
[DE93-000623] p 1309 N93-16376
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
[NASA-TM-105920] p 1159 N93-16612
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution
p 1165 N93-17334

TEMPERATURE MEASUREMENT
Recent diagnostic development for the Los Alamos Inertial Fusion Program
[DE92-040362] p 1306 N93-15849
The Global Historical Climatology Network: Long-term monthly temperature, precipitation, sea level pressure, and station pressure data
[DE92-040521] p 1201 N93-16497
Multicolor pyrometer for materials processing in space
[NASA-CR-190876] p 1132 N93-16747

Multiwavelength pyrometer for gray and non-gray surfaces in the presence of interfering radiation
[NASA-CASE-LEW-15250-1] p 1169 N93-17060
Measurements of the cosmic microwave background temperature at 1.47 GHz
[DE93-000587] p 1400 N93-17379

TEMPERATURE PROFILES
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

TEMPERATURE SENSORS
Infrared fiber-optical temperature sensor
[AD-D015495] p 1167 N93-16492
High temperature smart sensors and actuators
[AD-A256985] p 1158 N93-16517

TEMPORAL DISTRIBUTION
Variance of temporal moment estimates of a squared time history
[DE93-000753] p 1277 N93-17196
Complex temporal and spatial patterns in nonequilibrium processes
[DE93-001845] p 1281 N93-17531

TENNESSEE VALLEY (AL-KY-TN)
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180

TENSILE DEFORMATION
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908

TENSILE STRENGTH
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299
The influence of long term thermal aging on the microstructure and mechanical properties of modified 9Cr-1Mo steel
[DE93-001373] p 1116 N93-17479

TENSILE STRESS
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082
In-line load cell for flexible strength member materials
[AD-D015507] p 1186 N93-16609
The effect of tensile stress on hydrogen diffusion in metal alloys
[NASA-TM-108386] p 1114 N93-16701

TENSILE TESTS
Crack initiation and growth in notched CFRE laminates: FEM analyses and tests p 1077 N93-15725
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE93-003126] p 1114 N93-16927

TERMINAL BALLISTICS
Tests for determining failure criteria of ceramics under ballistic impact
[AD-A256652] p 1119 N93-15911

TERMINAL GUIDANCE
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system
[DOT/FAA/CT-92/22] p 1059 N93-16498

TERMS
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741

TERNARY ALLOYS
The influence of microgravity on the microstructure and properties of eutectics, phase 3
[CTN-93-60628] p 1133 N93-16936

TERRAIN
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947

TERRAIN ANALYSIS
RJARS: RAND's version of the jamming aircraft and radar simulation
[AD-A255560] p 1138 N93-16059
Automated classification of basic-level terrain features in digital elevation models
[AD-A256932] p 1190 N93-16504
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460

TERRESTRIAL DUST BELT
Studies of the charging of a thin dust layer in a plasma p 1313 N93-17320

TERRESTRIAL RADIATION
The earth's radiation belts, auroral zones, and polar caps: Particle models, event studies, and effects on materials
[AD-A256716] p 1207 N93-16173

TEST CHAMBERS
A study of the stability of two-liquid droplets under microgravity conditions
[CU-MAE-89-01] p 1131 N93-16496

TEST EQUIPMENT
Portable radar simulator
[AD-D015453] p 1139 N93-16459

TEST FACILITIES
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
Control of combined vibrations and multi-axis test p 1085 N93-15784
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
Experimental investigation of an ejector-powered free-jet facility
[NASA-TM-105868] p 1056 N93-16704

TEST STANDS
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

TEST VEHICLES
Development of test procedures for hybrid/electric vehicles
[DE93-001943] p 1180 N93-17579

TETHERED SATELLITES
SEDS1 mission software verification using a signal simulator p 1254 N93-17321

TETHERING
Tethers p 1089 N93-16915
SEDS1 mission software verification using a signal simulator p 1254 N93-17321
Advanced propulsion for LEO-Moon transport. 2: Tether configurations in the LEO-Moon system p 1393 N93-17421
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

TETHERLINES
Tethers p 1089 N93-16915

TETRAZOLES
Kinetic tetrazolium microtiter assay
[NASA-CASE-MSC-21979-1] p 1223 N93-17049

TEXTILES
NASA/USRA advanced design program activity, 1991-1992
[NASA-CR-192063] p 1135 N93-17778

TEXTURES
Crystallographic texture effects in hydroforming of aluminum sheet
[DE92-040368] p 1110 N93-15937
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
Texture segmentation in aerial photographs and satellite images
[ITN-93-85174] p 1191 N93-16738

THALLIUM ALLOYS
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759

THALLIUM COMPOUNDS
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
Method of making Tl-Sr-Ca-Cu-Oxide superconductors comprising heating at elevated pressures in sealed container
[AD-D015482] p 1321 N93-16489

THEOREM PROVING
An introduction mechanism for recursive functions: A case study
[MEMO-INF-92-34] p 1264 N93-16337
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Polling systems and multiple branching processes
[CWI-BS-R9128] p 1267 N93-16726
Open problems in rewriting
[CWI-CS-R9114] p 1267 N93-16727
A short proof of the decidability of bisimulation for normal BPA processed
[CWI-CS-R9151] p 1267 N93-16731
The Hahn-Exton q-Bessel function
[ISBN-90-9004649-6] p 1271 N93-17587
The uncertainty principle
[ETN-92-92533] p 1331 N93-17589
A contribution to the theory and practice of multivariate splines
[ISBN-90-9004534-1] p 1272 N93-17591
The error committed by stopping Newton iteration in the numerical solution of stiff initial value problems
[TW-92-02] p 1272 N93-17593
Modal derivation rules
[ML-91-07] p 1274 N93-17784
A note on the diagonalizable algebras of PA and ZF
[ML-91-09] p 1274 N93-17792

THEOREMS
Quantum mechanics and polarization correlations for photons
[MEMO-1035] p 1329 N93-16639
Note on the average rank of LYM-sets
[MEMO-1036] p 1266 N93-16640
Cycles containing all vertices of maximum degree
[MEMO-1044] p 1268 N93-16844
A contribution to the theory and practice of multivariate splines
[ISBN-90-9004534-1] p 1272 N93-17591
A note on the diagonalizable algebras of PA and ZF
[ML-91-09] p 1274 N93-17792

THEORETICAL PHYSICS
Theoretical interpretation of high-energy nuclear collisions
[DE92-040845] p 1296 N93-16128
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Theoretical particle physics
[DE93-000649] p 1329 N93-16357
Global continuous symmetry and the 17keV neutrino
[PREPRINT-868] p 1288 N93-16966
Experimental and theoretical high energy physics research
[DE93-001495] p 1298 N93-16986
Proceedings of the fifth workshop on elementary-particle picture of the universe
[DE92-538746] p 1375 N93-17190
The pion contribution to semi-inclusive deep inelastic scattering with slow baryons in the final state
[KVI-881] p 1293 N93-17399
Escape- and spreading width of the isobaric analog state
[KVI-884] p 1293 N93-17400
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561

THERAPY
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058

THERMAL ANALYSIS
Fingerprinting of materials: Technical supplement p 1199 N93-15917
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Development of a commercial photovoltaic concentrator module
[DE93-002594] p 1196 N93-16655
STME nozzle thermal analysis p 1095 N93-17291
Design and analysis of the cryopump for the D3-D advanced divertor
[DE93-001357] p 1179 N93-17389

THERMAL CONDUCTIVITY
Thermophysical properties
[DE93-000493] p 1329 N93-16242
A survey and analysis of commercially available hydrogen sensors
[NASA-TM-105878] p 1170 N93-17777

THERMAL CONTROL COATINGS
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

THERMAL DECOMPOSITION
Thermal isomerization and decomposition of ethynyldisilanes
[DE92-040578] p 1102 N93-16012

THERMAL DIFFUSION
Experimental evidence of off-diagonal transport term and the discrepancy between energy/particle balance and perturbation analyses
[DE92-556732] p 1309 N93-16237
Thermal diffusion processes in aqueous sodium chloride solutions
[DE93-002596] p 1105 N93-16656
THERMAL DISSOCIATION
The importance of hindered rotations and other anharmonic effects in the thermal dissociation of small unsaturated molecules: Application to HCN
[DE92-040734] p 1285 N93-16268
THERMAL ENERGY
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
[NASA-CR-191050] p 1196 N93-16617
THERMAL ENVIRONMENTS
An experimental examination of the thermal and acoustic environments on runway joint seals
[AD-A257965] p 1073 N93-17734
THERMAL EXPANSION
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
THERMAL FATIGUE
Prediction of thermal cycling induced matrix cracking p 1100 N93-16780
THERMAL INSULATION
High-performance, non-CFC-based thermal insulation: Gas filled panels
[DE93-001525] p 1118 N93-15809
Energy and global warming impacts of CFC alternative technologies for foam building insulations
[DE92-019477] p 1200 N93-16085
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605
THERMAL MAPPING
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830
Dual-band infrared imaging applications: Locating buried minefields, mapping sea ice, and inspecting aging aircraft
[DE93-000516] p 1304 N93-17225
THERMAL NEUTRONS
Surface physics with cold and thermal neutron reflectometry
[DE93-001986] p 1286 N93-16361
THERMAL PLASMAS
Plasma separation p 1313 N93-16892
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925
THERMAL PROTECTION
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
THERMAL RADIATION
Radiation fluxes at the FIFE site
[NASA-CR-191717] p 1208 N93-16718
THERMAL SHOCK
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 3: Stress and reliability analysis of layered composite cylinders under thermal shock
[AD-A257461] p 1090 N93-16131
THERMAL STABILITY
A high precision sandwich reflector for FIRST: Design and mechanical analysis of the sandwich core p 1082 N93-15759
The DARPA high-performance polymer program. Volume 2: Appendix: Selected presentation material from the program review held on 14-15 January 1992
[AD-A257309] p 1121 N93-16156
The DARPA high-performance polymer program. Volume 1: Program background and highlights of the program review held on 14-15 January 1992
[AD-A257308] p 1121 N93-16190
Chemical and thermal stability of refrigerant-lubricant mixtures with metals
[DE93-000537] p 1121 N93-16192
THERMAL STRESSES
Sunshade support structure: Structure and testing p 1080 N93-15748
Thermoviscoelastic analysis of pavements p 1070 N93-16313
THERMIONIC CATHODES
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
[AD-A255710] p 1102 N93-15963
THERMOCHEMISTRY
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
[DE93-002598] p 1288 N93-16919
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470
THERMOCLINES
Behavior of an ocean general circulation model at four different horizontal resolutions
[DE93-001341] p 1219 N93-15807
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
THERMODYNAMIC EFFICIENCY
Laboratory evaluation of an ozone-safe nonazeotropic refrigerant mixture in a Lorenz-Meutzner refrigerator freezer design
[DE92-041252] p 1134 N93-17367
THERMODYNAMIC EQUILIBRIUM
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171
Combustion of LOX with H2(sub g) under subcritical, critical, and supercritical conditions and experimental observation of dense spray and mixing of impinging jets
[NASA-CR-191222] p 1104 N93-16647
Charge-induced structural relaxation in amorphous semiconductors
[MBB-Z-0265-89-PUB] p 1151 N93-17641
THERMODYNAMIC PROPERTIES
Micromechanical concepts for the estimation of property evolution and remaining life p 1079 N93-15740
Fluctuations and thermodynamic variables in mean field spin glass models
[PREPRINT-883] p 1330 N93-17019
THERMODYNAMICS
Sample container technology p 1078 N93-15728
The hydrothermal synthesis of ceramic powders
[ETN-92-92785] p 1125 N93-16607
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
[DE92-015242] p 1115 N93-17204
THERMOELECTRIC GENERATORS
Nuclear energy technology p 1300 N93-16908
Improvements in manufacture of iridium alloy materials
[DE92-017126] p 1298 N93-16932
THERMOELECTRIC MATERIALS
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
THERMOGRAPHY
Radiometric infrared focal plane array imaging system for thermographic applications
[NASA-CR-189701] p 1168 N93-16830
THERMOMECHANICAL TREATMENT
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924
The role of particles in recrystallization of a thermomechanically processed Al-Mg alloy
[AD-A257315] p 1111 N93-15982
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667
THERMOPHYSICAL PROPERTIES
Thermophysical properties
[DE93-000493] p 1329 N93-16242
THERMOPLASTIC RESINS
Proceedings of the First Annual Advanced Polymer Components Symposium
[AD-A256679] p 1121 N93-16095
Morphology, properties, and stability of thermoplastic polymer blends
[ETN-92-92791] p 1124 N93-16491
Design for producing fiberglass fabric in a lunar environment
[NASA-CR-192068] p 1135 N93-17770
THERMOPLASTICITY
Environmentally compliant thermoplastic powder coating, phase 1
[AD-A257232] p 1120 N93-15966
An introduction to the rubber forming of thermoplastic composites
[LR-683] p 1122 N93-16212
Lunar preform manufacturing
[NASA-CR-192064] p 1135 N93-17775
THERMOSPHERE
Thermosphere-ionosphere-mesosphere energetics and dynamics (TIMED). The TIMED mission and science program report of the science definition team. Volume 1: Executive summary
[NASA-CR-191377] p 1208 N93-16683
THERMOVISCOELASTICITY
Thermoviscoelastic analysis of pavements p 1070 N93-16313
The thermoviscoelastic behavior of composite materials
[ITN-93-85185] p 1098 N93-16856
THICK FILMS
Glassy binder system for ceramic substrates, thick films and the like
[AD-D015472] p 1123 N93-16472
THICKNESS
The interface crack problem in nonhomogeneous bonded materials of finite thickness
[AD-A256990] p 1184 N93-16188
THIN FILMS
Rapid silicon dioxide film formation on clean silicon surfaces
[AD-A257261] p 1143 N93-15891
Nucleation and growth in electrodeposition of thin copper films on pyrolytic graphite
[DE92-041216] p 1111 N93-15967
RF vacuum microelectronics
[AD-A257208] p 1145 N93-16004
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
A preliminary examination of Y 1 (a proprietary thin-film ferroelectric produced by Symetrix Corporation)
[AD-A255692] p 1146 N93-16395
Method and system for electron beam lithography
[AD-D015397] p 1146 N93-16399
Plasma physics, and transportation and use of positively charged particle beams
[AD-D015398] p 1310 N93-16400
Measurement of fracture toughness in thin films and small volumes using nanoindentation methods
[DE92-040711] p 1320 N93-16445
High efficiency cadmium telluride and zinc telluride based thin-film solar cells
[DE92-016403] p 1195 N93-16448
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE92-040379] p 1147 N93-16512
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
Optical characterization of sputtered carbon films
[DE92-041209] p 1124 N93-16530
B4C solid target boronization of the MST reversed-field pinch
[DE93-002736] p 1310 N93-16921
Thermal plasma processing of materials
[DE93-003118] p 1311 N93-16925
Energetics, bonding mechanism and electronic structure of metal/ceramic interfaces
[DE93-003121] p 1098 N93-16926
Electrooptic properties of PZT thin films for image storage applications
[DE92-008523] p 1303 N93-16928
Spectroscopic and microstructural characterization of solution chemistry effects in PZT thin film processing
[DE92-008675] p 1322 N93-16929
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
Enhanced fatigue and retention in ferroelectric thin film memory capacitors by post-top electrode anneal treatment
[NASA-CASE-NPO-18551-1-CU] p 1150 N93-17277
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342
Microstructural and electronic properties of highly oriented Tl(0.5)Pb(0.5)Sr2CaCu2O7 films on LaAlO3
[DE93-000655] p 1326 N93-17365
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699
Molecular films for opto-electronics
[AD-A258070] p 1305 N93-17702
THIN WALLED SHELLS
TELECOM 2 deployable reflectors p 1082 N93-15761
A nonconforming approximate solution to a specially orthotropic axisymmetric thin shell subjected to a harmonic displacement boundary condition
[AD-A257733] p 1188 N93-17690
THIOLS
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467

The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476

THORIUM COMPOUNDS
Spectroscopic and magnetic studies of tetravalent Pa and trivalent Th compounds
[DE92-041214] p 1100 N93-15676

THREE BODY PROBLEM
Future directions in electron-ion collision physics
[DE93-000500] p 1292 N93-17374

THREE DIMENSIONAL BOUNDARY LAYER
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Three dimensional boundary-layer transition on a swept cylinder p 1161 N93-16817
Three dimensional boundary-layer transition on a swept wing p 1161 N93-16818
Experiments on swept-wing boundary-layer transition p 1162 N93-16829

THREE DIMENSIONAL COMPOSITES
The prediction of the overall behavior of viscous composites
[ITN-93-85184] p 1098 N93-16855

THREE DIMENSIONAL FLOW
Center for Modeling of Turbulence and Transition (CMOTT): Research Briefs, 1992
[NASA-TM-105834] p 1152 N93-15792
Verification of internal flow analyses in complex 3-D geometries
[NASA-CR-191250] p 1156 N93-16375
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
Streamwise computation of a circular-to-rectangular transition duct potential flow field
[NIAR-92-17] p 1159 N93-16628
Performance comparison of axisymmetric and three-dimensional hydrogen film coolant injection in a 110N hydrogen/oxygen rocket
[NASA-TM-105967] p 1091 N93-16714
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765
Boundary layer transition in Coriolis force field p 1160 N93-16815
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746

THREE DIMENSIONAL MODELS
FAA unified pavement analysis 3-D finite element method p 1070 N93-16314
Three-dimensional stress analysis of multilayered airport pavements: Integral transform approach p 1072 N93-16319
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
A three-dimensional model of cloud dynamics, microphysics, and chemistry p 1213 N93-16506
The 2 + 1 dimensional quantum gravity as a gaussian fermionic system and the 3D-Ising model
[PREPRINT-855] p 1330 N93-16961
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
Automating the design of scientific computing software p 1249 N93-17516
Studies of dynamic processes related to active experiments in space plasmas
[NASA-CR-191771] p 1313 N93-17801

THREE DIMENSIONAL MOTION
Input relegation control for gross motion of a kinematically redundant manipulator
[DE93-002735] p 1178 N93-16920
Numerical evaluation of general n-dimensional integrals by the repeated use of Newton-Cotes formulas
[DE93-715528] p 1270 N93-17473

THROWING
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192078] p 1229 N93-17806

THRUST AUGMENTATION
Low bandwidth robust controllers for flight
[NASA-CR-191774] p 1069 N93-17800

THRUST BEARINGS
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524

THRUST LOADS
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

THRUST VECTOR CONTROL
Application of an adaptive clustering network to flight control of a fighter aircraft, phase 1
[AD-A253388] p 1068 N93-16036
Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756

THUNDERSTORMS
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633

THYRATRONS
High power switching and other high power devices
[AD-A256974] p 1146 N93-16253

THYRISTORS
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191780] p 1168 N93-17001

TIDAL FLATS
Morphodynamics of intertidal regions
[BCRS-92-03] p 1220 N93-16574

TILT WING AIRCRAFT
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694

TIME DEPENDENCE
Time stability of Monte Carlo device simulation
[DE92-019375] p 1275 N93-15884
Quantum groups and Lie-admissable time evolution
[SSCL-PREPRINT-793] p 1264 N93-16349
Normal forms in real time process algebra
[CWI-CS-R9149] p 1265 N93-16367
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558
Two- and three-dimensional blade vortex interactions
[NASA-CR-177567] p 1056 N93-16942
Neural network training by integration of adjoint systems of equations forward in time
[NASA-CASE-NPO-18586-1-CU] p 1261 N93-17276
Structure in gamma ray burst time profiles: Statistical Analysis 1 p 1344 N93-17308
An investigation of the effects of history dependent damage in time dependent fracture mechanics, variable load conditions
[DE93-004288] p 1187 N93-17606

TIME DIVISION MULTIPLE ACCESS
National Defense Science and Engineering Graduate Fellowship Program in electrical engineering
[AD-A256975] p 1146 N93-16254

TIME FUNCTIONS
Redheffer's lemma and H(infinity)-control or infinite-dimensional systems
[W-9206] p 1259 N93-16355
Normal forms in real time process algebra
[CWI-CS-R9149] p 1265 N93-16367

TIME LAG
Completeness of a delay-insensitive algebra
[CS-9203] p 1264 N93-16352
An M/G/1 queue with dependence between interarrival and service times
[CWI-BS-R9125] p 1276 N93-16849

TIME MARCHING
Preconditioned time-difference methods for solving advective-diffusive systems
[DE92-014790] p 1262 N93-15879
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558

TIME MEASUREMENT
A timing analysis of level-clocked circuitry
[AD-A256796] p 1143 N93-15888

TIME SERIES ANALYSIS
Statistical error in a chord estimator of correlation dimension: The rule of five
[DE93-000687] p 1276 N93-17195
Least squares harmonic analysis applied to phenomena related to Earth rotation
[ETN-92-92532] p 1192 N93-17588
Interpretation of time series from nonlinear systems. Volume 58: Proceedings of the IUTAM Symposium and NATO Advanced Research Workshop on the Interpretation of Time Series from Nonlinear Mechanical Systems
[AD-A258028] p 1277 N93-17674

TIME SHARING
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681

TIME SIGNALS
A timing analysis of level-clocked circuitry
[AD-A256796] p 1143 N93-15888

TIMING DEVICES
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056

TIN ALLOYS
The effect of low Au concentrations on the properties of eutectic Sn/Pb
[DE92-041206] p 1109 N93-15675

TIN COMPOUNDS
Experimental investigation of cooling perimeter and disturbance length effect on stability of Nb3Sn cable-in-conduit conductors
[DE92-538568] p 1149 N93-17007

TIN ISOTOPES
Processing high-(Tc) superconductors with GeV heavy ions
[DE92-040755] p 1315 N93-15926

TISSUES (BIOLOGY)
Radon: Chemical and physical processes associated with its distribution
[DE93-003718] p 1204 N93-17470

TITANIUM
Modeling of microstructural effects on fracture processes at high loading rates
[AD-A255684] p 1183 N93-15958
A study of the Lute Metering Structure p 1189 N93-17294

TITANIUM ALLOYS
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A256196] p 1109 N93-15699
Deformation twinning in ordered alloys transformation induced ductility in intermetallics
[DE93-002879] p 1111 N93-16148
The titanium-aluminum phase diagram: A review of the near Ti-50 at. pct. Al phase fields
[AD-A255685] p 1112 N93-16299
Fatigue propagation behaviour of short cracks in titanium alloys
[ESDU-92023] p 1113 N93-16637
First-principles approach to alloy phase stability
[DE93-001323] p 1115 N93-17031

TITANIUM BORIDES
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657

TITANIUM CARBIDES
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831

TITANIUM NITRIDES
Molecular and polymeric ceramic precursors
[DE93-002841] p 1127 N93-17657

TITANIUM OXIDES
Ion-beam modification of Gd2Ti2O7
[DE93-001514] p 1328 N93-17652

TOKAMAK DEVICES
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
Physics of the L-mode to H-mode transition in tokamaks
[DE92-040697] p 1306 N93-15827
Measurement of impurity ion densities and energies in the divertor and edge regions of Alcator C-Mod tokamak
[DE92-040510] p 1307 N93-15922
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
Theoretical plasma physics
[DE92-040854] p 1308 N93-16185
Experimental evidence of off-diagonal transport term and the discrepancy between energy/particle balance and perturbation analyses
[DE92-556732] p 1309 N93-16237
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
Small steady-state tokamak (TST) for divertor testing
[DE93-001213] p 1309 N93-16274
Enhancement of D3-D neutral beam system for higher performance
[DE93-000878] p 1309 N93-16307
Correlation theory of a two-dimensional plasma turbulence with shear flow
[DE93-000880] p 1309 N93-16308

Electron-temperature-gradient-induced instability in tokamak scrape-off layers
[DE93-000623] p 1309 N93-16376
Tokamak turbulence in self-regulated differentially rotating flow and L-H transition dynamics
[DE93-000443] p 1310 N93-16451
High beta and second stability region transport and stability analysis
[DE93-000886] p 1310 N93-16534
JT-60 configuration parameters for feedback control determined by regression analysis
[DE92-556731] p 1310 N93-16650
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
Current drive with fast waves, electron cyclotron waves, and neutral injection in the D3-D tokamak
[DE93-001359] p 1311 N93-16985
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
The ARIES-1 tokamak reactor study, volume 2
[DE93-002185] p 1311 N93-17037
Theoretical reversed field pinch and tokamak studies
[DE93-002775] p 1312 N93-17085
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199
A need for non-tokamak approaches to magnetic fusion energy
[DE93-000794] p 1331 N93-17232
New D3-D tokamak plasma control system
[DE93-000877] p 1312 N93-17388
Design and analysis of the cryopump for the D3-D advanced divertor
[DE93-001357] p 1179 N93-17389
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
[DE93-715315] p 1127 N93-17472

TOLERANCES (MECHANICS)
Damage tolerance checking on Ni/H2 battery cells
p 1081 N93-15754
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104

TOMAHAWK MISSILES
Development and qualification of the US Cruise Missile Propulsion System p 1094 N93-17619

TOPEX
Experimental and theoretical determination of sea-state bias in radar altimetry
[NASA-CR-191712] p 1191 N93-16758

TOPOGRAPHY
Built-up area feature extraction
[AD-A256933] p 1190 N93-16206
Lunar Observer Laser Altimeter observations for lunar base site selection p 1395 N93-17437

TOPOLOGY
Hausdorff metric for capacities
[CWI-BS-R9127] p 1268 N93-16833

TORNADOES
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633

TOROIDAL PLASMAS
Toroidal effects on drift wave turbulence
[DE93-000498] p 1306 N93-15672
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-000402] p 1307 N93-16091
Plasma physics research in the MST toroidal confinement device
[DE93-000491] p 1309 N93-16241
Map model for nonlinear alpha particle interaction with toroidal Alfven waves
[DE93-001851] p 1311 N93-16973
Multiple-gap theory of toroidal Alfven waves with kinetic effects
[DE93-001852] p 1311 N93-16974
Magnetic fusion theory and experimental research and development
[DE93-002539] p 1311 N93-17003
Long wavelength magnetic fluctuations in toroidal plasmas
[DE93-002352] p 1312 N93-17199

TORQUE
Implementation of robotic force control with position accommodation
[NASA-CR-191850] p 1178 N93-16663
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718

TOTAL ENERGY SYSTEMS
Variational derivation of equation for generalized pair correlation function p 1254 N93-16778

TOTAL OZONE MAPPING SPECTROMETER
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645

TOTAL QUALITY MANAGEMENT
Total quality management: Strengths and barriers to implementation and cultural adaptation
p 1182 N93-16788

TOUCHDOWN
Example of statistical techniques applied to analysis of measurements of the landing airborne manoeuvre. (Multiple linear regression with two independent variables and one dependent variable.)
[ESDU-92022] p 1062 N93-16636

TOXICITY
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265

TOXICOLOGY
Enhancement of drug detection and identification by use of various derivatizing reagents on GC-FTIR analysis
[AD-A255582] p 1224 N93-16041

TRACERS
Radon as a tracer for lunar volatiles
p 1388 N93-17248

TRACKING (POSITION)
Spaceborne centrifugal relays for spacecraft propulsion
[NASA-CR-191773] p 1075 N93-16654
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481

TRACKING NETWORKS
Studies in beamforming tracking neural networks mathematics
[AD-A255574] p 1258 N93-16039

TRACKING PROBLEM
Passivity/Lyapunov based controller design for trajectory tracking of flexible joint manipulators
[NASA-CR-191852] p 1261 N93-16708

TRADEOFFS
Tradeoff and scale models of large deployable mesh reflectors for mobile communications satellite
p 1078 N93-15731
Reusable Reentry Satellite (RRS): Launch tradeoff study
[NASA-CR-186395] p 1086 N93-15803
Tradeoffs in the utility of learned knowledge
[NASA-TM-108111] p 1242 N93-16750

TRAILING EDGE FLAPS
Drag due to gaps round undeflected trailing-edge controls and flaps at subsonic speeds
[ESDU-92039] p 1055 N93-16634

TRAINING DEVICES
The SWOOPE experience: Precollege students mapping the environment
[DE92-040390] p 1198 N93-15663
Ventures in science
[DE93-003044] p 1331 N93-16521
Simulator motion
[AD-A257683] p 1072 N93-17687

TRAJECTORIES
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems
p 1074 N93-17290
Parallelizing the track-target model for the MIMD machine
[DE92-041100] p 1278 N93-17355

TRAJECTORY CONTROL
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481

TRAJECTORY OPTIMIZATION
Terminal area traffic management
[LR-684] p 1058 N93-16213
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Robust approximate optimal guidance strategies for aeroassisted orbital transfer missions
p 1074 N93-16518
A real-time near-optimal guidance approach for launch vehicles p 1074 N93-16540
Combining direct and indirect methods in optimal control: Range maximization of a hang glider
[REPT-313] p 1068 N93-16618
Potential missile flight performance gains from improvements to the propulsion system
p 1092 N93-17609

TRAJECTORY PLANNING
Genetic algorithms for the development of real-time multi-heuristic search strategies
[AD-A257454] p 1258 N93-15876
Project proposal active vision
[AD-A256490] p 1258 N93-15934
Path planning for assembly of strut-based structures
[NASA-CR-191874] p 1260 N93-16622
Efficient distance calculation using the spherically-extended polytope (s-tope) model
[NASA-CR-191858] p 1267 N93-16677
An inverse dynamic trajectory planning for the end-point tracking control of a flexible manipulator
[DE93-000428] p 1179 N93-17192
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493

TRANSDUCERS
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056
Control system and method for prosthetic devices
[NASA-CASE-MSC-21941-1] p 1228 N93-17087
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718

TRANSFER FUNCTIONS
A contribution to the dynamic feedforward open loop control of multivariable systems and to the optimal design of command functions
[DLR-FB-92-05] p 1260 N93-16515
Analysing the transfer functions of nonlinear systems in the frequency domain
[RR-445] p 1266 N93-16606

TRANSFER OF TRAINING
Representation of research paradigms as a function of familiarity with research domains
[AD-A256553] p 1263 N93-16266
Simulator motion
[AD-A257683] p 1072 N93-17687

TRANSFER ORBITS
Theory and computation of optimal low- and medium-thrust transfers
[NASA-CR-191651] p 1090 N93-16428
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems
p 1074 N93-17290

TRANSFORMATIONS (MATHEMATICS)
Proceedings of the Conference on Moments and Signal
[AD-A257227] p 1136 N93-15819
Interaction in polysilazane/SiC powder systems
[DE92-041178] p 1119 N93-15957
Projection with a minimal system of inequalities
[AD-A257237] p 1263 N93-15961
Quantum groups and Lie-admissable time evolution
[SSCL-PREPRINT-793] p 1264 N93-16349
Datatype laws without signatures
[CWI-CS-R9133] p 1268 N93-16851

TRANSIENT LOADS
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

TRANSIENT RESPONSE
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Measurand transient signal suppressor
[NASA-CASE-MSC-22027-1] p 1261 N93-17056

TRANSISTOR AMPLIFIERS
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825

TRANSISTORS
Effect of oxide thickness on interface-trap buildup rates
[DE92-040981] p 1315 N93-15928
Three-terminal devices of high-T(sub c) superconductors: A status report and future challenges
[DE93-000654] p 1319 N93-16358
Discrepancies between charge-pumping, dual-transistor, and midgap measurements of D(sub it)
[DE92-040977] p 1322 N93-16975

TRANSITION FLOW
Modeling of turbulence and transition
p 1153 N93-15795

TRANSITION METALS
Chemical probes of metal cluster structure: Fe, Co, Ni, and Cu
[DE92-041109] p 1108 N93-15674
Multi-body forces and the energetics of transition metals, alloys, and semiconductors
[DE93-002230] p 1115 N93-17184
Transition metal mediated transformations of small molecules
[DE93-001725] p 1117 N93-17623
The energetics of ordered intermetallic alloys (of the transition metals)
[DE93-001968] p 1117 N93-17753

TRANSITION PROBABILITIES
Geometric ergodicity, quasi-stationary and ratio limits for random walks
[MEMO-1033] p 1266 N93-16593

Calculation of quantum corrections to the rate of sphaleron transitions by means of the zeta-function
[PREPRINT-882] p 1289 N93-17018

TRANSITION TEMPERATURE
Isotope effect in (13)C-substituted (central C=C) kappa-phase organic superconductors
[DE92-040748] p 1314 N93-15834
Centimeter wave absorption in molecular crystals
[AD-A257453] p 1315 N93-15875
Summary of phase separation, structure and superconductivity in super-oxygenated La2CuO(4+delta)
[DE93-000855] p 1315 N93-15905
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
Matrix-dominated mechanical properties of a fiber composite lamina
[DE93-001320] p 1098 N93-17030
Enhanced superconducting properties in Bi2Sr2Ca1Cu2O(y) by thermal and mechanical processing
[DE93-000609] p 1325 N93-17227
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
Spin density waves in dilute CuMn alloys
[DE93-001628] p 1117 N93-17578

TRANSLATING
Counterexamples to completeness results for basic narrowing
[CWI-CS-R9154] p 1242 N93-16741
A rewrite approach to polynomial ideal theory
[CWI-CS-R9160] p 1271 N93-17536

TRANSMISSION EFFICIENCY
Modelling workload for multi-service LAN's
[MEMO-INF-92-31] p 1275 N93-16335

TRANSMISSION ELECTRON MICROSCOPY
Atomic resolution imaging and analysis with the STEM
[DE92-041304] p 1166 N93-16150
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006

TRANSMISSION LINES
Nonlinear characteristics of superconducting transmission lines
[AD-A256388] p 1143 N93-15901
Armored fiber optic cables statement of government interest
[AD-D015459] p 1302 N93-16437

TRANSMISSIONS (MACHINE ELEMENTS)
Conditioned based machinery maintenance (helicopter fault detection)
[AD-A255796] p 1061 N93-16396

TRANSMITTANCE
Characterization of semi-insulating gallium arsenide
[AD-A257295] p 1316 N93-16081
Vertical molecular absorption coefficient profiles and associated meteorological data at the High Energy Laser Systems Test Facility for 20 August 1991
[AD-A257353] p 1206 N93-16143
Adaptive optics for laser power beaming
p 1305 N93-17307

TRANSMITTER RECEIVERS
Instrumentation for millimeter-wave polarimetric measurements of inhomogeneous media
[AD-A257255] p 1136 N93-15835

TRANSONIC FLOW
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage
[AD-A256724] p 1066 N93-15979
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797

TRANSONIC WIND TUNNELS
Modeling and control study of the NASA 0.3-meter transonic cryogenic tunnel for use with sulfur hexafluoride medium
[NASA-CR-189737] p 1157 N93-16379
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710

TRANSPARENCE
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019

TRANSPONDERS
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353

TRANSPORT AIRCRAFT
Technology benefits and ground test facilities for high-speed civil transport development
[NASA-TM-107670] p 1069 N93-15790
Definition of the 2005 flight deck environment
[NASA-CR-4479] p 1065 N93-16693
The design of a long range megatransport aircraft
[NASA-CR-192077] p 1064 N93-17711

TRANSPORT PROPERTIES
Solid-polymer-electrolyte fuel cells
[DE92-041204] p 1193 N93-15919
Aspects of electron transport in semiconductor nanostructures
[ETN-92-92787] p 1321 N93-16486
Aerosol transport and global models
[DE93-001618] p 1209 N93-16969
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230
Asymptotic profiles with finite mass in one-dimensional contaminant transport through porous media: The fast reaction case
[REPT-92-30] p 1164 N93-17736

TRANSPORT THEORY
Salient issues of edge physics pertaining to loss of confinement: A resistive MHD analysis
[DE93-000600] p 1306 N93-15697
Electromagnetic scattering in clouds
p 1142 N93-17327
Methods development for electron transport
[AD-A257986] p 1295 N93-17698

TRANSPORTATION NETWORKS
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808

TRANSPUTERS
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693

TRANSVERSE WAVES
Optimal AR-coating for optical waveguide devices
[MBB-Z-0348-90-PUB] p 1127 N93-17643

TRAPPED PARTICLES
Positron dynamics in solids
[ACTA-POLYTEC-SCAND-PH-176]
p 1294 N93-17600

TRAPPING
Evaluation of a diffusion/trapping model for hydrogen ingress in high-strength alloys
[AD-A257385] p 1109 N93-15859

TRAVEL
Lewis online travel system: Preparer's/traveler's manual, release 1.0
[NASA-CR-190776] p 1254 N93-15789

TRAVELING IONOSPHERIC DISTURBANCES
Supercritical fluid chromatography for the analysis of nitroaromatics, nitramines, and nitrate esters
[AD-A256297] p 1101 N93-15842

TRAVELING WAVE MODULATION
North-south anisotropy during the quasi-stationary modulation of galactic cosmic rays
[NOTA-INTERNA-975] p 1400 N93-17647

TRAVELING WAVE TUBES
Interim report on the analysis of the microwave power module
[NASA-TM-105908] p 1148 N93-16713

TREES (MATHEMATICS)
An algorithm for the construction of dependency trees
[MEMO-INF-92-39] p 1240 N93-16668
The state operator in real time process algebra
[CWI-CS-R9140] p 1269 N93-16852
An improved classification tree analysis of high cost modules based upon an axiomatic definition of complexity p 1244 N93-17167

TRIBOLOGY
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Cryotribology: Development of cryotribological theories and application to cryogenic devices
[DE93-000404] p 1176 N93-16238
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776

TRIGGER CIRCUITS
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182

TRIGONOMETRIC FUNCTIONS
Vertex operator representation of some quantum tori Lie algebras
[PREPRINT-834] p 1269 N93-16956

TRIODES
RF vacuum microelectronics
[AD-A257684] p 1151 N93-17682

TRITIUM
Tritium pellet injector for the tokamak fusion test reactor
[DE93-001205] p 1307 N93-16044
Application of RADTRAN to estimation of doses to persons in enclosed spaces
[DE93-000758] p 1226 N93-17230

TROPICAL METEOROLOGY
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

TROPICAL REGIONS
Carbon emissions and sequestration in forests: Case studies from seven developing countries. Volume 3: India and China
[DE93-001600] p 1198 N93-15811
Meridional circulation in the tropical North Atlantic
[AD-A256906] p 1219 N93-16024

TROPICAL STORMS
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

TROPOSPHERE
Direct measurements of tropospheric ozone from TOMS data
[NASA-CR-191884] p 1202 N93-16645
Diode injection - seeded, 940 nanometer (nm), titanium - sapphire laser for H2O DIAL (differential absorption lidar), measurements p 1175 N93-16781
Atmospheric pressure flow reactor: Gas phase chemical kinetics under tropospheric conditions without wall effects
[NASA-CASE-MSC-21384-2] p 1169 N93-17626

TRUSSES
CFRP integral end fitting for high stability truss structures p 1084 N93-15774
Design of joints for damped structures
p 1084 N93-15776
The damper placement problem for large flexible space structures p 1089 N93-16776
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326

TUBE ANODES
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182

TUBE CATHODES
Cosmic ray test of SDC prototype muon drift tubes
[DE93-001680] p 1400 N93-17182

TUBES
Sample container technology p 1078 N93-15728
Relationship between mechanical-property and energy-absorption trends for composite tubes
[NASA-TP-3284] p 1098 N93-16537
Fluid separator
[NASA-CASE-MFS-28658-1] p 1163 N93-17039

TUNABLE LASERS
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691
Radiationless transitions and excited-state absorption in tunable laser materials
[AD-A256948] p 1173 N93-16432
The 1.083 micron tunable CW semiconductor laser
[NASA-CR-191338] p 1174 N93-16689

TUNGSTEN
Modeling of the vacuum plasma spray process
[DE93-000718] p 1126 N93-17229

TUNGSTEN ALLOYS
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

TUNGSTEN CARBIDES
Mechanisms of mechanical fatigue in ceramics
[DE93-001726] p 1121 N93-16133

TUNING
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208
Cluster-molecule systems: Analysis and tuning of the interaction potential
[DE93-000601] p 1291 N93-17175
Automatic tuning for a teleoperated arm controller
[DE93-001647] p 1179 N93-17481

TURBINE BLADES
Bypass transition in compressible boundary layers
p 1154 N93-15801
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

TURBINE ENGINES
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transformation temperature
[NASA-CR-191649] p 1109 N93-15830
Turbomachinery and potential computations
[DS-2026] p 1067 N93-17740
TURBINE PUMPS
Simulation of cryogenic turbopump annular seals
p 1181 N93-17318
Use of real fluid three dimensional flow computation codes for the design of rocket engine advanced turbine pumps
[DS-2139] p 1095 N93-17743
TURBINES
Field demonstration of aviation turbine fuel MIL-T-83133C, grade JP-8 (NATO code F-34), at Fort Bliss, TX
[AD-A256945] p 1129 N93-16431
TURBOCOMPRESSORS
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405
TURBOJET ENGINES
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 1067 N93-17620
Smaller expendable turbojets p 1067 N93-17621
TURBOMACHINERY
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
TURBOPROP AIRCRAFT
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715
TURBOSHAFTS
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines
[AD-A257754] p 1067 N93-17695
TURBULENCE
On a symmetry of turbulence
[AD-A256647] p 1155 N93-15910
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
TURBULENCE EFFECTS
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows
p 1152 N93-15793
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Bypass transition in compressible boundary layers
p 1154 N93-15801
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
TURBULENCE MODELS
Center for Modeling of Turbulence and Transition (CMOTT): Research Briefs, 1992
[NASA-TM-105834] p 1152 N93-15792
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows
p 1152 N93-15793
PDF turbulence modeling and DNS
p 1153 N93-15794
Modeling of turbulence and transition
p 1153 N93-15795
Turbulence modeling and experiments
p 1153 N93-15796
Modeling of turbulent shear flows
p 1153 N93-15797
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Two equation modelling and the pseudo compressibility technique p 1153 N93-15799
Renormalization group methods for the Reynolds stress transport equations p 1154 N93-15800
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389
Tokamak turbulence in self-regulated differentially rotating flow and L-H transition dynamics
[DE93-000443] p 1310 N93-16451
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Renormalization group in different fields of theoretical physics
[DE92-556707] p 1329 N93-16648
Critical assessment of Reynolds stress turbulence models using homogeneous flows
[NASA-TM-105954] p 1159 N93-16703
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data
[DE93-000678] p 1216 N93-17054
TURBULENT BOUNDARY LAYER
Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Boundary layer transition in Coriolis force field
p 1160 N93-16815
Laminar turbulent transition of a boundary layer by disturbances in the main stream p 1161 N93-16816
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer
[DE93-001515] p 1210 N93-17480
TURBULENT COMBUSTION
Chemical kinetic and aerodynamic structures of flames
[AD-A256015] p 1101 N93-15931
Modeling of turbulent supersonic H2-air combustion with an improved joint beta PDF
[NASA-CR-191929] p 1103 N93-16389
TURBULENT FLOW
Lumley's energy cascade dissipation rate model for boundary-free turbulent shear flows
p 1152 N93-15793
Modeling of turbulence and transition
p 1153 N93-15795
Modeling of turbulent shear flows
p 1153 N93-15797
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Turbulent boundary-layer fluctuations at the solid interface
[AD-A257253] p 1154 N93-15821
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Special publication of National Aerospace Laboratory
[DE93-716176] p 1053 N93-15946
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
A study of film cooling downstream of one and two rows of holes oriented in spanwise/normal planes
[AD-A257325] p 1156 N93-15985
Hydrodynamic effects on heat transfer for film-cooled turbine blades
[AD-A257291] p 1066 N93-16080
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Direct numerical simulation of turbulent flow in a square duct p 1158 N93-16513
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
Investigation of upwind, multigrid, multiblock numerical schemes for three dimensional flows. Volume 1: Runge-Kutta methods for a thin layer Navier-Stokes solver
[NASA-CR-191648] p 1158 N93-16557
Passive scalar fluctuations in intermittent turbulence
[PREPRINT-779] p 1159 N93-16575
A realizable Reynolds stress algebraic equation model
[NASA-TM-105993] p 1055 N93-16596
Critical assessment of Reynolds stress turbulence models using homogeneous flows
[NASA-TM-105954] p 1159 N93-16703
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data
p 1165 N93-16792
Consideration on boundary-layer receptivity
p 1160 N93-16814
Direct numerical simulation of combustion in turbulent supersonic flow
[DS-2138] p 1108 N93-17746
Lift and drag forces on droplets and particles in wall-bounded shear flows
[DE93-002678] p 1165 N93-17761
TURBULENT JETS
Particle dispersion in a turbulent shear flow
[AD-A255681] p 1156 N93-15956
Determination of turbulent velocities by nonlinear acoustic scattering
[AD-A257114] p 1282 N93-16121
Experiments on a round turbulent buoyant plume
[NASA-TM-105955] p 1129 N93-16384
TURBULENT MIXING
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
TURING MACHINES
Neural-network acceptors
[MEMO-INF-92-36] p 1260 N93-16666
TVD SCHEMES
Hypersonic flows including real gas effects
[AERO-REPT-9112] p 1054 N93-16467
TWINNING
Effect of substrate-twin-induced microstructure on transport properties of epitaxial Tl2Ba2CaCu2O(x) films in a magnetic field
[DE93-000605] p 1324 N93-17226
Twin boundaries, interfaces and modulated structures in martensites
[DE93-002136] p 1118 N93-17759
TWO BODY PROBLEM
Two-body nonleptonic decays of D mesons
[PREPRINT-859] p 1289 N93-17016
A two body relativistic equation for interacting nucleons
[NOTA-INTERNA-976] p 1295 N93-17630
TWO DIMENSIONAL BOUNDARY LAYER
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821
TWO DIMENSIONAL FLOW
Correlation theory of a two-dimensional plasma turbulence with shear flow
[DE93-000880] p 1309 N93-16308
Mixing and reaction in the subsonic 2-D turbulent free shear layer p 1054 N93-16508
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543
Instability of spatially periodic flows
p 1160 N93-16810
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
TWO DIMENSIONAL JETS
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811
TWO DIMENSIONAL MODELS
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies
p 1214 N93-16507
Autonomous environment modeling by a mobile robot
[LAAS-91381] p 1179 N93-17493
Image representation of I(sub 2) 2D systems with finite dimensional autonomous part
[REPT-92-24] p 1253 N93-17729
TWO PHASE FLOW
Development of an electrical impedance computed tomographic two-phase flows analyzer
[DE92-040527] p 1155 N93-15923
Present state-of-the-art of two-phase flow model calculations
[DE92-041124] p 1156 N93-16159
Interfacial area and interfacial transfer in two-phase flow systems
[DE93-000647] p 1157 N93-16378
Stability of multiphased rotating fluid systems subjected to variable gravitational forces, phase 1
[CTN-93-60610] p 1157 N93-16425
Gas bubble motion in liquid metals and aqueous solutions in low gravity environments
[CTN-93-60607] p 1162 N93-16838
Boiling heat transfer of refrigerant R-113 in a small-diameter, horizontal tube
[DE93-002351] p 1163 N93-17038
TYPHOONS
Observables for anticipating tornadogenesis in mesocyclones
[NASA-CR-191390] p 1214 N93-16633

Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680

U

U.S.S.R. SPACE PROGRAM
National Aeronautics and Space Administration
p 1358 N93-17090

ULTRAHIGH FREQUENCIES
IRD dropout study
[NASA-CR-191408] p 1139 N93-16381
High efficiency UHF oscillator for portable battery-powered applications
[DE92-040961] p 1150 N93-17353

ULTRAHIGH VACUUM
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208

ULTRASONIC RADIATION
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460

ULTRASONICS
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
An analysis of temperature-induced errors for an ultrasound distance measuring system
[NASA-CR-191859] p 1282 N93-16676
Rapid detection and quantification of features such as damage or flaws in composite and metallic structures
[NASA-CASE-LAR-14850-1-CU] p 1182 N93-17048

ULTRAVIOLET ABSORPTION
The AlCl absorption feature in solid rocket plume radiation
[AD-A256645] p 1089 N93-15700

ULTRAVIOLET ASTRONOMY
Ultraviolet observations of close-binary and pulsating nuclei of planetary nebulae; Winds and shells around low-mass supergiants; The close-binary nucleus of the planetary nebula HFG-1; A search for binary nuclei of planetary nebulae; UV monitoring of irregularly variable planetary nuclei; and The pulsating nucleus of the planetary nebula Lo 4
[NASA-CR-191634] p 1377 N93-15829

ULTRAVIOLET EMISSION
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029

ULTRAVIOLET LASERS
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446

ULTRAVIOLET RADIATION
AFRRI Reports --- Radiobiology
[AD-A257231] p 1221 N93-15965
Briefing paper for the proposed Ultraviolet Free-Electron Laser (UV-FEL) facility at Brookhaven National Laboratory
[DE92-040568] p 1171 N93-16025
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f yields 5d transitions in crystals and glasses
[DE93-002133] p 1324 N93-17079
Correlated hard x ray and UV variability in NGC 5548
p 1361 N93-17104
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120

ULTRAVIOLET SPECTRA
The AlCl absorption feature in solid rocket plume radiation
[AD-A256645] p 1089 N93-15700
Analysis of the AlCl absorption feature and the searchlight emission effect observed in solid propellant rocket plumes
[AD-A256784] p 1089 N93-15702
Ultraviolet studies of novae in the large Magellanic cloud
[DE92-040348] p 1359 N93-16181
International Ultraviolet Explorer (IUE)
[NASA-CR-191952] p 1359 N93-17029
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data
p 1368 N93-17113
The quasar 1821+643 during the ROSAT survey
p 1361 N93-17119

UNDERCARRIAGES
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404

UNDERGROUND ACOUSTICS
Geophysical investigation and characterization with USRADS
[DE93-001363] p 1210 N93-17460

UNDERGROUND EXPLOSIONS
Regional seismic studies in Central Asia
[AD-A256677] p 1206 N93-16094

UNDERGROUND STRUCTURES
Human safety in the lunar environment
p 1229 N93-16867
Evolving concepts of lunar architecture: The potential of subselene development p 1230 N93-17447
Lunar subsurface architecture enhanced by artificial biosphere concepts p 1230 N93-17448

UNDERWATER ACOUSTICS
Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Method of acoustic processing for acoustic image classification
[AD-D015454] p 1282 N93-16460

UNDERWATER COMMUNICATION
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817

UNDERWATER STRUCTURES
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815

UNDERWATER VEHICLES
Correction of inertial measurements using GPS updates for underwater navigation
[AD-A257329] p 1058 N93-15988
An autonomous expendable data collection device for remote environmental sensing
[DE92-019430] p 1190 N93-16224

UNITED KINGDOM
An evaluation of the potential decongestive effect of high speed trains to Europe on Heathrow and Gatwick Airports (United Kingdom)
[ETN-92-92774] p 1359 N93-16577

UNITED STATES
Interfacing 1990 US Census TIGER map files with New S graphics software
[DE93-001518] p 1351 N93-15808
US maglev: Status and opportunities
[DE92-041132] p 1176 N93-15954
US computer research networks: Domestic and international telecommunications capacity requirements
[NASA-CR-191666] p 1255 N93-16388
State-of-the-art for assessing earthquake hazards in the United States. Report 28: Recommended accelerograms for earthquake ground motions
[AD-A256276] p 1208 N93-16510
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 25: The impact of language and culture on technical communication in Japan
[NASA-TM-108592] p 1356 N93-17592
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668

UNIVERSE
Measuring q(sub 0) using supernovae at z approximately 0.2
[DE92-041164] p 1363 N93-15918
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151

UNIVERSITIES
National Technology Initiative summary proceedings
[DE93-001291] p 1358 N93-15941

UNIVERSITY PROGRAM
NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program 1992
[NASA-CR-189691] p 1332 N93-16760
The design of a long range megatransport aircraft
[NASA-CR-192077] p 1064 N93-17711
University of Illinois at Urbana-Champaign, Materials Research Laboratory progress report, FY 1992
[DE93-002655] p 1402 N93-17760

UNIX (OPERATING SYSTEM)
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511

UNMANNED SPACECRAFT
CRRES time history data base development for the high energy electron fluxmeter, medium energy electron spectrometer, electron and proton angle spectrometer, and proton telescope
[AD-A256179] p 1086 N93-15872
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover
p 1386 N93-17236

UNSATURATION (CHEMISTRY)
Surface epoxidation of elastomers
[AD-D015457] p 1123 N93-16436

UNSTEADY AERODYNAMICS
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543

UNSTEADY FLOW
Runge-Kutta methods combined with compact difference schemes for the unsteady Euler equations
p 1154 N93-15802
Preliminary efforts toward development of data handling and analysis software for unsteady flow measurements: An application for aeroelastic transonic flow configurations p 1057 N93-16768
Boundary-layer control on a freely falling sphere
p 1161 N93-16819

UPLINKING
Satellite to Submarine Laser Communications (SLC): Advanced filter technology
[AD-A257217] p 1136 N93-15817
Advanced Communications Technology Satellite high burst rate link evaluation terminal experiment control and monitor software maintenance manual, version 1.0
[NASA-CR-189161] p 1237 N93-16429

UPPER ATMOSPHERE
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
[AD-A257341] p 1206 N93-15994
Remote measurement of upper atmospheric density: Instrument definition
[AD-A256714] p 1207 N93-16171
Annual report, 1990 - 1991 p 1402 N93-16749

UPPER STAGE ROCKET ENGINES
Experimental approach on the pyrotechnical shock reduction of Ariane-5 upper stage p 1075 N93-15764

UPSTREAM
Volume 2: Explicit, multistage upwind schemes for Euler and Navier-Stokes equations
[NASA-CR-191647] p 1158 N93-16558

URINALYSIS
Metabolite identification of halon replacement compounds
[AD-A256344] p 1134 N93-16265

URINE
UPT scenarios: Implications for system reliability
p 1182 N93-17332

USER MANUALS (COMPUTER PROGRAMS)
Computer programs to characterize alloys and predict cyclic life using the total strain version of strainrange partitioning: Tutorial and users manual, version 1.0
[NASA-TM-4425] p 1182 N93-15788
Lewis online travel system: Preparer's/traveler's manual, release 1.0
[NASA-CR-190776] p 1254 N93-15789
CAPS ReReader simulation model user's manual version 1.0
[AD-A257180] p 1234 N93-16000
Calculation methods for steadily loaded fixed-inclined-pad thrust bearings. (Guide to use of computer program A9234.)
[ESDU-92034] p 1177 N93-16523
Calculation methods for steadily loaded, off-set pivot, tilting pad thrust bearings. (Guide to use of computer program A9235.)
[ESDU-92035] p 1177 N93-16524
Calculation methods for externally pressurised (hydrostatic) journal bearings with capillary restrictor control. (Guide to use of computer program A9237.)
[ESDU-92037] p 1177 N93-16528
User's manual for Interactive Data Display System (IDDS)
[NASA-TM-105572] p 1240 N93-16613
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
[NASA-TM-105851] p 1104 N93-16614

USER REQUIREMENTS
An investigation of requirements traceability to support systems development
[AD-A257444] p 1351 N93-15868
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
GATOR: Requirements capturing of telephony features p 1247 N93-17505
Generic domain models in software engineering
p 1250 N93-17520

UTILITIES
Energy analysis program
| DE93-001570 | p 1199 N93-16045
Expected benefits of federally-funded thermal energy storage research
| DE93-003139 | p 1197 N93-17187
Future directions: Integrated resource planning
| DE92-040867 | p 1197 N93-17208
UTILIZATION
S/EV 92 (Solar and Electric Vehicles): Proceedings, volume 1
| DE93-001501 | p 1180 N93-17577

V

V GROOVES
Double-V block fingers with cruciform recess
| NASA-CASE-GSC-13356-2 | p 1180 N93-17625
VACANCIES (CRYSTAL DEFECTS)
Fundamental studies of passivity and passivity breakdown
| DE93-002747 | p 1108 N93-17762
VACUUM
Electrostatic-field effects on adsorbate bonding and structure at metal surfaces: Parallels between electrochemical and vacuum systems
| AD-A256659 | p 1110 N93-15912
RF vacuum microelectronics
| AD-A257320 | p 1144 N93-15984
RF vacuum microelectronics
| AD-A257208 | p 1145 N93-16004
Preliminary investigation into the development of hardening devices using vacuum microelectronic technology
| AD-A258009 | p 1152 N93-17750
VACUUM DEPOSITION
Modeling of the vacuum plasma spray process
| DE93-000718 | p 1126 N93-17229
VACUUM EFFECTS
Experimental determination of in situ utilization of lunar regolith for thermal energy storage
| NASA-CR-191050 | p 1196 N93-16617
VACUUM SYSTEMS
RF vacuum microelectronics
| AD-A257684 | p 1151 N93-17682
VALENCE
The Ba-related partial density of states in thermionic dispenser cathodes revealed by resonant photoemission spectroscopy
| AD-A255710 | p 1102 N93-15963
VALIDITY
Verification and validation of simulation models
| FEW-542 | p 1277 N93-17405
VALLEYS
A search for intact lava tubes on the Moon: Possible lunar base habitats
| PGD-PUBL-541 | p 1396 N93-17438
VALVES
Self-actuating slide valve system
| AD-D015456 | p 1177 N93-16435
VAN DE GRAAFF ACCELERATORS
Models of high velocity impact phenomena
| DE92-017452 | p 1183 N93-15881
VANADIUM
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
| AD-A258055 | p 1127 N93-17676
VANADIUM OXIDES
Multifunctional nanocomposite materials
| DE93-002767 | p 1099 N93-17082
VAPOR DEPOSITION
Growth studies of CVD-MBE by in-situ diagnostics
| AD-A257216 | p 1314 N93-15816
Corrosion-resistant coatings for high-temperature high-sulfur-activity applications
| DE93-001527 | p 1120 N93-16032
Temperature dependence of species concentrations near the substrate during CVD diamond growth
| AD-A256762 | p 1316 N93-16071
Heteroepitaxial diamond growth
| AD-A257356 | p 1317 N93-16175
Growth on the reconstructed diamond (100) surface
| AD-A256954 | p 1319 N93-16301
Nonlinear optical composites of metal cluster laden polymers
| AD-D015396 | p 1123 N93-16398
High efficiency cadmium telluride and zinc telluride based thin-film solar cells
| DE92-016403 | p 1195 N93-16448
A theoretical study of the thermochemistry of molecules in the Si-C-Cl-H system
| DE93-002598 | p 1288 N93-16919
Thermal plasma processing of materials
| DE93-003118 | p 1311 N93-16925
Modeling of forced flow/thermal gradient chemical vapor infiltration
| DE93-001615 | p 1125 N93-17032
High heat flux experiment on B4C-overlaid C/C composites for plasma facing materials of JT-60U
| DE93-715315 | p 1127 N93-17472
VAPOR PHASE EPITAXY
Si atomic layer epitaxy based on Si2H6 and remote He plasma bombardment
| AD-A255569 | p 1316 N93-16136
VAPOR PHASES
LSENS, a general chemical kinetics and sensitivity analysis code for gas-phase reactions: User's guide
| NASA-TM-105851 | p 1104 N93-16614
Vapor phase pyrolysis p 1108 N93-16891
VAPOR PRESSURE
Experimental and numerical optimization of the U-Zr-C ternary phase diagram
| DE92-015242 | p 1115 N93-17204
VAPORIZERS
A high pressure aerosol generator for viscous fluids
| AD-A256269 | p 1157 N93-16401
VAPORS
Physical vapor transport of mercurous chloride under a nonlinear thermal profile
| NASA-TM-105920 | p 1159 N93-16612
VARIABILITY
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
VARIABLE
The role of under-determined approximations in engineering and science application
p 1274 N93-16763
VARIABLE STARS
Element diffusion in pulsating variables
| DE93-000795 | p 1364 N93-16232
VARIATIONAL PRINCIPLES
The Lagrangian approach to stochastic variational principles on curved manifolds
| PREPRINT-825 | p 1277 N93-17221
VARIATIONS
Solitons on domain walls
| PREPRINT-876 | p 1289 N93-16980
Fluctuations and thermodynamic variables in mean field spin glass models
| PREPRINT-883 | p 1330 N93-17019
Control-structure-thermal interactions in analysis of lunar telescopes p 1347 N93-17330
VARISTORS
Technique for current step measurements on the low field Metal Oxide Varistor (MOV)
| DE93-000843 | p 1143 N93-15904
VECTOR CURRENTS
Mixing of vector and axial correlators at finite volume: Implications for lattice computations
| PREPRINT-804 | p 1287 N93-16424
VECTOR MESONS
A lattice study of electromagnetic decays of vector mesons
| PREPRINT-835 | p 1289 N93-17014
Chiral weak Lagrangian for vector mesons and K decay to 3 pi decay amplitudes
| PREPRINT-849 | p 1290 N93-17069
VECTOR PROCESSING (COMPUTERS)
On solving the Diophantine equation (x cubed) + (y cubed) + (z cubed) = k on a vector computer
| CWI-NM-R9121 | p 1271 N93-17556
VECTOR QUANTIZATION
Complexity optimized vector quantization: A neural network approach
| DE93-001304 | p 1246 N93-17477
VECTORS (MATHEMATICS)
Excitation vector considerations in multiple sinusoidal testing p 1079 N93-15735
Minimum eigenvalue separation
| AD-A256570 | p 1262 N93-15848
Electromagnetic potential vectors and the Lagrangian of a charged particle
| NASA-TM-107703 | p 1280 N93-16555
Calculate categorically
| CWI-CS-R9132 | p 1268 N93-16850
VEGARD-KAPLAN BANDS
The atmospheric emission method of calculating the neutral atmosphere and charged particle densities in the upper atmosphere
| AD-A257341 | p 1206 N93-15994
VEGETATION
Usefulness of the CAESAR scanner for operational vegetation mapping
| BCRS-91-39 | p 1190 N93-16289
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
| NASA-CR-191886 | p 1190 N93-16382
An expert system shell for inferring vegetation characteristics: Implementation of additional techniques (task E)
| NASA-CR-190999 | p 1191 N93-16685
An expert system shell for inferring vegetation characteristics: The learning system (tasks C and D)
| NASA-CR-191000 | p 1191 N93-16687
An expert system shell for inferring vegetation characteristics
| NASA-CR-191207 | p 1191 N93-16691
VEGETATION GROWTH
Rangeland: Plant responses to elevated CO2
| DE93-000883 | p 1203 N93-17178
Slow-release fertilizer
| NASA-CASE-MSC-21953-1-NP | p 1179 N93-17271
VELOCITY COUPLING
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
| NASA-CR-191713 | p 1163 N93-16939
VELOCITY DISTRIBUTION
Boundary-layer measurements on a high Reynolds number three-element airfoil p 1057 N93-16787
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
Streamwise vortices and distortion of velocity distribution in parallel flows p 1161 N93-16821
Variations in the character of Goertler instability as a function of mean flow velocity distribution and curvature of the wall p 1162 N93-16823
The influence of density gradient on turbulent structure in the 2D shear flow p 1162 N93-16826
Effect of Reynolds number on the standards of a simplified anemoclinometric probe
| IMFL-91-31 | p 1056 N93-17542
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
| AD-A257725 | p 1218 N93-17701
VELOCITY MEASUREMENT
Heterodyne array for measurement of target velocity
| AD-D015402 | p 1302 N93-16127
Wind tunnel seeding particles for laser velocimeter
p 1057 N93-16770
Digital data acquisition and preliminary instrumentation study for the F-16 laminar flow control vehicle
p 1057 N93-16784
Studies on spectral analysis of randomly sampled signals: Application to laser velocimetry data
p 1165 N93-16792
Global flow characteristics on a curved channel. Goertler instability point
| DS-2141 | p 1165 N93-17742
VENTILATION
Case studies of Thermal Energy Storage (TES) systems: Evaluation and verification of system performance
| DE93-001572 | p 1193 N93-15810
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation
| DE93-001554 | p 1203 N93-17050
VERTICAL MOTION SIMULATORS
Ground based simulation evaluation of the effects of time delays and motion on rotorcraft handling qualities
| AD-A256921 | p 1060 N93-16186
VERY LARGE ARRAY (VLA)
A new look at radio/x ray correlations
p 1362 N93-17136
Optically selected quasars with Z greater than 4
p 1363 N93-17158
VERY LARGE SCALE INTEGRATION
A timing analysis of level-clocked circuitry
| AD-A256796 | p 1143 N93-15888
Proceedings of the MIT Student Workshop on VLSI and Parallel Systems
| AD-A256795 | p 1145 N93-16054
VERY LOW FREQUENCIES
The ionosphere as a gamma ray burst detector
p 1211 N93-17312
VLF/LF corona investigation
| AD-A258052 | p 1141 N93-17709
VIBRATION
Dynamic stability of maglev systems
| DE92-041104 | p 1177 N93-16549
Spectroscopic investigation of the vibrational quasi-continuum arising from internal rotation of a methyl group
| DE92-040509 | p 1104 N93-16586
Variance of temporal moment estimates of a squared time history
| DE93-000753 | p 1277 N93-17196
Hydroelastic vibrations in a rectangular container under zero-gravity
| LRT-WE-9-FB-28-1991 | p 1134 N93-17602

VIBRATION DAMPING
Design of joints for damped structures p 1084 N93-15776
Control of combined vibrations and multi-axis test p 1085 N93-15784
A modal analysis and modelling of a lightly damped large space structure [AD-A256566] p 1086 N93-15847
Adaptive feedforward control of structural intensity in a beam [AD-A256780] p 1183 N93-15915
Active control of foundation transmissibility using magnetostrictive actuators [AD-A257135] p 1145 N93-16078
Damping [LR-685] p 1184 N93-16214
The damper placement problem for large flexible space structures p 1089 N93-16776

VIBRATION ISOLATORS
Deployment analysis and in orbit control of large reflectors p 1083 N93-15769
High torque capable, self locking, vibration isolating flexible shaft coupling statement of government interest [AD-D015501] p 1178 N93-16583

VIBRATION MEASUREMENT
Development of a laser-based measurement system for modal testing of large space structures p 1083 N93-15766
Development of a force measurement device p 1083 N93-15767
Acceleration recorder and playback module [NASA-CASE-MSC-22008-1] p 1169 N93-17077

VIBRATION MODE
A modal analysis and modelling of a lightly damped large space structure [AD-A256566] p 1086 N93-15847

VIBRATION SIMULATORS
Development of a force measurement device p 1083 N93-15767
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786

VIBRATION TESTS
HISPASAT DBS reflector: Mechanical analysis-environmental test correlation p 1081 N93-15751
Design of joints for damped structures p 1084 N93-15776
Recent developments in controlling a hydraulic multi-axis test facility p 1074 N93-15783
Control of combined vibrations and multi-axis test p 1085 N93-15784
The use of reverberant-room acoustic testing for spacecraft structures and their payloads p 1085 N93-15786
Environmental tailoring: A major perspective for mechanical testing for future space projects p 1086 N93-15787

VIBRATORY LOADS
Development of a force measurement device p 1083 N93-15767

VIDEO COMMUNICATION
Video coding and the application level framing protocol architecture [NASA-CR-192002] p 1138 N93-16055

VIDEO EQUIPMENT
Remote driving with reduced bandwidth communication [DE92-040639] p 1139 N93-16408
Endoscopic measurements using a panoramic annular lens [NASA-CR-191727] p 1167 N93-16453

VIDEO SIGNALS
Enhancement of video imagery by modified intensity-dependent spatial summation [AD-A255689] p 1139 N93-16300

VIDEO TAPES
Network accessible multi-terabyte archive p 1354 N93-16326
Stability of metal particle and metal particulate media p 1170 N93-16329

VIEWING
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338

VINYL POLYMERS
Hydrogen peroxide and B-nicotinamide adenine dinucleotide sensing amperometric electrodes based on electrical connection of horseradish peroxidase redox centers to electrodes through a three-dimensional electron relaying polymer network [AD-A256789] p 1142 N93-15703
Low-density foam materials from styrene-divinylbenzene inverse emulsions [DE93-002854] p 1127 N93-17486

VIRIAL THEOREM
Force-free time-harmonic plasmoids [AD-A257765] p 1313 N93-17673

VIRTUAL MEMORY SYSTEMS
NPSGDL: An object oriented graphics description language for virtual world application support [AD-A257337] p 1234 N93-15992
Proceedings of the MIT Student Workshop on VLSI and Parallel Systems [AD-A256795] p 1145 N93-16054
Solving large dense systems of linear equations on systems with virtual memory and with cache [CWI-NM-R9123] p 1271 N93-17558

VIRTUAL REALITY
Virtual reality systems p 1232 N93-16775

VIRUSES
Epidemiologic research in Antarctica p 1221 N93-16800

VISCOELASTICITY
Conservation laws for elastic systems with dissipation [AD-A257168] p 1280 N93-15999
Damping [LR-685] p 1184 N93-16214

VISCOSITY
A high pressure aerosol generator for viscous fluids [AD-A256269] p 1157 N93-16401
High temperature smart sensors and actuators [AD-A256985] p 1158 N93-16517

VISCOUS FLOW
Turbulent boundary-layer fluctuations at the solid interface [AD-A257253] p 1154 N93-15821
High temperature smart sensors and actuators [AD-A256985] p 1158 N93-16517
Navier-Stokes calculation of transonic flow past the NTF 65-deg delta wing p 1057 N93-16797

VISCOUS FLUIDS
A high pressure aerosol generator for viscous fluids [AD-A256269] p 1157 N93-16401
Response of a viscous liquid column with anchored edges to axial excitations [LRT-WE-9-FB-7-1991] p 1164 N93-17550

VISIBILITY
Wintertime meteorology of the Grand Canyon region [DE93-001557] p 1216 N93-17179
Dust control for Enabler [NASA-CR-192065] p 1180 N93-17774

VISUAL ACUITY
Night vision manual for the flight surgeon [AD-A257059] p 1227 N93-15710

VISUAL AIDS
The forward masking effects of low-level laser glare on target location performance in a visual search task [AD-A258022] p 1175 N93-17703

VISUAL OBSERVATION
Correlated optical observations with BATSE/CGRO on SCO X-1 p 1344 N93-17313

VISUAL PERCEPTION
Multisensor perception and scene interpretation [LAAS-91305] p 1304 N93-17406
Automatic information processing and high performance skills: Individual differences and mechanisms of performance improvement in search-detection and complex tasks [AD-A257711] p 1226 N93-17684
The forward masking effects of low-level laser glare on target location performance in a visual search task [AD-A258022] p 1175 N93-17703

VOICE COMMUNICATION
Fast training of a high-speed voice and data modem receiver [ACTA-POLYTEC-SCAND-EL-67] p 1140 N93-17632

VOICE CONTROL
Fuzzy set approach to quality function deployment: An investigation p 1274 N93-16779

VOLCANOES
Effects of the Mount Pinatubo eruption on the chemistry, radiative, and transport processes in the stratosphere [DE93-001508] p 1203 N93-17211

VOLCANOLOGY
The target: H2O on the Moon p 1388 N93-17250

VOLTAGE REGULATORS
Technique for current step measurements on the low field Metal Oxide Varistor (MOV) [DE93-000843] p 1143 N93-15904

VORTEX BREAKDOWN
Vortex breakdown incipience: Theoretical considerations [NASA-CR-189734] p 1055 N93-16627

VORTEX GENERATORS
Static pressure measurements of the shock-boundary layer interaction in a simulated fan passage [AD-A256724] p 1066 N93-15979

VORTEX SHEDDING
Coherent vortex structure in a two-dimensional excited jet p 1160 N93-16811

VORTICES
Special publication of National Aerospace Laboratory [DE93-716176] p 1053 N93-15946
Particle dispersion in a turbulent shear flow [AD-A255681] p 1156 N93-15956
Experimental and numerical investigation of vortex flow over a 76/60-deg double-delta wing [LR-680] p 1054 N93-16210
Vortex breakdown incipience: Theoretical considerations [NASA-CR-189734] p 1055 N93-16627
Observables for anticipating tornadogenesis in mesocyclones [NASA-CR-191390] p 1214 N93-16633
Stability of elliptical vortices [ITN-93-85181] p 1159 N93-16733
Effects of sound on the artificially generated longitudinal vortex pair in boundary layer p 1160 N93-16813
Three dimensional boundary-layer transition on a swept cylinder p 1161 N93-16817
Two- and three-dimensional blade vortex interactions [NASA-CR-177567] p 1056 N93-16942
Force-free time-harmonic plasmoids [AD-A257765] p 1313 N93-17673
EM properties of high Tc superconductors [AD-A257724] p 1151 N93-17699

VULNERABILITY
Energy technology evaluation report: Energy security [DE93-001830] p 1194 N93-16046

W

WAFERS
Innovative techniques for the production of low cost 2D laser diode arrays [AD-A257419] p 1171 N93-15864
Wafer scale union [AD-A258001] p 1152 N93-17749

WAKES
Thermocline waves near to a free surface [AERO-REPT-9214] p 1159 N93-16578

WALL FLOW
Modeling of turbulence and transition p 1153 N93-15795
Modeling of near wall turbulence and modeling of bypass transition p 1153 N93-15798
Near-wall reconstruction of higher order moments and length scales using the POD p 1165 N93-16771
Development of wall turbulence structure p 1162 N93-16824
Drag reduction mechanism and coherent structure in near wall turbulence with riblets p 1162 N93-16827
Global flow characteristics on a curved channel. Goertler instability point [DS-2141] p 1165 N93-17742

WALL JETS
Analysis of film cooling in rocket nozzles p 1095 N93-17339

WALL TEMPERATURE
Hot experimental technique: A new requirement of aerothermodynamics [MBB-FE-202-S-PUB-480] p 1057 N93-17543

WALLS
Pressure wall patch [NASA-CASE-MFS-28724-1] p 1088 N93-17061
Radial spline assembly for antifriction bearings [NASA-CASE-MFS-28629-1] p 1179 N93-17084
Vertical regolith shield wall construction for lunar base applications p 1230 N93-17446

WARFARE
The effects of procedural structure and computer support upon selecting a tactical course of action [AD-A257254] p 1350 N93-15806

WARNING SYSTEMS
The effect of TCAS interrogations on the Chicago O'Hare ATCRBS system [DOT/FAA/CT-92/22] p 1059 N93-16498
Results of DATAS investigation of illegal mode S ID's at JFK Airport [DOT/FAA/CT-92/26] p 1059 N93-16841

WASPALOY
The effect of tensile stress on hydrogen diffusion in metal alloys [NASA-TM-108386] p 1114 N93-16701

WASTE DISPOSAL
Environmental Review Guide for Operations (ERGO) [AD-A256922] p 1202 N93-16502
Thermal diffusion processes in aqueous sodium chloride solutions [DE93-002596] p 1105 N93-16656
Annual report [NASA-CR-191389] p 1228 N93-16840

WASTE ENERGY UTILIZATION
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
WASTE TREATMENT
Recycling hydrogen and sulfur by microwave chemical processing
[DE92-040744] p 1101 N93-15925
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies
[DE92-001230] p 1195 N93-16134
Annual report
[NASA-CR-191389] p 1228 N93-16840
Proceedings of the Specialists' Meeting on High Energy Nuclear Data
[DE92-012299] p 1298 N93-16931
WATER
Characterization of polymer electrolytes for fuel cell applications
[DE92-040330] p 1195 N93-16249
Examination of the disintegration of liquid and slurry ligaments under microgravity conditions
[CTN-93-60615] p 1131 N93-16494
Beneficiation and extraction of nonterrestrial materials, part 2 p 1381 N93-16886
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Advanced water-cooled phosphoric acid fuel cell development
[DE93-000215] p 1197 N93-17008
Lunar magnetic fields: Implications for resource utilization p 1388 N93-17251
Theoretical characterization of the reaction CH3 + OH yields CH3OH yeilds products: The (1)CH2 + H2O, H2 + HCOH, and H2 + H2CO channels p 1107 N93-17408
WATER RESOURCES
The target: H2O on the Moon p 1388 N93-17250
WATER SPLITTING
High temperature reaction kinetics of boron oxides
[AD-A257402] p 1118 N93-15861
SPE propulsion electrolyzer for NASA's integrated propulsion test article
[NASA-CR-185669] p 1090 N93-16541
The onsite manufacture of propellant oxygen from lunar resources p 1381 N93-16888
WATER VAPOR
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167
WAVE AMPLIFICATION
Mechanism of the mode selection in bifurcations p 1162 N93-16825
WAVE DISPERSION
Dispersive regularization of shocks
[AD-A257256] p 1314 N93-15836
Theoretical development for depth profiling of stratified layers using variable angle ATR
[AD-A255571] p 1284 N93-16038
WAVE DRAG
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
Comparison of performances of different circular intakes p 1067 N93-17616
WAVE FRONT RECONSTRUCTION
Interferometric reconstruction of three-dimensional high-speed aerodynamic flows p 1057 N93-16765
WAVE FRONTS
Sodium guide star adaptive optics system for astronomical imaging in the visible and near-infrared
[DE92-041081] p 1359 N93-17354
WAVE FUNCTIONS
The electronic structure of core states under extreme compressions
[DE92-017451] p 1112 N93-16334
Symmetry of wavefunctions in quantum algebras and supersymmetry
[DE92-041129] p 1265 N93-16551
The local structure of high-temperature superconductors
[DE93-000653] p 1324 N93-17177
WAVE GENERATION
Thermocline waves near to a free surface
[AERO-REPT-9214] p 1159 N93-16578
WAVE INTERACTION
Mechanism of the mode selection in bifurcations p 1162 N93-16825
WAVE PACKETS
Stability of elliptical vortices
[ITN-93-85181] p 1159 N93-16733
Quantum chaos without classical counterpart
[PREPRINT-830] p 1331 N93-17215
WAVE PROPAGATION
A study of high frequency vibrations due to pyrotechnic shocks in coupled systems p 1079 N93-15736
Mathematical modelling of pyrotechnic shock in the Ariane 5 VEB structure p 1085 N93-15781
NDE for thick section composites
[AD-A257292] p 1181 N93-15837
Propagation of dissolution/precipitation waves in porous media
[DE92-017348] p 1154 N93-15851
Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
A comparison of acoustic impedance measurement techniques
[AD-A255566] p 1282 N93-16061
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
Are large quasar redshifts due to light propagation in an inhomogeneous and anisotropic medium?
[SSCL-PREPRINT-776] p 1365 N93-16386
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-191809] p 1140 N93-16679
Powerful algorithm for inversion of geophysical reflection profiles
[ITN-93-85179] p 1267 N93-16743
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721
Microcomputer simulation of a fourier approach to optical wave propagation
[AD-A257598] p 1305 N93-17796
WAVE SCATTERING
Scattering and radiation by shells and nonlinear acoustics of particle suspensions
[AD-A257257] p 1281 N93-15890
Application of ray-born scattering and boundary perturbation methods to acoustic reverberation
[AD-A255712] p 1281 N93-15936
Scattering of elastic waves by a spherical inclusion
[AD-A256676] p 1206 N93-16093
Two-scale solution for the mutual coherence function in the presence of turbulence
[ITN-93-85178] p 1162 N93-16837
WAVEFORMS
Analysis-by-synthesis speech coding based on relaxed waveform-matching constraints
[ETN-92-92529] p 1140 N93-17585
WAVEGUIDES
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721
WAVELENGTH DIVISION MULTIPLEXING
Polarization independent narrow channel wavelength division multiplexing fiber coupler and method for producing same
[AD-D015473] p 1303 N93-16480
WAVERIDERS
Hypersonic reconnaissance aircraft
[NASA-CR-192049] p 1064 N93-17804
WEAK INTERACTIONS (FIELD THEORY)
The Cabibbo-Kobayashi-Maskawa mixing matrix
[DE93-001255] p 1283 N93-15976
Theoretical particle physics
[DE93-000649] p 1329 N93-16357
Theory of the electroweak interactions
[SSCL-PREPRINT-775] p 1286 N93-16385
Weak matrix elements
[PREPRINT-854] p 1279 N93-16976
WEAPON SYSTEMS
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
WEAPONS DELIVERY
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
WEAR
Generation of aerosolized particulate contamination by the wear of stainless steels
[DE93-000742] p 1115 N93-17047
WEAR RESISTANCE
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858
Integrated fundamental research on current collection
[AD-A256893] p 1144 N93-15981
Ion beam application for improved polymer surface properties
[DE93-001375] p 1127 N93-17498
Tribological and microstructural investigation of the PM200 series of self-lubricating composites
[NASA-CR-190772] p 1096 N93-17776
WEATHER
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base
[DE93-000018] p 1399 N93-17174
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597
WEATHER FORECASTING
ExperCAT case studies
[AD-A256177] p 1211 N93-15871
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Proceedings of the First NMC/NESDIS/DOD Conference on DMSP Retrieval Products
[AD-A256707] p 1212 N93-16167
Pilot weather advisor
[NASA-CR-189723] p 1059 N93-16692
A plan for accurate estimation of daily area-mean rainfall during the CaPE experiment p 1219 N93-17292
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678
WEATHER STATIONS
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597
WEIBULL DENSITY FUNCTIONS
A normal distribution or a Weibull distribution for fatigue lives
[LR-689] p 1275 N93-16216
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764
WEIGHTING FUNCTIONS
Low sensitivity interpolation using feed-forward neural networks with one hidden layer
[AD-A257306] p 1258 N93-16006
WEIGHTLESSNESS
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689
Exercise during long term exposure to space: Value of exercise during space exploration p 1222 N93-16807
Response of a rotating anchored finite annular liquid layer to axial excitation
[LRT-WE-9-FB-6-1991] p 1133 N93-17548
Response of an annular cylindrical liquid layer with anchored edges in zero-gravity
[LRT-WE-9-FB-8-1991] p 1134 N93-17551
Marangoni-convection in a rotating liquid container
[LRT-WE-9-FB-14-1991] p 1164 N93-17552
Hydroelastic vibrations in a rectangular container under zero-gravity
[LRT-WE-9-FB-28-1991] p 1134 N93-17602
WEIGHTLESSNESS SIMULATION
Implementation of educational broadcasting in space, phase 1
[CTN-93-60623] p 1332 N93-16735
WELD TESTS
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
WELDABILITY
Characterization of solidification and weldability of Fe-29Ni-17Co alloys
[DE93-000739] p 1115 N93-17059
WELDED JOINTS
Grain competition in bicrystal welds
[DE92-040707] p 1110 N93-15950
Novel concepts in weld science: Role of gradients and composite structure
[DE92-040893] p 1176 N93-16086
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
The pyro-metallurgical, physical, and mechanical behavior of weldments
[AD-A256998] p 1112 N93-16234
The variable polarity plasma arc welding process: Mathematical model of welding system
[NASA-CR-191430] p 1177 N93-16452
WELDSMART: A vision-based expert system for quality control
[NASA-CR-191410] p 1182 N93-16724

Heat flow in variable polarity plasma arc welds
p 1181 N93-17280
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space
p 1181 N93-17284
Design of a welded joint for robotic, on-orbit assembly of space trusses
p 1181 N93-17326

WELDED STRUCTURES
Resistance upset welding for vessel fabrication
[DE93-000389] p 1178 N93-17010
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space
p 1181 N93-17284

WELDING
Residual stresses in welds and effect on crack growth prediction
p 1082 N93-15758
Integrating neural network and expert reasoning: An example
[AD-A257215] p 1257 N93-15815
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
Shuttle flight experiment preliminary proposal: Demonstration of welding applications in space
p 1181 N93-17284

WENTZEL-KRAMER-BRILLOUIN METHOD
Non-linear WKB analysis of the string equation
[PREPRINT-862] p 1330 N93-16963

WHEELCHAIRS
Wheels for wheelchairs and the like
[NASA-CASE-MFS-28632-1] p 1228 N93-17042

WHEELS
Wheels for wheelchairs and the like
[NASA-CASE-MFS-28632-1] p 1228 N93-17042

WHISKER COMPOSITES
Microstructure/mechanical-property relationships and R-curve behavior in Si3N4/Si3N4(w) composites
[DE92-041096] p 1098 N93-17004

WHISKERS (CRYSTALS)
The design and properties of ceramics reinforced by whiskers and similar microstructural features
[DE93-001372] p 1126 N93-17065

WIGGLER MAGNETS
Inverse free electron laser beat-wave accelerator research
[DE93-002770] p 1174 N93-16923

WIND (METEOROLOGY)
A comparison of the WIND system atmospheric models and RASCAL
[DE92-040207] p 1211 N93-15661
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Description and validation of ERAD: An atmospheric dispersion model for high explosive detonations
[DE93-002515] p 1201 N93-16363
Modeling and observational study of the daytime evolution east of the crest of the Colorado Rockies
p 1214 N93-16507
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
The coupling of synoptic and valley winds in the Tennessee Valley
[DE93-001559] p 1217 N93-17180
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390

WIND DIRECTION
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658

WIND EFFECTS
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
Investigation of rainfall data with regard to low-level wind flow regime for east central Florida
p 1219 N93-17285
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662

WIND EROSION
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382

WIND MEASUREMENT
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953

WIND PRESSURE
Wind load design methods for ground-based heliostats and parabolic dish collectors
[DE93-002737] p 1193 N93-15839

WIND PROFILES
Some simple improvements to an emergency response model for use in complex coastal terrain
[DE92-040648] p 1211 N93-15947
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder), volume 2, phase 2
[NASA-CR-184485] p 1214 N93-16623
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 1: Executive summary
[NASA-CR-191423] p 1215 N93-16700
Design definition of the Laser Atmospheric Wind Sounder (LAWS), phase 2. Volume 2: Final report
[NASA-CR-191424] p 1215 N93-16702
Definition and preliminary design of the LAWS (Laser Atmospheric Wind Sounder). Volume 1, phase 2: Executive summary
[NASA-CR-184484] p 1215 N93-16751
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed
[DE93-000512] p 1216 N93-17074

WIND TUNNEL APPARATUS
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

WIND TUNNEL NOZZLES
Design of a nozzle for a hypersonic wind tunnel
[AERO-REPT-9113] p 1072 N93-16468

WIND TUNNEL TESTS
Development of microchannel plates in advanced wind-tunnel instrumentation
[NASA-CR-181947] p 1166 N93-15716
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157
Experimental and numerical investigation of vortex flow over a 76/60-deg double-delta wing
[LR-680] p 1054 N93-16210
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-191886] p 1190 N93-16382
On flutter behavior of a 2-D compressor cascade in incompressible flow
[DLR-FB-91-26] p 1158 N93-16543
Takeoff/approach noise for a model counterrotation propeller with a forward-swept upstream rotor
[NASA-TM-105979] p 1066 N93-16715
Wind tunnel seeding particles for laser velocimeter
p 1057 N93-16770
Three dimensional boundary-layer transition on a swept wing
p 1161 N93-16818
Experiments on swept-wing boundary-layer transition
p 1162 N93-16829
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677

WIND TUNNEL WALLS
Modifications to Langley 0.3-m TCT adaptive wall software for heavy gas test medium, phase 1 studies
[NASA-CR-189736] p 1056 N93-16710

WIND TUNNELS
Transient/structural analysis of a combustor under explosive loads
[NASA-TM-107660] p 1188 N93-17779

WIND TURBINES
Aeroelastic stability and response of rotating structures
[NASA-CR-191803] p 1068 N93-16560

WIND VARIATIONS
Investigations of the mesoscale flow in the planetary-boundary-layer over Israel: A numerical study
[ITN-93-85177] p 1215 N93-16836

WIND VELOCITY
Unified program for the specification of hurricane boundary layer winds over surfaces of specified roughness
[AD-A257462] p 1217 N93-17658
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701

WIND VELOCITY MEASUREMENT
Coherent lidar system for high resolution measurement of atmospheric wind velocity and water vapor fields
[AD-A257725] p 1218 N93-17701

WINDOWS
Synthesis and evaluation of polymeric materials
[AD-A255563] p 1121 N93-16060

WINDOWS (APERTURES)
Stress calculations on the window section of an all-composite aircraft fuselage
[LR-688] p 1060 N93-16215
High power RF window and waveguide component development and testing above 100 MW at X-band
[DE93-001809] p 1138 N93-16220
Power coupler and cold window for seven-cell superconducting cavity vertical tests
[DE93-000791] p 1150 N93-17380

WINDS ALOFT
Radar sensitivity and antenna scan pattern study for a satellite-based Radar Wind Sounder (RAWS)
[NASA-CR-191387] p 1216 N93-16953

WING TANKS
Aircraft wing compartment liner concept to reduce fuel spillage
[DOT/FAA/CT-TN92/34] p 1062 N93-17219

WINGS
F-14 wing lug coating investigation
[AD-A257384] p 1060 N93-15858
Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157
Lanchester: The man
[AERO-REPT-9111] p 1402 N93-16464
Maximum lift of wings with leading-edge devices and trailing-edge flaps deployed
[ESDU-92031] p 1055 N93-16522

WINTER
Wintertime meteorology of the Grand Canyon region
[DE93-001557] p 1216 N93-17179
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter
[DE93-001558] p 1217 N93-17390

WIRE
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Progress toward application of bulk high-T(sub c) superconductors
[DE92-040735] p 1315 N93-15924
Phase chemistry and microstructure evolution in silver-clad (Bi(2-x)Pb(x)) Sr2Ca2Cu3O(y) filaments
[DE92-040716] p 1318 N93-16267
Armored fiber optic cables statement of government interest
[AD-D015459] p 1302 N93-16437

WORK-REST CYCLE
Bright light delivery system
[NASA-CASE-MFS-28723-1] p 1225 N93-17058

WORKLOADS (PSYCHOPHYSIOLOGY)
Cognitive and affective components of mental workload: Understanding the effects of each on human decision making behavior
p 1226 N93-16783

WORKSTATIONS
Distributed finite element analysis using a transputer network
[NASA-CR-190888] p 1232 N93-15693
Wide-bandwidth high-resolution search for extraterrestrial intelligence
[NASA-CR-191618] p 1230 N93-15825
Space Station Freedom technology payload user operations facility concept
[NASA-TM-107701] p 1350 N93-16373
Data manipulation package using PV-WAVE. Precision visual's workstation analysis and visualization environment
[AD-A256513] p 1238 N93-16511
Human computer interface style guide, version 1.0
[AD-A253475] p 1232 N93-17752

WOVEN COMPOSITES
A probabilistic method to establish the reliability of carbon-carbon rocket motor nozzles. Volume 1: Experimental determination of mechanical properties for a carbon-carbon composite
[AD-A257459] p 1090 N93-16010
Characterization of thick glass reinforced composites
[AD-A256881] p 1097 N93-16047

WURTZITE
Crystalline growth of wurtzite GaN on (111) GaAs
[DE92-041165] p 1321 N93-16525

X

X RAY ABSORPTION
Magnetic circular dichroism in x ray absorption and core-level photoemission of Fe/Cu(001)
[DE93-001305] p 1327 N93-17651

X RAY ANALYSIS
Study of dynamic behavior and hazards of VHBR, LOVA, and PSS propellants under rapid ignition and combustion conditions by real-time x ray radiography
[AD-A256775] p 1129 N93-16051
TEM structure investigations of low-temperature MBE grown InAlAs layers on InP group of zone axes (001) substrate
[DE92-041199] p 1323 N93-17006
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
The Prospector mission
[DE93-000656] p 1385 N93-17194

X RAY ASTRONOMY
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095
Observational constraints on AGN models p 1360 N93-17097
Recent results on 3C 273 p 1366 N93-17099
Hard x ray observations of active galactic nuclei with SIGMA p 1360 N93-17100
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
Correlated hard x ray and UV variability in NGC 5548 p 1361 N93-17104
The x ray properties of a large, uniform QSO sample: Einstein observations of the LBQS p 1361 N93-17106
Extragalactic counterparts to Einstein slew survey sources p 1361 N93-17107
Power spectrum modelling of the x ray variability of NGC4051 p 1367 N93-17108
Multifrequency observations of rapidly variable blazars p 1361 N93-17109
ROSAT observations of AGN p 1361 N93-17116
Multifrequency observations of ROSAT selected radio sources p 1361 N93-17118
ROSAT and multi-wavelength observations of 3C 371 p 1361 N93-17121
Preliminary results on ROSAT observations of the Blazar PKS 0537-441 p 1362 N93-17127
The x ray background: Past, present, and future p 1372 N93-17140
The evolution of AGN's at x ray wavelengths p 1372 N93-17141
The hard x ray luminosity function and evolution of AGN p 1373 N93-17142
The Ginga satellite and the large-scale structure of the Universe p 1374 N93-17151
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155
Imaging the Nearby Seyfert 2 Galaxy NGC 1068, and Spectrum and Variability of Geminga
[NASA-CR-191905] p 1360 N93-17401
A ROSAT high resolution x ray image of NGC 1068 p 1360 N93-17402
Soft x ray properties of the Geminga pulsar p 1360 N93-17403

X RAY ASTROPHYSICS FACILITY
A second generation expert system for checking and diagnosing AXAF's electric power system p 1152 N93-17287

X RAY DIFFRACTION
Application of grazing incidence x ray diffraction to polymer blends
[DE93-000709] p 1122 N93-16228
Orientational phase transitions in alloys
[DE93-001702] p 1114 N93-16971
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover p 1386 N93-17236
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269
Fundamental studies of stress distributions and stress relaxation in oxide scales on high temperature alloys
[DE93-003654] p 1117 N93-17560
Solid State Division progress report, period ending 31 March 1992
[DE93-003665] p 1327 N93-17561
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

X RAY FLUORESCENCE
Hard x ray microimaging techniques based on phase zone plates
[DE93-000615] p 1304 N93-17176
The Prospector mission
[DE93-000656] p 1385 N93-17194
X-ray studies of microstructures in semiconductors and superconducting materials
[DE93-001953] p 1324 N93-17198
TOPLEX: Teleoperated Lunar Explorer. Instruments and operational concepts for an unmanned lunar rover p 1386 N93-17236
High-resolution elemental mapping of the lunar surface p 1387 N93-17244
Mapping the Moon in soft x rays: Promises and challenges p 1388 N93-17252
A combined XRD/XRF instrument for lunar resource assessment p 1391 N93-17269

X RAY IMAGERY
High-resolution elemental mapping of the lunar surface p 1387 N93-17244

X RAY LASERS
Transient x ray laser schemes at 1 millimicron and at 2 millimicron
[DE92-040670] p 1171 N93-15948
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Geometric optics scaling laws for x-ray laser coherence
[DE92-040402] p 1301 N93-16102
Whispering-gallery mirrors for short-wavelength laser cavities: Shapes and tolerances
[DE92-040667] p 1172 N93-16104
Polarizing optics for the soft x ray regime: Whispering-gallery mirrors and multilayer beamsplitters
[DE92-040668] p 1172 N93-16105
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
Line overlap measurements for resonant photo-pumping of x ray lasers
[DE93-001620] p 1175 N93-17462

X RAY SCATTERING
Combined small-angle neutron and x ray scattering studies of polymers
[DE93-000440] p 1118 N93-15671

X RAY SOURCES
The atmospheric structures of the companion stars of eclipsing binary x ray sources
[NASA-CR-191393] p 1365 N93-16752
Extragalactic counterparts to Einstein slew survey sources p 1361 N93-17107
Time variability of extragalactic sources in the ecliptic pole regions p 1370 N93-17123
Source content of a deep pointed ROSAT observation at very low N(sub H) p 1362 N93-17130
Initial results from a ROSAT deep survey in Lynx p 1362 N93-17132
ROSAT all sky survey observations of IRAS galaxies p 1362 N93-17133
A new look at radio/x ray correlations p 1362 N93-17136
The x ray background: Past, present, and future p 1372 N93-17140
Where have all the sources gone? p 1373 N93-17144
ROSAT deep surveys p 1362 N93-17145
Origin of the cosmic x ray background radiation p 1373 N93-17146
On the suitability of starburst galaxies as a contributor to the CXRB p 1373 N93-17147
Contribution of clusters of galaxies to the XRB p 1374 N93-17148
On the origin of the x ray background p 1374 N93-17149
Clustering properties of x ray sources from the analysis of the Ginga P(D) distribution p 1374 N93-17150
QSO's to B less than 22 and the cosmic x ray background radiation: A fluctuations correlation approach p 1374 N93-17153
Identification of ROSAT AGN on objective prism plates p 1362 N93-17154
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155
AGN and the x ray background: Concluding remarks p 1375 N93-17160
Correlated optical observations with BATSE/CGRO on SCO X-1 p 1344 N93-17313

X RAY SPECTRA
Capillary discharge extreme ultraviolet lasers
[DE92-040853] p 1173 N93-16446
X Ray Emission from Active Galactic Nuclei and the Cosmic X Ray Background
[MPE-235] p 1365 N93-17094
Ginga and ROSAT observations of the x ray spectra of Seyfert 1 galaxies p 1360 N93-17095
X ray luminosity and spectral variability of a complete sample of AGN's p 1365 N93-17096
Observational constraints on AGN models p 1360 N93-17097
X ray spectral structure of Seyfert galaxies p 1366 N93-17098
Recent results on 3C 273 p 1366 N93-17099
First results from the Compton Observatory p 1366 N93-17102
Ginga results of type 2 AGN's and their contributions to the cosmic x ray background p 1367 N93-17105
The x ray properties of a large, uniform QSO sample: Einstein observations of the LBQS p 1361 N93-17106
Power spectrum modelling of the x ray variability of NGC4051 p 1367 N93-17108
An introduction to the pair-reflection model of X-ray spectra in AGN's p 1367 N93-17110
The spectra of accretion discs in active galactic nuclei p 1368 N93-17111
UV to x ray AGN accretion disc spectra: Model fitting of IUE and ROSAT All Sky Survey data p 1368 N93-17113
X and gamma ray flaring of 3C279 and the baryonic component of nonthermal particle distributions in radiojets p 1368 N93-17114
The quasar 1821+643 during the ROSAT survey p 1361 N93-17119
Multifrequency observations of Kaz 102 during ROSAT All Sky Survey p 1361 N93-17120
ROSAT and multi-wavelength observations of 3C 371 p 1361 N93-17121
A comparative study of soft x ray QSO spectra p 1361 N93-17124
Spectra of radio-loud quasars observed in the ROSAT/XRT all sky survey p 1361 N93-17125
X ray spectra of bright BL Lacertae objects observed with ROSAT p 1361 N93-17126
Preliminary results on ROSAT observations of the Blazar PKS 0537-441 p 1362 N93-17127
ROSAT x ray spectra of quasars with a range of continuum properties and redshift p 1362 N93-17128
ROSAT deep surveys p 1362 N93-17145
The ROSAT autocorrelation function of the x ray background p 1374 N93-17152

X RAY SPECTROSCOPY
Advanced light source
[DE92-041181] p 1302 N93-16196
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155

X RAY TELESCOPES
Hard x ray observations of active galactic nuclei with SIGMA p 1360 N93-17100
Observing AGN and DXRB with Xspect/Sodart p 1360 N93-17103
Spectroscopic identification of x ray soft AGN found by ROSAT p 1362 N93-17155

X RAYS
Development of the MIT tabletop soft x ray laser
[DE92-040671] p 1172 N93-16106
An alpha-p-x analytical instrument for lunar resource investigations p 1387 N93-17243

XENON
A proposed gas release experiment on the ARGOS satellite
[AD-A256182] p 1206 N93-16017

XENON CHLORIDE LASERS
Widely tunable gas laser for remote sensing
[NASA-CR-190869] p 1189 N93-15691

Y

YAW
Detailed near surface flow about yawed, stranded cables
[AD-A257382] p 1155 N93-15857

YAWING MOMENTS
Contribution of ventral fins to sideforce and yawing moment derivatives due to sideslip at low angle of attack
[ESDU-92029] p 1056 N93-16638

YBCO SUPERCONDUCTORS
HTS-based switched filter banks and delay lines
[DE92-041146] p 1144 N93-15973
High-temperature superconducting current leads
[DE92-040729] p 1145 N93-16028

Low-energy physics of high-temperature superconductors
[DE92-040672] p 1317 N93-16194
Simulation of vortex-line pinning by defects in the Y-Ba-Cu-O system
[DE92-041185] p 1318 N93-16205
Growth and properties of ultrathin YBa2Cu3O7-delta layers
[DE93-001210] p 1318 N93-16218
Current transport across grain boundaries in TlBa2Ca2Cu3O(x) thick polycrystalline films and YBa2Cu3O7 step edges
[DE93-000610] p 1320 N93-16393
Flux flow microelectronics
[DE93-000756] p 1149 N93-17210
EM properties of high Tc superconductors
[AD-A257724] p 1151 N93-17699

YIELD STRENGTH
Environmentally-controlled fracture of an overstrained A723 steel thick-walled cylinder
[AD-A257303] p 1184 N93-16082

YOUTH
Ventures in science
[DE93-003044] p 1331 N93-16521

YTTRIUM COMPOUNDS
First-principles studies of phase stability and the structural and dynamical properties of metal hydrides
[DE92-040855] p 1104 N93-16589

YTTRIUM OXIDES
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

Z

ZEEMAN EFFECT
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844

ZINC OXIDES
Low-cost CuInSe2 submodule development
[DE92-016438] p 1198 N93-17650

ZINC SELENIDES
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
IR materials producibility
[AD-A257695] p 1305 N93-17691

ZINC SULFIDES
Polycrystalline thin film materials and devices
[DE93-000022] p 1325 N93-17342

ZINC TELLURIDES
Novel ways of depositing ZnTe films by a solution growth technique
[DE92-010591] p 1111 N93-16019
High efficiency cadmium telluride and zinc telluride based thin-film solar cells
[DE92-016403] p 1195 N93-16448
Fabrication of stable, large-area, thin-film CdTe photovoltaic modules
[DE92-016445] p 1195 N93-16516
IR materials producibility
[AD-A257695] p 1305 N93-17691

ZINC-BROMIDE BATTERIES
Durability of carbon-plastic electrodes for zinc/bromine storage batteries
[DE93-003224] p 1151 N93-17465

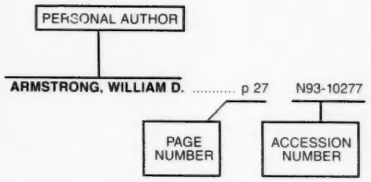
ZIRCONIUM
Microstructure, fracture toughness, and strength of (ultra)fine-grained tetragonal zirconic ceramics
[ISBN-90-9003972-4] p 1123 N93-16475

ZIRCONIUM OXIDES
Nanograin superplasticity in ceramics
[AD-A256643] p 1119 N93-15908
Effect of translucence of engineering ceramics on heat transfer in diesel engines
[DE92-041384] p 1120 N93-16058
The tetragonal-monoclinic transformations of zirconia studied by small angle neutron scattering and differential thermal analysis
[DE92-040718] p 1319 N93-16390
Nucleation in stress-induced tetragonal-monoclinic transformation of constrained zirconia
[DE92-040720] p 1319 N93-16391
X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676

ZONE MELTING
Autonomous magnetic float zone microgravity crystal growth application to TiC and GaAs
[NASA-CR-191002] p 1322 N93-16831

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

A

AARON, W. S. ..... p 1326 N93-17368
ABADA, A. ..... p 1291 N93-17213

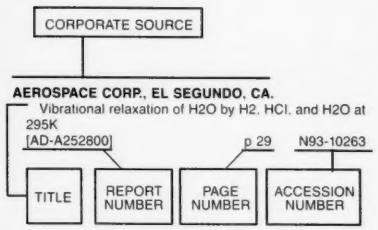
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

AASTRA AEROSPACE, INC., DOWNSVIEW (ONTARIO).
A study for protein crystallization in microgravity
[REPT-3211-ER-02-VOL-1] p 1131 N93-16547
A study of protein crystallization in microgravity. Phase 2: System specification for nucleation detection system for space facility
[DOC-3296-ER-01] p 1132 N93-16730

ACADEMY OF SCIENCES, POTSDAM (GERMAN D.R.).
ROSAT all sky survey observations of IRAS galaxies
p 1362 N93-17133

ACADEMY OF SCIENCES OF THE UKRAINIAN SSR, KHARKOV.
Automating software design system DESTA
p 1250 N93-17519

ADVANCED AVIATION CONCEPTS, JUPITER, FL.
Workshop on Aeronautical Decision Making (ADM). Volume 1: Executive summary
[AD-A257016] p 1226 N93-16189

ADVANCED TECHNOLOGIES, INC., TUCSON, AZ.
Advanced imaging system
[NASA-CR-191800] p 1303 N93-16712

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 1224 N93-15824
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 1092 N93-17607

AERODYNE RESEARCH, INC., BILLERICA, MA.
UHV-compatible electrostatically-driven tuning fork chopper
[AD-A256943] p 1280 N93-16208

AEROJET-GENERAL CORP., SACRAMENTO, CA.
ASRM case insulation design and development
[NASA-CR-191947] p 1090 N93-16605
Formed platelet combustor liner construction feasibility, phase A
[NASA-CR-184506] p 1091 N93-16697

AEROJET TECHSYSTEMS CO., SACRAMENTO, CA.
The onsite manufacture of propellant oxygen from lunar resources
p 1381 N93-16888

AERONAUTICAL RESEARCH INST. OF SWEDEN, BROMMA.
Generalised damping in fluid structure interaction analyses using modal synthesis p 1082 N93-15763

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Review of techniques for in-flight transfer alignment: Guided weapons technical memorandum no. 012
[AD-A256316] p 1059 N93-16402
Development of a menu driven materials data base for use on personal computers: Aircraft structures technical memorandum
[AD-A256317] p 1097 N93-16403
Measurement of the dynamic undercarriage response of a Sikorsky S-70B-2 helicopter: Instrumentation and test methods: Flight mechanics technical memorandum
[AD-A256319] p 1061 N93-16404
A preliminary investigation into the feasibility of using a small turbojet to propel an expendable hovering decoy: Propulsion technical memorandum
[AD-A256320] p 1066 N93-16405

AEROSPACE CORP., EL SEGUNDO, CA.
Some observations on stress graphitization in carbon-carbon composites
[AD-A256819] p 1096 N93-15683
Carborane-catalyzed graphitization in polyarylacetylene-derived carbon-carbon composites
[AD-A256826] p 1096 N93-15705
Surface analyses of composites exposed to the space environment on LDEF
[AD-A257141] p 1096 N93-15997
Structural and tribological studies of MoS2 solid lubricant films having tailored metal-multilayer nanostructures
[AD-A257218] p 1120 N93-16005
Inferences concerning the magnetospheric source region for auroral breakup
[NASA-CR-191674] p 1208 N93-16536
Exact calculation of light scattering from a particle on a mirror
[ATR-92(8476)-1] p 1303 N93-16542

AEROSPACE MEDICAL RESEARCH LABS., BROOKS AFB, TX.
Night vision manual for the flight surgeon
[AD-A257059] p 1227 N93-15710

AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OH.
Measurement and evaluation of blast overpressure during F-15A crew station vulnerability assessment test
[AD-A257152] p 1227 N93-16033

AEROSPATIALE, BORDEAUX (FRANCE).
Damage tolerance checking on Ni/H2 battery cells
p 1081 N93-15754

AEROSPATIALE, CHATILLON (FRANCE).
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 1092 N93-17608

AEROSPATIALE, LES MUREAUX (FRANCE).
TELECOM 2 deployable reflectors
p 1082 N93-15761
Dynamic of large reflectors p 1084 N93-15773

AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, IL.
Cloud model database comparison study
[AD-A258065] p 1218 N93-17678

AIR FORCE GLOBAL WEATHER CENTRAL, OFFUTT AFB, NE.
Computer models used by AFGWC and NMC for weather analysis and forecasting
[AD-A257985] p 1218 N93-17744

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.
Multi-ion ambipolar diffusion
[AD-A256568] p 1283 N93-15659
Output frequency changes in a commercial rubidium clock resulting from magnetic field and microwave power variations
[AD-A256466] p 1279 N93-15844
Photoluminescence study of Si(1-x)Ge(x)/Si and Si/Ge strained layer super lattices
[AD-A256467] p 1314 N93-15845
Feature extraction and classification of FLIR imagery using relative locations of non-homogeneous regions with feedforward neural networks
[AD-A256468] p 1301 N93-15846
A modal analysis and modelling of a lightly damped large space structure
[AD-A256566] p 1086 N93-15847
Laser guide stars: Bridge of ground-based lasers entering space
[AD-A256649] p 1171 N93-15887
Transition induced normal forces and their effects on the aerodynamic characteristics of slender sharp cones
[AD-A256802] p 1053 N93-15889
Alignment focusing system for high-power laser beam
[AD-A256907] p 1172 N93-16026
Ablative thermal protection structure design of ballistic reentry spacecraft
[AD-A256908] p 1087 N93-16027
Diagnosis of plasma states in x ray laser experiments
[AD-A256909] p 1307 N93-16029
Comparative analysis of guidance algorithms for the hyper velocity missile and AFTI/F-16
[AD-A256728] p 1068 N93-16067
Multiple model adaptive estimation applied to the VISTA F-16 with actuator and sensor failures, volume 2
[AD-A256569] p 1068 N93-16165
Device for applying powder coatings
[AD-A256917] p 1124 N93-16501
Formalization and visualization of domain-specific software architectures p 1247 N93-17501
The kinematic structure of a prefrontal convective rainband revealed by TAMEX Doppler radar data
[AD-A258081] p 1218 N93-17679

AKRON UNIV., OH.
Compatibility of refrigerants and lubricants with elastomers
[DE93-000539] p 1122 N93-16245

ALABAMA A & M UNIV., HUNTSVILLE.
Updating and expanding the library of materials on NASA Spacelink electronic information system
p 1340 N93-17282
A study of the Lute Metering Structure
p 1189 N93-17294
Nature of fluid flows in differentially heated cylindrical container filled with a stratified solution
p 1165 N93-17334

ALABAMA CRYOGENIC ENGINEERING, INC., HUNTSVILLE.
Adiabatic demagnetization refrigerator for use in zero gravity
[NASA-CR-190864] p 1130 N93-15689

ALABAMA UNIV., BIRMINGHAM.
An experiment to study fullerene formation under reduced gravity p 1134 N93-17335

ALABAMA UNIV., HUNTSVILLE.
CRRES: The combined release and radiation effects satellite program directory
[NASA-CR-184504] p 1076 N93-15713
Accurate computation and continuation of homoclinic and heteroclinic orbits for singular perturbation problems
[NASA-CR-191419] p 1262 N93-15717
Fingerprinting of materials: Technical supplement
p 1199 N93-15917
The variable polarity plasma arc welding process: Mathematical model of welding system
[NASA-CR-191430] p 1177 N93-16452
Endoscopic measurements using a panoramic annular lens
[NASA-CR-191727] p 1167 N93-16453
Polarization analysis of a balloon-borne solar magnetograph
[NASA-CR-191270] p 1167 N93-16458
Study of FES/CAST/HGS
[NASA-CR-190945] p 1114 N93-16711
Drop tube research
[NASA-CR-191415] p 1132 N93-16717
Study of basic physical processes in liquid rocket engines
[NASA-CR-184481] p 1091 N93-16722
Study of port of FRAMES artificial intelligence system
[NASA-CR-191703] p 1261 N93-16740

Electrical actuation technology bridging, volume 1
[NASA-CR-191705] p 1148 N93-16756
Electrical actuation technology bridging, volume 2
[NASA-CR-191706] p 1148 N93-16757
Development of generalized pressure velocity coupling scheme for the analysis of compressible and incompressible combusting flows
[NASA-CR-191713] p 1163 N93-16939
The FNAS Gamma Ray Observatory
[NASA-CR-191418] p 1399 N93-16944
Materials surface contamination analysis
[NASA-CR-191417] p 1105 N93-17000
Systems engineering process and organization assessment p 1340 N93-17281
Design and analysis of seals for extended service life p 1181 N93-17283
Optimal Trajectories For Orbital Transfers Using Low And Medium Thrust Propulsion Systems p 1074 N93-17290
Evaluation and recommendations for work group integration within the Materials and Processes Lab p 1341 N93-17293
Hybrid rocket performance p 1095 N93-17295
Post-impact behavior of composite solid rocket motor cases p 1095 N93-17299
Some effects of time usage patterns on the productivity of engineers p 1343 N93-17301
Ground testing of bioconvective variables such as morphological characterizations and mechanisms which regulate macroscopic patterns p 1224 N93-17303
Adaptive optics for laser power beaming p 1305 N93-17307
Directions for future Earth-to-orbit vehicles p 1076 N93-17309
Development of a prototype interactive learning system using multi-media technology for mission independent training program p 1227 N93-17310
Development of vendor evaluation criteria and post-implementation considerations for MSFC center-wide executive information system p 1345 N93-17316
The Inner Magnetospheric Imager (IMI): Instrument heritage and orbit viewing analysis p 1170 N93-17338
Analysis of film cooling in rocket nozzles p 1095 N93-17339

ALABAMA UNIV., TUSCALOOSA.
Comparison of methodologies for describing relaxation in nonequilibrium gaseous systems p 1165 N93-16786
1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-184505] p 1339 N93-17279
Emergency egress requirements for caution and warning, logistics, maintenance, and assembly stage MB-6 of Space Station Freedom p 1089 N93-17323
Design of a welded joint for robotic, on-orbit assembly of space trusses p 1181 N93-17326
Neural network architectures to analyze OPAD data p 1262 N93-17336

ALASKA UNIV., ANCHORAGE.
Nifedipine for treatment of high altitude pulmonary edema
[AD-A256959] p 1225 N93-16187

ALENIA SPAZIO S.P.A., NAPLES (ITALY).
Review of aeronautical fatigue investigation activities developed in Alenia-GAT during the period May 1990 - March 1991
[ETN-92-92884] p 1061 N93-16287
An advanced graphics-interactive system for a multi-block structured grid generation within an industrial environment
[ETN-92-92885] p 1235 N93-16288

ALENIA SPAZIO S.P.A., ROME (ITALY).
Orbital manoeuvre effects on large flexible antennae p 1078 N93-15729
Acoustic tests structural predictions p 1081 N93-15750
A systematic approach for the DRSS IOL APM design p 1081 N93-15753
Residual stresses in welds and effect on crack growth prediction p 1082 N93-15758
Analysis and test methods for the evaluation of deployment shock p 1082 N93-15760

AMERICAN INST. OF BIOLOGICAL SCIENCES, WASHINGTON, DC.
Possible biomedical applications and limitations of a variable-force centrifuge on the lunar surface: A research tool and an enabling resource p 1224 N93-17458

AMERICAN INST. OF PHYSICS, NEW YORK, NY.
The study of multi-institutional collaborations in high-energy physics
[DE93-002337] p 1300 N93-17580

AMES LAB., IA.
Development and applications of a new computer-controlled magnetic inspection system
[DE92-040579] p 1181 N93-15664
AC loss and dynamic resistance of a high T(sub c) strand carrying a direct current in a transverse AC magnetic field
[DE92-040581] p 1142 N93-15826
Thermal isomerization and decomposition of ethynyldisilanes
[DE92-040578] p 1102 N93-16012
Evaluation of fast ADC's
[DE92-040582] p 1145 N93-16013
Radio-frequency surface impedance of type-2 superconductors: Dependence upon the magnitude and angle of an applied static magnetic field
[DE92-040583] p 1316 N93-16014
C-13 solid-state NMR study of ethylene oxidation over supported silver catalysts
[DE92-040584] p 1102 N93-16016
Fluorescence detection for gel and capillary electrophoresis
[DE92-040585] p 1102 N93-16020
Rapid texturing of high temperature superconductors from amorphous precursors
[DE93-001217] p 1319 N93-16360
A solid state approach to the production of kilogram quantities of Si-20 at. percent Ge thermoelectric alloys
[DE92-018803] p 1114 N93-16989
Instrumental and theoretical development of capillary electrophoresis and its application to biological systems
[DE93-001220] p 1106 N93-17348
Spin dependent recombination in conjugated polymers: An optically detected magnetic resonance study
[DE93-001221] p 1126 N93-17349
Phase equilibria, superconductivity, and flux creep in Nd(1+x)Ba(2-x)Cu3O(7+delta) superconductors
[DE93-001223] p 1325 N93-17350
Distance analysis of Patterson calculations and molecular mechanics as aids in structure solution
[DE93-001224] p 1325 N93-17351
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver
[DE93-002526] p 1126 N93-17467
The characterization of organic monolayers at gold surfaces using scanning tunneling microscopy and atomic force microscopy correlation with macrostructural properties
[DE93-001218] p 1327 N93-17476

AMPEX CORP., REDWOOD CITY, CA.
An empirical approach to predicting long term behavior of metal particle based recording media p 1170 N93-16330
The 19 mm data recorders similarities and differences p 1170 N93-16331

AMSTERDAM UNIV. (NETHERLANDS).
The global second level trigger for ZEUS
[ETN-92-92816] p 1297 N93-16479
A spectator model for deep inelastic electron scattering
[ETN-92-92539] p 1293 N93-17396
Semantics and comparative logic
[LP-91-09] p 1272 N93-17713
Logic and the flow of information
[LP-91-10] p 1357 N93-17714
Lambek grammar: An information-based categorical grammar

Real-time detection of fatigue cracks at multiple holes in 7075 aluminum using acoustic emission
[AD-A257102] p 1111 N93-16114
Development of a faculty research and publication database system
[AD-A257107] p 1352 N93-16115
Analysis, design, and implementation of a database management system for the Naval Postgraduate School Alumni Association
[AD-A257109] p 1352 N93-16116
Mathematical model and computer algorithm for tracking coastal storm cells for short term tactical forecasts
[AD-A257110] p 1212 N93-16117
Experimental development of tubeside heat transfer correlations for laminar flow with and without inserts
[AD-A257099] p 1156 N93-16124
Definition of the sea surface infrared sun glitter corridor
[AD-A257100] p 1220 N93-16125
Natural convection from a horizontal heater in response to steady and pulsatile input powers
[AD-A257101] p 1156 N93-16126
Multispectral analysis of maritime clouds at night in the presence of atmospheric water vapor
[AD-A256699] p 1212 N93-16153
A correlation of welding solidification parameters to weld macrostructure
[AD-A256702] p 1176 N93-16154
Quantitative-force measurements of pneumatic control on a wing/strake model
[AD-A257343] p 1054 N93-16157
Kink-assisted mode hopping in a surface wave resonator
[AD-A256314] p 1207 N93-16264
Scientific development of a massively parallel ocean climate model
[DE92-040508] p 1213 N93-16409
Scientific development of a massively parallel ocean climate model
[DE92-040517] p 1214 N93-16584
On the consequences of bi-Maxwellian plasma distributions for parallel electric fields p 1152 N93-17317
Statistical fatigue analysis of the SH-60B servo beam rail component
[AD-A257474] p 1064 N93-17660
Economic analysis of redesign alternatives for the RESFMS information system
[AD-A257475] p 1356 N93-17661
Thermodynamic air/ocean feedback mechanisms in the Equatorial Pacific
[AD-A257476] p 1220 N93-17662
A database approach to aircraft carrier airplan production
[AD-A257737] p 1053 N93-17666
The deformation characteristics and microstructural dynamics of an Al-10Mg-0.1Zr alloy
[AD-A257738] p 1117 N93-17667
Incorporation of a radiation parameterization scheme into the Naval Research Laboratory limited area dynamical weather prediction model
[AD-A257739] p 1218 N93-17668
A clearinghouse for software reuse: Lessons learned from the RAPID/DSRS initiatives
[AD-A257743] p 1252 N93-17669
Design of robust suboptimal controllers for a generalized quadratic criterion
[AD-A257746] p 1069 N93-17670
Implementation of the one bit spectral correlation algorithm
[AD-A257748] p 1141 N93-17671
Modeling closure of army materiel command installations: A bi-criteria mixed integer programming approach
[AD-A257755] p 1252 N93-17672

X ray diffraction and electron microscope studies of Yttria Stabilized Zirconia (YSZ) ceramic coatings exposed to vanadia
[AD-A258055] p 1127 N93-17676
A multi-faceted engineering study of aerodynamic errors of the Service Aircraft Instrumentation Package (SAIP)
[AD-A258059] p 1057 N93-17677
Upper-tropospheric forcing of the intensification rates of tropical cyclones Flo and Ed based on TCM-90 observations
[AD-A257659] p 1218 N93-17680
A study on the effectiveness of lockup-free caches for a Reduced Instruction Set Computer (RISC) processor
[AD-A257662] p 1231 N93-17681
Preliminary analysis of the J-52 aircraft engine component improvement program
[AD-A257640] p 1067 N93-17686
Computer simulation of random and non-random second-phase particle distributions for both constant and varying particle size
[AD-A257700] p 1099 N93-17692
IR imaging for combustion characteristics and optical properties of boron/boron oxide
[AD-A257747] p 1108 N93-17693
An investigation of two-propeller tilt wing V/STOL aircraft flight characteristics
[AD-A257751] p 1064 N93-17694
Analysis of consolidation of intermediate level maintenance for Atlantic Fleet T700-GE-401 engines
[AD-A257754] p 1067 N93-17695
Sun sensor implementation using solar power arrays
[AD-A257627] p 1198 N93-17717
Force override rate controller for remote actuation
[AD-A257631] p 1180 N93-17718
The design of an adaptive attitude control system
[AD-A257632] p 1088 N93-17719
Structural design, analysis, and modal testing of the petite amateur navy satellite (PANSAT)
[AD-A257633] p 1088 N93-17720
Analysis of constant phase contours of evaporation duct mode functions for waveguide mode propagation
[AD-A257634] p 1141 N93-17721
Coded orthogonal signaling
[AD-A257635] p 1141 N93-17722
Static scheduler for hard real-time tasks on multiprocessor systems
[AD-A257663] p 1257 N93-17724
Comparison of areal extent of snow as determined by AVHRR and SSM/I satellite imagery
[AD-A258054] p 1192 N93-17755
Flowfield computations over the Space Shuttle orbiter with a proposed canard at a Mach number of 5.8 and 50 deg angle of attack
[AD-A258058] p 1057 N93-17756
Version and variation control of a design database for a computer aided prototyping system
[AD-A257480] p 1357 N93-17763
A revised lower confidence limit procedure for the reliability of complex quasi-coherent systems
[AD-A257599] p 1277 N93-17764
Building reusable software components for automated retrieval
[AD-A257605] p 1253 N93-17765
Turtle graphics implementation using a graphical dataflow programming approach
[AD-A257606] p 1253 N93-17766
Emissivity of rocket plume particulates
[AD-A257623] p 1095 N93-17767

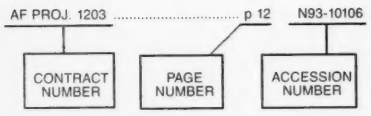
WORCESTER POLYTECHNIC INST., MA.
NASA advanced design program: Analysis, design, and construction of a solar powered aircraft
[NASA-CR-192040] p 1064 N93-17802
WORLD METEOROLOGICAL ORGANIZATION, GENEVA (SWITZERLAND).
On implementation (World Weather Watch)
[WMO-753] p 1217 N93-17597
WORLD SPACE FOUNDATION, PASADENA, CA.
A lunar polar expedition p 1395 N93-17433

Y

YALE UNIV., NEW HAVEN, CT.
Knowledge-based planning
[AD-A257209] p 1350 N93-15812

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

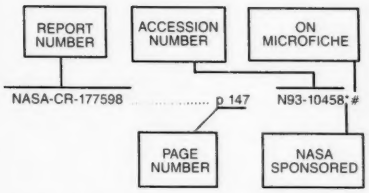
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

Appendix

NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (*STAR*) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications;
- Other U.S. Government agency and foreign patents and patent applications;
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *International Aerospace Abstracts* (*IAA*). *IAA* is issued on the 1st and 15th of each month and is available from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, NY 10019.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points — central points of document acquisition and control within qualified organizations — or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

16 SPACE TRANSPORTATION
Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance.* For space suits see *54 Man/System Technology and Life Support.*

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, address inquiry to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft fur wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARIES: To provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. (These libraries are not sales outlets.) At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, appears on page A-8. A local library can contact a regional depository library to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintianed by the British Library Lending Divison, Boston Spa, Wetherby, Yorkshire, England, for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*.

European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA—Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *IAA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00 domestic, $117.00 foreign. Single copy prices: $33/domestic, $41/foreign.

An annual, cumulative *STAR Index* is also available at $54/domestic and $65/foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Microfiche of the abstract sections of *STAR* are available, on annual subscription, from CASI. Annual subscription rates are $216.00 North America; $432.00 foreign.
